INTRODUCTION

> *"They will appear to be omniscient and will generally know nothing; they will be tiresome, having the reputation of knowledge without the reality."*

PHAEDRUS' *words are old. But "they" of the quotation could be politicians, columnists, military men, financiers, labour leaders, writers of books and plays, radio commentators, teachers, editors, scientists, of the year 1949—or of any year. The "omniscience" of these is a root, generally, of current evil and of evils that follow. Such men are not only tiresome, but they can be dangerous.*

The year 1949 has known bigger atom bombs, engines that move faster than engines were ever expected to and voices that can in an instant circle the globe; there seems to be no end to expansion in technological achievement. But the year has also had "cold war," universal dissension, hunger and want beyond all imagining—and, of course, no peace at all.

The present Book of the Year is the thirteenth in the series. The volumes reflect most areas of human interest and especially the activities of men, good and bad, who were "certain" and had no right to be, whose reputation of knowledge was without the reality. Men of humility have never had much chance against them.

It was said by Nehru, in 1949, that "bad means can never make good ends." It's been said a thousand times. But most of us don't believe it. And so many of us can't recognize a "bad means" when we see one. The blame lies within us. We don't know enough. We don't try to know more. We favour enlightenment, but make little or no attempt to be enlightened. We are too lazy, too many of us, even to hope.

And yet it is comforting to know that hope is always blossoming somewhere. Hope is a reality that gives the world promise of spiritual dignity and that kind of humility which, one day, alone can bring peace to the world.

THE EDITOR

EDITORS AND CONTRIBUTORS

WALTER YUST, EDITOR OF ENCYCLOPÆDIA BRITANNICA AND OF THE BRITANNICA BOOK OF THE YEAR

HOWARD E. KASCH, *Associate Editor of the Book of the Year*
RUTH SOFFER, *Picture Editor*

(*Initials and names of contributors to the Britannica Book of the Year with the principal articles written by them. The arrangement is alphabetical by initials.*)

A.A.P. — **Greece** (*in part*)
ALEXANDER A. PALLIS. Minister Plenipotentiary attached to the Greek Embassy; Director of the Greek Office of Information, London, Eng. Author of *Greece's Anatolian Venture—and After;* etc.

A.B.Bu. — **Mississippi**

The Year 1949 in Historical Perspective

The contributions on the following pages are an attempt to examine some of the principal cultural and political trends of the world during 1949, and to relate them to prior developments from which they emerged, or with which comparisons might be drawn. This is done by directing the reader to appropriate articles and parts of articles in the *Encyclopædia Britannica*. By examining this background of material the reader of the *Book of the Year 1950* may achieve a fuller understanding and appreciation of present events and their roots in history.

(Footnotes are direct references to articles and parts of articles in the *Encyclopædia Britannica*.)

THE TRENDS OF CULTURE

By Isaiah Berlin

Fellow and Tutor of New College, Oxford University, and University Lecturer in Philosophy

THE year 1949 was not notable for any revolutionary change or crisis in the development of thought and of art, or indeed of any form of human self-expression. But there were marked differences between the forms adopted by it in the principal areas of civilization—western Europe, North America and the soviet orbit. In western Europe the central mood was one of anxiety to avoid anything exaggerated or *outré* and too self-revealing, any suspicion of wishing to dramatize or romanticize either the present or the past, still less the future. As if conscious of the absurd spectacle presented by the extravagant cynicism and disillusionment in Europe after World War I, the generation which succeeded World War II seemed determined not to be carried away by any wave of violent feeling, whether positive or negative. It may be not unprofitable to bring this out by comparing some aspects of the year 1922, since like 1949, it was divided by four years from the end of a great war. In Europe the early '20s were marked by a sharp conflict between the ebbing, but still strong current of liberal idealism which had created the League of Nations, which believed in open diplomacy and still, despite many failures and disappointments, seemed confident that a new and better order was surely, if somewhat slowly, coming into existence, bringing with it more liberty and equality and prosperity for individuals and classes and nations than any previous age. This optimistic faith was in some degree shared both by conservatives and liberals, victors and vanquished, at any rate in western Europe. Arrayed against them were those sceptical and destructive persons who out of amusement and indignation exposed what they regarded as the shams, the muddles and the absurdities of their immediate predecessors—above all, the inflated values of that decaying Victorian establishment which had failed to prevent the brutalities of the great slaughter. They proudly flaunted their disbelief in, and indeed contempt for, tradition as a heroic act of testimony to the truth, however unpalatable—an attitude superior to the passive acceptance of systems in art and thought and life no longer tolerable to any moderately intelligent or honest man.[1] The air was full of violent denunciation of old divinities and bold new experiments intended not to produce objects of lasting value, but to innovate and to shock. This is the best-remembered characteristic of those years; any methods, however bizarre, were applauded, provided they looked as if they could shake the ignorant and complacent out of the exasperating dead level of their unperceptive lives. Often these experiments were mere forms of extravagant exhibitionism or hysteria, launched by individuals with little talent save as impresarios.

[1] **JUVENAL: *Contents of the Satires;* VOLTAIRE, FRANÇOIS MARIE AROUET DE; SWIFT, JONATHAN (for examples of spirited debunking in earlier times).**

At times they revealed a pathetic frustration on the part of writers or artists whose anguish exceeded their gifts, and whose works to a later and more critical generation seem worthy of sympathy but scarcely of admiration or respect or even interest. At other times they resulted in works of the most authentic and enduring genius; it was a period exceptionally rich in works both good and bad, and artistically and intellectually most exhilarating.[2]

• • •

The generation of 1949, as every available symptom indicated, was the opposite of this. Biographies are among the surest indications of the view of life for which the biographer, whether consciously or not, himself stands; and so far as he is typical of the mood of his generation, he will convey its thoughts and feelings for the most part more truly than its official heralds and prophets. If then we consider those of 1922, they represent either the last phase of the grand, old-fashioned Victorian tradition of competent and solemn monumental masonry, or else the exercise of sharp analytical skill compounded of the new sciences of psychology and sociology with which the authors, with varying proportions of gaiety and savage irony, struck out and demolished, pilloried and caricatured those of their predecessors who symbolized the most ridiculous or the most detested vices or tyrannies of previous generations.[3] The tone in any case was moral: enthusiasm or indignation, passionate defense or bitter exposure; there was a major battle in progress; the old values and the new were sharply distinguishable; the battle of the young against the old had never reached such heights of open and violent conflict. Both sides, even if they were not fully prepared to say what order it was for which they were fighting, were only too ready to specify what they were against; some stated their reasons in elaborate polemical tirades, others preferred direct action by word or painting or musical composition likely to outrage the enemy and in the end sweep him out of existence.[4]

This was a far cry indeed from 1949 with its mood of sober nostalgia and cool appraisal: the great Victorians were amply commemorated in almost every literate country; in England alone two lives of Ruskin, two studies of Byron, massive books on Tennyson, Dickens and the prince consort appeared. Their writers were cautiously determined to say neither too much nor yet too little; the analysis was careful, judicious and morally neutral;[5] the eminent dead were represented as burdened with an excess neither of virtue nor of vice—they were figures neither exceptionally great nor absurdly small, and although not overwhelming, were clearly considered as being far more impressive than either the biographer himself or his reader. The attitude was neither one of admiration for success, nor of that genuine contempt for it which was typical of the literary morality of the '20s; but of a somewhat gloomy feeling of respect, carefully emptied of any committal expression of feeling; the tone was one of objectivity and conveyed a mild sense of wonder, mixed with neither admiration nor disdain at the fact that those large beings once walked the earth. The reader was invited to inspect the more noteworthy characteristics of the persons described as part of a solider, and on the whole, more interesting world, worthy of the attention of the civilized and the fastidious, but not of sharp or eager advocacy. At first this appeared a juster and certainly more mature outlook than that of a quarter of a century before. But if we compare the imaginative literature of the two periods we find that, if this is so the price paid had been high indeed. For 1922 saw the appearance of these works (to take only those in English): among the older poets, new collections of verse by W. B. Yeats, Thomas Hardy, A. E. Housman; and then the true harvest begins: *The Waste Land* by T. S. Eliot, *Ulysses* by James Joyce, *Babbitt* by Sinclair Lewis, *Jacob's Room* by Virginia Woolf, *The Garden Party* by Katherine Mansfield, *Swann's Way* (the first volume of the translation of Marcel Proust's *A la recherche du temps perdu*), by C. K. Scott Moncrieff; all these, particularly *The Waste Land, Ulysses* and *Babbitt* were works whose influence on English was greater than that of any other contemporary writing. In this same year moreover there appeared such minor masterpieces as *Lady into Fox* by David Garnett, the *Puppet Show of Memory* by Maurice Baring, *Books and Characters* by Lytton Strachey, *The Second Empire* by Philip Guedalla, *Aaron's Rod* by D. H. Lawrence, *Mortal Coils* by Aldous Huxley, *Mr. Prohack* by Arnold Bennett, *Kleist* by Gundolf, books by Wells and Galsworthy, Keynes and G. M. Trevelyan, two volumes of caricatures by Max Beerbohm; and a work of philosophical genius which had a greater influence on the development of logic and the theory of knowledge than any other of its time, the *Tractatus Logico-Philosophicus* by Ludwig Wittgenstein. This is all stupendous enough in a year which was not exceptional in its own period; even allowing for the magic of distance it must be conceded that 1949 had somewhat less to show.

• • •

The most important single factor in 1949 was, of course, the continuation of the battle between the creeds—between Marxism and its various enemies—the greatest since the Reformation and its aftermath. This divided the world into hostile camps about which no all-embracing generalizations could profitably be made. In the West imaginative literature, while not precisely in decline, showed no sign of any bold new beginnings. The best English-speaking novelists produced works of great technical perfection in accepted and familiar genres. Elizabeth Bowen, Ivy Compton Burnett, Henry Green, utterly different as they are in almost every respect, published novels which reflected acute moral and spiritual preoccupation with the fate of individuals hemmed in by and insulated against an aggressively impinging environment. The feeling was romantic, and to some degree nostalgic, the canvas not large, the problems were (unlike postwar writing in France) neither intellectual nor social nor metaphysical, but personal, not a direct expression of—although not untouched by—the psychological doctrines prevalent at the moment. George Orwell's *Nineteen Eighty-Four*, which caused a considerable stir, was a tract of the times, dealing with the implications of the unchecked development of the ruthless control of the lives of individuals by political tyrannies which brutally crush and destroy human beings and forms of life in the name of official ideologies scarcely believed in by the leaders themselves. The mood of general distrust of political nostrums and formulas as such, a sense of horror when faced by the inhuman consequences of doctrines and ideas unmodified by understanding or sympathy for the actual predicament of specific individuals or groups in specific situations, filled the writings of disillusioned writers who had broken with communism (like the very gifted novelists Koestler and Silone), who denounced their past with varying degrees of anger or bitter and ironical satire. Even T. S. Eliot seemed caught by this ambiguity and lack of positive character; of all living writers in English he had had perhaps the strongest positive influence on other writers; he had an "ideology" and a "message"; his poetical dramas had conveyed his views as clearly as his left-wing opponents succeeded in expressing their own. But the *Cocktail Party* performed at the Edinburgh festival was less eloquent, more obscure and more elusive than even *Family Reunion.* The *Zeitgeist* seemed to have cast its spell even on his low-toned, carefully modulated voice. There was, on the other hand, a great deal of very distinguished work done in the field of criticism: Ernst Robert Curtius of Bonn published a masterpiece on the rise of the European tradition; and interesting and penetrating critical studies were published by Herbert Read, Edward Sackville-West, Lord David Cecil, Basil Willey, Cleanth Brooks, Van Wyck Brooks and Leavis; the bicentenary of Goethe's birth led to commemorations in many parts of the world and notable discussions of his genius and influence. Critical powers exceeded those of the creative imagination almost too obviously.

• • •

The general mood in western Europe was sober, sane, touched with scepticism, afraid above all of those excesses of cynicism and disillusionment which to a later generation seemed sentimental and infantile. There was neither great optimism nor great pessimism; above all, writers were anxious to convey the impression that they were adult, balanced, fully capable of surveying the contemporary scene, however dull or dangerous or hopeless, with the unprejudiced and unexcited eyes of long experience, not likely to be betrayed into giving themselves away by exaggerated passion for or against anything. The genuine romanticism of the wartime resistance against fascism, both Communist and non-Communist, was dying fast. The great three-cornered ideological war—between Catholicism, communism, existentialism—which during the years immediately following the war dominated both the life and art of France and threatened to convert the latter into applied social theory, metaphysics, theology, everything but itself, diminished in importance. Mauriac and Claudel, Aragon and Eduard, Sartre and Mlle. de Beauvoir, continued to act as party leaders and banner bearers of the three movements; but some of their most gifted followers failed to retain their ideological purity. Some formally seceded; others returned to the practice of an art not primarily concerned with demonstrating the doctrine or preaching a particular way of life. And although France since the Renaissance had been—and still remains—the classical battleground of philosophy and religion, of highly self-conscious alignments of the least politically minded writers into this or that ideological camp, yet even there the claims of "pure" literature were asserting themselves once more.[6] Aragon wrote a party novel, *Les Communistes;* Sartre continued to write existentialist plays and published a new volume of his great *roman-fleuve.* Camus published a remarkable historical play, *Les Justes,* about a political assassination in Russia in 1905. Neither Sartre nor Camus after the fashion of their school sought directly to suggest solutions to social or individual dilemmas, in the manner of the realists, nor yet to discredit their importance in the dryly cynical and deflationary manner of the Maupassant-Somerset Maugham tradition of amoral storytellers, nor yet to create lyrical or religious art like Mauriac or Cocteau. These once revolutionary writers now no longer in their first youth wrote and were widely read, and visited foreign countries and were duly acclaimed, but seemed more remote from the new mood, than the surviving writers of the 19th century: André Gide, and Maurice Maeterlinck (who died in the course of the year). The climate of opinion was temperate, the attitude to life serious, meticulous, unsentimental, a little bitter and, in a restrained way, nostalgic. Julian Green was greatly looked up to; in France there was a minor revival of "daring" literature which dealt with sexual aberrations in a deliberately flat and unromantic manner which betrayed the still very powerful influence of André Gide and the modern U.S. "tough" school of novelists so greatly admired by him—Hemingway, Faulkner, Cain and O'Hara, the greatly praised Steinbeck. The principal characteristics of writing, both imaginative and critical, were (apart from the waning Communist vogue) freedom from dogma or crusading zeal, a kind of cautious humanism, respectful both of the truths and methodology of science and of the inner life of the individual, sensitive, tolerant, careful, observant, open-minded, civilized, almost a return to the civilized melancholy of Montaigne, but on the whole with little hope and little temperament.

This seemed true even of postwar German writing, which sought relief from the humiliating present behind the metaphysical smoke screen of the transcendental theology of such writers as Jaspers and Heidegger;[7] the view of life was vaguely tragic but too remote to bring home the sense of the crimes and horrors of the immediate past, relieving the burden of particular guilt by a misty disquisition on its nature in general, in which the painful facts grew dim and invisible, written in quasi-theological prose for which the dark tradition of German and Danish mysticism and idealism was heavily drawn upon.

It seemed obvious that the postwar period in western Europe had gone on far longer, because of the failure to achieve adequate social and economic reconstruction, than the similar period after 1918; and that, as happened then also, the romantic afflatus of the heroic years of war had become exhausted without producing an equally spirited reaction. The appetite for life which seems to require a certain degree of economic security and opportunity within the middle class (which continued to produce the majority of the writers and artists) had clearly not been achieved. The year 1949 was a time not so much of transition as of absence of forward motion, becalmed, with little wind to swell the sails.

If this applied to the field of critical and creative writing in which no works of genius were born, and even Malraux had ceased to be a revolutionary writer, great signs of originality and life could perhaps be perceived—combined with the prevailing unsentimental mood—in other spheres: Italian films, for example, among the most interesting artistic achievements of the day, displayed a capacity for natural vision, artistic sensibility and purity of purpose and freedom from rhetoric, or contrived pathos or solemnity and so resulted in works of art more moving, poetical and true than anything achieved in any other country since the war. The reason for this may lie in the fact that Italy, with its creative energies so long constricted and perverted by a sterile despotism, possessed unexpended resources of feeling and constructive capacity not to be found in countries in which the writers and artists went through their greatest moral crisis in the late '20s or '30s.

In music there was much charming and sensitive writing, particularly in France, Italy and Switzerland; the English composer Vaughan Williams produced a notable symphony, surprisingly modern in structure and sentiment. Interesting and highly skilful and agreeable but very nonrevolutionary works were written by Ernest Bloch and Hindemith in the United States, by Benjamin Britten in England and Dallapiccola in Italy. There was a revival of music in Germany; much was expected of a composer of partly Russian origin domiciled in Berlin, Boris Blacher. No new voice was heard, no new tendency asserted itself. The atonalists continued to experiment in their chosen medium, and much was written to expound the theories of its founder Schönberg, but since the death of Webern atonal music seemed to exercise more appeal to the eye than to the ear.[8] The technical skill of orchestras (though not of players of chamber music or singers) and the art of recording and mechanical reproduction appeared to improve in inverse ratio to originality and beauty of composition.

As for the visual arts, they were, as had often and monotonously been pointed out, dominated by the masters who were already in the full tide of their creative activity after World War I—the painters Matisse, Picasso, Braque and Léger continued to overshadow their younger contemporaries; no national school could vie with that of Paris in this respect, but there was little new to record.[9] The Neo-Gobelin school of French tapestry and the occasional additions to their vivid brand of public art by the Mexican school did little to alter this general impression. Public appreciation of painting and sculpture rose as creative output diminished: the great exhibitions of painting in Paris and London and Switzerland held in 1949 were models of their kind, and excited much discriminating enthusiasm. Excellent critical studies were published on both sides of the ocean; commentators and interpreters appeared more gifted than their modern originals. The study of the history of art in English-speaking countries rose to heights of elegance and scholarship which made it the rival of the most distinguished masters of the subject in Italy and Germany, and Malraux's *Psychologie d'art* continued the noble French tradition of writing about art by men of letters, the tradition of Diderot, Taine and Valéry. The refinement, imagination and uncompromising fastidiousness displayed by the Third Programme of the British Broadcasting corporation, and its musical and literary programs raised this experiment far above any consistent public effort of its kind attempted before; the state itself seemed to be adopting standards hitherto confined to cultivated amateurs.

In philosophy there was genuine progress. No common language could bridge the gulf between the great empirical school which dominated English-speaking and Scandinavian countries and the metaphysical and religious philosophies of western Europe. The great revolution inaugurated by Bertrand Russell in the beginning of the century, perhaps the greatest since the 17th century, appeared in the '20s and '30s to be in danger of ossification in the great dogmatic schools of Vienna and Cambridge, and their many offshoots in Scandinavia and the United States and elsewhere.[10] There was some justice in the frequently made charges that the division of what could be said into empirical statements of fact and logical formulations of the rules of language mechanically eliminated, instead of solving, many problems which tormented generations of enquirers, and created an over-simplified form of utterance in which the finer differences became obliterated, and the problems posed by metaphysics were crudely dismissed instead of being resolved by the new technique. The progress of the subject in 1949, although not rich in major philosophical works, made possible far greater flexibility of expression, and so allowed the rich ambiguity of language to play its proper part in the conveying of those differences and similarities for which metaphysicians devised strange terminology, which in the end obscured and almost destroyed the purpose of the precise and therefore technical use of words. The most notable single work of this school of thought in 1949 was the *Concept of Mind* by Gilbert Ryle of Oxford university, a bold and imaginative volume written with uncommon force and freshness. The philosophers engaged in this type of work seemed scarcely themselves aware of the magnitude of the transformation which they had been so rapidly effecting, or of the mass of philosophical writing during the last 150 years which they were rendering obsolete; seldom can so much darkness have been illuminated so rapidly and so successfully. The effects of this spread widely beyond the realm of technical philosophy, and standards of clarity and responsibility for factual statements insensibly rose in the fields of history, the social sciences and criticism generally. While empirical theories of thought and language on the one hand and the techniques of symbolic logic on the other progressed and developed, the older philosophical theories lost ground, at least in the major seats of Anglo-U.S. learning; or at any rate recognized enough of their opponents' claims to be fruitfully transformed themselves.

Meanwhile, the more traditional types of philosophy, relying upon intuitive methods rather than upon those of the natural sciences and common sense, continued to flower in France and Germany and Italy, as well as the countries of Latin America; there existentialism fought with more orthodox Catholic rationalism, in particular Neo-Thomism, or uncompromising Protestant faith; while the proponents of Marxist dialectical materialism in the orbit of the Soviet Union denounced all philosophies in the western world as equally bourgeois, decadent and false. Apart from the logicians and empirical philosophers and their allies among the psychologists and sociologists, whose subjects also were making swift if not always solid progress, the contending philosophers confined themselves to exposition rather than formal argument, each side remaining convinced of a sense of superiority; nor were there any intermetaphysical techniques of communication between warring camps in terms of which either side could be made to recognize its own fallibility. This was particularly true in the field of ethics.

The general impression of the western European scene was, therefore, one neither of an exceptional flowering of creative powers, nor of chaos or decadence; but of the pursuit of older directions with exceptional sensitiveness, competence, seriousness and moderation. As a result, its best achievements were not dull or mediocre, or extravagant, or counterfeit; but on the other hand they opened no new windows, and created no novel fields for the application of new technical methods. Individual works possessed a degree of originality and truth as great as any before them; they sprang from sober reflection and great critical sensibility, not exuberant imagination or an irrepressible desire to know or to enjoy, to do or to be, something in particular.

• • •

The situation outside western Europe in the countries dominated by communism and in the U.S. was somewhat different. In the United States there seemed less evidence of sensibility, but there was far more hope, and above all a far stronger sense of the crucial importance of the issues involved and of the need to speak out and declare oneself in a relevant fashion. No doubt, the quality of works like Mailer's *The Naked and the Dead* or Williams' *A Streetcar Named Desire*, still widely discussed in 1949, was inferior in kind and not merely in degree from the masterpieces of Ivy Compton Burnett, or M. Sartre or Elizabeth Bowen, or Edith Sitwell, or Mauriac, or Anouilh. But these works, and the great mass of documentary and journalistic description from which they sprang, represent a vehement interest in, and passionate feeling about, critical issues, which, however crudely conveyed and analyzed, were a symptom of a conflict of attitudes which in its turn presupposed belief in the possibility of action, and a sense of the presence of boundless resources with which, and for the possession of which, the battle was being fought. The U.S. novel and play referred to above, which had provoked much admiring and indignant reaction in the United States, fell flat in Europe, partly because their lack of intrinsic literary or dramatic interest was no longer half concealed by the urgent nature of the social problems involved or the blunt courage with which they were set forth. The situation in the U.S. in certain striking respects resembled that of Europe 25 years before. The narrow streams of personal and fastidious art—for instance, that of Glenway Westcott, the novelist, or Samuel Barber, the composer, or indeed so rigidly isolated a province as that of Faulkner's south—were so many conscious deviations from that main current of literature and the arts which more truly focused the condition and the moods of the broad central stream of social life; they stood aside from that public arena in which intellectuals fought with philistines, where open and concealed rebels of the type so common in Europe during the previous half century "unmasked" and "exposed" the follies and the vices of the establishment or of tradition or of fashion; above all, there was a feeling that an immense amount was at stake, that the future seemed sufficiently controllable by a concentration of human resources to make the issue genuinely uncertain, the battle worth fighting. The arts and letters of the U.S. in 1949, whatever their other qualities, were the only true heirs to the great social tradition of the 19th century in Europe, with its moral idealism, bitter partisan feeling and those immense public issues which involved the artists deeply and influenced the general outlook of a generation. A great critic like Edmund Wilson was far more representative of the great line of European essayists and critics—Sainte-Beuve or Taine or Mathew Arnold—than anyone writing in Europe in 1949. In so far as T. S. Eliot belonged to this tradition too, he derived from what was most American in him and not from what was most like his contemporaries among European men of letters. In western Europe this broad river seemed to be divided into isolated streams and pools. The French and English figures who represented the main tradition—the widely read "upper middle-brow" novelists and poets and painters—were with the solitary exception of Mauriac, minor figures, rightly made little of by serious critics, and aware themselves, with varying degrees of embitterment, of the fact that their *métier* had outlived itself.[11]

Meanwhile, in the United States, in the fields both of imaginative and quasi-historical, quasi-sociological writing, there was an effort to answer questions, to discover solutions of acute social and individual problems. It was accompanied by an increasing intolerance of heterodox views, by growingly severe tests of loyalty exacted by all parties and sects and movements, by demands for clear alignment and charges and countercharges and declarations of war. And this, however exaggerated the results, and hostile to the disinterested lives and humane forms of culture, was yet evidence of movement, and of passionate moral concern and a capacity for heroism and uncompromising pursuit of ideals whose very fanaticism and violent collision was at any rate characteristic of the atmosphere in which alone major advances come into being. It was not political and economic predominance alone that led to the preoccupation with the U.S. on the part of so many European writers.

• • •

But if the U.S. scene resembled, at any rate in the depth of its preoccupations and antagonisms, that of Europe before the recent war, the cultural conditions of the countries dominated by communism went back to a considerably earlier period—to those of the great religious wars of the 17th century or perhaps earlier still, to the ages of faith and heroic barbarism. In the U.S.S.R. itself the campaign for undeviating conformity to the party line in the realms of literature and art attained new heights in 1949. The limited licence granted to nationalism and even to a certain degree of personal self-expression which had been given during the war years was finally revoked;[12] a political storm, more violent and more widespread than that of 1936–37, began to gather force in the early months of 1949, and finally broke over the heads of all the liberal professions. The dramatic critics were among the earliest victims of this great campaign to standardize all forms of cultural life; adherence was demanded to the party line—a blend of primitive Leninism with an antiwestern chauvinism more violent than any known before, even during the severest purges of 1936–38. All western influences, every form of alleged sophistication or insufficient saturation in the carefully prescribed brand of social content was condemned with unheard-of severity as "formalism" or "grovelling to the West." Those suspected of the least degree of nonconformity, among them nearly all the most honoured names among the survivors of the still quite genuine Russian culture of the '20s and '30s, were subjected to vituperation unparalleled even in the history of Marxist polemics; and although this was more difficult to achieve among the central European nations where western influence and liberal traditions had had a longer history, there too, the immense levelling apparatus had begun to crush the native civilizations and impose the new uniformity.[13]

This process now gained pace in Czechoslovakia, Hungary and Poland, and led to the replacement of their normal literatures by a vast stream of what could be best described as children's or young peoples' books, literally. The novel became the medium for the widest possible inculcation of the simple virtues needed by the regime, and the castigation of the more obvious vices opposed to it. Anything which diverted attention from this simple goal—the idealization of the right kind of citizen in the simplest and crudest colours, calculated to make a strong impact on the least educated reader—was frowned upon as a dangerous form of diversion and a sign of disguised admiration for the corrupt and hostile west. All art forms were subjected to this process; the state in 1949 imposed a degree of conformity to dictated patterns which exceeded all previously known examples of regimentation.[14] Writers and musicians, critics and composers, historians, biologists, physicists, geneticists and even circus clowns confessed their crimes and humbly declared their gratitude to the Communist party for showing them the path to salvation. Attacks on the west grew more unanimous and violent, the mood was as of a school which had been collectively punished for an infringement of discipline, and was anxious to show every sign of contrition and zeal. Styles grew simpler, works of art more uniformly didactic than during the most unquestioning periods in the Middle Ages. Such originality and initiative as were left at all found expression in the relatively nonpolitical corners of nursery rhymes and translations from the west European classics, or of the epics of the Asiatic nations within the Soviet Union; or else in public criticism of western culture, in which there was still opportunity for ingenuity and sharp insight and power of irony and which, therefore, despite the standard of crudity demanded, succeeded at times in giving effective expression to damaging home truths about the art and literature of western countries. Such communication as there was between the U.S.S.R. and the outside world, precarious at the best of times, which had grown somewhat larger during the better relations brought about by alliance during the war years, had diminished steadily since, and in 1949 began to approach vanishing point. Original works of art comparable with the best produced even by the attentuated cultural life of the west scarcely appeared. The purpose of all activity was the training of a certain kind of citizen, and all mental and material resources were concentrated upon this end. The state had evidently decided that its own security and that of its system left it with no margin within which it could afford to permit free self-expression to occur at any level; it was viewed as being at best a luxury, at worst a menace, to the minimum social discipline needed for survival.[15]

It might seem that no generalization can conceivably apply to such disparate developments occurring in a single human society. There were in being, if not many, at least two worlds, distinct from, and indeed opposed to, each other in every detail of both theory and practice. Yet something like a common tendency was nevertheless discernible. Everywhere the doctrine of social responsibility was gaining ground at the expense of self-assertive individualism and liberal humanism alike. In particular, disciplines were encouraged whose purpose it was to mould human beings in ways likely to make them fit more effectively, and eagerly, into preconceived patterns of social life; and this ideal was advanced at the expense of conceptions of existence in which men were left—or at any rate expressed the wish to be left—relatively undirected to achieve their own triumphs and failures. Avoidance of misery was on the whole cultivated as a goal worthier than the development of independence of character with its record of conflict and frustration. The social sciences began to encroach boldly upon the territory of the older forms of humane learning; the application of social techniques on a wide scale was viewed no longer as a triumphant achievement of human intelligence and skill over human ignorance, or the recalcitrance of the material environment, or as being indispensable to the preservation of what had been won against nature or the consequences of men's own technical achievements, but as being a form of activity valuable in itself. There was a growing preoccupation with the problem of self-preservation and survival in a society growing with an apparently inevitable rapidity less and less capable of creating or protecting what previous generations had sometimes valued beyond life itself—the disinterested discovery of the truth, the cultivation of personal relationships, the making and enjoyment of objects whose social value was of secondary importance.[16] This attitude had already found its way into literature and art before Germany attacked Poland in 1939. But it continued after 1945 with more vehemence and sense of urgency in the United States, and in a more depressed and calm fashion in Europe. French existentialism was perhaps the last Byronic gesture of romantic defiance in which, however hopelessly, and indeed the more hopelessly the more defiantly, a last stand was made against total submergence and dissolution in a world without independent passions or independent responsibility. This growing primacy of social over individual problems—the conception of the individual as an element in this or that social situation or pattern rather than vice versa—was part of the doctrine upon an extreme form of which the Soviet Union had been expressly built, and it had, in fact, advanced further in the west than the survival of cultural forms fully developed in a more individualist age might at first suggest. The sense of the final end of an era was perhaps most explicitly present in the analyses, filled with anxiety and melancholy premonition, of such critics as Arnold Toynbee and Julien Benda, who both published books in the course of the year, seeking to call attention to the final eclipse of the values of the post-Renaissance era. The most obvious symptom of the new age is the half-conscious assumption that personal problems (*e.g.*, the very discussion of aesthetic or moral or intellectual issues as they affect individual decisions and duties) is peripheral, and at times, almost exotic. And per contra all social, political and technological problems and all theories relating to them are in the forefront of attention—as the battlefield where the fate of individuals and nations will be, or is being finally decided. Consequently, all the appeals to return to private life and individual self-examination are considered as being in varying degree voices speaking out of the past, in wilfully eccentric or obsolete terms. In all these respects 1949 saw a further step taken in the direction characteristic of all the years since the end of World War II. It was not a turning point nor did it mark a revolution or a sharp divagation. Nothing had yet occurred enabling men to predict how far the process would carry them, for plainly the world was nearer the beginning than the end of a development of a genuinely new social age to which the monuments of the culture of a liberal bourgeoisie would soon be only an interesting but hardly a haunting memory.

THE POLITICAL ORDER

By Hans Kohn
Professor of History
College of the City of New York

SLOWLY and painfully the outline of a political order began to take shape in 1949 out of the chaos left by the wars which Germany and Japan started in the years between 1937 and 1941, and which ended in 1945 in an entirely new and unexpected situation. Not only were Germany and Japan eliminated, at least for a long time to come, as independent centres of world power, but also some of the victors whose strength should have stabilized the postwar period—especially Britain, France and China—emerged dangerously weakened.[1] Only two states were found at the end of the war greatly strengthened in power and influence—and these two states were diametrically opposed in their historical background and in their concept of life. The United States during the war years had increased its productive capacity to a degree unprecedented in history and had truly become the arsenal of democracy; the Soviet Union had followed from 1939 on a policy of large-scale aggrandizement by conquest and ruthless diplomacy, and seized the opportunity of victory to expand its territory and its influence vastly in Europe and Asia.

[15] **SOCIAL PHILOSOPHY:** ***The General Will*** **(for the relation between individual responsibility and the authority of the state).**

[16] **ATOMIC BOMB:** ***The Future of Atomic Energy;*** **MASS PRODUCTION:** ***The Effects of Mass Production*** **(for examples of neutral developments in science and industry which have contributed to feelings of separation between people and the things they make and do); MONTESSORI METHOD (for a contrary trend in the field of education emphasizing the personal and the individual in experience and behaviour); see also UTILITARIANISM; ETHICS:** ***The Motive of Moral Conduct.***

This new position of unequalled strength possessed by these two giants made the postwar era appear as a polarization of all political and economic relations between the United States and the Soviet Union. In reality, the conflict was not between two powers, but between two systems of life, the Communist dictatorship within which the Soviet Union claimed undisputed and infallible leadership, and a free society among the nations in which the leadership fell to the United States by the accident of its undestroyed wealth and its geographic position. The outcome of the war seemed to have simplified this ideological conflict. For in the 1930s three systems of social organization and political philosophy had competed for the loyalty of man and for the organization of the world.[2] Two of them, communism and fascism, felt themselves at that time heirs of the future, while democracy was on the defensive.[3] World War II eliminated fascism but increased tremendously the confidence and aggressiveness of communism, which during these years fused more and more with the messianic aspects of traditional Russian imperialism.[4] It was only in 1949 that democracy regained full confidence in its own values and began to organize for a reinvigorated survival.

• • •

The year of 1949 marked the first success of the forces of resistance to the sweep of communism and of soviet domination across Europe. Among these forces, the Roman Catholic Church began to play an active role.[5] It had been exposed to violent Communist attacks, especially in predominantly Catholic countries like Hungary and Czechoslovakia, which had fallen under Communist control. In July the Congregation of the Holy Office decided to excommunicate all those Catholics who, knowingly and of their free will, remained in the Communist party and supported and disseminated Communist doctrine.[6] The whole traditional pomp of the church was mobilized when, on Dec. 24, Pope Pius XII opened in Rome the Holy Year, instituted first in 1300 by Pope Boniface VIII. Its spiritual significance was to call upon all Catholics to rally for the defense of the church. Special attention was paid to Italy, the geographic centre of the world-wide organization of the church, where the Catholic Action started in the last days of 1949 a "Crusade of the Great Return" to persuade atheists to return to the fold.

Communism, however, saw its main enemy in democracy, in the system of free representative multiparty government and of liberty of thought and expression.[7] Its hostility was equally directed against democratic capitalism, as flourishing in the United States and in Switzerland, and against democratic socialism, as growing in Britain and Norway. Some of the most vituperative Communist attacks singled out the Socialists and labour leaders as their special target. In countries with Socialist governments the Communists could make no headway. They suffered decisive defeats in 1949 even in lands as close to the U.S.S.R. as Finland and Norway. But the decline of communism was general during 1949 in all democratic countries of the west.

The historical reasons for this decline as they appeared in perspective at the end of 1949 were manifold. In 1946 the Communists had counted upon a repetition of that disunity in the ranks of democracy which followed World War I and which largely made possible the coming of World War II and the temporary triumph of fascism and communism.[8] The experiences of World War II had shown the great resilience of democracy and its survival value even under the most trying circumstances in Britain, and the unprecedented achievements of a free society in the United States. On the other hand, the continuation and even the aggravation of the police state in the Soviet Union and the resurgence of traditional Russian and Pan-Slav imperialism disillusioned many Communist sympathizers in the west. In the years of democratic disunity, the Communist appeal was based upon its advertised humanist promises and its internationalism.[9] Now democracy had regained its vigour, and important social reforms revealed its flexibility which assured to the masses not only individual liberty but much higher material living standards than communism seemed able to offer. And while communism grew more "nationalistic" and even displayed extreme Russian chauvinism, the democratic nations laid in 1949 the foundations of a democratic internationalism which would integrate the free world for close political, economic, military and cultural co-operation.[10] Thus, seen in historical perspective, the year 1949 might mark a new epoch in the development of western civilization and of free society.

• • •

This trend toward a growing solidarity and interdependence of the democracies took a twofold form. One had its roots in old feelings of European community. The events after World War II had reduced Europe—in the cultural sense of adherence to the traditions of free society—to rather narrow limits. Europe was confined to the area which determined its fate up to the 18th century, when Russia and the Balkans began to enter the European family. Now, as then, the peoples speaking Romance or Germanic languages formed Europe, while the western and southern Slav-speaking peoples were separated from the west after World War II and absorbed into Eurasian Russia, which expanded its frontiers in 1945 to a line running from the Elbe to the Adriatic sea. Thus, the postwar division line ran across that Europe which had emerged as a growing cultural unit in the

19th century. The victims were the peoples of central-eastern Europe, especially the Czechs, the Poles and the Yugoslavs, who had come out of World War I as victors, fortifying themselves against German and Russian threats by closer ties with the west. These lands fell first after 1938 under German control, and then after 1945 under an even tighter control by Moscow, which rigidly enforced strict obedience and unflinching orthodoxy on the leadership that was to form the iron framework of the Communist union of eastern Europe and northern Asia.[11]

Against this Communist block, free Europe felt the necessity, which many of its liberal thinkers had predicted in the 19th century, to organize a closer integration. The ruthless overthrow of the last vestiges of democracy and of the western spirit by the Communists in Prague, Czech., in Feb. 1948 convinced the free nations of Europe of the need for democratic co-operation. The 50 years' pact of Brussels concluded between Great Britain, France, Belgium, the Netherlands and Luxembourg was followed and widened in 1949 by the formation of the Council of Europe. Its consultative assembly, the embryo of a parliament of free Europe, met in Aug. 1949 for the first time, in Strasbourg, Fr., an ancient city on the Rhine where Romance and Germanic cultural influences had mingled for centuries. Plans for full economic integration of free Europe into a single large market, in which eventually all tariff barriers would be abolished, were advanced by the end of 1949.[12] Thus, the old dream of a united Europe, so fervently proposed by 19th-century Europeans, like Giuseppe Mazzini and Victor Hugo, began to materialize.

• • •

Hugo in 1849 had foreseen that a united free Europe would clasp hands with the United States of America across the Atlantic. This form of democratic co-operation within the common western civilization also began to materialize in 1949. It had its roots in certain trends of United States policy, which were now expanded and adapted to a new situation in which the Atlantic ocean was no longer a barrier but had become a connecting link. The Monroe Doctrine had been dictated by considerations of American security, but also by concern for the preservation of an area of freedom. During World War I Woodrow Wilson clearly recognized that democracy could exist safely in the developing interdependent world only if peace were preserved by collective security, in which the freedom and territorial integrity of all nations, large and small alike, were guaranteed by mutual assistance. Now these trends were taken up in the bipartisan foreign policy of the United States, which was largely supported by public opinion. The new policy expressed itself in the North Atlantic treaty, which was signed in Washington, D.C., by the United States, Canada and ten European nations, and in the Mutual Defense Assistance act, which provided for more than $1,000,000,000 in armaments for the Atlantic pact nations.

In this atmosphere of growing consolidation of the democratic world, even the announcement by the president of the United States that an atomic explosion had been set off in the U.S.S.R. was of no decisive influence. Atomic discoveries had hardly changed the underlying tensions of the international situation, which would have shown themselves much the same after 1945 without these technological changes. Irrespective of them, the way to cope with potential aggression was that of creating an effective collective security as now outlined in the consolidation of the free world. In signing the Atlantic treaty, Pres. Harry S. Truman pointed out that had such a system existed in 1914 and 1939 it might have prevented the outbreak of the two World Wars.

Thus, a promising beginning of political order and economic co-operation among the free nations on both sides of the North Atlantic in 1949 added much to the probability of preservation of peace between the western world and the Communist U.S.S.R. Some of the danger zones of possible conflict were successfully eliminated in 1949. Greece and Turkey, which had formed two years before the goal of imminent soviet expansion, seemed secure by the end of 1949, and the Communist-inspired civil war in Greece had practically ended. The Berlin blockade, which lasted for almost 11 months, was lifted in May without achieving the Communist aim of forcing the western powers out of Berlin. The air superiority of the democracies and the stubborn resistance of the Berlin population were responsible for a peaceful termination of this potentially dangerous Communist pressure. Under the existing conditions no common policy for Germany could be developed. The result was the division of Germany in 1949 into an eastern zone, where a republic modelled after the Communist people's democracies was established under soviet control, and the German Federal Republic with its capital at Bonn on the Rhine and a freely elected parliament. The organization of this federal republic, in which the three zones occupied by the United States, Britain and France, were combined, marked in historical perspective a turning point in German history. Its centre of gravity shifted from the east, where Prussian power and armed victories had located it, to the west, the original home of a German civilization thriving in close touch with the west. The shift of the capital from Berlin to Bonn facilitated the reintegration of Germany into the general trend of the western community from which it had deviated more and more in the period from Otto von Bismarck to Adolf Hitler.[13]

• • •

This voluntary consolidation of the free world contrasted with the enforced consolidation of the Communist sphere. There purges and mass trials were conducted, and some of the formerly most-trusted Communist leaders were executed, like Laszlo Rajk in Hungary and Traicho Kostov in Bulgaria.[14] To cope with the situation in Poland, the U.S.S.R. even appointed one of its own leading generals, Marshal Konstantin Rokossovsky, as commander-in-chief of the Polish army. But the most outstanding fact in the soviet block was the ever-growing rift between the Communist U.S.S.R. and Communist Yugoslavia. Only two years before, Yugoslavia and its leader, Marshal Tito, had been regarded as the backbone of communism outside the Soviet Union, and Belgrade, Yugoslavia's capital, ranked second only to Moscow as a centre of world-wide Communist attraction. In June 1948 the Moscow government and its mouthpiece, the Cominform, or Communist Information bureau, had made public the differences between Stalin and Tito and had demanded the removal of Tito and the submission of Yugoslavia to the Moscow-ordered line. Eighteen months later, at the end of 1949, Yugoslavia's resistance was still unbroken. Though remaining a Communist country, it accused the Soviet Union of betraying the principles of socialism in the service of Russian chauvinism and expansionism. Yugoslavia rejected Moscow's demand for absolute obedience of all Communist parties in the world to the Russian Communist party and its leader.

• • •

The beginning consolidation of the situation in Europe found no parallel in Asia. There by the end of 1949 the situation remained fraught with unforeseeable consequences. The beginning of the 20th century had seen a new force entering Asia—nationalism, which later spread with astonishing rapidity.[15] It was a product of Asia's contact with the west; it was a fruit of the new civic ideas which administration by western powers had planted in the hardly prepared soil of the ancient civilizations of the far and middle east. This nationalism had received a great impetus in the events and slogans of World War I. Great popular leaders, like Mustafa Kemal in Turkey, Saad Zaghlul in Egypt, Ibn Sa'ud in Arabia, Mohandas Gandhi in India and Sun Yat-sen in China, aroused and channelled the emotions of the masses in the direction of nationalism.[16] At the very time that the western world tried to overcome nationalism in favour of international co-operation, nationalism began to reach its climax in the east and to put the western powers to the necessity of dealing with a new situation. The United States in the Philippine Islands and Great Britain in its far-flung Asiatic empire took cognizance of the changed circumstances and adapted themselves accordingly to them. The transformation of the British commonwealth was one of the most remarkable facts of peaceful change in history. In Jan. 1950 a British commonwealth conference met, in which India, Pakistan and Ceylon sat as equal members with the older dominions, and which convened characteristically in Colombo, Cey., with Don Stephan Senanayake, prime minister of Ceylon, as host and chairman.

The new Asiatic nations which remained within the British commonwealth or in close treaty relations with the United States—India, Pakistan, Ceylon and the Philippines—weathered the storms of the difficult transitional period with relative success. This example was followed at the end of 1949 by the United States of Indonesia, which emerged after long negotiations as an independent nation remaining united with the Netherlands as an equal partner by the very loose tie of the Dutch crown. Three and a half centuries of Dutch rule over the great island empire came thus to an end. The French were trying at the same time to stabilize the situation in French Indo-China, by recognizing the limited independence of the state of Viêt-Nam under the former emperor of Annam, Bao Dai.

Burma, on the other hand, which had severed its ties with the British commonwealth, continued to present a picture of chaos and disorder. The focus of attention in Asia was, however, centred in China, where the year 1949 saw most momentous developments. There, as in the U.S.S.R., the two great emotional mass forces of nationalism and communism seemed to fuse. The roots of the situation could be traced back as far as the middle of the 19th century, when China entered into closer contact with the west, without receiving under western administration a training in western civic methods. The rising discontent of the Chinese intelligentsia with the backwardness of the ancient empire led to a demand for social reforms and, in 1912, under the leadership of Sun Yat-sen, to the overthrow of the monarchy and the establishment of a republic before the people of China were integrated into a modern nation. The sudden impact of western ideas, without a corresponding background in society and history, made many Chinese young intellectuals receptive to communism. This inclination was supported by the manifest misery of the masses and the ineptness of the governmental machine in coping with the immense problems presented by the transformation of an ancient oriental civilization into a modern nation.[17]

The revolutionary nationalist movement which had overthrown the monarchy in 1912 organized itself as the Kuomintang, and entered in 1923 into an alliance with the Communists. Under the leadership of Chiang Kai-shek, the armies of the Kuomintang succeeded in 1927 in unifying China and in establishing a centralized government in Nanking. After its success, the Kuomintang broke with the Communists, who were able, however, to continue their organization and maintain armed forces in the remote parts of China. Thus, from 1928 on China was in the throes of a civil war. In China the Communists directed not only a party organization but also an army. Nevertheless, the Kuomintang under Chiang Kai-shek grew in strength until the civil war became decisively aggravated by Japanese occupation of Manchuria, the main source of Chinese economic resources, and later on by the Chinese-Japanese War, in which for eight years Chiang Kai-shek's China successfully resisted.

At the end of the war with Japan in 1945, China found itself faced, as a result of the Yalta agreement and the U.S.S.R.'s intervention in the war with Japan, with the loss of the economic resources of Manchuria.[18] There the Chinese Communists could establish a firm basis. The problem of China was thus put up to the United States government and people long before that country had made up its mind about Europe, where a definite U.S. policy was slowly evolved in 1947. The problem of Europe was infinitely easier, because of the community of civilization; the problem of China baffled as much by its immensity as by the unfamiliarity of the country's civilization and thought processes.[19] Under these circumstances the momentous events of 1949 caught the United States in China without a clear policy. During that year the Chinese Communists swept relentlessly from north China across the entire country, so that by its end the national government of China controlled only the two islands of Formosa and Hainan.

Thus, China, with its teeming millions and its as yet unknown resources, became in 1949 an integral part of the Communist dominion. The Chinese Communist leaders repeatedly stressed their complete devotion to, and agreement with, the general party line as ordered by Moscow. They followed it faithfully in their violent attacks against the United States and the democratic world. The Chinese Communist leader, Mao Tze-tung, visited Moscow in mid-December for the declared purpose of strengthening the relations between the Soviet Union, "the first state in world socialism," and China, and promised to intensify the common battle against the "war mongers."

The future of Asia might well be determined by the form of relationship into which the forces of nationalism and communism would enter there. While the Russians were promoting a fusion of these forces—thereby creating a national communism which might lead in the near future to great difficulties for Moscow—the western powers, especially the United States and Britain, were supporting the young indigenous nationalism and trying to embue it with the spirit of democracy. To that end, President Truman outlined in his inaugural address on Jan. 20, 1949, as Point Four a "bold new program for . . . the improvement and growth of underdeveloped areas," by which the standard of living would be slowly raised, thus securing a stable progress toward a good life. By the end of 1949 this long-range program was still in the stage of preliminary discussion. Besides southeast Asia, the middle east and Latin America presented fields for its application.

• • •

The first half of the 20th century, a turbulent era of totalitarian barbarism, of revolutionary cruelty and of devastating wars, in which so many of the cultural and political gains of the 19th century were lost, drew to its end with the coming of 1950. In spite of the difficulties which the world still faced, there was good reason to believe that, seen in historical perspective, the year 1949—four years after the conclusion of actual warfare—would be regarded as the first year in which a more consolidated future began to take shape. Much of it was in the tentative stage; whether it could grow beyond this would depend largely on the unity and determination with which the U.S. people, and the leading western European nations, would play their role on the international stage.

It was the unity and determination which the U.S. people had shown to a growing degree in the last three years which had so favourably distinguished the present postwar period from that after World War I, and which made it probable that World War III could be averted. The Marshall plan, the Atlantic treaty, the Point Four program, the Council of Europe, were all steps in the new direction. They would ultimately strengthen the free world and help the United Nations in the preservation of peace.

Their spirit was well expressed by Lester B. Pearson, Canada's representative, in signing the North Atlantic pact in Washington on April 4, 1949: "We are a North Atlantic community of twelve nations. . . . We are strong above all in our common tradition of liberty, in our common belief in the dignity of the individual, in our common heritage of social and political thought and in our resolve to defend our freedoms together. Security and progress, however, like peace and war, are indivisible. So there must be nothing narrow or exclusive about our league; no slackening of our interest in the welfare and security of all friendly people."

1949

Senate rejected by vote of 45 to 26 a move to freeze farm price supports at 90% of parity.

8 **Western and eastern German** trade officials signed agreement for exchange of goods valued at $112,816,000 during 9-month period ending June 30, 1950.

9 **31 nations** released new customs tariff schedules incorporating cuts agreed upon in conference at Annecy, France.

New York Yankees won their 12th world series, defeating Brooklyn Dodgers 4 games to 1.

10 **U.S.S.R.** transferred to German Democratic Republic (eastern Germany) all administrative functions previously the responsibility of soviet military authorities.

Pres. Truman signed bill authorizing him to assign up to 1,000 troops and U.S. military equipment to the U.N. for noncombat assignments.

11 **Indian Prime Minister Jawaharlal Nehru** arrived in Washington, D.C., for 3-week visit to the U.S.

Wilhelm Pieck was elected president of German Democratic Republic.

Asst. Secy. of State Ernest A. Gross was named to newly authorized post of deputy U.S. representative at the U.N.

12 **Joint congressional atomic energy committee** cleared chairman David E. Lilienthal and U.S. Atomic Energy commission of charges of mismanagement.

Otto Grotewohl was elected minister-president (premier) of German Democratic Republic; all key cabinet posts went to veteran Communists.

Lord Boyd-Orr, former director-general of the Food and Agriculture Organization of the U.N., was awarded the Nobel peace prize for 1949 by Norwegian storting.

Mrs. Eugenie Anderson of Minnesota was nominated by Pres. Truman to be U.S. ambassador to Denmark, the first woman to be given such a diplomatic rank.

13 **British Prime Minister Clement Attlee** announced that he would not call a general election in 1949.

Senate voted 53 to 15 to reject nomination of Leland Olds to a 3rd term on the Federal Power commission.

Adm. Louis E. Denfeld, chief of naval operations, told house armed services committee that U.S. navy was being dangerously weakened by uninformed high-command decisions.

14 **Jules Moch** was elected premier of France by national assembly, receiving 311 votes, 1 above the constitutional minimum.

John L. Lewis urged in letter to A.F. of L. Pres. William Green that 9 A.F. of L. unions join with United Mine Workers of America to give financial aid to striking steelworkers.

11 top U.S. Communist leaders were found guilty by federal jury in New York, N.Y., of conspiring to teach and advocate the overthrow of the U.S. government by force.

Congress completed action on bill raising salaries of cabinet members and other officials and heads of government agencies.

Czech national assembly approved 2 laws making all churches administratively and financially dependent upon the state.

15 **Chinese Communist forces** occupied the abandoned nationalist capital of Canton in south China.

Pres. Truman nominated 19 new federal judges, including Virgin Islands Gov. William H. Hastie, the first Negro to be named to a U.S. circuit court of appeals.

Laszlo Rajk, onetime leading Hungarian Communist, was hanged for treason.

Senate voted 36 to 30 to return to committee a house-approved bill liberalizing displaced persons legislation.

16 **Greek Communist radio** announced that Greek guerrilla forces had ceased military operations but would not disband.

Georgi M. Pushkin, prominent soviet diplomat, was named chief of the soviet diplomatic mission to German Democratic Republic.

17 **Jules Moch** resigned as premier of France after failing to form a cabinet.

Chinese Communist forces won the large southeast China port of Amoy and consolidated their control of China's coastline from Korea to Hong Kong.

18 **House and senate** approved a compromise defense appropriation of $15,585,863,498 for fiscal year 1950, including provision for the 58-group air force demanded by the house.

Soviet Foreign Minister Andrei Y. Vishinsky told a press conference that the U.S.S.R. had had atomic bomb since 1947.

19 **Congress** adjourned *sine die* after approving overwhelmingly a compromise farm price support bill.

Senate confirmed Mon C. Wallgren of Washington as a federal power commissioner and James M. Mead of New York as a member of the Federal Trade commission.

Pres. Truman accepted the resignation of Edwin G. Nourse as chairman of his council of economic advisers.

Trials of Japanese war criminals by Allied military tribunals were completed in Tokyo.

Gen. Omar N. Bradley, chairman of joint chiefs of staff, severely criticized high naval officers in testimony on the unification controversy before house armed services committee.

20 **French national assembly** elected René Mayer as premier.

Ecuador, India and Yugoslavia, the latter over vehement soviet protest, were elected members of the U.N. Security council by the general assembly.

21 **Federal judge Harold R. Medina** fined each of the 11 convicted Communist leaders $10,000 and sentenced 10 of them to 5 years' imprisonment and 1 to 3 years' imprisonment.

Amtorg Trading Corp., soviet purchasing agency in the U.S., and 6 of its officers were indicted by a federal grand jury for failure to register as foreign agents.

23 **René Mayer** resigned as premier of France after making a futile effort to reach agreement with the Socialists on a cabinet.

24 **44-day strike** of operating employees of Missouri Pacific lines ended after agreement to arbitrate unsettled union grievances was reached.

Permanent U.N. headquarters site in New York, N.Y., was dedicated; Pres. Truman was principal speaker.

Prime Minister Clement Attlee proposed cuts in food subsidies, national defense and health and other welfare services amounting to £250,000,000 to alleviate Britain's economic crisis.

25 **U.S.S.R.** requested Yugoslavia to recall its ambassador in Moscow on ground that he was engaged in espionage activities against the U.S.S.R.

26 **Pres. Truman** signed the Fair Labor Standards Amendments of 1949 which raised the legal minimum wage from 40 cents to 75 cents per hour and reduced coverage slightly.

27 **Asst. Secy. of State George V. Allen** was named U.S. ambassador to Yugoslavia by Pres. Truman.

Adm. Louis E. Denfeld was removed from his post as chief of naval operations by order of Pres. Truman.

1949 Nobel prize for medicine went to 2 brain specialists, Walter R. Hess of Switzerland and Antonio Egas Moniz of Portugal.

28 **Pres. Truman** signed bill providing pay increases and simplified compensation schedules for classified civil service employees.

National Labor Relations board ruled unanimously that the International Typographical union had violated closed-shop ban of Taft-Hartley act by trying to force employers to discriminate against nonunion workers.

Georges Bidault, Popular Republican leader, was elected premier of France.

29 **Chinese Communist authorities** were reported to have arrested Angus Ward, U.S. consul general, and 4 aides in Mukden, Manch.

Pres. Truman signed defense appropriation bill for fiscal year 1950 but ordered impounded the $615,000,000 appropriated to increase size of U.S. air force from 48 combat groups recommended in budget estimates to 58.

30 **Defense dept.** announced the removal of 77 vessels, including 35 combat ships, from active service for reasons of economy.

31 **Bethlehem Steel Co.** and the United Steelworkers of America signed an agreement providing for the continuation, with increased benefits, of the company-financed pension plan

OCTOBER—*Continued*

and for a jointly financed welfare plan.

NOVEMBER

1 **White House** announced the appointment of Vice-Adm. Forrest P. Sherman, commander of the 6th task fleet, as chief of naval operations.

National convention of the C.I.O. approved constitutional amendment barring Communists, fascists and members of other totalitarian groups from the C.I.O. executive board.

2 **Dutch and Indonesian leaders** signed a pact at The Hague providing for the unconditional and irrevocable transfer of sovereignty over Indonesia to the Republic of the United States of Indonesia.

United Electrical, Radio and Machine Workers of America and the United Farm Equipment and Metal Workers of America were expelled from the C.I.O. on the ground that they were Communist dominated.

3 **U.S. circuit court of appeals** in New York, N.Y., ordered release of the 11 convicted Communist leaders from jail on $260,000 bail, pending hearing of appeal.

Pres. Truman accepted the resignation of Karl T. Compton as chairman of the research and development board in the defense dept.

1949 Nobel prize for chemistry was awarded to William F. Giauque of the University of California, Berkeley; physics prize went to Hideki Yukawa of Kyoto university, Japan.

4 **Federal Republic of Germany** and the Saar were recommended for admission as associate members to the Council of Europe by the council's Committee of Ministers.

Pres. Truman approved the appointment of Ely E. Palmer to succeed Paul A. Porter as U.S. representative on the U.N. Conciliation Commission for Palestine.

U.S. dept. of commerce announced more stringent controls on export of strategic goods to forestall their reshipment to the U.S.S.R. and eastern Europe.

7 **Board of directors of General Motors Corp.** voted a record U.S. cash dividend of $190,232,055 to 436,005 stockholders.

U.S. supreme court ruled that Negro workers could sue railroads and railroad unions for alleged discrimination in employment.

Soviet Marshal Konstantin K. Rokossovsky was named minister of defense in the Polish cabinet and marshal of the Polish armies.

Economic Cooperation administration announced the lifting of suspension of Marshall plan aid to Indonesia.

8 **William O'Dwyer** was re-elected mayor of New York, N.Y., on the Democratic ticket; Herbert H. Lehman defeated John Foster Dulles in race for N.Y. seat in senate.

Republic Steel Corp., 3rd largest U.S. steel producer, signed pension and welfare agreement with United Steelworkers of America similar to that signed by Bethlehem Steel Co.

Elpidio Quirino was re-elected president of the Republic of the Philippines.

France and the Indo-Chinese kingdom of Cambodia signed a treaty in Paris confirming Cambodia's status as an independent state within the French union.

9 **John L. Lewis,** president of the United Mine Workers of America, ordered soft-coal miners to return to work without a contract until midnight Nov. 30.

Pres. Mariano Ospina Pérez declared a state of siege in Colombia in an effort to quell political disturbances.

10 **Secy. of the Interior Julius A. Krug** submitted his resignation to Pres. Truman.

Soviet Foreign Minister Andrei Y. Vishinsky asserted that atomic energy was being used in the U.S.S.R. to raze mountains and irrigate deserts and for other peaceful purposes.

Yugoslavia was excluded from all offices on the soviet-dominated Danube river control commission organized in Galati, Rum.

11 **Pres. Truman** promoted Undersecy. of the Interior Oscar L. Chapman of Colorado to post of secretary.

Nation-wide strike in the steel industry was virtually terminated by conclusion of pension and welfare agreement, similar to the Bethlehem agreement, between U.S. Steel Corp. and the United Steelworkers of America.

Foreign ministers of the U.S., Britain and France announced in Paris that they had instructed their high commissioners in Germany to give the Federal Republic of Germany wider discretion in internal affairs.

Maxwell M. Hamilton was named to succeed Maj. Gen. Frank R. McCoy as U.S. representative on Far Eastern commission.

12 **Yugoslavia** denounced its treaty of mutual aid and friendship with Albania.

Soviet Foreign Minister Andrei Y. Vishinsky told a U.N. committee that the U.S.S.R. would allow inspectors of the proposed atomic energy control agency to enter the U.S.S.R. for periodic checks.

13 **Prime Minister Antonio de Oliveira Salazar's** National Union party won all 120 seats in Portuguese national assembly elections.

14 **Eastern railroads** were awarded a 12.5% increase in passenger fares, 3rd postwar increase, by the Interstate Commerce commission.

Central committee of Polish Communist party expelled 3 onetime leaders, including Wladyslaw Gomulka, former vice-premier, on charges of nationalistic deviation from the Communist line.

15 **Chinese nationalist warship** blockading the port of Shanghai shelled and damaged a U.S. merchant ship leaving the port.

German Chancellor Konrad Adenauer announced that the U.S., Britain and France had decided that there should be no further dismantling of German plants for reparations.

Peking radio reported that the Communist regime had sent a message to U.N. officials challenging the right of the nationalist government to represent China in the U.N.

Herbert J. Burgman, former clerk in the U.S. embassy in Berlin, was convicted of committing 13 overt acts of treason against the U.S. in broadcasting German propaganda during World War II.

16 **Mohammed Riza Pahlavi,** shah of Iran, arrived in Washington, D.C., for visit to Pres. Truman and tour of the U.S.

House of commons approved amended bill for nationalization of the British steel industry which postponed the vesting date until Jan. 1, 1951.

17 **Burma and Pakistan** were admitted to membership in the Far Eastern commission.

Atomic Energy commission chairman David E. Lilienthal warned that recent atomic explosion in the U.S.S.R. made dispersion of U.S. government and industrial facilities more imperative.

18 **Vice-Pres. Alben W. Barkley** and Mrs. Carleton S. Hadley were married at St. Louis, Mo.

Grounding of all B-29s which had not undergone engine modernization was ordered by U.S. air force following crash of 4th B-29 in 3-day period.

U.N. general assembly approved resolution requesting member nations to halt arms shipments to Albania and Bulgaria until those countries ceased giving aid to Greek guerrillas.

North Atlantic council created a financial and economic committee to keep military planning in line with budgetary plans and economic goals of member nations.

19 **American Legion** demanded use of U.S. troops to compel release of U.S. consul general Angus Ward, held by Chinese Communists.

eraging $4 per ton to meet increases in production costs which included employee pension and welfare programs.

Agreement making Federal Republic of Germany a full participant in the European Recovery program was signed at Bonn.

International Court of Justice ruled that Albania must pay Britain £843,947 in damages for mining 2 British destroyers in the Corfu channel in 1946.

16 **Chinese Communist leader Mao Tse-tung** arrived in Moscow for consultations with soviet Premier Stalin.

Achmed Soekarno, president of the Indonesian republic since 1945, was elected president of the Republic of the U.S. of Indonesia by electors of the constituent states.

17 **State dept.** warned all U.S. shipping companies and ships at sea that Shanghai was a danger zone and extremely hazardous to shipping.

18 **Mohammed Hatta,** premier of the Indonesian republic, was appointed premier of the Republic of the U.S. of Indonesia by Pres. Achmed Soekarno.

19 **Defense dept.** announced that the U.S., Britain and Canada had agreed on a plan for standardizing all military weapons except the atomic bomb

Nazi Field Marshal Erich von Manstein was found guilty of war crimes by British military court and sentenced to 18 years' imprisonment.

Australian coalition cabinet headed by Robert Gordon Menzies replaced Labour cabinet headed by Joseph B. Chifley.

1949-50 edition of *Jane's Fighting Ships* published in London reported that the U.S.S.R. was attempting to build up a fleet of 1,000 submarines.

20 **U.N. Trusteeship council** voted to ask Israel to remove ministries and government departments recently transferred from Tel Aviv to Jerusalem and to explain its defiance of U.N. internationalization plan.

U.S. demanded the release of Robert A. Vogeler, a U.S. citizen held incommunicado by Hungarian authorities, and barred further travel in Hungary by U.S. citizens.

21 **70th birthday** of soviet Premier Stalin was marked by elaborate celebrations in the U.S.S.R. and in nations in the soviet sphere of influence.

Secy. of State Dean G. Acheson reported that substantially full agreement had been reached by the North Atlantic treaty nations on the weapons to be supplied them by the U.S. under the Mutual Defense Assistance Act of 1949.

22 **Japanese government** asserted that it was not bound by the Yalta pact and hence had legal claims to Okinawa, Iwo, the Bonin Islands and parts of the Kuriles and Sakhalin.

23 **State dept.** warned U.S. ship captains that they might forfeit their masters' licences by trying to run the Chinese nationalist blockade of Chinese ports.

Polish military court convicted 6 persons, including 4 French citizens, on charges of spying for the French intelligence service.

British foreign office announced suspension of trade negotiations with Hungary following latter's refusal to permit access to British subject under arrest in Budapest.

24 **Hungary** rejected U.S. demand for the release of Robert A. Vogeler, a U.S. businessman arrested on charges of alleged espionage and economic sabotage.

Yugoslavia and the U.S. signed agreement permitting U.S. civil aeroplanes to use Yugoslav fields and to fly over Yugoslavia en route to other countries.

25 **Argentine government** climaxed oppressive campaign against opposition newspapers by barring publication of a provincial paper opposed to the Juan D. Perón regime.

26 **Yugoslavia and Britain** signed a 5-year trade agreement providing for the exchange of goods valued at $616,000,000.

Egyptian government warned that it would take a positive attitude against any Arab state that threatened the independence of another Arab state.

Albert Einstein was reported to have evolved a generalized theory of gravitation interrelating all known physical phenomena into a single intellectual concept.

27 **Queen Juliana** of the Netherlands transferred sovereignty over Indonesia to the Republic of the U.S. of Indonesia in ceremony at Amsterdam.

28 **U.S. extended** *de jure* recognition to the Republic of the U.S. of Indonesia and Pres. Truman named H. Merle Cochran to be U.S. ambassador to the new nation.

Southern coal operators filed unfair labour practice charges against the United Mine Workers of America and requested National Labor Relations board to seek court injunction against 3-day work week.

French Premier Georges Bidault received votes of confidence of 305 to 287 and 306 to 288 from national assembly on 2 tax increase measures.

Hungarian government ordered the nationalization of all businesses still in private hands or financed by foreign capital, including many U.S. and British firms.

30 **Chinese Communist regime** was accorded recognition by India.

Northern and midwestern soft-coal operators filed unfair labour practice charges against the United Mine Workers of America.

State of Viêt-Nam in Indo-China was granted a large measure of internal sovereignty by France under terms of agreement signed in Saigon, Indo-China.

31 **Israel** rejected request by U.N. Trusteeship council for removal of Israeli government offices from Jerusalem.

Moscow announced that 12 former Japanese army officers had been sentenced by soviet military court in Siberia on charges of engaging in bacterial warfare during World War II.

Gen. Douglas MacArthur told Japanese people in annual New Year's message that they had not renounced their inalienable right of self-defense against unprovoked attack.

BOOK OF THE YEAR

Abdullah ibn Hussein (1882–), king of the Hashemite Kingdom of Jordan, was born in Mecca, the second son of King Hussein of Hejaz. He joined his father in exile in Istanbul in 1893 and was a member of the Ottoman parliament. His father's unauthorized assumption of the title of "King of the Arab Countries" was not viewed with favour by Ibn Sa'ud, king of Nejd, and the estrangement between the two rulers resulted in a territorial dispute on the Hejaz-Nejd border. In May 1919 the Hejaz forces under Abdullah were annihilated by Ibn-Sa'ud's army. In March 1921, when Trans-Jordan was separated from Palestine, Abdullah was offered the rule of the new country as emir under British mandate. On May 25, 1946, he was crowned sovereign king of the Hashemite Kingdom of Trans-Jordan. In the summer of 1948, King Abdullah declared war against the state of Israel, but his British-trained army failed to justify its reputation.

On Aug. 7, 1949, at the conclusion of a 12-day visit by King Abdullah to Iran, it was announced that the two countries had signed an agreement providing for collaboration in international problems. Shortly afterward, while on a visit to Great Britain, Abdullah declared to the correspondent of the Cairo newspaper *El Misri* that the creation of a Greater Syria, uniting Syria, Iraq, Jordan and Arab Palestine under a Hashemite king, was an obvious necessity. On Sept. 5 he visited Spain for ten days.

Abyssinia: *see* ETHIOPIA.

Academy of Arts and Letters, American: *see* SOCIETIES AND ASSOCIATIONS.

Academy of Political and Social Science, American: *see* SOCIETIES AND ASSOCIATIONS.

Accident Insurance: *see* INSURANCE.

Accidents. Accidents caused 98,000 deaths in the United States in 1948. This total was exceeded only by deaths from heart disease, cancer and cerebral haemorrhage. Information available through Oct. 1949 indicated that the 1949 accidental death total would probably drop 5% below that of 1948. In addition to the deaths, accidents in 1948 also caused about 10,000,000 nonfatal injuries.

Organized efforts to reduce accidents in the United States are spearheaded by the National Safety council and affiliated local safety councils throughout the nation. Safety work is constantly carried on by industries and by a large number of organizations, both governmental and private, operating in their various spheres of activity, such as industry, traffic, the school, the home, the farm, etc.

Serving as a place for group planning and execution by all who take part in the safety movement, the National Safety council attempts to discover the facts of accident occurrence, to devise or help devise engineering, educational and enforcement measures for prevention; assists in determining engineering requirements for the safe design, construction and use of machines and equipment; helps formulate model safety legislation; participates in planning and executing training and educational programs; disseminates this information widely to interested groups and to the general public; and encourages and assists the establishment and functioning of community and state safety organizations.

Industrial Safety.—Building on approximately 40 years of experience in preventing work accidents, the country's progressive industries continued to pursue thoroughgoing safety measures in 1949, recognizing accident prevention as an important element in efficient operation.

Trade associations and other employer groups emphasized accident prevention programs in their meetings and publications. Labour organizations recognized accident prevention efforts as an important element in serving their members. Governmental agencies, such as state and national labour departments, also carried on safety programs as important parts of their operations.

Look BOTH WAYS BEFORE CROSSING
PLAY AWAY FROM TRAFFIC
Look!

PRIZE WINNERS in the 1949 National Traffic Safety poster contest sponsored by the American Automobile association and open to elementary and high school students throughout the U.S.

An industrial safety highlight of 1949 was the president's conference on industrial safety in March, at which 1,500 representatives of management, labour, government and the public met in Washington, D.C., to consider committee reports and develop plans for the reduction of the industrial accident toll.

It appeared, late in 1949, that the year's toll of occupational accident fatalities might be reduced by as much as 6% from the 1948 toll of 16,500.

Traffic Safety.—As the year 1949 drew to a close, it appeared that the number of traffic accident deaths might drop 500 below the 1948 figure of 32,000. This apparent reduction was in the face of an approximate 6% increase in motor vehicle travel.

Various professional, industrial, insurance and other groups continued in 1949 their programs of education, enforcement and engineering in the traffic safety field.

In June 1949 the president's highway safety conference met for the third time in Washington, with about 3,000 of the nation's traffic safety leaders in attendance. Committee reports from previous conferences were brought up to date, and plans made for a more intensive application of the action program, as agreed on at previous meetings of this conference.

In the 1948 National Traffic Safety contest, which takes account of good traffic safety records, as well as sound programs in all phases of traffic safety, Massachusetts received the grand award among states, and Washington, D.C., among cities. Massachusetts also received top place among states in the 1948 Pedestrian Protection contest; Washington, D.C., was the winner in cities of more than 50,000 population; and Peru, Ind., among cities of less than 50,000. Awards for outstanding performance in traffic law enforcement in 1948 were granted, among the states, to Connecticut, Pennsylvania, Oklahoma, Texas, Minnesota and Colorado. City winners, in various population groups, were: Washington, D.C.; Portland, Ore.; Grand Rapids, Mich.; Pasadena, Calif.; Plainfield, N.J.; and Longview, Wash.

Farm Safety.—In 1949, 23 states had State Farm Safety committees, and 11 states had a full-time farm safety specialist, working through many public and private agencies to spread information on the seriousness of the farm accident problem, and ways and means of meeting it.

The president of the United States, for the sixth successive year, proclaimed a National Farm Safety week, in July 1949, which brought attention to the problem of rural accidents. More than 1,100,000 pieces of educational material were distributed, and radio, newspaper and magazine support was outstanding.

School and Child Safety.—Among children 1 to 14 years of age accidents are responsible for more deaths than the next six death causes combined. Even so, the accidental death rate among children under 14 had dropped about 40% in the last 40 years.

School authorities showed increasing recognition during 1949 of the importance of safety education, in the classroom, in shops and in other parts of the school program.

A specialized feature of school safety work had been the driver training programs instituted in many high schools throughout the nation. Studies had shown that students who had had this training were involved in fewer accidents than those who had not.

Home Safety.—The 1948 toll of deaths in home accidents was 35,000, which was greater than in any other type of accident. Ten months' reports for 1949 indicated that home fatalities would again lead the list, although a reduction of about 6% from 1948 appeared likely.

Activity in home safety during 1949 consisted in large part of improved and expanded safety education of people generally, both through the general media of public information and through specific instructional material. In the latter field, a special kit of home safety materials was produced and made available for use in many communities.

Local and state health departments gave increased attention to accident prevention work, concentrating on home safety. Women's clubs and other organizations and agencies attracting the support and interest of homemakers showed an increasing tendency to include safety in the home as a regular program activity.

Community and State Safety Organizations.—Community and state safety organizations served in their respective areas to provide leadership in a co-operative effort among all groups and individuals working together for the conduct of safety activities. Control of accidents in any community involves the joint efforts of traffic enforcement and engineering authorities, public information media of various kinds, industry, labour, service groups and many others. It is the function of the local safety council to harmonize and co-ordinate these and other safety activities.

During 1949 about 50 out of the several hundred local and state safety organizations throughout the country qualified for acceptance as chapters of the National Safety council, this relationship signifying that these organizations fully represented the National Safety council in the communities in which they operated, at the same time retaining their own autonomy.

Safety Meetings.—The 37th National Safety congress was held in Chicago, Ill., in Oct. 1949 with an attendance of approximately 10,000. In addition, about 30 regional safety conferences were held during the year. These meetings brought about an exchange of information, plans and programs among leaders in all fields of safety. (R. L. Fo.)

Canada.—Provincial highway accident trends and safety measures of 1949 included: Quebec—a superior court ruling made it clear that a green light gave a permissive right, not an absolute right, to proceed; new legislation suspended for three months the licences of guilty accident-involved or drunken or reckless drivers; the government issued simplified forms to facilitate compulsory accident reports; Ontario—although extended daylight-saving time gave longer daylight driving hours during the autumn months, and although the highways department conducted a vigorous educational campaign, traffic deaths were up 17% for the first ten months of 1949 (1948: 574; 1949: 671); 83.3% of highway fatalities were being caused by drivers 18 to 24 years old; Saskatchewan—tests on the province's first portable safety lane revealed that 80% of the province's cars were unsafe; British Columbia—compulsory driving tests every five years for all motorists were inaugurated.

Canada's industrial accident fatalities during the first half of 1949 stood at 518, with transportation, manufacturing and logging persisting as the most contributory industries.

Following the S.S. "Noronic" fire disaster, federal transport authorities examined shipping laws to see if they could be amended to promote greater safety in Canadian waters, but no action was taken by the end of the year. (C. Cy.)

Great Britain.—*Road Safety.*—The principal road safety activity during 1949 was the organization of a National Pedestrian Crossing week from April 3 to 9, the aim being to focus the attention of all classes of road users on proper observance and use of crossings. Local authorities were asked by the ministry of transport to co-operate, and 1,100 of them did so.

The National Safety congress was held in London from Oct. 4 to 7 and was attended by 1,000 local authority delegates; a conference of road safety organizers from all over the country was also held in Harrogate, Yorkshire, during May.

Two hundred thousand drivers entered the National Safe Driving competition of the Royal Society for the Prevention of Accidents.

Industrial Accident Prevention.—A National Industrial Safety conference held in Scarborough, Yorkshire, in May was attended by 450 industrial delegates. Regional industrial safety conferences were held in many provincial towns. Firms in Sheffield, Rotherham, Barnsley, Doncaster and Chesterfield, covering about 200,000 workers, co-operated in a Good Housekeeping week to draw attention to accidents due to untidiness in work.

The chief inspector of factories' report for 1947 was published early in 1949. It showed that more than 83% of all injuries reported were due to causes other than machinery.

The ministry of education published a pamphlet, *Safety Precautions in Schools,* explaining ways in which risks could be avoided in physical education, the laboratory, manual and handicraft work.

Home Accident Prevention.—During the year the registrar general's review for 1946 was issued and revealed that 7,883 deaths occurred in the home and everyday pursuits, a slight decrease from previous years. The campaign against home accidents was intensified by a grant made to the Royal Society for the Prevention of Accidents by the home office for the provision of lectures, posters and leaflets for this purpose. (*See* also Death Statistics; Disasters; Industrial Health.)

Films of 1949.—*The Safest Way* (American Automobile Association); *Wheel Sense* (Association Films); *You're Driving 90 Horses* (Bell Telephone). (H. I. S.)

Acheson, Dean Gooderham (1893–), U.S. secretary of state, was born on April 11 in Middletown, Conn., attended the Groton school, was graduated from Yale in 1915 and from Harvard law school in 1918. After serving in the navy in World War I he was for two years private secretary to Louis Brandeis, associate justice of the U.S. supreme court. He then engaged in law practice, and in 1933 served for six months as undersecretary of the treasury. In 1941 he became assistant secretary of state and was undersecretary of state from Aug. 16, 1945, to June 30, 1947. He was chairman of the commission of the secretary of state that wrote the Acheson-Lilienthal report on international control of atomic energy. On Jan. 7, 1949, Pres. Harry S. Truman appointed him secretary of state to succeed George C. Marshall, who resigned. Acheson was sworn in on Jan. 21.

He strongly supported the entry of the United States into the North Atlantic alliance. He was vice-chairman of the (Hoover) Commission on Organization of the Executive Branch of the Government, and put some of its proposals into effect in the state department. He attended the meeting of the Big Four foreign ministers which took place in Paris, May 23 to June 20, and which came to several agreements concerning Germany and Austria, among them one confirming the ending of the Russian blockade of Berlin. Acheson supported President Truman's program for supplying military aid to nations combating communism. He reviewed U.S. foreign policy in an address before the United Nations general assembly Sept. 21 in which he said "a small group," meaning the soviet satellites, was causing unrest and that Russia was blocking effective U.N. control of atomic energy and disarmament.

Aden. British colony and protectorates on the southern coast of Arabia (*q.v.*). Colony area: 80 sq.mi. Pop. (1948 est.) 81,000. Protectorate area: *c.* 112,000 sq.mi. Pop. (1948 est.) 650,000, almost entirely Moslem Arabs. Governor: Sir Reginald S. Champion.

History.—Kamaran Island (22 sq.mi.) in the Red sea, administered by the government of India after capture from the Turks in 1915, was placed under the personal supervision of the governor of Aden. Rising costs necessitated the revision in 1949 of the colony's development plan; the revised plan envisaged a total expenditure of £1,063,000 from the colony's surplus balances, £300,000 from colonial development and welfare funds, and £660,000 to be raised by loan. A serious famine, which threatened the eastern protectorate in the spring, was in part relieved by supplies flown in by the royal air force.

Finance.—Currency: the Indian rupee (21 U.S. cents after devaluation in Sept. 1949). Colony's budget (1947–48): revenue Rs. 12,112,421; expenditure Rs. 9,880,631. (Jo. A. Hn.)

Adenauer, Konrad (1876–), German government official, was born at Cologne, Jan. 5. Following a university education at Freiburg-in-Breisgau, Munich and Bonn, and three years as a lawyer, he was in 1906 elected town councillor in his native city. Eleven years later he was elected *Oberbuergermeister* (lord mayor) of Cologne, an office which he held uninterruptedly for 16 years. From 1917 to 1933 he was a member of the Prussian *landtag* and in 1928–33 was its speaker. In June 1934 he was arrested and imprisoned for a short time in connection with the Röhm purge; and following the assassination attempt against Hitler on July 20, 1944, he was sent to Brauweiler concentration camp but was later released. In Feb. 1946 he was elected chairman of the Christian Democratic union in North Rhine-Westphalia, and on Sept. 1, 1948, was elected president of the parliamentary council drafting the west German constitution or basic law. On Sept. 15, 1949, after the elections to the *bundestag* (federal diet) of the new west German republic had given the C.D.U. the largest number of seats, Adenauer was appointed chancellor.

Advertising.

In 1949, a year during which total advertising expenditures continued to increase, the most outstanding development was the swift growth of television and the successful application of advertising techniques to the new medium. The year was also marked by advertising that was more strongly competitive in its presentations, as supply began to meet demand in additional fields of commercial activity.

The rate of increase in advertising expenditures was not so great as in previous postwar years, standing at approximately 2.9%. The most important single gain was made by newspaper advertising.

The $5,400,000,000 spent in 1949 in all media was divided as shown in Table I.

Table I.—*Advertising Expenditures in the United States*
(Millions of Dollars)

	1949*	1948
Newspapers	$1,763.1	$1,749.6
Radio	612.8	596.9
Magazines	491.6	512.7
Direct mail	632.0	574.5
Trade and business papers	227.8	230.1
Outdoor	130.8	132.1
Television	60.5	—†
Farm papers	19.7	20.4
Miscellaneous	1,030.7	1,014.4
Total	$4,969.0	$4,830.7

*Preliminary estimates by Hans Zeisel, McCann-Erickson, Inc.
†No estimate for 1948.

In a study published in Sept. 1949, the National Industrial Conference board stated that advertising costs were slightly lower than in the 1935–39 period. The report estimated that the cost of a page for each 1,000 circulation of magazines was 6.5% below the 1935–39 average, the milline rate of newspapers was down 3.8%, and radio time for each thousand radio homes was 18.9% lower. Farm publication costs, on the other hand, were up 8.4%.

Problems facing advertising in 1950, as stated by various leaders, included the following: How to encourage adequate use of advertising to sell the vast volume of goods and services the economy was capable of producing; how to achieve better integration of advertising with merchandising and sales programs; how to improve measurements of advertising effectiveness; how to secure better public relations through advertising; how to set advertising appropriations and to budget more scientifically.

Both the Association of National Advertisers and the National Industrial Advertisers association were studying appropriations. The A.N.A. published an extensive bibliography on the subject, and the N.I.A.A. studied practices among 2,000 of its advertiser members. The latter survey, when completed, would list budgets by types of product for 1949, 1948 and 1939, state how appropriations were determined and how budgeted for expenditures in various media.

Two new products were introduced during the year, ammoniated dentifrices and antihistamine cold remedies, that resulted in large-space and competitive advertising. During the year the automobile manufacturers moved toward a buyer's market, with the result that their advertising increased and often featured price cuts. In Nov. 1949 the advertising of new passenger cars in newspapers, for instance, was 239% higher than in Nov. 1948.

The year 1949 closed with fair optimism among advertisers. They had passed through the recession of the spring and early summer successfully, and felt that 1950 would be a good year. The Research Institute of America found in a poll of 30,000 member firms that one-third planned to increase advertising appropriations in 1950, less than 7% to reduce them. The A.N.A. annual survey of its members did not indicate that there would be much increase in spending in 1950.

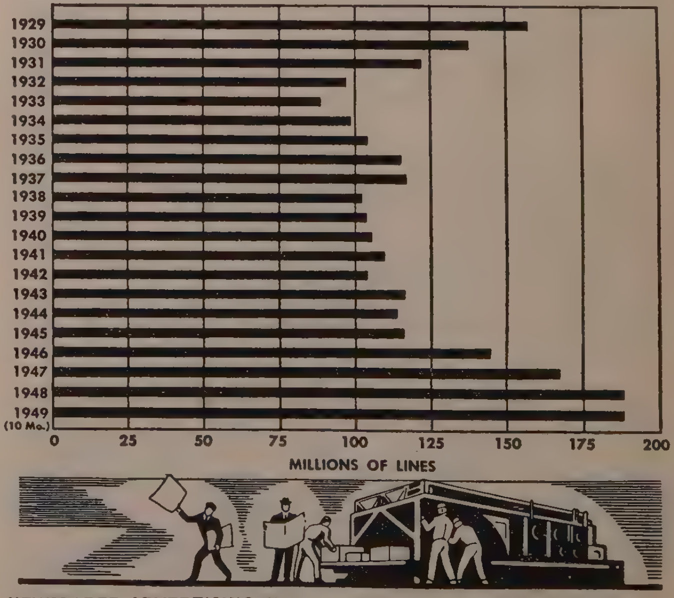
Newspapers.—Newspaper linage was approximately 2% higher in 1949 than in the year before. Media Records reported 2,094,103,004 lines for the first 11 months of the year, a gain of 1.7% over the first 11 months of 1948. The rate of increase in December was faster, so that it was expected the year would end with a gain of about 2% or more. There were continued rate increases, but it was felt that rates were reaching a plateau of some stability.

National newspaper advertising (excluding local retail advertising) fared better, being 15.9% higher during the 11-months' period than for the like months of 1948. The largest gains were made by alcoholic beverages, up 29.8%; dentifrices, up 53.7%; new passenger cars, up 83.0%. Alcoholic beverages and new passenger cars together accounted for 22.8% of all national newspaper linage during the first 11 months. Advertising of the antihistamine cold remedies was reflected in a rise of 30.3% for medical advertising in November.

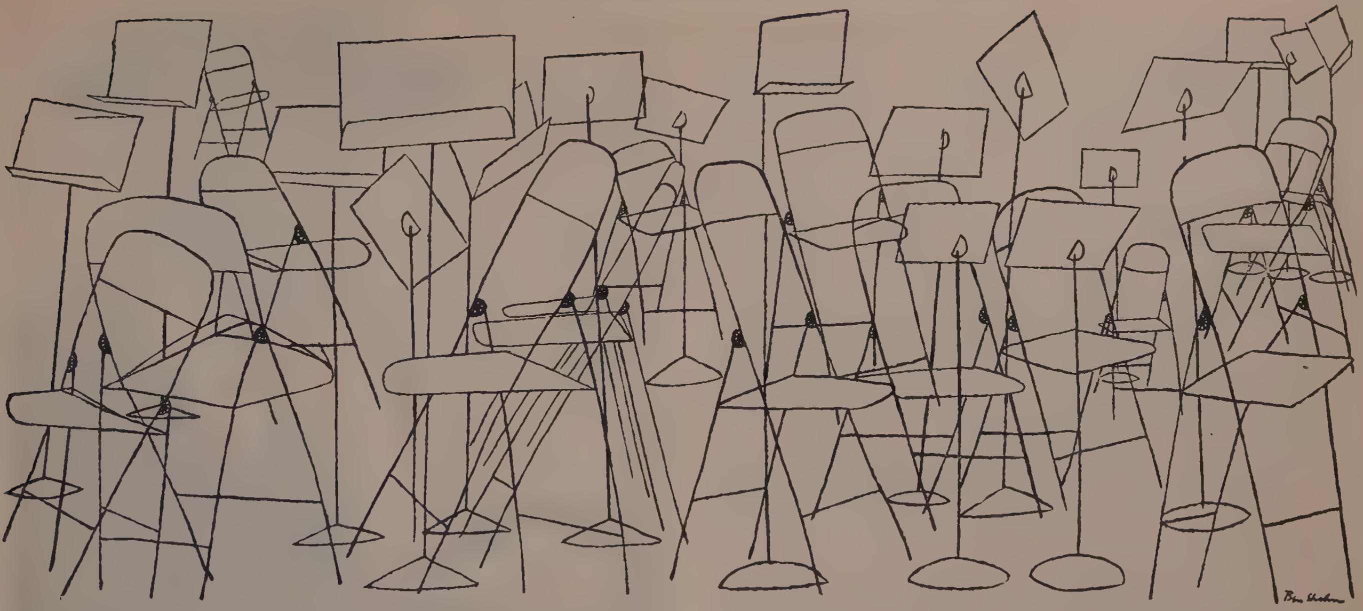
There were some important casualties among newspapers during the period. The *New York Sun* ended a career of 116 years when it was sold early in Jan. 1950 to the *New York World-Telegram*. The publisher of the *Sun* stated that the move was caused by failure of advertising revenue to keep up with rising costs of labour and newsprint. Newspaper linage figures developed by Media Records showed that whereas in 1939 the *Sun* accounted for 10.3% of all New York city newspaper linage, by 1949 that figure had dropped to 5.4%.

The *New York Star*, successor to *PM*, suspended publication in the year; its mechanical equipment was bought by a publisher who began to issue a new tabloid, the *New York Daily Compass*. The American Newspaper Advertising Network, an organization designed to sell newspaper advertising space in groups of newspapers, ended its four-year career in 1949.

Magazines.—The Magazine Advertising bureau estimated that advertising expenditures in national magazines for the first six months of 1949 were at the annual rate of $450,000,000, compared with $463,000,000 for the like period of 1948, a decrease of 2.8%. During the same period of 1949, circulation of 242 magazines stood at 142,500,000, compared with 141,100,000 for 238 magazines in the like period of 1948. Circulation of 95.8 copies per 100 persons compared with 96.6 for the first half of 1948. The reasons ascribed by the bureau for the high circulation were editorial improvements that had occurred in the past decade, an increase in the number of high school graduates in the population, and the large growth in the number of



NEWSPAPER ADVERTISING (total linage in 52 cities of the United States): average per month. Compiled by Media Records, Inc.



"NO VOICE IS HEARD NOW . . ." by Ben Shahn, an advertisement for the Columbia Broadcasting System, Inc. This drawing was exhibited at the Museum of Modern Art as part of the 1949 Art Directors club annual exhibit

consuming units in the upper-income brackets.

A breakdown of magazine newsstand outlets was also reported by the bureau. It showed that seven out of eight were retail stores. Of 99,238 outlets surveyed, 39.5% were drugstores, 23.0% confectionery stores and 14.0% groceries and delicatessens. Only 7.4% of the outlets were newsstands.

In a report on paper prices, the National Association of Magazine Publishers stated that paper costs in 1949 took one out of every four dollars the publisher spent, compared with one out of five spent 10 years before. The association stated that the profit margin of the average publisher had dropped from 6.7% in 1935–39 to 4.9%, and was still declining.

There was some mortality among magazines, just as among newspapers. *Sports Illustrated* began publication in January and discontinued six months later. B. C. Forbes' bimonthly *Nation's Heritage*, whose subscription price was $150 a year, ceased publication in December. McGraw-Hill publishing company discontinued its *Science Illustrated*. Publishers of *Look* magazine, on the other hand, put out a flourishing and small-sized weekly, *Quick*, and announced publication in 1950 of *Flair*, a monthly. (*See* also Newspapers and Magazines.)

Radio.—The National Association of Broadcasters estimated that gross income of the radio industry was up 4.5% from 1948, but that this gain was almost matched by a rise of about 4% in operating expenses. It predicted a gross income of $435,279,000 in 1949, as compared with $416,720,279 in 1948. The gross income stated was that received by stations and networks before deduction of agency commissions and after trade discounts. National network income at $129,300,000 was off 3.3%; national spot business at $118,425,000 was up 13.0%; local retail income at $180,025,000 was up 5.3%.

The year in radio was marked by competition among the networks for major advertising accounts, a competition that resulted in several switches of popular programs. The year was also noteworthy for the decline in popularity of the type of program marked by contests in which large amounts of merchandise or cash were given as prizes. The Federal Communications commission (*q.v.*) announced in the year that it intended to ban such "giveaway" programs, but was temporarily restrained by a court order obtained by a producer of syndicated radio shows.

The National Broadcasting company stressed the importance of the radio audience not in the home of the listener. It cited surveys to show that most radio listening outside the home is done in automobiles, or while the listener is at work or while he is visiting in other homes. It was estimated that as much as 12%, or some 27 minutes, of a total day's listening was outside the home. The surveys showed that listening to radio had become a personal rather than a family habit, and the company cited one survey to show that in 1949 98.6% of all homes owned radios, 54.3% with one set, 33.3% with two sets and 12.4% with three or more. (*See* also Radio.)

Television.—Television was the most exciting advertising medium during 1949, and data on its growth became inaccurate almost as soon as published. The number of television stations jumped during the year from 50 to nearly 100, the number of owners of sets from 1,000,000 to about 3,500,000, the television audience from about 4,000,000 to more than 14,000,000, the number of television advertisers from 1,000 to 2,000.

It was estimated that approximately $20,000,000 was invested in television time sales by advertisers during the year. As advertising increased, time costs approximately doubled, in New York going from an average of $1,000 an evening hour in January to $2,000 in December. In respect to television advertising rates, a study by The Broadcast Advertising bureau found little uniformity in the method of allowing agency commissions, some stations paying on time charges only, others on time plus other charges as for studio facilities, production and so on, and some making no intelligible statement.

The effect of television on other advertising media, especially radio, was debated at length during the year. The general conclusion was that television would take its place as one of the major advertising media, but that it would complement rather than displace newspapers, magazines, radio and outdoor advertising.

It was also suggested during the year that television was taking the cream off the advertising markets, concentrating in large cities and neglecting rural areas. One conclusion was that rural areas might loom larger in importance to radio. Television costs remained high; it was estimated that the cost of building a station was $400,000 and the cost of operating it $200,000 a year. The cost of television was also high for advertisers. Advertising agencies experimented widely with television, although it was said in agency circles that only one of them did so at a profit.

There were many surveys on the penetration and effectiveness of television. Daniel Starch and staff inaugurated a television commercial rating service somewhat similar to its publication advertising readership service. One of its first reports indicated that in television integrated commercials were most effective and demonstration relatively ineffective. Basing percentages on viewers who would buy the brand advertised, the integrated commercial was rated at 80%, the dramatic at 72%, cartoon and stop-motion at 63%, demonstration at 25% and service (time and weather reports) at 14%. (*See* also TELEVISION.)

Other Media.—Advertising expenditures in outdoor advertising amounted to approximately $78,000,000, according to Outdoor Advertising Inc. This was approximately the same as for 1948. Major advertisers in the medium were classified as follows: automotive, 38% of dollar volume; beverages, 29%; food, 19%; other products, 14%.

Advertising revenue of the 41 farm publications measured by Farm Publication Reports, Inc., for the first half of 1949 was $25,044,181, compared with $23,557,027 for the same period of 1948.

The outstanding trend in direct mail advertising was said to be the increasing use of metered mail. Tests on cost per order or inquiry showed that third-class meter stamps were most effective, followed by first-class meter stamps, first-class adhesive stamps, third-class printed postal permit, third-class adhesive stamps and third-class precancelled stamps.

The volume of advertising in business papers in 1949 was estimated at $215,000,000, compared with $200,500,000 in the previous year. The year was marked by a controversy between publications with paid circulations and those with controlled circulations (50% or more free). The latter contended that their circulations should be certified by the Audit Bureau of Circulations as were those of the publications with paid circulations. The papers with paid circulations opposed such a claim. Many business magazines with controlled circulations resigned from the Associated Business Publications because of the controversy.

The year saw an increase in the use of premiums in advertising, and one estimate put their value at $1,000,000,000, or double the prewar peak. Coupons redeemable in merchandise reappeared on the package of one of the largest-selling brands of cigarettes. Door-to-door selling also increased, an indication of greater competition in selling. The amount of merchandise moved by this kind of selling was estimated at about $7,000,000,000.

British Advertising.—It was estimated that British advertisers in the United States spent about $29,000,000 in U.S. media in 1948 and that the expenditure would be even greater in 1949. Approximately half this amount was spent by Lever Brothers company and Lipton.

The 17th annual Advertising conference held in England was attended by 600 persons. The theme of the conference was "The Task of Advertising in Creating National Prosperity." Delegates indicated a realization of the expanded scope of advertising and a willingness to discuss media research.

The impact of the new large space in press advertising brought an early trend toward artwork and layouts featuring bright-eyed young women and apparently influenced by American advertising. Later the editorial techniques used in newspapers began to be adopted in greater measures by advertisers, and in addition some newspapers showed willingness to make available to advertisers special positions.

Despite the postponement of the census of distribution, the whole question of distribution costs was receiving more attention. This attention was stimulated by the report of the Committee on Resale Price Maintenance. Incentive to study costs came from manufacturers, the government and from the agitation of left-wing elements which were attacking the advertised brand method of distribution as a vulnerable aspect of capitalism.

ADVERTISEMENT for The Watchmakers of Switzerland published in *Advertising Agency* magazine as one of the 50 best of 1949 on the basis of layout, art and typography

Afghanistan. An independent kingdom in the centre of Asia, Afghanistan is bounded to the N. by the U.S.S.R., to the W. by Iran, to the S. and S.E. by Pakistan and to the E. by China (Sinkiang). Area: *c.* 270,000 sq.mi. Pop. (1948 est.): 12,000,000. Religion: Moslem. Languages: Pashtu and Persian. Chief towns (pop. 1946 est.): Kabul (cap. 206,200); Kandahar (77,200); Herat (75,600); Mazar-i-Sharif (41,900). King, Mohammed Zahir Shah; prime minister, Sardar Shah Mahmud.

History.—The cold war between Afghanistan and Pakistan continued during 1949. Political circles in Kabul and the Afghan government insisted that Pakistan should constitute the North West Frontier province as an independent Pathan republic, or at least allow the Pathans of the tribal areas on the Pakistan side of the Durand line to opt for Kabul. The British government categorically refused the Afghan request that it should intervene. The press and wireless of Kabul continued to pour out propaganda against Pakistan. The Pakistan government refrained from reprisals and trade between the two countries went on as before; in fact economic co-operation was offered.

The country was in the grip of an economic crisis. The Persian lamb trade, a vital element in Afghan finance, was languishing; Indian import duties paralyzed the export of fruit. A U.S. firm had been carrying out important work on roads, bridges and irrigation dams for two or three years. Work was later held up because of dwindling Afghan credit, but was to be resumed on the strength of a $21,000,000 loan granted by the Export-Import Bank of Washington on Nov. 24. (W. Bn.)

Education.—(1948 est.) Primary schools 400, secondary schools 25, higher schools (*lycées*) 7, and a university at Kabul.

Finance.—The monetary unit is the *afghani*, which under exchange rates existing in Nov. 1949 was worth 5.96 cents U.S.

Transport and Communications.—There are eight main roads totalling 2,265 mi. Licensed motor vehicles (Dec. 1948): cars 770, commercial vehicles 2,070. There are no railways.

Agricultural and Industrial Chemistry, Bureau of: *see* Agricultural Research Administration.

Agricultural Research Administration.

The Agricultural Research administration, established in 1941, directs and co-ordinates most of the scientific research in the U.S. department of agriculture. The administration comprises seven research agencies. It also operates a 12,000-ac. research centre at Beltsville, Md., and administers the Research and Marketing act. Close co-operation is maintained with the state agricultural experiment stations and other research organizations.

Some examples of the results of ARA research in 1949 follow:

Gelsoy, a versatile new protein product obtained from soybeans, was developed at the northern regional research laboratory, one of the four large regional laboratories operated by the bureau of agricultural and industrial chemistry. This product was developed by spray drying the water extract of alcohol-washed soybean flakes from which the oil had been recovered with hexane. Gelsoy, the first gelable vegetable-protein material discovered, promised usefulness as a remoistening glue, cork line sealer in metal bottle caps, foaming agent, and in food products such as ice creams, gelled foods and meringues.

A red-green dye technique developed at the southern laboratory to distinguish between mature and immature cotton attracted world-wide interest. Brokers used the test to aid them in channelling cottons into uses for which they were best suited, thus forestalling processing difficulties at cotton mills. The mills employed the test to check the uniformity of blends of immature cotton fibre and to detect bales containing too many thin-walled fibres, which might cause "neppiness" or spottiness in yarns and fabrics. The differential-dyeing technique was also adopted by cotton breeders for variety-development work.

Allyl starch, a product of the eastern laboratory, was further improved as a base material for protective coatings, printing inks, linoleum and other plastic compositions. The laboratory found that a better product could be obtained by copolymerizing allyl starch with styrene, a chemical used in the manufacture of synthetic rubber. This development increases the resistance of allyl-starch coatings to certain solvents, alkalies and boiling water and was expected to enhance the usefulness of allyl starch and to facilitate its further commercialization.

Studies at the western laboratory to improve methods of processing fruits and vegetables showed that indirect immersion freezing is a safe as well as a speedy and economical method of food preservation. This process is several times as fast as conventional air-blast package freezing and appreciably faster than the more expensive plate-freezing method. In indirect immersion freezing, food products are packed in hermetically sealed containers and then immersed in a refrigerated liquid until frozen.

In the bureau of animal industry's co-operation with the Mexican government to eradicate foot-and-mouth disease in Mexico, vaccination of uninfected animals was undertaken to help starve out the virus. The first round of vaccinations within the quarantine zone was completed in July 1949, and additional vaccinations were started immediately. The first vaccination covered more than 13,000,000 cattle, sheep and goats. Although susceptible animals had contracted foot-and-mouth disease after one vaccination, there was no record in 1949 of such an infection after the second or third vaccination with currently available vaccines.

Through the bovine brucellosis control program, 469 counties in 21 states had been accredited as brucellosis-free, with less than 1% of cattle infected.

Breeding work with cattle, hogs, sheep and chickens showed that crossbreds have better qualities for efficient production than purebreds. Tests with beef cattle indicated that offspring would largely inherit the sire's rate and efficiency of weight gain while on feed. With this knowledge, cattle producers could predict the future performance of their herds from records made by the herd sire before breeding age.

A new-type, high-temperature, short-time milk heater was developed by the bureau of dairy industry and used successfully in the laboratory to improve certain characteristics of both evaporated milk and sweetened condensed milk. When the milk is forewarmed at a higher temperature for a shorter time than is usually done, the canned product is better able to withstand the heat of sterilization and, therefore, stabilizing salts can be omitted or reduced in amount. A similar treatment for sweetened condensed milk retards thickening of the product during storage. Commercial companies were making plans to manufacture this heater.

Experiments showed that a five-year crop-and-pasture rotation would yield more roughage and total digestible nutrients than permanent pastures. In the rotation, corn was grown for silage the first year, wheat the second year, followed by three years of pasture and hay crops. The five-year average for the rotation system was 11% higher than the average for the permanent pasture.

Milk composition studies showed milk and nonfat milk products to be rich sources of the newly discovered vitamin B_{12}. Other laboratory research resulted in improvement in quality of American cheddar cheese, application of the phosphatase test to goat's milk to determine the adequacy of pasteurization, two new tests for determining lipolytic activity in milk and improvement in keeping quality of dried milk by packaging it with carbon dioxide. Methods were developed for utilizing sweet-cream buttermilk in the manufacture of ice cream and for the use of whey in sherbets.

Culminating 15 years of intensive studies, pyrethrinlike esters almost identical to portions of the insect-killing principle in pyrethrum were produced in the chemical laboratory of the bureau of entomology and plant quarantine. One compound was as toxic to houseflies as the natural ingredient derived from pyrethrum flowers. It has the same desirable knock-down action and remains stable in storage for longer periods. It was thought that this might prove to be the first step in the development of a synthetic substitute for the imported plant material, so important in the control of certain kinds of insect pests.

A practical method of treating cotton bags with chemicals to make them insect-repellent was developed co-operatively by the bureaus of entomology and plant quarantine and agricultural and industrial chemistry. Pyrethrins, or a mixture of pyrethrins and piperonyl butoxide, were applied to warp yarns during the usual sizing treatment preparatory to weaving. Treated bags were found to protect cereal products for seven months or more. It was thought that this new treatment might prove of great value in conserving flour and other cereal products, especially in warm countries.

Farmers and dairymen were advised in the spring of 1949 not to use DDT for insect control on dairy cows or in dairy barns. Studies showed that small quantities of DDT appear in milk of cows treated with this insecticide. Sometimes DDT can be detected in milk following its ordinary use in dairy barns for fly control. Methoxychlor and pyrethrum insecticides were recommended for use on dairy cows and lindane for use in dairy barns and milk rooms.

A two-year study of the breakfast meal, with adult women as subjects, was completed by the bureau of human nutrition and home economics. An important observation in this study was that a sense of well-being was consistently reported following the breakfasts that provided the larger quantities of protein-rich foods. The study also showed that a high-protein lunch will not take the place of a low-protein breakfast in promoting the sense of well-being during the afternoon.

Facts and figures showing what city families were eating were published in a series of reports of a nation-wide study begun in 1948. This study is showing the influence of geographic location, season of the year, income and family size on household use of food. It provides marketing facts of value to farmers, food processors and tradesmen and nutrition information of value to home economists and social workers.

New crop plants released by the bureau of plant industry, soils and agricultural engineering included, among others, three new varieties of Chinese chestnuts, new tung nut varieties, new disease-resistant beans, a new head lettuce named Progress, for the east, and a new yellow tomato named Sunray. Other developments in the fruit and vegetable field were refinements in the use of 2,4-D to prevent preharvest drop of apples; better control of peach mosaic; more knowledge about nitrogen fertilization of apple and peach orchards and about chemically induced tetraploid forms used in peach breeding; and progress in study of resistance of citrus to tristeza, a destructive South American disease potentially dangerous to citrus in the United States.

Tobacco advances included a male sterile line, which was established by fertilizing wild species with pollen of cultivated tobacco, followed by backcrossing that always used the pollen of cultivated tobacco on the hybrid flowers. This brought the chance of hybrid seed production and the further interesting possibility of growing plants that set no seed, which would eliminate topping.

Cotton breeders, looking for new genes (inheritance carrying bodies) to make U.S. cottons better, found in co-operative mill-run tests that the new American-Egyptian variety of cotton, Pima 32, compared favourably with a foreign variety popular for thread and fine combed yarns.

Soil and fertilizer studies brought out new facts on effects of various chemicals on yields and on soil bacteria factors in crop production. Engineering research gave new data on storage of grain, cold storage of fruits and vegetables, effects of building design on comfort and efficiency of farm animals, fuel saving in curing tobacco and hay-drying equipment. Improvements were made in on-the-farm processing of various crops, such as conditioning corn and small grain and rice, to keep down spoilage in storage.

The office of experiment stations administered federal grants to the state agricultural experiment stations in the amount of $10,492,848. The stations also had about four times that amount of nonfederal funds available during the year. Some 4,162 lines of research were active under federal grants and about 4,700 under other funds. The administration of the federal experiment station at Mayagüez, Puerto Rico, remained a further responsibility. (P. V. C.)

Agriculture.

For United States agriculture, 1949 was a bountiful year without a crop scare; crop productivity continued at a high level compared with the years prior to World War II, though below the record level of 1948. New record production was achieved in 1949 only in rice, dry beans and pears, but several other crops were near record and rather uniformly large production gave an over-all result only 6% less than the previous year. Livestock numbers, particularly hogs and poultry, increased with the result that an increased volume of production in the livestock sector balanced the lesser crop production, giving a total equal to the 1948 record.

The price situation was the most unfavourable of recent years. After a sharp break in February (as in 1948), an irregular decline continued. By December the parity ratio (ratio of prices received by farmers to prices paid, interest and taxes) had fallen to 98, the first time it had been less than 100 since Nov. 1941. As usual in recessions, the farmer found himself at a disadvantage, with the price decline proceeding more rapidly in farm products than in other parts of the economy; the index of prices received by farmers stood at 236 in Dec. 1949, compared with 268 in Dec. 1948, and a record high of 307 in Jan. 1948; but the index of prices paid by farmers, including interest and taxes, stood at 240, compared with 246 in Dec. 1948 and a high of 249 in Sept. 1948.

In spite of the slow decline in prices, the volume of agricultural marketings was such as to provide a gross income to farmers of about $32,000,000,000, compared with $35,300,000,000 in 1948. However, because of higher costs of production, the realized net income, which had been declining since 1947, in 1949 was estimated at only $14,000,000,000, compared with $16,700,000,000 in 1948. Agricultural assets at the beginning of the year were estimated at $130,000,000,000, compared with $122,278,000,000 a year earlier and $53,805,000,000 in 1940. But farm land values, which constituted a large portion of the assets, declined 5% or 6% during the year; hence, total assets were also lower by the year end.

The world food crisis, which had been in a dangerous phase in early 1948, was relaxed in the latter part of 1948 and became still easier in 1949 as world crops continued favourable and surplus stocks of some major foods accumulated in exporting countries. Famine once again was not prevalent in any large

*Estimates by the U.S. department of agriculture; 1949 figures are preliminary.

CO-OPERATIVE FARMERS of Burlington county, N.J., picking sweet corn at night for store-door delivery to neighbouring cities. A 50-day drought in the New England states, ending July 13, reduced the corn yield in this county from an average of about 1,750,000 bu. to 250,000 bu., an estimated loss in income of about $3,000,000

portion of the world during 1949. (*See* Food Supply of the World.)

Crop Production.—The aggregate volume of all 1949 crops in the U.S. declined to 148% of the 1935–39 base, but was second only as compared with a record high volume of 154% in 1948. Food grains declined substantially to 165% of the base, compared with the very high levels of 1947 and 1948, in spite of the fact that rice was at a new record high; feed also declined relative to the record of 1948 but exceeded the high level of 1946. Cotton was nine points higher than in 1948. Many other agricultural crops were near record levels of production. Total harvested acreage for the 52 principal crops amounted to 356,041,000, compared with 352,297,000 in 1948 and a ten-year average of 340,709,000. This acreage was larger than in any other year since the peak period of 1930–33. Losses from weather damage or insect destruction of planted crops amounted to nearly 13,300,000 ac., more than in any other year since 1943, but near average for the decade. Abandoned winter wheat acreage constituted a larger than usual portion of the total. Yields per acre were above average for most crops; grain sorghums, dry beans and soybeans set new records, and the composite yield stood at 142% of the 1923–33 average, exceeded only by the 151% of 1948. Yields of wheat, flaxseed and dry peas were disappointing.

The eight major grains in 1949 produced a total tonnage of 163,000,000, the second largest on record—1948 provided a record of 180,500,000 tons. The food grains constituted 37,000,000 tons of that total, the third highest year on record, exceeded only by the 42,000,000 tons in 1948 and a record of 44,000,000 tons in 1947. The 1949 tonnage included the fourth largest wheat crop, the record large rice crop, the smallest crop except one, during the century, of rye and a relatively small buckwheat crop. The feed grain total of 126,000,000 tons represented the second largest on record but a decline from 138,000,000 tons the previous year; included were a large corn crop (in spite of some drought and the cornborer), the second largest grain sorghum crop, a more than average oat crop and a less than average barley crop.

The oilseed crop of 1949 amounted to 15,300,000 tons, near the 1948 record and 41% more than average. Soybeans approximated the 1948 record, cottonseed was about 9% in excess of 1948 and 40% more than average; flaxseed and peanuts were less than the 1948 record crops, but flaxseed was nevertheless 45% more than average, and peanuts a good average outturn.

A large sugar crop was harvested; fruits and nuts produced a bountiful crop about 7% larger than in 1948; the truck crops were approximately as plentiful as in 1948, though other vegetables were somewhat shorter.

Corn was planted exceptionally early under very favourable conditions on a slightly larger acreage than in 1948. Although the crop progressed to an early harvest, some dry weather plus exceptional damage by the cornborer resulted in yield estimates being progressively lowered; the final estimate was an average yield of 38.9 bu. per acre for the nation, against 42.8 bu. in 1948. An exceptionally high wind in October made gleaning by hand or livestock necessary to gather the portion of the crop on the ground which could not be harvested by the mechanical pickers.

The 1949 wheat crop, though the fourth largest on record, was the disappointment of the year. A record acreage was sown and survived the early stages nicely, only to be rather severely

damaged just prior to harvest in the southern and central plains by excess rain and fungus diseases and in the Palouse and northern plains by drought. As a result, storage was available at least in needed amounts. Nevertheless, the total supply situation was such that acreage allocations were set for the 1950 crop at about 15% less than in 1949. It was indicated that total domestic consumption of the large crop would not be much more than 700,000,000 bu. Exports, which in 1948–49 reached the unprecedented level of 503,000,000 bu., were expected to be less than 400,000,000 bu. Thus, the carryover at the end of the crop year, July 1, 1950, would be 350,000,000 bu. or more, mostly owned by the government, and with exports apparently to decline still further. The preliminary survey in December of the 1950 winter wheat crop suggested that sown acreage had been reduced about as requested, but that the crop was in excellent condition and might produce nearly as much as in 1949.

The cotton crop of 16,034,000 bales was the largest since 1937 and the sixth largest on record. The mounting surplus, mostly in the hands of the Commodity Credit corporation, and the expanded acreage in 1949 resulted in an acreage goal allocation of about 21,000,000 for 1950 (down from 26,898,000 harvested in 1949) plus marketing quotas. The Brazilian crop was expected to be smaller than in 1948.

A crop of 401,962,000 bu. of white or Irish potatoes was produced, compared with 454,654,000 bu. in 1948, even though the harvested acreage was the smallest since 1878 and less than the official goal. Nevertheless, an estimated $50,000,000 to $60,000,000 support program was under way with prices being supported at 60% of parity against 90% in 1948. The average yield of 211.4 bu. per acre was not much less than the high 215.5 bu. of 1948, and much more than the 145.5-bu. ten-year average. Maine had a record yield of 450 bu. per acre. The European crop (excluding the U.S.S.R.) was 4,414,363,000 bu., compared with 5,054,390,000 bu. in 1948.

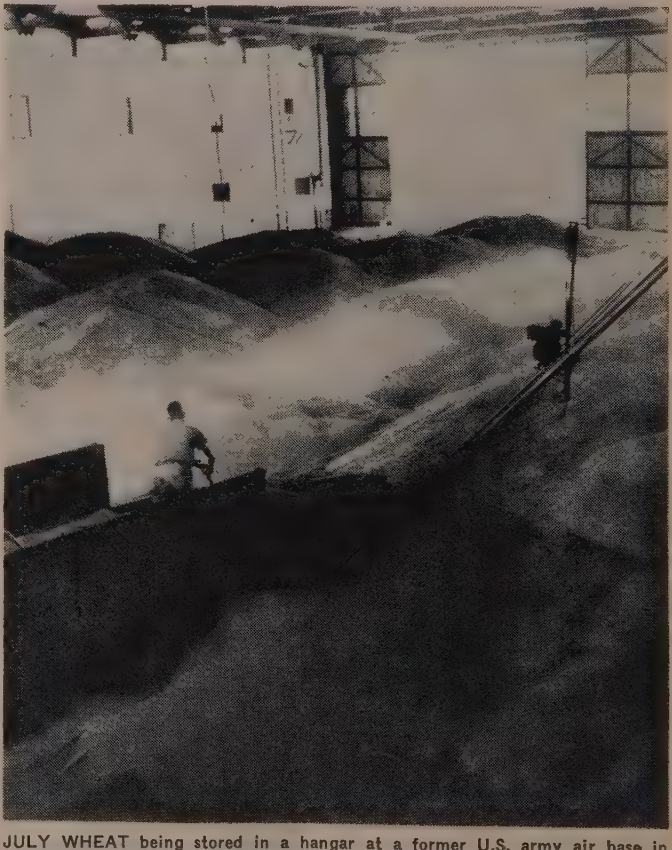
Such bountiful U.S. harvests and increasing year-end carryover stocks, mostly in government ownership, plus substantial general agricultural recovery in western Europe to which the U.S. had been exporting exceptional amounts of food, brought the problems of mounting production very much to the forefront of farm and political discussion and policy-making. The extension of support prices at 90% of parity for some 1949 crops, and in the Agricultural act of 1949 to some 1950 crops, encouraged continued all-out farm production.

The government, meanwhile, ordered allocation of reduced acreage on several major 1950 crops and marketing quotas on a few.

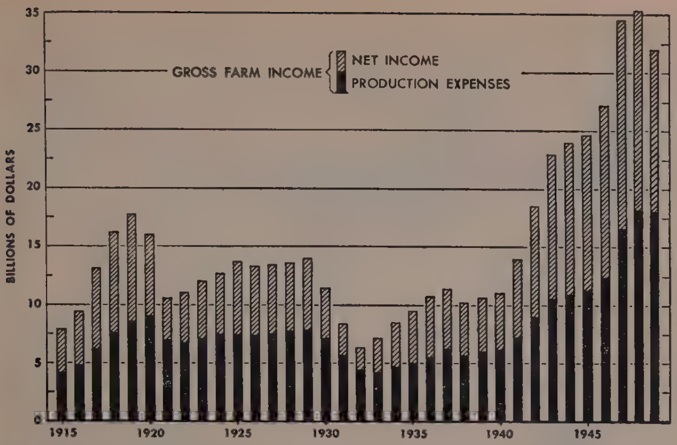
Livestock Production.—The somewhat regular variation over the decades in livestock numbers, sometimes referred to as the livestock cycle, changed phase in 1949, most kinds (excepting particularly horses and mules and possibly sheep) beginning another period of expanding numbers. The reasons apparently differed somewhat for each type of animal, but the record abundance of feedstuffs was recognized as a major factor. The expansion in livestock and its products during 1949 was sufficient to counterbalance the moderate decline in over-all crop production, giving a total agricultural production volume for 1949 equal to the record 1948 production.

All cattle at the beginning of the year totalled 78,495,000 head, compared with 78,126,000 head a year earlier and 85,600,000 head at the peak in 1945, but approximately 10,000,000 head more than prewar. Of that total, 24,450,000 head were milk cows, against 25,039,000 a year before. Slaughter of about the same number of beef animals at slightly heavier weights than in 1948 provided an estimated 10,880,000,000 lb. of beef and veal, compared with 10,600,000,000 lb. in 1948 and about 8,000,000,000 lb. prewar.

There were 57,139,000 head of hogs on U.S. farms at the beginning of the year, an increase from 55,028,000 head in 1948 but much less than the 83,700,000 head at the peak in 1944. The major spring pig crop was 59,039,000 head, much more than the 51,266,000 head of a year earlier, and the fall pig crop was indicated at 37,262,000 head, compared with 33,921,000 head a year before. Slaughter during the year produced an outturn of 10,650,000,000 lb. of pork, against 10,246,000,000 lb. in the previous year. At the year end it was estimated that pork production in 1950 might approximate 11,500,000,000 lb., a result of the increased fall pig crop of 1949 plus an indicated expansion to 62,500,000 head in the spring crop of 1950. This was a logical development from the very abundant corn crop and the favourable feeding situation. The corn-hog ratio in Nov. 1949 approximated the favourable level of 15.3 to 1, as against an average of about 12 to 1 over the long term and an average of



JULY WHEAT being stored in a hangar at a former U.S. army air base in Liberal, Kan. With a bumper wheat crop, and granary space at a premium, U.S. farmers and grain merchants pressed many such shelters into service



GROSS FARM INCOME: net income and production expenses of U.S. farm operators, 1915–49, including government payments beginning in 1933. Compiled by the U.S. bureau of agricultural economics. Data on 1949 are tentative estimates

13 to 1 for 1948.

In great contrast with the record high price of $31.85 per hundredweight on the Chicago market in Aug. 1948, average hog prices in 1949 mostly remained less than $20 per hundredweight and in December declined to a low for the year of $14.80 per hundredweight.

Sheep on U.S. farms at the beginning of the year, 31,963,000 head, were the smallest number from the time records had been kept, having declined from 34,827,000 head the previous year and more than 50,000,000 head prewar. Consequently, the lamb crop of 1949 was a record small one of 18,906,000 head and the indicated slaughter during 1949 provided only 600,000,000 lb. of lamb and mutton, against 753,000,000 lb. the previous year.

The 24,450,000 milk cows on U.S. farms at the beginning of 1949 represented a decline from 25,039,000 head in 1948 and from a peak of 27,770,000 head in Jan. 1945, but it was indicated that the end of 1949 would show an increase. As a result of very heavy feeding of the smaller number of cows from the abundant harvests of 1948 and the fine pastures of 1949, milk production per cow reached record high levels, and total production for the year was about 118,000,000,000 lb., 2% more than in 1948, with still larger production expected in 1950. Prices of most dairy products declined in 1949, sharply at wholesale, very moderately at retail, and the government continued to accumulate butter and dry milk powder in large amounts in its price-support operations.

Poultry provided a large outturn during 1949, the volume amounting to 163% of 1935–39, whereas 1948 was 153%. Hens on farms at the beginning of the year were 448,838,000, compared with 461,550,000 head a year before. Chickens raised in 1949, excluding commercial broilers, were 749,000,000 head, as compared with 637,000,000 head the year previous. Broiler production continued at a high level.

No recent year, not even 1949, showed an interruption in the fast pace of the U.S. horse to rarity, if not oblivion. There were 5,921,000 head on farms, against 6,589,000 head in 1948. Mules were 2,353,000 head, against 2,541,000 head a year previous.

World livestock numbers were restored rapidly. Cattle were estimated at a record 761,000,000 head, hogs at 261,000,000 head were up 6% compared with a year earlier and sheep at 720,000,000 head had increased for the second consecutive year. Even world horse numbers increased slightly to an estimated 76,000,000 head.

Food Stocks and Exports.—Food stocks continued to increase in 1949 in the major exporting countries. Exports after reaching very high levels during the early part of the year appeared to be easing off in the latter part of the year. On July 1, grain stocks in the four principal exporting countries were indicated at 72,800,000 short tons, 35% larger than the average for five recent years and 68% above 1948 stocks. Of that total about 52,000,000 tons were in the U.S.; Argentina held 15% of the total, Canada 9% and Australia 4%.

Food exports by the U.S. in 1948–49, mostly to Economic Co-operation administration countries or occupied areas, amounted to about 49,521,000,000 lb. Wheat in some form made up more than three-fifths of the total. Other grains accounted for about one-fifth. (*See* also EUROPEAN RECOVERY PROGRAM.)

Farm Prices.—Farm prices continued to decline in 1949. In December the index of prices received for all farm products stood at 236 (1909–14=100), as compared with 268 a year earlier and a record high of 307 in Jan. 1948. Even the maintenance of that level was to a considerable degree the result of government support programs; although prices in the case of particular products were less than support prices, the official program appeared to have much weight in preventing some farm prices from collapsing. Crop prices in general were only 208% of the base, compared with 228% a year earlier, whereas livestock and its products were at 261% of the base, as compared with 305% in Dec. 1948.

Table IV.—*Farmers' Average Prices, Certain U.S. Crops, on Selected Dates*

(In cents per unit)

	Wheat per bu.	Corn per bu.	Oats per bu.	Barley per bu.	Rye per bu.	Buck-wheat per bu.	Pota-toes per bu.	Eggs per doz.	Cot-ton per lb.
Oct. average, 1909–13	88.1	64.8	38.4	60.5	72.0	71.1	65.0	23.8	12.10

Farm Income.—Late in the year it was estimated that the total gross farm income for 1949 would be about $32,000,000,000, or approximately 10% less than in 1948. This gross income included not only cash income from marketings, but government payments, value of home consumption, rental value of dwellings and expenses of agricultural production. Total farm production expenses amounted to about $18,000,000,000, only 3% less than the $18,600,000,000 of the previous year. Most of the decrease in costs was the result of a sharp decline in purchased feed prices; expenditures for stock and labour were also slightly lower. Operating costs for motor vehicles were about 10% higher; taxes and depreciation charges also were higher. Realized net income was estimated at $14,000,000,000, compared with $16,700,000,000 in 1948. Nevertheless, in the prewar year of 1938, realized net income was only $4,327,000,000. Cash receipts from marketings in 1949 were estimated at about $27,700,000,000, or 9% less than receipts in 1948. Although both crops and livestock were marketed in a little larger volume than in 1948, total crop receipts were estimated at $12,500,000,000, down 7% from the 1948 level, and livestock and its products at $15,200,000,000, down 11% from 1948. The income, credit and debt structure of U.S. agriculture continued to appear favourable.

Farm Land Values.—Farm real estate in the U.S. declined in value by about 6% in the year ending Nov. 1949, as compared with peak values a year earlier. The decline was irregular, amounting to 10% to 14% in some mountain and western states, whereas a few midwestern states recorded an increase.

OPERATION "HAYLIFT," showing a U.S.A.F. C-82 dropping bales of hay beside a starving herd of cattle at Lund, Nev. Similar emergency relief was brought to thousands of cattle and sheep marooned by a series of blizzards that hit western and mountain states of the U.S. early in 1949

Also, very little of the better land was being sold and less desirable land showed larger reductions. The amount of funds available for farm mortgage financing decreased as farm prices declined.

Farm Population.—By preliminary estimate as of the beginning of the year, the farm population of 27,776,000 constituted about 19% of the nearly 150,000,000 U.S. total, the agricultural group having increased compared with 1948, when it was 27,440,000 persons. In 1940 there were 30,269,000 included in the farm population, or 23% of the U.S. total, and in 1920 there were 31,614,000 on U.S. farms, or 29.9% of the total population.

Farm Labour.—Farm employment at the end of 1949 was 7,150,000 persons, almost the same as a year before, but of course far less than the peak employment of the busier part of the agricultural year when slightly more than 12,000,000 persons were employed, of whom more than three-fourths constituted family labour.

Not only was the number of persons employed in agriculture in 1949 about 3% less than during the previous year but farm labour was slightly less expensive. The decline was on the order of 1%. Rural living costs were about steady.

Farm Machinery.—The farm machinery supply situation eased significantly during 1949 in relation to demand, although prices were the highest on record. Mechanization of U.S. agriculture continued at an unparalleled rate. The number of tractors on farms at the beginning of the year was 3,500,000, 281% of the prewar level and 350,000 more than a year earlier, although the cost of using tractor power was higher than in any previous year. Used machinery declined in price. Automobiles and motor trucks on farms were at peak levels in 1949. Exports of farm machinery were higher in early 1949 than previously and the year averaged near 1948.

Commodity Credit Corporation.—This financing organization of the department of agriculture carried on three major programs during the year 1948–49: (1) The price support program; (2) the supply program; (3) the foreign purchase program. During the year it received additional legislative authority to expand its grain storage activities, which it did, particularly with reference to corn, contracting for more than 250,000,000 bu. of new storage space, most of which was used for storing corn taken over by the government under support operations for the 1948 crop.

Under the farm price support operations, the CCC at the end of October had $3,148,577,435 (of its authorized $4,750,000,000 borrowing authority) tied up in farm commodities. It held at that time an inventory of $1,692,478,677 worth taken over under price support and was additionally obligated under loan and purchase agreements to the possible extent of $1,456,098,758. Additional funds had to be held in reserve to meet programs in process, but it appeared that the borrowing authorization was sufficient to meet obligations resulting from the 1949 crops. It was indicated that additional borrowing authority would be requested for operations covering the crops of 1950.

The inventory in October included: 3,756,864 bales of cotton costing $615,405,202, 182,736,985 bu. of wheat costing $442,379,272, 364,962,841 lb. of linseed oil costing $102,428,703, 15,334,146 bu. of flaxseed costing $97,181,136, 68,873,456 lb. of dried eggs costing $88,894,070, 89,257,414 lb. of wool costing $68,591,529, 88,768,703 lb. of butter costing $54,498,595, 4,892,858,000 lb. of beans costing $43,018,216 and 27,967,266 bu. of corn costing $42,385,599. It was indicated that funds tied up in inventory were not realized losses but would be recovered in part or in total when inventory was liquidated. The realized net loss for the year 1948–49 was $253,000,000, of which potatoes accounted for $204,000,000.

Marketing Research.—Activities under the Research and Marketing act of 1946 progressed in 1949 into numerous specific projects, bearing on the efficient processing and distribution of agricultural commodities and new and expanded uses for agricultural products. Meanwhile, the farmer's share of the market-basket dollar declined to approximately 48%, as compared with 53% in 1948 and 40% in 1940.

Rural Electrification.—Rural U.S. moved still further into the electric power age during 1949. It was indicated that 78.2% of the country's farms were electrified.

Commodity Trading.—Activity in commodity future markets declined in 1948–49, particularly as regards wheat and cotton, yet was somewhat greater than in any year in the decade except 1947–48. Speculative activity for the most part was more orderly than in the previous year, excepting for a sharp price break in February followed by prompt recovery. The Commodity Exchange authority continued to request legislation to extend its supervision to futures trading in 11 additional commodities, for authority to fix minimum margin requirements on speculative transactions and to require the registration of commodity trading advisory services.

Agricultural Legislation.—The Brannan proposal (by Charles Brannan, secretary of agriculture) of April 1949 did not become law, but it was the most discussed farm legislation proposal of the year. It was a price support plan based on an income objective. The secretary of agriculture and others continued to explain it as the year ended. The major farm organizations and agricultural leaders, in and out of government, disagreed sharply as to its merits. The following is a brief synopsis of the proposal:

> *A farm income standard* would be set as a minimum goal under which farm purchasing power would be maintained at least as high as the average of the first 10 of the most recent 12 years. For 1950 this would require a dollar income of $26,200,000,000, about 15% less than the $31,000,000,000 of 1948. This minimum goal was to be used only as the starting point for computing commodity price supports.
>
> Definite *price support* would be assured on those commodities that ranked highest in importance to farm income and to the national diet. Commodities suggested for priority claim on support funds included corn, cotton, wheat, tobacco, milk, eggs, chickens and the meat animals. They accounted for about 70% of cash farm receipts. Other commodities would be supported within the limits of available funds.
>
> Two major *methods of support* would be used. On storable commodities, loan and purchase agreements would be continued. On perishable commodities the entire production would go to the consumer through the usual market channels at such prices as supply and demand would indicate. However, if the average price received by the producers for a given commodity proved to be lower than the official support price level, the producer would receive a compensatory production payment for the difference between the support price and the average market price.
>
> There would be *conditions* and *limits* on price support. Eligibility for price support on the part of a particular farmer would be tied to soil conservation requirements, to acreage and marketing limits when wasteful surpluses made them necessary and to volume per farm of supported commodities.

The Agricultural act of 1949 continued, for co-operators, for 1950, rigid price supports at 90% of parity on the six basic crops, corn, cotton, wheat, rice, tobacco and peanuts. (All six of them were under acreage allotment for the 1950 crop, and cotton, peanuts and tobacco were under the even stricter marketing quotas.) After 1950 there was provision for "flexible" or lower minimum supports, depending on the size of the total supply of the crop in relation to the normal supply. However, the degree of flexibility, as a maximum, as long as acreage allotments or marketing quotas remained in effect, was between 75% and 90% of parity, not between 60% and 90% as in the Agricultural act of 1948.

The 1949 act included mandatory price support for wool (including mohair), tung nuts, honey, intermediate and late Irish potatoes, milk, butterfat and the products of milk and butterfat. The level of support was provided as a range which varied with the different commodities and within which the secretary had discretion to set the specific level.

For other nonbasic agricultural commodities support was permissive at any level not to exceed 90% of parity. The modernized parity formula of the 1948 act was amended to include wages paid hired farm labour and wartime subsidy payments. Additional provision was made for disposal of perishable food commodities not produced in the U.S., to school lunch programs, Indian affairs, to local public welfare organizations and to private welfare organizations assisting needy persons, domestic or foreign.

Other agricultural legislation of 1949 resulted in the ratification of the International Wheat agreement, the amendment of the charter of the Commodity Credit corporation, provisions for rural housing and the initiation of a loan program for rural telephone development and expansion. (J. K. R.)

Other Countries.—All European governments continued to be concerned with agricultural plans and these were kept under general review by the Organization for European Economic Co-operation (*q.v.*), by the Economic Cooperation administration of the United States and by other bodies. Plans were upset by weather conditions during the period June to Sept. 1949 but basic progress continued to be made in providing the fertilizers, machinery and motive power needed for greater production. Imports of agricultural tractors into continental Europe had numbered 54,000 during 1948 as against only 14,000 during 1937 and, in addition, increasing numbers were available from continental factories themselves. Supplies of agricultural machinery were also greater. One of the most satisfactory improvements was in the supply of nitrogen fertilizers.

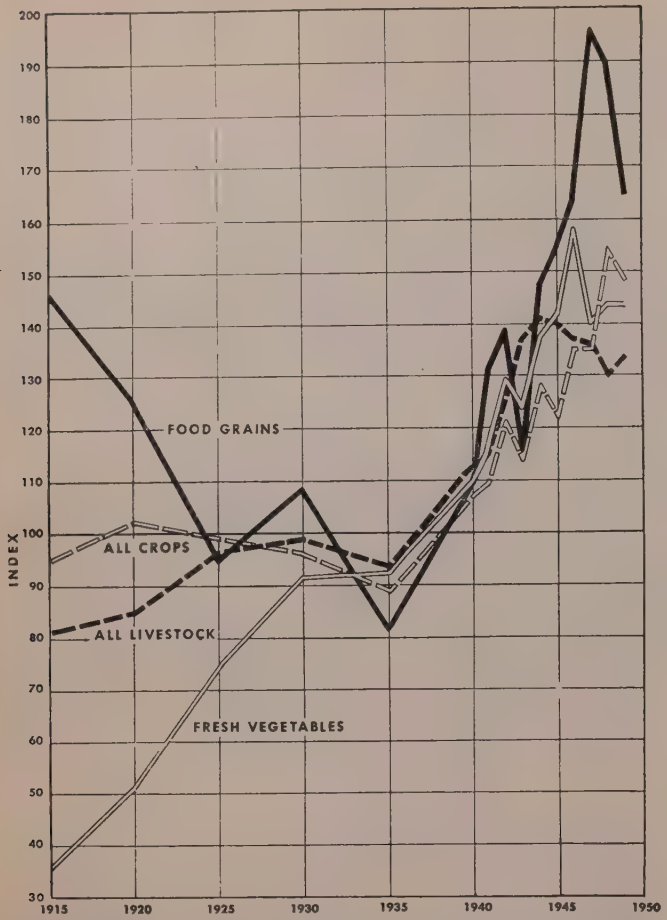
In several countries considerable public attention was drawn to the difficulties of inducing farmers to carry out the centrally devised plans. In the United Kingdom a shortage of workers, especially skilled workers, and of houses for them actually led to a reduction of acreages of intensive crops in some areas.

Argentine policies continued to influence European agriculture mainly through their effects on cereal, linseed and meat exports to Europe. The government called in June for an increase of 3,700,000 ac. in the area sown to wheat, a slight increase in that sown to coarse grains and maintenance of the linseed acreage. The fixed prices paid to farmers for fat cattle were raised about 37%. This plan, however, would still leave Argentine production far below prewar levels. The effects of industrialization and inflation, accompanied by control of farmers' returns, had reduced the number of agricultural workers by about 400,000 (20%) after 1937, and the area sown to cereals and linseed by about 14,000,000 ac. (30%). Even during the later part of 1949, the prices paid to farmers continued to be at a much lower level than prices charged to foreign buyers of farm produce.

In Australia and New Zealand emphasis on expansion of production continued and some encouragement was obtained from higher prices for dairy products and meat sold to the United Kingdom. The butterfat in dairy products delivered from New Zealand factories during the year ended July 1949 was 461,000,000 lb., 10% more than during 1947–48 and only 1% less than the record output of 1940–41.

Lamb production for export was also satisfactory but there were significant reductions in beef and pork outputs. In Aus-

BARRACKS for Puerto Rican seasonal workers on a fruit farm in Dutchess county, N.Y.; the men were brought from their homes in New York city to ease a local labour shortage, as arranged for in 1949 by the U.S. Employment Clearance service and the Puerto Rican Employment bureau in New York



FOOD PRODUCTION in the United States, as measured by index numbers (1935–39=100). Estimates by the department of agriculture; 1949 is preliminary

tralia total meat production was higher but exports were slightly reduced because home consumption of beef rose by 9%. The sowing of wheat was hindered by dry spells.

In India a major event of 1949 was the government's announcement in April that except in case of widespread failure of crops or for purposes of building up a central reserve no food grains would be imported after 1951.

The council of the Food and Agriculture Organization of the United Nations appointed a committee of experts in June to examine the problem of surpluses in some countries and starvation in others and this committee reported promptly that the causes of surpluses lay mainly in shortages of western hemisphere currencies. They proposed an international commodity clearing house with a capital of United States $5,000,000,000. This would be used, for instance, to buy United States wheat for India, the fund being repaid by India in rupees which would be held by the clearing house until they became convertible into United States dollars. Until there was fundamentally better balance in world trade it was foreseen, however, that this initial capital might comparatively soon be held in currencies still inconvertible into dollars.

In the United Kingdom agricultural prices were raised by an average of 7% following the February price review. This rise was the result of withdrawal of part of the subsidy on feedstuffs, of increase of agricultural wages by about 4% and, not least, of the desire to expand agricultural production further in accordance with the program first announced in Aug. 1947. Agricultural prices were, indeed, raised to the highest level ever recorded. After devaluation of the pound sterling these prices were not far out of line with price levels in the United States and Canada but they continued high as compared with the prices paid for the principal foodstuffs from Australia, New Zealand and nearly all European countries. Subsidies were continued in the United Kingdom on purchased fertilizers and on labour and machinery services administered by the county agricultural executive committees, but it was announced in July that half the fertilizer subsidy would be withdrawn in July 1950 and the remainder in July 1951. Complete withdrawal of the remainder of the feedstuffs subsidy in April 1950 was announced in October.

Aircraft Manufacture. Before the end of World War II the aircraft manufacturing industry in the U.S. ranked among the leaders in dollar volume, output and employment. During the peak year of 1944 its 2,000,000 employees turned out more than 96,000 military aircraft. By V-E day its backlog of orders stood at more than $20,000,000,000. Although anticipated, the wholesale contract cancellations during the fall of 1945 imposed a severe shock. The postwar low occurred during 1946 when air-frame production in all categories fell to approximately 5% of the peak and employment had dropped to less than 9% of the wartime high. Production orders for military aircraft became a mere trickle of replacements. Manufacturers then turned their production effort into nonmilitary types. There was a considerable demand for new equipment for the civil air lines. Several manufacturers pinned their hopes on a rising market for personal aircraft.

The intervening years were periods of violent readjustment for the aircraft industry. The anticipated boom in personal aircraft failed to materialize and the demand for privately owned aircraft fell from 33,250 in 1946 to approximately 3,400 in 1949. Also, by 1949 the replacement program undertaken by the air lines immediately after the war approached completion and the deliveries of civil transports had fallen from 433 in 1946 to approximately 160 in 1949.

In spite of these negative factors, however, the aircraft manufacturing industry showed a steady recovery from the low of 1946 because of increasing demand for new military aircraft. The industry turned out only 13,000,000 lb. of military airframe weight in 1946. By 1949 the output had risen to 28,000,000 lb. Employment in the primary aircraft industry which had dropped to a low of 180,000 in 1947 had risen to approximately 218,000 by mid-1949.

To understand the 1949 position of the aircraft manufacturing industry it is necessary to review briefly certain political and technical trends of the preceding four years. Aircraft manufacturing is basically a munitions making industry. Its condition is inevitably related to the world political situation. The president's air policy commission (see *Survival in the Air Age,* 1948) and the congressional Air Policy board of 1948 were agreed upon the necessity of maintaining an aircraft manufacturing industry in readiness to produce the most effective types of military aircraft and aerial weapons in quantity on short notice at the outbreak of future hostilities. The unstable state of affairs in the world today led the congress to appropriate very large sums of money during the past few years for research and development and for new types of aircraft. During 1949 this resulted in substantial production orders for machines to replace World War II types in air force and navy squadrons.

Although by the end of 1949 the congress had not definitely made up its mind with respect to the proper peacetime level for the air forces (the air policy commission and congressional board had endorsed a program of 70 air groups for the air force) all were agreed on the necessity of a stable, long-term aircraft procurement program to provide proper support for the aircraft industry.

Certain technological advances of the past few years were having a profound effect upon aircraft manufacturing during 1949. During the war the emphasis had been almost entirely on production. Intensive research and development during the immediate postwar years had resulted in drastic design changes which were being reflected in manufacturing processes and production. The armed services were in 1949 replacing their obsolete equipment with new aircraft of tremendously improved performance.

The most radical change in aircraft manufacturing came about because of the introduction of jet-type power plants. This necessitated a complete redesign and retooling in air-frame and aircraft engine manufacturing plants. It also caused a decrease in the demand for aircraft propellers.

The availability of jet and rocket power plants and the greatly increased aerodynamic knowledge which resulted from intensive postwar research greatly extended the speed possibilities for aircraft. Already the so-called "sonic barrier" (approximately 760 m.p.h. at sea level) had been exceeded by piloted aircraft, and the probabilities pointed toward much higher flight speeds in the near future. Such speeds, however, impose demands upon human pilots that are physically impossible to meet. More and more effort, therefore, had been focused on the design and manufacture of pilotless aircraft or guided missiles. During 1949 many manufacturers found that they were giving more attention to the design of guided missiles than to conventional aeroplane types. Quantity production was expected to come in the near future.

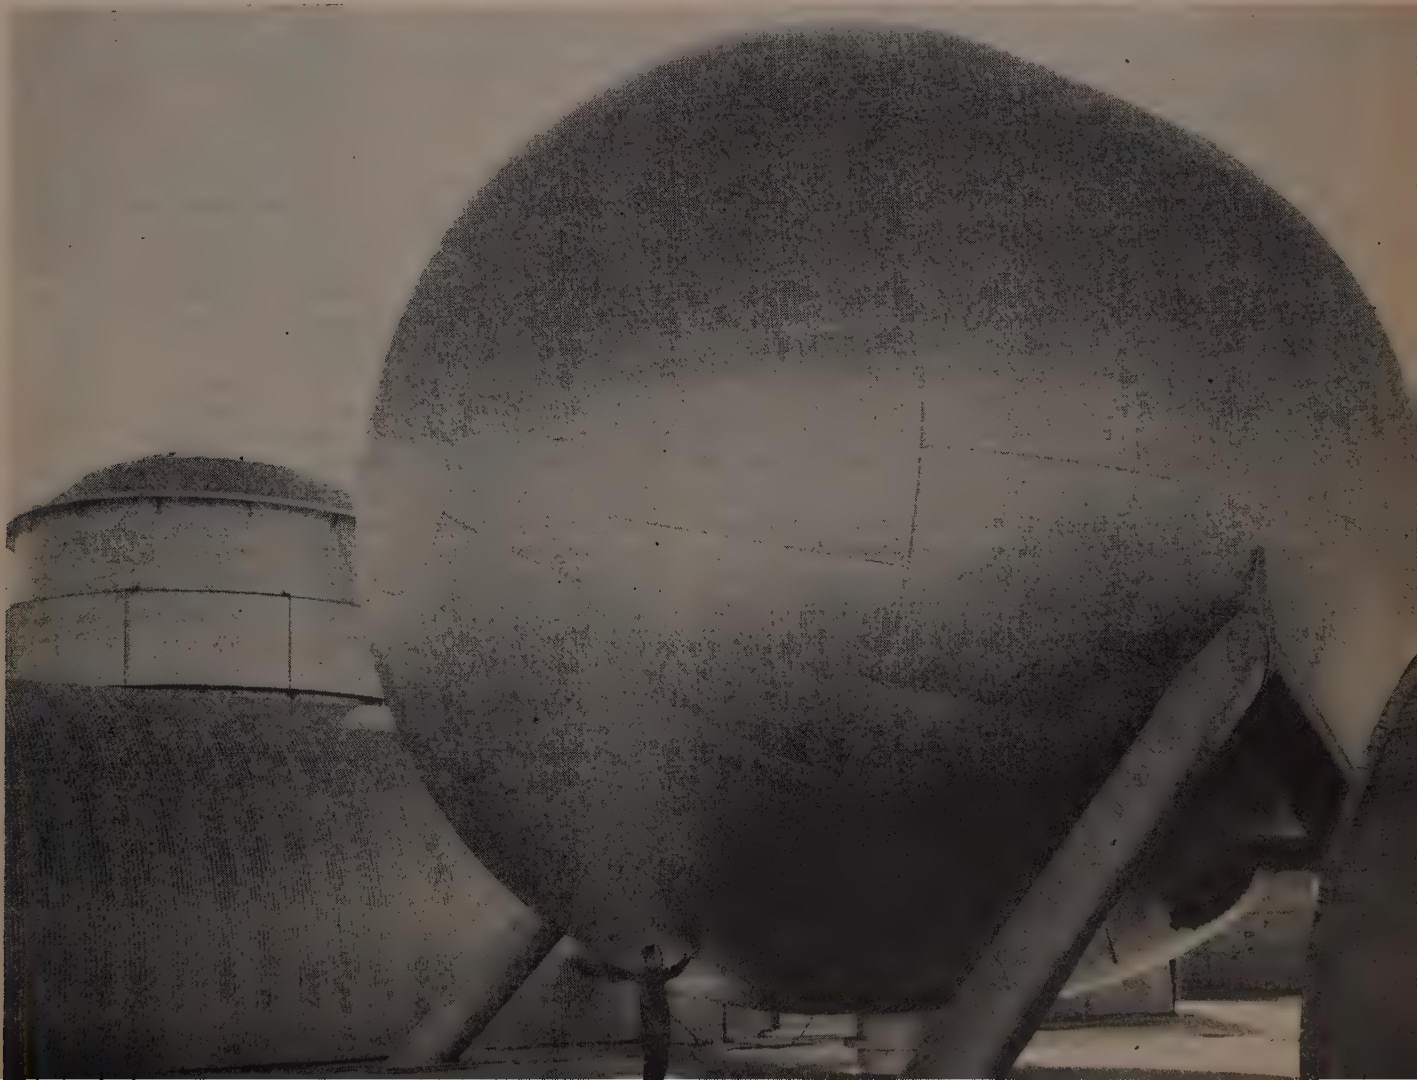
Aircraft manufacturing was also made more difficult by the increasing size and complexity of modern aeroplanes. In 1939 the average bomber weighed in the neighbourhood of 20,000 lb. (empty), a fighter 5,000 lb., a trainer 2,000 lb. and a transport about 12,000 lb. By the end of World War II 50,000-lb. bombers and transports were in service.

During 1949 at least one bomber of about 150,000 lb. (empty) was in production and several were coming along in the 100,000-lb. class. Jet fighters of about 12,000 lb. were being built and the average four-engine transport in air line service was running in the neighbourhood of 50,000 lb. empty.

The installation of very complicated automatic navigation, communication, ordnance and other devices in modern aircraft also vastly increased the manufacturing problem. The air frame and the power plant were generally less complicated than the auxiliary devices that went into them.

The net result of the increase in aeroplane size and complexity was greatly to increase the unit cost of aircraft. Where in 1939 a twin engine, 23-passenger transport cost about $150,000, a

VACUUM CHAMBER of the supersonic wind tunnel completed at Los Angeles, Calif., in 1949, by North American Aviation, Inc. The tunnel was to be used in studying the performance of guided missiles and planes travelling at speeds as high as 4,000 m.p.h.



four-engine 50–60 passenger air liner of 1949 cost in the neighbourhood of $1,000,000. The navy estimated that, on the average, each jet-powered aircraft procured during the 1949–50 fiscal year would cost $829,000. The air force figure was $900,000. Quantity production would, of course, materially reduce these figures.

The navy and air forces were paying a great deal of attention to "produceability." It was well recognized that the ability to turn out aircraft in large quantities in any national emergency was of utmost importance. Both services were spending considerable amounts of time and money on the study of production problems so that if any emergency should develop production lines could be started up with a minimum expenditure of time and effort.

During 1949 the aircraft industry did about $1,700,000,000 worth of business, the largest share of which came from military buying through government agencies. Output included approximately 2,500 military aircraft, 3,400 personal type planes and 160 civil transports of all types. For reasons of security military aircraft production was computed in terms of air-frame weight rather than number of units. On this basis the production for the year would reach approximately 28,000,000 lb. of air-frame weight as compared with approximately 25,000,000 in 1948. The money spent by the government with the aircraft industry included not only funds for the direct procurement of aircraft but also a substantial amount for research and development contracts covering both piloted aeroplanes and guided missiles.

The primary aircraft industry at the end of 1949 consisted of 34 manufacturers of complete aircraft, with 39 plants, and 13 manufacturers of aircraft engines, operating 14 plants. The balance of the industry consisted of a large number of propeller and accessory companies backed up by suppliers of parts and materials as well as subcontractors and manufacturers of subassemblies. The latter categories were of increasing importance. In the production of the Boeing B-47 bomber for example, 48% of the total cost went to hundreds of subcontractors, and in the manufacture of the General Electric J-47 turbojet engine it was estimated that 280 subcontracting companies participated.

The 3,400 output for personal planes was a great disappointment to those who before the end of the war predicted a probable production of 50,000–60,000 a year by 1950. The expectation that the demand for privately owned aircraft would take up much of the slack during the immediate postwar years had not been realized. That market failed to develop because the personal aeroplane was not developed to the point of real usefulness at low cost.

The output of commercial transport types came to about 120 units in 1949. Since the 1946 high of 433, the demand had been dropping off steadily as the civil air lines in the U.S. completed their modernization programs. At the end of 1949 there were approximately 1,100 transport aircraft in service on U.S. domestic and overseas air lines, which appeared to be about the number that the traffic could bear in the immediate future. Some replacements would be required during the next few years, but it was probable that the demands for the next year or two would fall below the 1949 level.

During 1949 the British unveiled two jet-type transport aircraft which had been observed with great interest by U.S. air line operators. A number of U.S. jet transport designs were in the offing. Several years must elapse, however, before interest would be reflected in actual orders for jet transports. Few air lines could afford to retire existing equipment in favour of jet-powered equipment much before 1955.

In addition to the conventional aircraft types mentioned above, helicopters were a factor in 1949 U.S. aircraft production. A number of new companies had come into the field but over-all production statistics were incomplete. It was estimated, however, that about 200 helicopters were produced in the United States during 1949. Most of them went to the military services for special uses (air-sea rescue work, etc.) but a few went into commercial use for the carriage of mail and small items in localized areas. (S. P. J.)

Airports and Flying Fields. The 1949 Civil Aeronautics administration (CAA) revision of the annual three-year forecast of constructions and improvements contemplated under the Federal Airport plan called for the building or improvement of 4,977 airports at a cost of $1,115,300,000 of which $510,600,000 would be federal funds and $604,700,000 state and local contributions.

Under this program, which was to extend through 1953, 2,794 new airports would be constructed and 2,183 improved. By the close of the year, congress had appropriated $117,500,000 toward the total of $500,000,000 it authorized in 1947 when the Federal Aid Airport act was passed. The projected program included plans for a second large airport in the Washington area to relieve congestion at the Washington National airport.

Civil Airports by Class as of Dec. 1949

Class 1 and Sub 1	4,012
Class 2	983
Class 3	479
Class 4	368
Class 5	133
Class 6 and over	75
Total	6,050

Civil Airports by Type as of Oct. 1, 1949

Commercial	2,662
Municipal	2,180
CAA Intermediate Landing Fields	142
Military	366
All other types	1,066
Total	6,416

High-Intensity Approach-Light Development.—The aircraft committee of the munitions board approved the CAA-sponsored slope-line system of approach lighting for airport runways in use by the army, navy, air force and commercial operators. The system was originally recommended by a subcommittee on visual aids to air navigation following about 475 low-visibility tests at the Landing Aids Experimental station at Arcata, Calif.

The design of the slope-line system provides that the individual lights be seen as lines, rather than as points. Each unit is made up of 10 lights arranged in a line to form a component unit 14 ft. long. Each of the component lights has a fairly wide candle-power distribution laterally, with a controlled narrow distribution vertically. The lights are visible from the front through 180° only, for the definite reason that it is desired to eliminate as far as possible background illumination of the fog.

The slope-line system derives its name from the fact that the lighting units are mounted in a geometrical pattern, the outside ends of the units being nearest the ground, the inner ends being so elevated that the 14-ft. long units make a 45° angle with the horizontal. They are so arranged that if the units of any pair are extended in length the extensions will intersect on the glide path.

In order to carry out this design, as the beginning of the runway is approached the respective units of the pairs of slope-line lights are brought closer together so that the intersection of the imaginary extension lines always occurs on the glide path which is decreasing in elevation as the near end of the runway is approached. In this system it is not necessary for all the units to be on the same level. It is only necessary that each unit lie in the same 45° plane as the other units on the same side. These planes, intersecting on the proper approach path, define that path.

When a pilot on the proper glide path looks ahead he sees all of the slope-line lights lying in only two lines, one line on either side of the approach. As soon as he deviates from the proper path the lights break up into echelon, the exact appearance of each echelon depending upon the amount and direction of deviation.

It was intended to use white lights of approximately 100,000 candle power for the slope-line system. However, the colour of lights was not considered critical and the system could be adapted to whatever colour was selected as standard for high-intensity approach lights.

Briefly, the problem of landing an aeroplane when visibility is restricted involves the use of radio landing aids to lead the aeroplane into the approach path, and to bring it to within approximately 200 ft. of the ground, and then the use of visual aids on the ground to enable the pilot to complete his landing.

On one requirement all of the authorities and all of the proposed high-intensity systems agree. They all call for 3,000 ft. of approach lighting for every instrument-landing runway. Hence, provision for 3,000 ft. of land in the approach should be included with every airport where scheduled operations are anticipated, and 500 ft. additional to allow for the middle marker.

Immediate installation of high-intensity approach lights utilizing the slope-line system was planned for the Washington National airport, Washington, D.C., and the Los Angeles International airport, Los Angeles, Calif.

Cross-Wind Landing-Gear Development.—The CAA approved the use of the cross-wind landing gear in the DC-3 aircraft for a 40 m.p.h. cross-wind component. This gear in use on the DC-3 was developed by the Goodyear company and was given a CAA-approved type certificate. (*See* also CIVIL AERONAUTICS ADMINISTRATION.) (E. M. E.)

Great Britain.—By 1949, only one airport in Great Britain, London airport, fell into the A-1 category: *i.e.,* it had a main runway not less than 8,400 ft. in length, and could bear a single-wheel load of at least 100,000 lb. at 120 lb. per sq.in.

The concreting of the six-runway layout at London airport was almost completed; but much additional work to the lighting, drainage and radio aids remained to be carried out before further runways could be used. Development of the central terminal area was begun and four further temporary hangars were completed during the year.

The air traffic control problem became more acute, particularly in the London area, where London and Northolt, both handling heavy density traffic, proved to be too close under instrument flying conditions. Additional points of entry and exit for the Metropolitan Control zone were provided, an inner zone was created and the holding area for air liners waiting to land at Northolt was moved to near Bovingdon, Hertfordshire.

At Manchester (Ringway) one runway was extended by more than 1,000 ft. and a new terminal building opened. The stressing of the main runway at Prestwick, the Scottish transatlantic airport, for air liners of Stratocruiser weight was completed; and Glasgow (Renfrew) had its runways resurfaced.

Belgium.—At Brussels (Melsbroek) work was concentrated on building four double hangars to occupy 4,800 sq.yd. A start was made on developing Antwerp (Deurne) as an international air freight centre.

Finland.—It was announced that the airport for Helsinki, Malmi, was to be replaced by a new one at Seutula, to be ready for the Olympic games in 1952.

FIDO (Fog, Intensive, Dispersal of) undergoing acceptance tests at the Los Angeles airport in 1949, the first installation of this system at a U.S. commercial airport. Fido utilizes hundreds of high-pressure burners to disperse the fog, enabling air liners to land under conditions which would otherwise be prohibitive

France.—The airport construction work vote was cut by 85,000,000 fr., but the planned development of Paris (Orly) for intercontinental traffic was continued. The basic layout was to be similar to that of London airport; but two of the three runways in use by the end of 1949 were parallel.

Germany.—The Anglo-U.S. airlift of 1948–49 reached such proportions that the three receiving airports in Berlin dealt with the heaviest density of aircraft movements in the history of aviation. At Gatow airfield, the original steel-mesh runway was extended by 1,500 ft. of concrete, and, parallel to this, a new 6,000-ft. concrete runway was constructed. The airports from which Berlin was supplied all benefited materially from the airlift: Hamburg (Fuhlsbuettel) had a new 6,000-ft. permanent runway in use, and Frankfurt (Rhein-Main) had a second runway of 8,200 ft. under construction.

Italy.—The airports of Rome (Ciampino) and Naples (Capodichino) were being improved with funds provided under the European Recovery program. Ciampino had an imposing passenger-handling building in use, but an entirely new site for a Rome intercontinental airport was selected at Fogere, on the Tyrrhenian coast.

Netherlands.—The fine steel-and-glass terminal building at Amsterdam (Schiphol) came into partial service in May 1949. The new control tower was completed but technical equipment was awaited. Concreting work was concentrated on the new north-south runway, announced as complete at the end of the year.

Norway.—An aviation commission in June 1949 recommended new airports at Herdla, Gosse and Bodo, the improvement of Oslo (Fornebu) and Stavanger (Sola) and the retention of the existing seaplane bases. Gardenmoen, a major military base 22 mi. from Oslo, was scheduled to take the long-haul commercial traffic.

Portugal.—A seaplane dock, 1,509 ft. in length, was partially constructed at Cabo Ruivo (4 mi. upstream from Lisbon); and Lisbon's Portela de Sacavem, the land airport, had a new administrative block under construction.

Sweden.—The Stockholm (Halmsjön) project for an intercontinental land airport achieved limited development in 1949. By June, some 10,000,000 kronor had been expended, mainly on blasting operations.

Switzerland.—Geneva (Cointrin) remained unique among Europe's major airports in retaining a single broad 6,500-ft. runway. A new passenger-handling block with a single long frontage and a hangar to house up to ten 4-engined aircraft were opened in May 1949. Zürich (Kloten), an entirely new postwar enterprise, had three runways all in use by the same date; and the permanent terminal buildings were due for completion in 1950. (*See* also AVIATION, CIVIL; AVIATION, MILITARY.)

FILMS OF 1949.—*The Airport* (Encyclopædia Britannica Films Inc.).
(G. D. H. L.)

Air Races and Records. Cook Cleland, a home town pilot and winner in 1947, carried off the Thompson trophy, major prize of the national air races held at Cleveland, O., in 1949. Flying a Vought Corsair, Cleland got off in front and stayed there for the 15 laps of the 225-mi. test, setting a record of 397.071 m.p.h. average for the event. Only seven of ten planes in the final, the piston-engine division of the competition, finished and prizes totalled $40,000 of which Cleland won $19,100. Second place went to Ron Puckette of Lansdowne, Pa., who sped over the course at 387.527 m.p.h.

A crowd of 100,000 persons, which was on hand for the finals, was shocked when William P. Odom, round-the-world flier and starter in the big event, crashed and was killed. Odom, flying a radically modified F-51 Mustang that belonged to Jacqueline Cochran, dove into a suburban house a few minutes after his take-off. The crash resulted in the death of two persons who were in the house at the time.

Prior to his fatal accident, Odom had won the Sohio trophy in his first start as a closed-course racer. Odom had flown nonstop from Honolulu to Teterboro, N.J., earlier in the year to establish a record for light planes.

The fastest time ever made in a closed-course race was in the jet division of the Thompson when Capt. Bruce Cunningham of the fourth fighter group at Andrew Air Base, Md., flew his North American F-86 Sabre at 586.173 m.p.h. The old mark of 515.85 m.p.h. was set by Maj. G. E. Lundquist in a Lockheed F-80 Shooting Star.

The final heat of the Goodyear trophy race for midget planes was won by William Brennand of Oshkosh, Wis. Brennand posted an average of 177.340 m.p.h. Another Goodyear winner was H. R. Salmon of Van Nuys, Calif., who was in the group of Continentals. Steve Whitman of Oshkosh, Wis., captured the Continental Motor trophy before 25,000 at the All-American manoeuvres at Miami, Fla., in January where he averaged 176.867 m.p.h.

The Bendix trophy was won by Joseph De Bona. Six planes took off from Rosamond Dry Lake, Calif., in the flight to Cleveland and De Bona was first in. The winner, in a modified F-51 Mustang, set a record for the piston-engine division with an average of 470 m.p.h., the old mark of 460 m.p.h. having been made by Paul Mantz in 1947.

Competition in the Allison Jet trophy race, from Indianapolis to Cleveland, drew a crack field with the top prize going to an Air National Guard F-80C Shooting Star piloted by Lieut. W. C. Rew of the 196th fighter squadron. He averaged 594.806 m.p.h.

Peggy Lennox of St. Petersburg, Fla., won honours in the third annual all-women's meet at Miami, Fla. She was first home in the handicap flight from Montreal, Can., to Miami and won the Johnnie and Mack race after arriving. Kaddy Landry of Miami and Mrs. Helen McBride, another Florida pilot, were other feature winners.

Mrs. Zona B. King of Quincy, Calif., was first to reach Miami in the transcontinental race from San Diego. (*See* also AVIATION, MILITARY; GLIDING.)

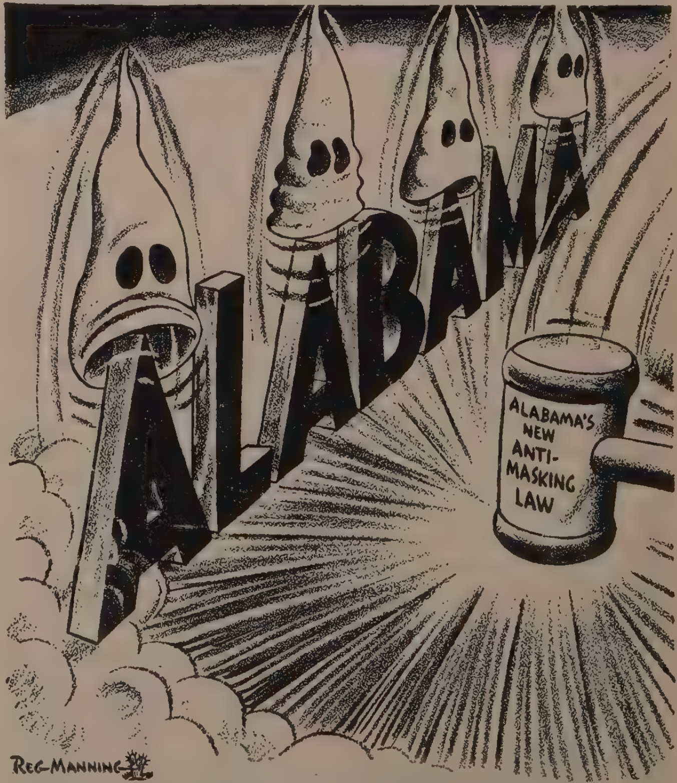
A.L.A.: *see* AMERICAN LIBRARY ASSOCIATION.

Alabama. Located in the heart of the "deep south," Alabama became the 22nd state of the United States Dec. 14, 1819. It is popularly called the "Cotton state," or the "Yellowhammer state." Area: 51,609 sq.mi. (51,078 sq.mi. of land and 531 sq.mi. of water). In 1940 the total population of the state was 2,832,961. Of this number 1,849,097 were whites, 983,290 were Negroes and 574 were classified otherwise; 2,821,004 were native-born and 11,957 were foreign-born. July 1, 1949, the U.S. census bureau estimated the total population of Alabama to be 2,920,000. Montgomery, the capital city, in 1949 had an estimated population of 111,450; Birmingham, the state's largest city, 311,750; and Mobile, the state's only seaport and second largest city, 167,600.

History.—The principal elective officials of the state in 1949 were: James E. Folsom, governor; J. C. Inzer, lieutenant governor; Albert A. Carmichael, attorney general; Dan Thomas, state auditor; Haygood Paterson, commissioner of agriculture and industries; Sibyl Pool, secretary of state; John Brandon, state treasurer; Austin R. Meadows, state superintendent of education. During the summer months of 1949 the state legislature met in regular biennial session. Administration forces and antiadministration forces opposed each other throughout the session and each succeeded in keeping the other's proposals



"BLOWING THE LID OFF!" cartoon comment by Manning of the *Arizona Republic* (Phoenix) on the Alabama state law passed in 1949 to prohibit the public wearing of masks from passing but failed to muster enough votes to enact its own. One statute enacted made it illegal in the state to wear a mask in public. This measure was supposedly aimed at an outbreak of mob action accredited to the Ku Klux Klan. Lawmakers adopted a two-year budget for the state with a straight 10% reduction in every department except the governor's office. The legislature presented nine constitutional amendments to the voters on general election day. One which was accepted authorized the governor to issue $2,000,000 in bonds as a part of a $12,000,000 state hospital building program. Another which passed would give the counties the right to levy taxes and issue interest-bearing bonds. It permits them to borrow in anticipation of revenues of special taxes levied by counties for hospital purposes. During the year a previous constitutional amendment which was a voter-restriction law was ruled in a federal court to be in opposition to the U.S. constitution.

Education.—During the academic year 1948–49 (ending June 30), the total number of public schools in the state was 3,700. Total enrolment for these schools was 657,359. Of this number 436,618 had elementary school standing and 220,741 had secondary school standing. There were 12,962 elementary and 8,175 secondary teaching positions in public schools. There were 9 state institutions of higher learning with a total of 26,772 students enrolled and 1,793 teachers.

Social Insurance and Assistance, Public Welfare and Related Programs.—Amounts spent for public assistance categories in Alabama during the fiscal year 1948–49 (ending Sept. 30) and average number of recipients (in parentheses) during 1948–49 were as follows: old-age assistance $19,298,111.45 (71,698); aid to the blind $369,651.46 (1,241); aid to dependent children $5,536,590.28 (12,748); aid to children in foster care $156,278.31 (486); aid to the handicapped $1,255,078.79 (6,382); temporary aid $32,476.36 (123). During the fiscal year 1948–49 approximately 95,000 beneficiaries were paid $16,275,063 under the unemployment compensation program. Approximately 39,000 unemployed persons were paid $8,090,350 under the readjustment allowance program and approximately 5,300 self-employed persons were paid $2,884,182 under the same program. State correctional institutions are largely self-supporting. On Sept. 30, 1949, there were 31 state prisons and 3 state reformatories. The total prison population was 4,922 and the reformatory population was 569. Prison expenditures for 1948–49 were $3,605,576.78 and reformatories $365,009.88.

Communications.—The state highway system consisted of 7,634 mi. of road, the county system had 52,579 mi. of road and there were approximately 4,000 mi. of municipal streets. For the fiscal year 1948–49 state expenditures for highways by the state highway department were $28,215,562. Estimated railroad mileage within the state was 5,300. There were 1,015 mi. of controlled civil airways, 60 mi. of noncontrolled and 2,441 mi. of off-airway direct air carrier routes. The number of active airports was 109 and inactive airfields numbered 11 (including those owned by the U.S. national military establishment). The tonnage of water-borne commerce in the state was estimated at 4,500,000. The approximate number of telephones was 385,000.

Banking and Finance.—On June 30, 1949, there were in Alabama 156 state banks and 1 branch, which had total deposits of $271,729,000 and total resources of $296,707,000; 69 national banks and 24 branches which had total deposits of $879,759,000 and total resources of $949,478,000. According to budgetary figures the state government receipts for 1948–49 were $83,027,560. Expenditures totalled $79,569,337 and $3,458,223 was transferred to surpluses; the gross state bonded indebtedness Sept. 30, 1949, was $46,879,000 and sinking funds totalled $16,863,000 with a net state indebtedness of $30,016,000.

Agriculture.—The total value of agricultural production in Alabama during 1948 was estimated at $618,360,000. This includes the value of crops produced in 1948 regardless of when they were used or sold plus the value of livestock and livestock products marketed. During 1948 crops were harvested from 5,873,000 ac. excluding duplications. Cash income from sale of crops was $296,043,000; sale of livestock and livestock products amounted to $130,210,000; income from government payments was $4,150,000.

Table I.—*Leading Agricultural Products of Alabama*

	1949	1948	Average 1938–47
Cotton, bales	865,000	1,197,000	901,000
Corn, bu.	57,456,000	58,824,000	43,596,000
Peanuts, lb.	289,075,000	354,710,000	281,976,000
Hay, tons	660,000	700,000	759,000
Sweet potatoes, bu.	4,565,000	4,505,000	5,709,000
Irish potatoes, bu.	3,432,000	3,640,000	4,382,000
Oats, bu.	4,230,000	5,750,000	4,500,000
Soybeans, bu.	1,037,000	1,100,000	266,000
Peaches, bu.	792,000	1,298,000	1,441,000
Sugar cane syrup, gal.	1,820,000	2,240,000	1,912,000

Manufacturing.—The 1948 total estimated value of manufactures in Alabama was $2,658,400,000. Persons employed totalled 229,400 and the yearly pay roll was $524,100,000. The primary metals industry employed 47,500 and the value of the product was $716,700,000; textiles employed 55,200 and the product value was $485,500,000; the lumber industry employed 44,900 and the product was valued at $303,900,000; food product industries employed 14,300 and the total value of products was $292,100,000.

Table II.—*Principal Mineral Products of Alabama*

Mineral	1948	1947	Value, 1947
Coal, tons	17,371,000	19,048,225	$104,303,000
Iron ore, tons	7,914,000	7,225,000	23,437,000
Cement, bbl.	9,912,000	9,514,000	16,664,000
Stone, tons	....	2,795,000	4,625,000

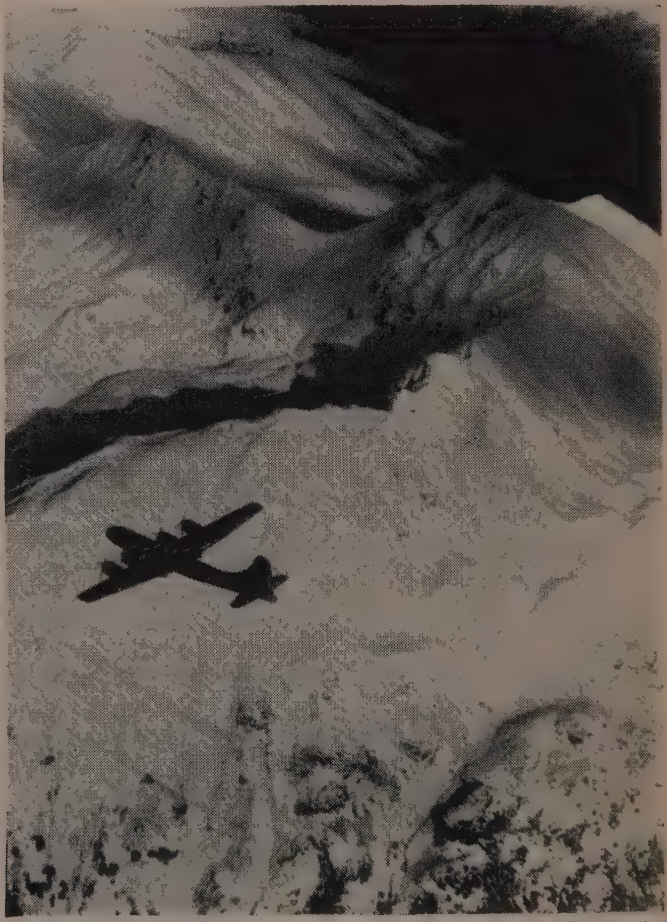
Minerals.—The total value of Alabama mineral production in 1947 was $159,788,000; in 1946 the value was $117,764,000. In 1949 there was no report of fields discontinued or new ones opened. A large and easily available salt deposit was discovered in Washington county but had not been mined. (J. E. Fm.)

Åland Islands: *see* Finland.

Alaska.

Alaska, the northernmost territory of the United States, is separated from Siberian U.S.S.R. by Bering strait. The boundary line runs between the Big Diomede Island, which is soviet soil, and the Little Diomede Island, which is on the U.S. side. These islands are about four miles apart. Alaska has an area of 586,400 sq.mi. and an estimated population in 1949 of 100,000, made up of about 60% whites and 40% Eskimos, Aleuts and Indians. The Aleutian Islands, a chain of small islands extending about 1,200 mi. westward from the extremity of the Alaskan peninsula, constitute part of the territory of Alaska. Juneau (1940 est. pop. 5,748) is the capital of Alaska, and other principal cities are Ketchikan (4,601), Anchorage (3,488), Fairbanks (3,304), Sitka (1,945), Petersburg (1,288), Nome (1,550), Wrangell (1,142) and Seward (1939 census, 949). Governor since 1939: Ernest Gruening; reappointed in 1949 for another four-year term.

History.—The territorial legislature met in a special session of 17 days and a regular biennial session of 60 days in 1949 and enacted the territory's first basic tax program consisting of an



ICE-LOCKED REACHES OF ALASKA being charted from the sky by a photo-reconnaissance crew of the U.S.A.F. in 1949. Vast areas of formerly unexplored terrain were being mapped out for military purposes in a survey that began in 1946 income tax, property tax and business licence tax. The income tax levies 10% of the amount the taxpayer pays the federal government under the internal revenue code; the property tax is 1% of the true and full value, with $200 exemption on personal property; and the business licence is $25 for any and all business enterprises, with a graduated levy on all gross receipts of more than $100,000. The legislature created a territorial department of fisheries and a department of aviation and established a national guard. It appropriated $17,279,000 for operation of the territory during the 1949–50 biennium. The anticipated revenue for the same period was $19,000,000.

Education.—The territory had 26 incorporated school districts and 58 rural schools in 1949, employing 549 teachers and with a student enrolment of 12,000. In addition, the Alaska native service of the department of the interior maintained 85 day schools and 3 boarding schools with a total enrolment of 5,000. The University of Alaska, at College, the territory's only institution of higher learning, farthest north U.S. college, had an enrolment of 330 in the 1949 fall term.

Defense.—Construction of defense installations was concentrated at key points in 1949. Late in the year announcement came from the military high command that ground troops would be withdrawn from the Aleutian Island chain although the air arm would be maintained. Lack of sufficient funds to rebuild the temporary installations made in the islands during World War II was given as the reason. Defense centred in air facilities, both from the military and civilian standpoint. The Civil Aeronautics authority maintains 54 facilities in the territory. The U.S. coast guard re-established a district in Alaska on July 1, 1949, with headquarters at Juneau. It patrols the 26,000 mi. of coast line with aeroplanes and cutters. The navy has its district headquarters at Kodiak.

Banking and Finance.—The territory had a cash balance of $1,558,457.93 as of Dec. 15, 1949, deposited with various banks. There were 17 territorial banks and 4 national banks. Total deposits in territorial banks in December were $42,312,811.69 and in the national banks $31,304,761.

Fisheries.—The 1949 fishery season was one of the best in Alaska history. The total pack of salmon was 4,375,147 cases, valued at $100,000,000. Southeast Alaska, with the largest catch in nine years, produced 2,511,274 cases. The halibut fishery produced 50,000,000 lb., valued at $10,000,000, and shrimp, crab and cod added more than $1,000,000 to the year's total yield.

Mining.—Gold production was still down from prewar years, but 1949 production was approximately $8,750,000, about the same as 1948. A new strike was made on the Yukon river northeast of Fairbanks near the Arctic circle in the fall of 1949, and claims were staked along the river for about 20 mi., hundreds of prospectors stampeding to the area. The real value of the strike would not be known until spring, as winter had closed down operations. Coal production ran about 400,000 tons, with price at the mines holding at $7.25 per ton. Production of silver, copper, lead and zinc approximated $160,000.

FILMS OF 1949.—*Alaska: Global Crossroads* (Flory Films, Inc.).

(L. M. W.)

Albania. A people's republic in the western part of the Balkan peninsula, Albania is bounded by Yugoslavia to the north and east and by Greece to the south, with an Adriatic coast of 200 mi. Area: 10,629 sq.mi.; only one-tenth of the total area is arable land (mainly the Adriatic littoral and the Korçë plain), about three-tenths being pasture and the rest forest, swamp and mountainous waste. Pop.: (1939 census) 1,063,000; (mid-1948 est.) 1,175,000. Chief towns (1946 est.): Tiranë (cap., 35,000); Scutari or Shkodër (30,000); Koritsa or Korçë (27,000); Elbasan (15,000). Language: besides the literary Albanian, there are two spoken dialects, the Gheg north of the river Shkumbi and the Tosk in the south. Religions (1946 est.): Moslem 800,000; Greek Orthodox 220,000; Roman Catholic 110,000. Chairman of the presidium of the People's Assembly, Omer Nishani; prime minister, Colonel General Enver Hoxha.

History.—Because of its strategic position Albania played an important role in soviet policy which attempted to retain influence in the western Balkans. Despite a series of crises the Communist government continued its submissive attitude to soviet direction. In June 1949 the hostile propaganda campaign against Marshal Tito of Yugoslavia reached its peak when, after a widespread purge of so-called Tito sympathizers, five members of the government were sentenced to various terms of imprisonment and the former deputy prime minister and minister of the interior, Koçi Xoxe was executed. Yugoslavia denounced its treaty of friendship and mutual aid with Albania in November.

Completely isolated and deprived of normal trade with its Balkan neighbours, Albania's economy became dependent on the Soviet Union. Albania was admitted to the Council for Mutual Economic Assistance on Feb. 22. From March 21 to April 10 Hoxha visited Moscow where negotiations resulted in an agreement whereby the U.S.S.R. would provide capital equipment for industrial development and large quantities of consumer goods. The five-year plan based on Yugoslav support, abandoned in 1948, was translated into a two-year plan on the soviet model. Albania, however, was not granted membership in the Cominform and remained the only satellite country without a treaty of mutual aid with the Soviet Union.

It became clear in July that the Soviet Union was more interested in supplying Albania in order to maintain the Greek rebel movement and increase the tempo of the nerve-war against Marshal Tito than to prevent the Albanian population from starving. As the Greek rebellion drew to its close, so the number of ships bringing transport and food, but not capital equipment, from soviet Black sea ports, rapidly diminished. The result was that the already poor economic situation became serious. There was famine in the south of the country and disease was rife in many towns. Large numbers of refugees crossed the frontier into Yugoslavia. Deserters to the Greek government forces reported dissension in the Albanian army. Responsibility for the internal disorder was pinned on the minister of industry, Gogo Nushi. He was arrested on the grounds of sabotage in October.

Although there was a marked decline of soviet interest in Albania in the last half of the year, a large soviet military mission was maintained in Tiranë and soviet technicians continued work on the harbour defenses at Vlorë (Valona) and Durrës (Durazzo).

In the report of the United Nations Special Committee on the Balkans, Albania was indicted as the principal source of material assistance to Greek Communists. This report, submitted to the general assembly, provided evidence to show that the Albanian armed forces had actively assisted the Greek rebels. Some 6,000 of them were given refuge in Albania when the civil war ended. All attempts by the United Nations to secure an understanding between Greece and Albania failed.

Education.—(1949) Elementary schools 1,909, pupils 162,000; higher elementary (145) and secondary (20) schools had a total of 19,000 pupils. A teachers' college was opened at Tiranë in 1946. In Aug. 1949 it was announced that there were 12 newspapers and 14 other periodical publications with a total circulation of 83,000.

Finance.—The monetary unit is the lek, which until June 1948 was at par with the Yugoslav dinar. In July 1949 a state loan of 250,000,000 leks, the first loan in Albanian history, was launched. On Oct. 1 all the banknotes of 1947 issue were withdrawn and replaced by new ones, but no information was published as to the amount of the currency circulation.

Transport and Communications.—Roads (1949): 2,842 km. Licensed motor vehicles (Dec. 1948): cars 500, commercial vehicles 1,240. Railways (1949): 100 km. Shipping (1949): number of merchant vessels 6 (including two sea-going ships purchased in 1949 from Poland).

Agriculture.—Main crops (in metric tons, 1947): maize 140,000; wheat 54,000. Livestock (1946 est.): sheep 1,548,000; cattle 345,000; horses 50,000; asses 40,000; mules 10,000; goats 854,000; pigs 35,000. The first 20 collective farms were organized during 1949. (S. E. Ws.)

Alberta. Most westerly of the three prairie provinces of Canada, Alberta was created by parliament in 1905. The area is 255,285 sq.mi., of which 6,485 sq.mi. are water; pop. (1941) 796,169, (1949 est.) 871,000. Largest city is Edmonton, provincial capital (1948: 126,809). Administered by a lieutenant governor, an executive council, and a 57-member legislative assembly, Alberta is federally represented by 17 members of parliament and 6 senators.

History.—The Alberta legislature had a busy year in 1949. It offered free hospitalization and treatment to arthritis sufferers, banned the sale of yellow-coloured margarine, reduced hours of work in coal mines from 48 to 40 per week, raised minimum weekly wages for women from $18 to $20, extended the workmen's compensation act to include the furniture-finishing industry, strengthened regulations for safety of oil-well drillers and brought the export of oil and gas under a petroleum and natural gas conservation board.

Education.—The department of education announced that the supply of teachers for the year 1949 was 300 to 400 below the 6,000 requirement. The latest available revised statistics for provincially controlled schools were for 1946: total enrolment, 155,455; average daily attendance, 133,162; teachers, 5,446; total revenue, $15,199,465.

Finance.—The 1949–50 provincial budget amounted to $66,659,000. Liquor revenues and amusement taxes were at their peak, and oil revenues reached an estimated $60,000,000 before the year's end. At the half-year mark there was an $11,953,431 provincial surplus, but increased spending during the second six months reduced it.

Agriculture.—Extended drought cut the expected 1949 crop returns, and summer-end hail storms that swept over 1,000,000 ac. further reduced harvests. The latter resulted in a $450,000 bill to insurance companies, which represented only about 10% of the actual losses. Cash income from the sale of farm products for the final half of 1949 was $207,250,000, compared with $165,720,000 for same 1948 period. Production values for 1948 were as follows: wheat, $152,950,000; other grains, $125,787,000; fodder, $32,430,000; root crops, $8,999,000; livestock, $140,000,000. Total agricultural production value was slightly more than $600,000,000, compared with $438,000,000 for 1947.

Industries.—There were general boom conditions throughout 1949, with 32 new industries started, largely resulting from the expansion of the oil resources. In April the provincial minister of economic affairs announced that total production was about $700,000,000 annually, with a trade turnover of $310,000,000 at wholesale levels and $450,000,000 at retail levels.

Minerals.—During 1949, eight companies having a total of 4,000 men in the field and spending about $100,000,000 had drilled into oil reserves totalling 1,000,000,000 bbl. worth an estimated $2,500,000,000. By November there were 1,000 producing wells pumping about 70,300 bbl. daily; the total for the year ran to about 20,000,000 bbl. (compared with 10,900,000 bbl. for 1948). New wells were constantly coming in, both near the 1948-discovered Redwater field and near the smaller Peace River field. Pumping was restricted pending better access to markets. Pipe-line construction was still not completed, though lines totalling more than 2,400 mi. and costing more than $275,000,000 were well along in the blueprint stages. Canada's biggest natural gas well was brought in at Pincher Creek with a daily capacity of 83,000,000 cu.ft. (*See* also CANADA, DOMINION OF.) (C. CY.)

Alcohol, Industrial.

In the United States, during the year 1948–49, production, withdrawals, and stock figures on industrial alcohol differed very little from the previous year in which production amounted to 166,141,074 wine gal. of 190 proof undenatured ethyl alcohol. Stocks were equal to about one-fourth of the year's production. Synthetic processes contributed 20% more than in the previous year, about 48% of the total, and molasses, formerly the chief source, 34%. Three large government-owned plants using grain and potatoes ceased operations during the year.

Prices were raised about ten cents per gallon July 1, and withdrawals were heavy prior thereto and lighter afterward, but demand and production increased after September and no further price rise was reported. The Economic Cooperation administration authorized substantial purchases by participating countries. (J. K. R.)

Alemán, Miguel

(1903–), president of Mexico, was born Sept. 29 in Sayula, Veracruz, Mexico. He studied at the National Preparatory school in Mexico City and later at the National University of Mexico, where he received his law degree in 1928. He was successively consulting attorney for the Mexican ministry of agriculture; judge of the federal court; senator from Veracruz; governor of that state (1936–40); and minister of the interior under Pres. Manuel Avila Camacho, whom he succeeded as president in 1946. During World War II and afterward, Alemán championed inter-American solidarity. His program as president included emphasis on education, industrialization, irrigation and the modernization of agriculture, source of income for 70% of the population. In 1949 his Party of Revolutionary Institutions won a sweeping victory in the July 3 election of delegates to the chamber of deputies. His government had effected the devaluation of the peso on June 17; and, in his state of the nation address on Sept. 1, Alemán told the new chamber of deputies that this action had saved Mexico from a crisis in foreign trade and from inflation. He pledged continued controls over prices and supplies of consumer goods and disclosed that the Bank of America had granted a $3,000,000 loan for a highway across the isthmus of Tehuantepec.

Aliens.

United States.—By using the true figures for immigration and naturalization and estimating alien mortality for the period of registration, it is possible to arrive at the approximate alien population. On such a basis it is estimated that there were approximately 3,000,000 resident aliens in the continental United States on June 30, 1946. This estimate does not take into account persons there temporarily, that is, nonimmigrants, border crossers and imported labourers.

Naturalizations.—The number of noncitizens naturalized during the year ended June 30, 1949, was 66,594. This was the lowest number in 37 years. Included in the number naturalized were 35,131 persons naturalized who were married to United States citizens, and 2,456 persons who had served in the armed forces of the United States.

The principal countries of former allegiance, and classes under the Nationality act of 1940, were as reported below:

U.S. Noncitizens Naturalized during Year Ended June 30, 1949, by Countries or Regions of Former Allegiance

Country or region of former allegiance	Total	Persons naturalized: General Provisions	Persons naturalized: Spouses and children of U.S. citizens	Persons naturalized: Military	Persons naturalized: Other
All countries	66,594	24,566	35,579	2,456	3,993
Austria	1,194	586	554	31	23
British Empire	13,284	3,840	8,928	353	163
Canada	5,347	1,591	3,467	202	87
China	927	340	233	257	97
Czechoslovakia	1,284	579	661	32	12
France	1,658	383	1,222	23	30
Germany	5,777	2,613	2,986	95	83
Greece	1,638	691	820	97	30
Hungary	1,036	483	528	16	9
Ireland	1,370	558	789	17	6
Italy	8,301	3,183	4,774	188	156
Mexico	2,227	957	1,045	205	20
Philippines	3,478	245	178	310	2,745
Poland	4,371	2,197	2,035	99	40
Sweden	1,044	511	491	12	30
U.S.S.R.	2,752	1,261	1,430	40	21
Yugoslavia	809	380	382	30	17
Other countries	10,097	4,168	5,056	449	424

Throughout the year 2,271 petitions for naturalization were denied. Almost two-thirds were denied for want of prosecution, 61 were denied by the courts for failure to establish attachment to the principals of the constitution and proper disposition to the good order and happiness of the United States and 233 were denied to persons for lack of good moral character. There were 184 judgments of naturalization revoked and certificates of naturalization cancelled during the year. In 179 cases the foreign service of the department of state initiated action because naturalized citizens of the United States became permanent residents of foreign countries within five years after naturalization. In five cases the immigration and naturalization service initiated action because naturalization was otherwise fraudulently or illegally procured.

There were 8,575 persons who lost United States nationality during the year 1948–1949: 4,515 by voting in a foreign political election or plebiscite, 1,459 by entering or serving in the armed forces of a foreign state, 754 through naturalization in a foreign state, 694 naturalized citizens through prolonged residence in a foreign state and 1,153 who lost United States nationality for other reasons.

Petitions for naturalization were filed by 71,044 persons, an increase of 4.1% from the fiscal year 1948, when 68,265 petitions were filed.

Alien Enemies.—At the beginning of the fiscal year 1949 there were 174 continental Germans and 27 continental Japanese still under orders of removal issued by the attorney general, pursuant to the presidential proclamation of July 14, 1945. Of the Germans, 75 departed or were removed from the United States during the fiscal year as the result of the supreme court decision in the case of *Kurt G. W. Ludecke* v. *W. Frank Watkins* handed down on June 21, 1948, upholding the right of the government to remove or deport under the Alien Enemy act of 1798 interned alien enemies deemed by the attorney general to be dangerous because they had adhered to an enemy government or to the principles thereof; 58 were released outright; 3 were released by court order; and 6 were paroled pending further administrative determination of their cases. In view of the decision handed down by the supreme court in the case of *Klapprott* v. *United States,* execution of removal orders was deferred in the 29 denaturalization cases remaining for further administrative consideration. Only 3 continental Germans were still detained at Ellis Island at the close of the fiscal year.

New Legislation.—The only act of major importance to the service which was passed by the 80th congress during the fiscal year was public law 863 of July 1, 1948. This act amended section 19(c) of the Immigration act of 1917 in several major respects. Under the new law, suspension of deportation by the attorney general was authorized even though an alien was racially ineligible to citizenship. The law also permitted such suspension in the cases of aliens who had resided continuously in the United States for seven years or more and who were residing there on July 1, 1948. The other important change in section 19(c) changed the procedure to be followed by the congress in approving suspension of deportation cases. Affirmative, rather than negative, action was required before such cases might finally become effective. There was a provision for protecting small quotas by providing that in the future no quota should be reduced by more than 50% in any one year.

During the first session of the 81st congress three bills affecting service activities were passed prior to the close of the fiscal year. The first was public law 51 of April 21, 1949. This act authorized U.S. foreign service officials to complete the processing of cases pending in their offices on Dec. 31, 1948, involving alien fiancés and fiancées of certain U.S. citizens who had applied to come to the United States under the special terms of public law 471 of the 79th congress, as amended and extended. The new act required that the citizen and his or her prospective alien spouse must have personally met, and that the alien must arrive at a port of entry with a valid visa within five months after April 21, 1949. Provision was made in the act to permit such aliens to become permanent residents after marriage.

Public law 110 of June 20, 1949, provided for administration of a Central Intelligence agency established pursuant to the National Security act of 1947. Section 8 of the act authorized the entry into the United States during each fiscal year of not to exceed 100 aliens for permanent residence without compliance with the immigration laws. These persons were to be chosen upon a finding by the director of the Central Intelligence agency, the attorney general, and the commissioner of immigration and naturalization that the entry of such aliens was in the interest of the national security or essential to the furtherance of the national intelligence mission.

Public law 140 of June 29, 1949, merely corrected a typographical error in section 324A of the Nationality act of 1940 (public law 567, 80th congress, 2nd session). (*See* also LAW.)

(W. B. MI.)

Great Britain.—The number of aliens registered in Great Britain Oct. 1, 1949, was 429,342 (males 273,323; females 156,019). The figure on Jan. 1 was 410,600. The principal nationalities represented and the numbers of each compared with those in parentheses at approximately the same date in 1948 were: Austrian, 11,034 (11,254); Belgian, 6,467 (8,241); Chinese, 9,367 (9,309); Czechoslovakian, 7,207 (6,837); Danish, 5,145 (4,753); Dutch, 9,158 (9,456); Estonian, 5,816 (6,025); French, 14,087 (13,019); German, 44,249 (42,252); Hungarian, 5,536 (5,155); Italian, 18,667 (17,680); Latvian, 13,855 (13,723); Lithuanian, 7,165 (7,355); Norwegian, 5,868 (5,585); Polish, 150,378 (136,336); Russian, 40,785 (36,254); Swiss, 13,107 (12,063); U.S.A., 16,656 (14,967). The figures included 13,000 aliens to whom no nationality could be attributed.

The flow of foreign passenger traffic through United Kingdom ports continued to be heavy and in July 1949 101,768 aliens entered the United Kingdom and 84,076 departed; similar figures in July 1948 were 111,553 and 74,149. As a result of agreements concluded in and before 1949 nationals of the following countries were absolved from obtaining visas for travel to the United Kingdom: Belgium, Denmark, France, Iceland, Italy, Liechtenstein, Luxembourg, Monaco, the Netherlands, Norway, San Marino, Sweden, Switzerland and the United States.

The settlement of Poles for whom the British government assumed responsibility proceeded in 1949 and by Sept. 30 the Polish Resettlement corps had been wound up. By then, out of the 174,000 Polish servicemen brought to the United Kingdom after mid-1945, 61,500 had been repatriated and 17,000 assisted to emigrate. Of the remainder 1,000 had died, 94,500 had been settled in civilian life in Great Britain and 31,000 persons dependent on them had been brought from abroad to join them.

Between Jan. 1 and Oct. 1, 1949, 5,610 new applications for naturalization were lodged, compared with a yearly average of 1,708 before World War II. Certificates granted during the same period numbered 7,731, an annual rate of naturalization of approximately 10,300 as against 15,500 in 1948. Among the other effects of the British Nationality act, 1948, which came into operation on Jan. 1, 1949, was that British women who had lost their British nationality by marriage before that date regained it; the statutory qualifications for British-protected persons seeking naturalization was reduced and such persons were exempted from the provisions of the Aliens Restriction acts; and foreign women ceased to acquire British nationality automatically on marriage to a British subject but became eligible to secure it by applying for registration as citizens of the United Kingdom and colonies. (T. G. W.)

Alimentary System, Disorders of.

Oesophagus.—Increasing interest was manifested during 1949 in oesophagitis, an inflammation of the gullet which gives rise to heartburn, pain and dysphagia. The oesophagus does not have the resistance to acid that the stomach and duodenum have, but there is a mechanism at the inlet of the stomach (cardia) which normally prevents acid from reaching it. Failure of this mechanism will allow acid to reach the oesophagus, and in time this inevitably leads to inflammation and ulceration. According to Allison, the four stages of oesophagitis are inflammation, inflammation with acute ulcer, inflammation with chronic ulcer and healed fibrous stenosis. In the presence of a diaphragmatic hernia such inflammation causes shortening of the oesophagus as well as stricture.

Cancer of the oesophagus had formerly been considered a hopeless disease. Since the successful resection of the upper portion of the stomach (cardia) with restoration of continuity by W. E. Adams and D. B. Phemister in 1938 the scope of operations for oesophageal cancer had been extended so that the entire oesophagus could be removed and direct continuity satisfactorily reestablished. The over-all surgical mortality in 1949 was between 10% and 20%.

Stomach and Duodenum.—Stewart Wolf and H. G. Wolff in 1948 had summarized the results of their extensive investigations concerning emotional disturbances and their bearing on gastric dysfunction. In general the patterns of disturbance were characterized either by overfunctioning or underfunctioning of the stomach. The former was found to be associated frequently with symptoms characteristic of peptic ulcer: heartburn, gnawing epigastric pain, especially when the stomach was empty, and which usually was relieved by taking food, milk or alkalies. Gastric hypoactivity, on the other hand, was found to be accompanied by sensations of epigastric fullness and nausea.

Investigations showed that the average volume of nocturnal gastric secretion and the average output of hydrochloric acid are highest in patients with duodenal ulcer. There is no significant difference in the average volume secreted by patients with benign gastric ulcer and by normal people. In fact, the concentration and output of hydrochloric acid is actually somewhat lower in patients with gastric ulcer. These observations have a definite bearing on treatment. The decline in mortality after massive haemorrhage from the stomach or duodenum was attributed largely to liberal transfusions of blood and early feeding which control shock, tissue anoxia that is often irreversible and eventually fatal, dehydration, excessive accumulation of urea in the blood and acute malnutrition. As a result patients were much more able to withstand further haemorrhages.

An article by T. L. Althausen published in 1949 on the prevention of recurrences of peptic ulcer after medical treatment was characteristic of numerous contributions on this important phase of treatment of ulcers, which had been insufficiently stressed in the past. Factors predisposing to reactivation or recurrence are emotional tension, physical fatigue, respiratory infection, alcohol, tobacco, condiments, caffeine-containing beverages, stimulating or coarse foods and hurried, improper mastication. The institution of a protective regimen during periods of stress or former seasonal exacerbations was emphasized. Continued co-operation with respect to diet, medication and hygiene was usually achieved only by fully acquainting the patient with the nature of the disease and the rationale underlying treatment. Favourable results continued to be reported by proponents of vagotomy (cutting of both vagus nerves) in the treatment of chronic ulcer of the stomach and duodenum. Many U.S. surgeons felt that vagotomy, as an exclusive primary procedure, should be abandoned.

Subtotal gastric resection still remained the method of choice for duodenal ulcer. Vagotomy was recommended especially for patients who previously had undergone operations such as pyloroplasty, gastro-enterostomy or gastric resection, and who later had recurrent ulceration, particularly anastomotic ulcers. For patients considered to be good postoperative risks, many surgeons preferred to excise or resect the recurrent ulcer at the time vagotomy was performed.

Liver and Gall Bladder.—The advantage and safety of needle biopsy of the liver in competent hands was increasingly apparent. Combined biopsy and tests of hepatic function were most illuminating even though the results from the respective investigations did not always parallel each other. Such combined procedure, plus thorough clinical study, represented distinct progress in the diagnosis and treatment of hepatobiliary disease. M. W. Comfort, H. K. Gray and J. M. Wilson reported observations on 112 patients who had asymptomatic gallstones found incidentally during the course of abdominal operations. Follow-up data on these patients for 10 to 20 yr. revealed that indigestion supervened in 30, biliary colic in 21 and both jaundice and colic in 5. The remainder, exactly half the total, continued to be asymptomatic. The authors concluded that surgical treatment for silent gallstones may be classified as optional. Surgery should not be postponed, however, especially after colic occurs.

Intestines.—The investigations of T. P. Almy and associates confirmed the important role of emotional stress in the alteration of colonic function, similar in kind and degree to those alterations seen in patients with irritable colon. In a review of 726 consecutive cases of diverticulum of the colon, F. H. Goodwin and E. N. Collins noted the following features: aetiology was unknown; the site of predilection in the majority was the sigmoid colon; three-fourths of the patients were 50 years of age or older, two-thirds were overweight; and symptoms, signs and mode of treatment were similar to those of irritable colon. Other observers estimated that diverticulitis would develop in 10% to 20% of cases of diverticulosis. Medical management was indicated for a large majority of the patients during an attack of diverticulitis as well as before operation.

(G. B. EN.)

Allergy.

Investigations in 1949 helped clarify obscure allergic causes of both respiratory and abdominal symptoms. R. L. Mayer sensitized guinea pigs with paraphenylene diamine, a common dye. When the pigs were tested with related dyes commonly used to colour foods, some of the animals were found to be sensitive. The author concluded that occasionally obscure cases of symptoms may be due to materials used to colour foods artificially. H. H. Gelfand found that sensitivity to the gums of acacia, karaya or tragacanth, used as fillers or stabilizers in such common foods as pies, cream cheese, whipped cream preparations, candies, mayonnaise and many other foods may be a cause of asthma, hives or abdominal distress.

H. S. Bernton, E. J. Coulson and H. Stevens found in a careful study of two patients who were sensitive to cottonseed protein, that ingestion of cottonseed oil failed to produce symptoms. The report threw doubt on the view held by some allergists that patients sensitive to the water soluble protein of cottonseed could not tolerate the oil so commonly used as a food.

A new approach to the study of various types of arthritis from an allergic point of view was offered by the experimental work of L. M. Kopeloff and N. Kopeloff. They injected antigens in an adjuvant oil emulsion in the back of the neck of guinea pigs. Simultaneously they injected the antigen without any adjuvant near the joint of one hind foot. Most animals developed a swollen joint in the injected foot between the 9th and 20th day after the injection. The authors suggested that this method be applied to the study of bacteria as a cause of arthritis.

Symptoms of typical gout may be precipitated by sensitivity to foods or pollens according to J. Harkavy, who was able to reproduce attacks of gout in three patients by exposing them to the foods or pollens to which they were sensitive.

In the field of therapy several contributions served to emphasize the dangers to the allergic patient of helpful or even essential drugs. H. H. Rivers, B. B. Ward and M. L. Hicks reported the death of a 16-mo.-old girl who accidentally swallowed 100 mg. (adult dose) of thenylene hydrochloride, one of the antihistaminic drugs. S. A. Wolfson reported urinary obstruction caused by spasm of the sphincter of the bladder in a man after four one-tablet doses of pyribenzamine, another of the antihistaminic remedies. The patient recovered after stopping the drug. While the danger of penicillin administration to those sensitive to this important antibiotic had been previously emphasized, the report by G. L. Waldbott of sudden anaphylactic death following its injection served as an added warning of caution in the use of even an essential drug in allergic patients. To these two observations was added the report by W. R. Coppinger and M. G. Goldner of a sudden death caused by hypersensitivity following the intravenous injection of a digested protein in a patient who required such treatment after an operation. This serious result occurred despite the rarity of sensitivity to protein digests.

In a study of a new antihistamine, dramamine, L. N. Gay and P. E. Carliner found the drug ineffective for the relief of hay fever, but curiously potent as a preventive or relief for motion sickness. When administered under various trial conditions to soldiers in an army transport crossing the Atlantic in rough seas, the drug prevented seasickness for almost all who used it. It relieved the condition within one-half hour after its administration in those who had not previously received a protective dose.

The experimental extract of the pituitary gland commonly known as ACTH was used on five patients with severe asthma by J. E. Bordley and co-workers. All five patients were relieved in 4 to 48 hr. The authors did not state the duration of relief; however, other indications were that relief lasts for no longer than two weeks. Furthermore, ACTH was still a potentially dangerous material, available only in minute quantities and only for experimental use.

Aluminum.

Although world production of aluminum in 1948 increased one-sixth over 1947, to more than double the 1939 total, it was still only 65% of the war peak of 1943. The outputs of the major producing countries and the world totals during recent years are shown in Table I.

THIN-WALLED ALUMINUM OFFICE BUILDING completed at Davenport, Ia., in June 1949, to serve as administration centre for the newly built 52-ac. sheet and plate rolling mill of the Aluminum Company of America

ported by the U.S. bureau of mines, are shown in Table II.

While the production rate was advanced appreciably during the first half of 1949, strikes in several of the plants cut output in the second half. The total output through Oct. 1949 was 526,436 tons, and the total for the year was expected to be about the same as in 1948.

(G. A. Ro.)

Ambassadors and Envoys.

The following is a list of ambassadors and envoys to and from the United States, Jan. 1, 1950.

To the United States	Country	From the United States
*Naim, H.R.H. Sardar Mohammad	Afghanistan	*Dreyfus, Louis G., Jr.
*Remorino, Jerónimo	Argentina	*Griffis, Stanton
*Makin, Norman J. O.	Australia	*Jarman, Pete
Kleinwaechter, Ludwig	Austria	Erhardt, John G.
	Belgian Congo	Beach, William H.[1]
*Silvercruys, Baron	Belgium	*Murphy, Robert D.
*Martinez Vargas, Don Ricordo	Bolivia	*Florman, Irving
*Nabuco, Mauricio	Brazil	*Johnson, Herschel V.
†Voutov, Peter	Bulgaria	Heath, Donald R.
*Nyun, U So	Burma	*(Vacancy)
*Wrong, Hume	Canada	*Steinhardt, Laurence A.
*Corea, G. C. S.	Ceylon	*Satterthwaite, Joseph C.
*Nieto del Río, Félix	Chile	*Bowers, Claude G.
*Koo, V. K. Wellington	China	*Stuart, J. Leighton
*Zuleta-Angel, Don Eduardo	Colombia	*Beaulac, Willard L.
*Esquivel, Don Mario A.	Costa Rica	*Flack, Joseph
*Gans, Oscar	Cuba	*Butler, Robert
*Outrata, Vladimir	Czechoslovakia	*Briggs, Ellis O.
*Kauffmann, Henrik de	Denmark	*Anderson, Eugenie
*Thomen, Luis Francisco	Dominican Rep.	*Ackerman, Ralph H.
*Dillon, Don Augusto	Ecuador	*Simmons, John F.
*Abdul Rahim, Mohamed Kamil	Egypt	*Caffery, Jefferson
*Castro, Don Héctor David	El Salvador	*Shaw, George P.
Kaiv, Johannes[2]	Estonia	(Legation at Tallinn closed)
*Imru, Ras H. S.	Ethiopia	*Merrell, George R.
Jutila, K. T.	Finland	(Vacancy)
*Bonnet, Henri	France	*Bruce, David K. E.
	Germany	McCloy, John J.[3]
*Franks, Sir Oliver Shewell	Great Britain	*Douglas, Lewis W.
*Dendramis, Vassili G.	Greece	*Grady, Henry F.
*Goubaud-Carrera, Don Antonio	Guatemala	*Patterson, Richard C., Jr.
*Charles, Joseph D.	Haiti	*DeCourcy, William E.
*Valle, Don Rafael Heliodoro	Honduras	*Bursley, Herbert S.
Horváth, Imre	Hungary	Davis, Nathaniel P.
Thors, Thor	Iceland	Lawson, Edward B.
*Pandit, Mme. Vijaya Lakshmi	India	*Henderson, Loy W.
	Indonesia	*Cochran, H. Merle
*Ala, Hussein	Iran	*Wiley, John C.
*Bakr, Abdullah Ibrahim	Iraq	*Crocker, Edward S., 2nd
Nunan, Sean	Ireland	Garrett, George A.
*Elath, Eliahu	Israel	*McDonald, James Grover
*Tarchiani, Alberto	Italy	*Dunn, James Clement
	Japan	Sebald, William J.[4]
Haikal, Yusuf	Jordan	(Vacancy)
*Chang, John Myun	Korea	*Muccio, John J.
Feldmans, Jules	Latvia	(Legation at Riga closed)
Malik, Charles	Lebanon	Pinkerton, Lowell C.
*King, Charles D. B.	Liberia	*Dudley, Edward R.
Žadeikis, Povilas	Lithuania	(Legation at Kaunas closed)
Le Gallais, Hugues	Luxembourg	Mesta, Perle
*Colina, Don Rafael de la	Mexico	*Thurston, Walter
	Morocco	Plitt, Edwin A.[5]
Shanker, ShumShere Jung Bahadur Rana, Gen.[6]	Nepal	Henderson, Loy W.[7]
*Kleffens, E. N. van	Netherlands	*Chapin, Selden
*Berendsen, Sir Carl	New Zealand	*Scotten, Robert M.
*Sevilla-Sacasa, Don Guillermo	Nicaragua	*Waynick, Capus M.
*Munthe de Morgenstierne, Wilhelm	Norway	*Bay, Charles Ulrick
*Ispahani, M. A. H.	Pakistan	*Warren, Avra M.
	Palestine	*Gibson, Raleigh A.[1]
Chevalier, Don Eugenio J.[8]	Panamá	*Davis, Monnett B.
*Boettner, Don Luís Oscar	Paraguay	*Warren, Fletcher
*Berckemeyer, Don Fernando	Peru	*Tittmann, Harold H., Jr.
*Elizalde, Joaquin M.	Philippines, Republic of the	*Cowan, Myron Melvin
*Winiewicz, Jozef	Poland	*Gallman, Waldemar J.
*Theotónio Pereira, Pedro	Portugal	*MacVeagh, Lincoln
Magheru, Mihai	Rumania	Schoenfeld, Rudolf E.
*Al-Faqih, Sheikh Asad	Saudi Arabia	*Childs, J. Rives
*Jooste, G. P.	South Africa, Union of	*(Vacancy)
Propper de Callejón, Don Eduardo[9]	Spain	*(Vacancy)
*Boheman, Erik	Sweden	*Matthews, H. Freeman
Bruggmann, Charles	Switzerland	Vincent, John Carter
El-Khouri, Faiz	Syria	Keeley, James Hugh, Jr.
*Waithayakon, H.R.H. Prince Wan	Thailand	*Stanton, Edwin F.
*Erkin, Feridun C.	Turkey	*Wadsworth, George
*Panyushkin, Alexander S.	U.S.S.R.	*Kirk, Adm. Alan G.
*Domínguez-Cámpora, Alberto	Uruguay	*Ravndal, Christian M.
*Pocaterra, Don José Rafael	Venezuela	*Donnelly, Walter J.
	Yemen	Childs, J. Rives[10]
*Kosanovic, Sava N.	Yugoslavia	*Allen, George V.

*Ambassador. Unstarred—Minister.
†Chargé d'affaires ad interim.
[1] Consul general.
[2] Acting counsul general.
[3] U.S. high commissioner and chief of mission.
[4] Acting U.S. political adviser with the rank of minister plenipotentiary.
[5] Diplomatic agent and consul general with the personal rank of minister.
[6] Resident in London, Eng.
[7] Resident in New Delhi, Ind.
[8] Minister counsellor.
[9] Minister plenipotentiary, chargé d'affaires ad interim.
[10] Resident in Jidda, Saudi Arabia.

American Citizens Abroad.

The number of U.S. citizens residing abroad in 1949 was 383,542, an increase of nearly 50,000 over the previous year and 75,000 more than were residing abroad during 1941. The usual number of businessmen and their families and persons engaged in professional or other activities such as pleasure, health or family needs continued to make up this group. There was an increase in the number of students and teachers residing abroad, largely because of the stimulation given this type of sojourn by the Fulbright act and the Economic Cooperation administration. Also, there was an increase in the number of employees of the government service following extension of the Economic Cooperation administration program and certain new activities in connection with the Marshall plan and the North Atlantic treaty. There was a noticeable increase in the number of Americans proceeding abroad for short sojourns, the numbers limited only by the scarcities of air and ship space during the months deemed most desirable for travel.

At the end of the year 1949, the U.S. colony in China was reduced to something less than 3,000 people, many of whom were prepared to leave as soon as exit permits were obtainable. Many who left China during 1949 did not return to the United States but remained in the far east awaiting a clarification of the conditions surrounding the life of foreigners in China under the new Communist regime.

Registration of Americans residing abroad was greater than that of the normal American foreign colonies in the pre-World War II days.

Restrictions concerning travel of U.S. businessmen in Japan were modified during 1949 to permit the permanent residence of those whose business requires that they make more than a temporary stay. Many of the businessmen formerly engaged in trade with Japan took advantage of this, as did many persons who had learned of the trade opportunities through temporary visits and during the occupation. The U.S. colony in Japan showed a great increase, largely because of dependents joining persons stationed there on military or civil government assignments.

Detailed figures on U.S. citizens abroad in 1949, by countries, are as follows:

South America		
Argentina	4,148	
British Guiana	373	
Bolivia	686	
Brazil	7,913

American Dental Association.

Total membership in the American Dental association reached a new high of 75,267 in 1949, a net gain of 3,441 over the preceding year. The increase was recorded in student and life membership classifications. Active membership totalled 65,551, about 1% below the total for the previous year.

Among major activities of the association and its 487 state and local dental societies were the inauguration of programs designed to raise the level of dental health in the United States. The association's house of delegates unanimously adopted a statement of principles for the development of community, state and national dental health programs to carry out this objective. This statement, which reiterated the association's objection to the establishment of a national system of compulsory health insurance, urged the development and expansion of community health programs to make dental care available to every child. The statement recommended that children be given a priority over adults for dental health services.

The association also joined with the American Medical association (*q.v.*) and four other national professional organizations in the formation of the Inter-Association Committee on Health.

In February, the association inaugurated the first National Children's Dental Health day designed to stimulate both public and professional interest in making dental health education and care available to all children. The association also increased its output of dental health education material, distributing more than 1,000,000 pamphlets and brochures and numerous motion pictures and other visual aids to schools, public and private agencies and individuals.

The association continued its support of a number of research projects and appropriated an additional $20,000 for a special study of the physical and chemical properties of enamel to be conducted at the U.S. bureau of standards. It also authorized the creation of a new specialty board for oral pathologists, increasing to six the number of recognized dental specialties.

One additional dental school was founded during the year in Alabama and plans were completed for the opening of a new dental school in North Carolina in 1950, bringing the total number of dental schools in the United States to 42. Of these, 39 had been approved, either in full or on a provisional basis, by the association Council on Dental Education.

Officers of the association for 1949–50 were: president, Philip E. Adams, Boston, Mass.; president-elect, Harold Oppice, Chicago, Ill.; secretary, Harold Hillenbrand, Chicago; and treasurer, H. B. Washburn, St. Paul, Minn.

The 90th annual scientific and business session of the association was held at San Francisco, Calif., on Oct. 17 to 20, with a record attendance of 11,000.

The 91st annual session of the association was to be held Oct. 30 to Nov. 2, 1950, at Atlantic City, N.J.

American Library Association. The oldest professional association in the world of librarians and others interested in educational, social and cultural responsibilities of libraries, the American Library association (A.L.A.) is the official organization of librarians in the United States and Canada. Established on Oct. 6, 1876, in Philadelphia, Pa., the A.L.A. had a membership in 1949 of about 20,000 in the U.S. and possessions, Canada and 50 foreign countries. It is affiliated with more than 60 other library associations throughout the world and works closely with organizations and government agencies concerned with education, recreation, research and public service. In 1949 its endowment was approximately $2,107,000. Activities were carried on by members of a headquarters staff of 80, assisted by 700 volunteer boards and committees. Headquarters are located at 50 E. Huron St., Chicago 11, Ill., with John Mackenzie Cory as executive secretary.

Representatives from 43 states, Canada and 7 foreign countries, totalling 1,440, attended the largest midwinter conference ever held, when it convened Jan. 20–23, 1949, in Chicago. In place of the usual annual conference, seven regional meetings were held. Officers, elected by ballot, who assumed their duties following the final conference were: president, Milton E. Lord, Boston Public library, Boston, Mass.; first vice-president and president elect, Clarence R. Graham, Louisville Free Public library, Louisville, Ky.; second vice-president, John B. Kaiser, Newark Free Public library, Newark, N.J.; and treasurer, R. Russell Munn, Akron Public library, Akron, O.

The annual A.L.A. citations for distinguished service as library trustees were awarded to Julia Brown Asplund, Santa Fe, N.M., and Robert B. Tunstall, Norfolk, Va. The 28th Newbery medal was received by Marguerite Henry for *King of the Wind*, judged to be the outstanding contribution to children's literature during 1948; while the 13th annual Caldecott medal for the most distinguished picture book was conferred upon Berta and Elmer Hader for *The Big Snow*.

Harry Miller Lydenberg, Greensboro, N.C., received the Joseph W. Lippincott award ($500) from the donor for distinguished library service.

Carleton B. Joeckel, professor of librarianship, University of California, was the recipient of the first Herbert Putnam Honor award ($350), "a grant-in-aid to an American librarian of outstanding ability, for travel, writing, or other use that might improve his service to the library profession or to society."

Ina L. Hawes and Rose Eisenberg, of the bibliography division of the U.S. department of agriculture library, Washington, D.C., jointly won the Oberly Memorial award, given every other year to the compiler of the best bibliography on agriculture or the natural sciences. Ten libraries were presented with the 1949 John Cotton Dana Publicity awards, sponsored by the *Wilson Library Bulletin* and the A.L.A. Public Relations committee for outstanding publicity.

The Ada McCormick *Letter* Magazine award ($100) to a library for "progressive library service" went to the Trinidad Public library, Port of Spain, Trinidad, Carlton N. Comma, librarian, and the 1949 *Letter* Library award was received by the Louisville Free Public library, Clarence R. Graham, librarian. The 1949 *Letter* Librarian award "for the humanizing of knowledge" was conferred on Galileo Patino, director of the Biblioteca Nacional of the Republic of Panamá.

During the year, in addition to its regular periodicals, *A.L.A. Bulletin, Booklist, Subscription Books Bulletin, College and Research Libraries* and *Hospital Book Guide*, the association issued 11 new books from a total of more than 125 projects being considered.

Sixty-three far-reaching recommendations involving the reorganization of the A.L.A. were considered and presented for action at the 1949 and 1950 midwinter conferences. Questions under consideration were whether there should be a decentralized A.L.A. or a strong central organization, where the headquarters should be located, and whether a system of federated associations and departments should replace the existing divisions.

Among the surveys and studies completed was the one on library salaries and personnel, conducted by the U.S. bureau of labour statistics and A.L.A. Board on Personnel Administration, scheduled for 1950 publication. Through a $3,500 Rockefeller foundation grant to the A.L.A. a bibliographical guide to U.S. library resources was made possible.

A Carnegie corporation renewal grant to the A.L.A. of $32,000 continued the Film Service Through Libraries project until June 1951, enabling special work to be done in this field. By Sept. 1949 there were 65 public libraries conducting film lending services.

The association continued its work on censorship, intellectual freedom, library legislation and extension, increased library support and staff salaries, library training and recruitment, and international library projects and activities. (M. O. P.)

American Literature.

The year 1949 in American literature retreated from 1948's high-water mark of war books. The year's most important books focused rather on religious, political and social problems. In fiction especially, there was a lapse almost into silence about the war. After World War I there had been a similar lapse until the mid '20s, when the first-rate novels about it appeared, as if the material had to lie fallow for a while. It appeared that 1949 was a similar period of reaction.

The phenomenon of the year in nonfiction books was the overwhelming popularity of books on religious subjects. While preceding years had seen such writers as Lloyd Douglas and Thomas Merton topping the best-seller lists, 1949 witnessed a particularly striking demonstration of the popularity of nonfiction religious books. On the best-seller lists were Thomas Merton's *The Waters of Siloe,* a history of the Trappist order, Fulton J. Sheen's *Peace of Soul,* which offered the Catholic faith as the solution to the frustrations of the world, Fulton Oursler's *Greatest Story Ever Told,* a retelling of the gospel, and Norman Vincent Peale's *A Guide to Confident Living.* In a scholarly manner, Harry Emerson Fosdick retold the life of Jesus in *The Man from Nazareth.* Reinhold Niebuhr's study of the place of religion in civilization, *Faith and History,* was an important book. On the other side of the coin were two carefully documented studies of the growing power of the Catholic church in temporal affairs. Paul Blanshard's widely-read and controversial *American Freedom and Catholic Power* showed the influence of the Church on various phases of the American scene and Avro Manhattan's milder *The Vatican in World Politics* carried the investigation into broader fields.

Perhaps the most important discussion of the problems created by the war and the atom bomb was Vannevar Bush's *Modern Arms and Free Men,* which asserted that the atom bomb did not make other weapons obsolete and which proposed a politically conservative *laissez-faire* solution. Theodor Rosebury, in *Peace or Pestilence,* analyzed the frightening facts of biological warfare and favoured a liberal political policy as the way to avoid the possible catastrophe.

Samuel Eliot Morison added two more volumes to *The History of United States Naval Operations in World War II,* "Coral Sea, Midway and Submarine Actions" and "The Struggle for Guadalcanal." Oliver La Farge wrote a history of the air transport command in World War II, *The Eagle in the Egg.* Fletcher Pratt made a study of outstanding generals from Nathanael Greene through Omar Bradley, *Eleven Generals.* General H. H. Arnold's *Global Mission* combined his own life story with a history of the army air force, while Claire Lee Chennault's *Way of a Fighter* sounded a biting attack on U.S. policy in China and called for all-out aid to the Chinese nationalists.

Many books dealt with world affairs and the U.S. role in them. Howard K. Smith's *State of Europe* was a description and interpretation of developments in European countries since World War II. Owen Lattimore, in his *Situation in Asia,* reported on China, India and Indo-China. He proposed self-determination along with increased authority to the United Nations as a solution to the crisis in Asia. Anna Louise Strong's *Chinese Conquer China* described her view of China's ways of solving its own problems. Walter Duranty's *Stalin & Co.; the Politburo* analyzed the structure of the soviet government, and John Gunther reported on eastern Europe in *Behind the Curtain.* Stringfellow Barr wrote *The Pilgrimage of Western Man,* a history of modern Europe.

The American Scene.—The problem of race relations in the United States prompted a number of good books. E. Franklin Frazier's *The Negro in the United States* was an authoritative factual survey of the Negro from slavery to the F.E.P.C. Lillian Smith's *Killers of the Dream,* which treated the same material more emotionally, tried to shock the reader into realization of the Negro's desperate situation. Ray Sprigle's *In the*

SCENE from *Death of a Salesman,* by Arthur Miller, the first play to win all three top U.S. drama awards (the Pulitzer, New York Drama Critics Circle and Antoinette Perry awards) and the first current drama to become a Book-of-the-Month club selection. The play opened in New York city in Feb. 1949, staged by Elia Kazan

Land of Jim Crow set forth his experiences in the south, where he passed as a Negro. Carey McWilliams, in *North from Mexico,* studied the mistreatment of Mexican minorities in California.

Margaret Mead, in *Male and Female,* recorded the battle of the sexes in a changing world, and concluded that a healthy society would be possible only when the potentialities of both sexes were realized. Clyde Kluckhohn's *Mirror for Man* discussed the relation of anthropology to modern life. H. A. Overstreet's *The Mature Mind,* an analysis of how mass media of communication perpetuate immaturities and infantilisms, was widely read. Catherine Mackenzie presented a synthesis of the work of experts in the field of child psychology in *Parent and Child.* Lincoln Barnett's *The Universe and Dr. Einstein* explained the scientist to the layman.

Other books which studied phases of the U.S. scene or U.S. culture were Oliver Larkin's *Art and Life in America,* an analysis of the interrelation of American art and thought, and Roger Burlingame's *Backgrounds of Power,* a history of mass production and its social effects. Isabel Leighton edited *The Aspirin Age, 1919–1941,* a volume of essays by Samuel Hopkins Adams and others on U.S. life between World Wars I and II, and Lewis Gannett wrote *Cream Hill,* a group of leisurely essays on his experiences as a week-end countryman. Carl Carmer's *Dark Trees to the Wind* was a romantic history of New York state traditions and folklore. Marion L. Starkey, in *The Devil in Massachusetts,* conducted a modern inquiry into the Salem witch trials, and O. John Rogge wrote about *Our Vanishing Civil Liberties.* Arthur Schlesinger, Jr., in *The Vital Center,* attempted to formulate a theory of liberalism and advocated a national policy along the lines of the Fair Deal. Leland Stowe, drawing on his observations as a foreign correspondent, recommended popular participation in government in *Target: You.*

Memoirs and Historical Works.—The most widely read memoirs of the year were Eleanor Roosevelt's *This I Remember,* a factual account by the president's wife. Grace Tully published *F.D.R.—My Boss,* the story of the president as his secretary saw him. Edward Stettinius' *Roosevelt and the Russians* revealed the inner workings of the Yalta conference and the attempts of the United States to co-operate with Russia. David Lilienthal's *This I Do Believe* expressed his affirmative political and social credo, and Morris R. Cohen's *A Dreamer's Journey* told the life story and intellectual history of an American philosopher. *The Autobiography* of Will Rogers was put together from selections of his own writings.

Historical works included Ray Allen Billington's *Westward Expansion,* a definitive study, in the tradition of Frederick Jackson Turner, of the frontier in United States history. The two chief Lincoln books were Kenneth P. Williams' *Lincoln Finds a General,* a military history of the Civil War, and Carl Sandburg's *Lincoln Collector,* papers from the Barret collection with extended comment. Samuel F. Bemis wrote *John Quincy Adams and the Foundations of American Foreign Policy,* a history of Adams' early years, and Frederick Lewis Allen, in *The Great Pierpont Morgan,* presented the financier as a symbol of his era.

Fiction.—The shift away from the war as a focus of interest was even more clear in fiction than in nonfiction. There were some war novels, and of course many books whose themes were not directly concerned with the war still dealt with people in a society suffering from the effects of war. At the same time many good novels appeared which, although chiefly concerned with character, exploited unusual settings or occupations or explained the ins-and-outs of special situations. One of the most popular of these was John Brooks's *The Big Wheel,* a story which showed how a big-time slick news-weekly gets written, and dramatized the conflicting loyalties in the minds of its editors. Tom Lea's *The Brave Bulls* told the adventures of a Mexican matador. George Weller's *The Crack in the Column* gave a detailed and accurate explanation of the intricate forces and personalities involved in the Greek resistance movement and civil war, but the narrative suffered at times from the weight of exposition. One of the year's major novels depended much on the nature of its setting—Nelson Algren's *The Man With the Golden Arm,* which dug deep into the materials and people of the Polish slums of Chicago.

Without Magnolias, by Bucklin Moon, projected realistically the Negro's position in the south. *The Sure Thing,* by Merle Miller, set forth the catastrophic effects of witch hunts on government employees. Albert Maltz, in *The Journey of Simon McKeever,* created a dignified and almost tragic character and also focused attention on the problems of the old age pensioner. William Gardner Smith's perceptive story of a Negro in the U.S. army of occupation in Germany, *Last of the Conquerors,* was a picture of how democracy sometimes fails to work. Virginia Sorensen's *The Evening and the Morning* put a difficult mother-daughter relationship in the setting of the Mormon country. Norman Katkov, in *A Little Sleep, A Little Slumber,* told the story of a Russian Jewish immigrant's death and its effect on his children. Haakon Chevalier's *For Us The Living* used a background of west coast fruit packer and labour disputes for his story of murder. Kay Boyle's novel of oblique characterization, *His Human Majesty,* used a ski troop training centre. Ludwig Bemelmans, writing in his usual humorous nostalgic manner, described the history of a Tirolese village before, during and after the nazis, in *The Eye of God.* Harold Robbins wrote about the early days of the moviemakers in *The Dream Merchants.* The theme of Mildred Walker's *Medical Meeting* was marriage, but the medical profession was an important element in the book's interest. There were two books with good neighbour settings—David Davidson's *The Hour of Truth* and Robert Carver North's *Revolt in San Marcos.* Two novels employed Kentucky settings, Harriette Arnow's *Hunter's Horn* and Gwen Davenport's humorous *Family Fortunes.*

Along with these novels which threw emphasis on setting was a small but highly rated group of novels concerned primarily with character. Among these was one of the most distinguished first novels of the year, Paul Bowles's *The Sheltering Sky.* Although the North African setting was a vivid part of the book, it was his mature and sensitive portrayal of somewhat existentialist characters involved in a triangle situation which marked the book as superior. Another novel which probed delicate human relations was Isabel Bolton's *The Christmas Tree,* a story which explored the sources of homosexuality. Walter Van Tilburg Clark's *The Track of the Cat,* a novel full of suspense and portentous symbols, showed the haunting and destructive effect of two panthers, one real and one imaginary, on a ranch family.

Other novels in this group were Elizabeth Janeway's *The Question of Gregory,* a portrayal of an American marriage during World War II. Ben Lucien Burman created a memorable character in Captain Asa in *Everywhere I Roam.* There were also Josephine Lawrence's slight novel, *My Heart Shall Not Fear,* a study of selfish and unselfish love; Hamilton Basso's *The Greenroom,* in which a young editor sojourning on the Riviera becomes disillusioned about an elderly Edith Wharton sort of character; and Clyde Brion Davis' *Playtime Is Over,* about a small Arkansas farmer.

The year saw books published by several standard U.S. writers. Sinclair Lewis' *The God-Seeker,* an American frontier novel, was dubiously received and was criticized as the work of a bored, reformed satirist, far from the mood of *Babbitt* and *Main Street.* William Faulkner published *Knight's Gambit,* a group of short semidetective stories and a novella set in the familiar Faulkner south and involving characters from his *Intruder in the Dust*. James Branch Cabell, who published his first book in 1904 and was a major figure of the '20s, rounded out the half-century with *The Devil's Own Dear Son,* an ironic tale of a man who set out to find his real father, the Devil. John Dos Passos completed his New Deal trilogy with *The Grand Design*. Upton Sinclair brought Lanny Budd to friendly terms with President Truman and the world in general in *O Shepherd, Speak!,* at last catching up with history in the tenth and professedly final volume of the interminable series. John P. Marquand's facile novel of upper middle class America, *Point of No Return,* was a best-seller. Christopher Morley's *The Man Who Made Friends with Himself* was the life and meditations of a literary agent.

Other works of fiction by old-timers were Pearl Buck's *Kinfolk,* a novel of modern China; Taylor Caldwell's uninspired melodrama, *Let Love Come Last;* Jerome Weidman's satire on the business world, *The Price Is Right;* and Mary Ellen Chase's novelette, *The Plum Tree,* a neatly written story of insane old ladies in a nursing home.

One of the most popular novels of the year purported to be a historical novel. John O'Hara intended *A Rage to Live* to be a period picture of life in a small Pennsylvania city during the early years of the 20th century, as well as a portrait of a bad lady. An excellent historical novel of the year was A. B. Guthrie's exciting *The Way West,* which used the Oregon trail. Others in the orthodox vein included Thomas Costain's *High Towers,* about a French family in 18th-century Canada; Frances Ormond Gaither's *Double Muscadine,* a story of slavery days in Mississippi; Anne Goodwin Winslow's *It Was Like This,* a girl versus two suitors in a 19th-century deep-south setting; and Marguerite Steen's *Twilight on the Floods*.

There were several collections of distinguished short stories. The stories in Eudora Welty's *The Golden Apples* gave a connected picture of life in the Mississippi country. Truman Capote, in *A Tree of Night, and Other Stories* dissected a group of disturbed personalities. Shirley Jackson skillfully combined the macabre and the familiar, especially in the title story of *The Lottery: or, The Adventures of James Harris*. Dorothy Canfield published 17 short stories, mostly set in Vermont, in *Four-Square*.

Two standard authors returned with books of essays. H. L. Mencken published *A Mencken Chrestomathy,* a selection of his essays and epigrams; and Joseph Wood Krutch presented *The Twelve Seasons,* essays on man and nature. Willa Cather's *On Writing* gathered her critical essays on her own writing as well as that of others. Kenneth Roberts' *I Wanted to Write* passed on to young writers the results of his experiences in learning to write. Robert Benchley's *Chips off the Old Benchley* brought together previously unpublished sketches and humorous pieces.

Belles Lettres.—Quantitatively, the phenomenon of the year was the swelling wave of books by and about Herman Melville, which began in 1948 and by the end of 1949 threatened to overtop the flood of Henry James. The most conspicuous token of the continued interest in James was Leon Edel's edition of *The Complete Plays*. The enormous quantity of Melville research which occupied scholars during the '40s was bursting into print. Two major critical works were Howard P. Vincent's *The Trying-Out of Moby-Dick,* a fascinating quest for the book's sources and an illuminating interpretation of its meaning; and Richard Chase's more subjective *Herman Melville: A Critical Study,* which undertook a complex interpretation and analysis of all his works. A specialized study was made by Nathalia Wright in *Melville's Use of the Bible*. The reissue of Melville's own writings continued. Henry A. Murray edited *Pierre,* the third volume in the scholarly new *Complete Works,* supplying an accurate fully annotated text and a brilliant analysis of its literary and psychological significance. Jay Leyda's edition of *The Complete Stories of Herman Melville* made available the neglected magazine pieces. *The Confidence-Man* was reprinted for the first time in the United States. All signs were pointing to a rise rather than a recession of the flood during 1950; dissertations were still being added to the score already completed, more than a dozen books were in preparation, and further volumes of the *Complete Works* were scheduled.

There were a number of biographies of important U.S. writers, the most impressive of which was Ralph L. Rusk's definitive *Life of Ralph Waldo Emerson,* an exhaustively factual rather than critical or intellectual study. Most favourably received by historians and literary scholars was Ernest Samuels' *The Young Henry Adams,* published at the close of 1948. In this first volume of a projected two-volume biography, Adams is shown as a very human and ardent idealist, and is rescued from the injustice he did himself by an old man's ironic hindsights and distortions in the famous *Education of Henry Adams*. John A. Pollard wrote an excellent *John Greenleaf Whittier, Friend of Man*. Three volumes were added to the fine American Men of Letters series: Mark Van Doren's *Nathaniel Hawthorne,* James Grossman's *James Fenimore Cooper,* and Perry Miller's *Jonathan Edwards*. Robert H. Elias wrote a good study of *Theodore Dreiser,* and Dixon Wecter edited the *Love Letters of Mark Twain*.

Donald Stauffer contributed to Shakespeare scholarship with his *Shakespeare's World of Images* and Francis Fergusson wrote an important analytic study of drama as the imitation of action, *The Idea of a Theatre*. There also appeared the first translation since 1908 of Miguel de Cervantes' *Don Quixote,* in idiomatic modern English, by Samuel Putnam.

Poetry.—Few of the major poets published during 1949. Conrad Aiken's *Skylight One* combined sensuousness and irony. *The Selected Poems* of William Carlos Williams and *The Complete Poems* of Robert Frost appeared. The most important anthology was *The Poetry of the Negro—1746–1949,* edited by Arna Bontemps and Langston Hughes.

Theodore Roethke's *The Lost Son, and Other Poems,* centring about greenhouse imagery, was well received by the critics. Ellis Foote wrote *Layman's Fall; A Fantasy in the Joyous Mode,* a long symbolic poem. Richard Eberhart's *Burr Oaks,* May Sarton's *The Lion and the Rose,* and Rolfe Humphries' *The Wind of Time* were other new volumes.

A major critical controversy was precipitated by the award of the Bollingen prize to Ezra Pound for his *Pisan Cantos*. This selection, the first made under a grant by the Bollingen foundation to the Library of Congress to encourage U.S. poets, was made by the Committee of the Fellows in American Letters of the Library. Since Pound was, at the time of the award, under indictment for treason, the committee accompanied its announcement by a special statement that they were aware of the situation but that they had made the choice on poetic considerations alone. The inevitable public debate over the award was brought to battle pitch by the publication in the *Saturday Review of Literature* of two articles by Robert Hillyer, who accused the committee of a fascistic conspiracy against American life and letters. Soon the battle had reached such a pitch that a congressional investigation was proposed, perhaps the closest touch congress had had with literature since the citation of ten Hollywood writers for contempt. (*See* also CHILDREN'S BOOKS; ENGLISH LITERATURE; LITERARY PRIZES.)

FILMS OF 1949.—*James Fenimore Cooper; Henry Wadsworth Longfellow; Washington Irving* (Encyclopædia Britannica Films Inc.); *Legend of Sleepy Hollow* (Byron, Inc.). (H. M. H.)

American Mathematical Society: *see* SOCIETIES AND ASSOCIATIONS.

American Medical Association.

The American Medical association in 1949 included 145,036 physicians. These were grouped in 2,011 component county medical societies. The Association had investments of approximately $6,000,000 and a gross income annually in excess of $3,000,000.

The principal officers of the association in 1949 were: president, Ernest E. Irons, Chicago; president-elect, Elmer L. Henderson, Louisville, Ky.; vice-president, James F. Norton, Jersey City, N.J.; secretary and general manager, George F. Lull, Chicago; treasurer, J. J. Moore, Chicago; editor of publications, Morris Fishbein, Chicago; business manager, Thomas R. Gardiner, Chicago. The board of trustees included: Louis H. Bauer, chairman, Hempstead, N.Y.; John H. Fitzgibbon, Portland, Ore.; James R. Miller, Hartford, Conn.; Walter B. Martin, Norfolk, Va.; Dwight H. Murray, Napa, Calif.; E. J. McCormick, Toledo, O.; Edwin S. Hamilton, Kankakee, Ill.; Gunnar Gundersen, La Crosse, Wis., and F. J. L. Blasingame, Wharton, Tex.

The publications of the American Medical Association in 1949 included the *Journal of the American Medical Association* with a circulation of more than 130,000 weekly; *Hygeia,* a health magazine for the public, with a circulation of approximately 250,000 monthly; nine medical journals for various medical specialties; a complete directory of the medical profession, medical schools, libraries and hospitals; and the *Quarterly Cumulative Index Medicus*, indexing regularly the contents of more than 1,500 medical periodicals.

The association functions through its councils and bureaus. These include the Council on Medical Education and Hospitals, which establishes minimum standards for education in medical schools and hospitals, for occupational therapists, physical therapists, record librarians and similar medical technologists; the Council on Pharmacy and Chemistry, which investigates new remedies and controls their advertising claims; the Council on Industrial Health, which standardizes the care of workers in industry; the Council on Medical Service, which investigates plans for medical care and encourages the growth of voluntary sickness insurance plans; the Council on Foods and Nutrition, which investigates foods and nutritional problems; and the Council on Physical Medicine, which studies physical devices used in the treatment of disease.

The bureaus, which have their headquarters in the office of the association, include those devoted to medical economics, exhibits, investigations of frauds and quackery, medical legislation and health education.

The printing establishment of the association and the headquarters office personnel at 535 N. Dearborn St., Chicago 10, employed more than 800 people in 1949.

The American Medical Association continued to oppose plans for nationalization of medicine, emphasizing its opposition to compulsory sickness insurance. The association favoured proposals for the extensions and construction of hospitals and health centres through the United States, the extension of public health units, the care of maternal and child health, the care of the crippled, the blind and those otherwise disabled, as covered through the Social Security act, and the establishment of a national science foundation to encourage co-ordinated and intensified research. Moreover, the association provided both funds and facilities for extending as widely as possible prepayment plans to provide for covering hospital costs and medical care to the indigent. The association also favoured insurance against loss of wages caused by illness and against the costs of medical care.

The house of delegates of the American Medical association in Dec. 1949 for the first time established annual dues of $25 for each member. Most of these funds were to be used for a nation-wide campaign of education including opposition to nationalized medicine.

As the year ended, Morris Fishbein retired as editor of the publications and was succeeded by Austin Smith as editor of the *Journal,* Richard J. Plunkett as editor of the special journals, W. W. Bauer as editor of *Hygeia,* which was renamed *Today's Health,* and Magdalene Freyder as editor of the *Quarterly Cumulative Index Medicus.* (M. FI.)

Anaemia.

In 1949 vitamin B_{12} came into general use in the treatment of pernicious anaemia and certain other macrocytic anaemias. Its value in the production of remissions was confirmed repeatedly, and its efficiency in checking the progress of neurologic and tongue symptoms was established. The mechanism of its action was still a problem, but some investigators felt that it was the same as the "extrinsic" factor of W. B. Castle and was identical with the antipernicious anaemia principle of liver. It was postulated that the "intrinsic" factor does not react with the extrinsic factor, as was previously thought, but it facilitates the absorption of the extrinsic factor. Vitamin B_{12} was not readily absorbed when given by mouth unless given in large amounts, or accompanied by intrinsic factor (normal gastric juice).

Folic acid continued to prove effective in the treatment of macrocytic anaemias, but the effect was less pronounced than with liver derivatives. In the hands of different investigators the reaction to the neurologic changes varied. While some noted improvement or no aggravation of symptoms, others found development or progression of the cord changes, which were reversible, however, with large amounts of liver extract. Good results followed its uses in the macrocytic anaemia of pregnancy, even when liver proved inadequate.

Subacute combined degeneration of the spinal cord in pernicious anaemia was found to be reversible if intensive liver or vitamin B_{12} therapy was instituted before axis cylinders had been destroyed. In some patients, glossitis responded to treatment with members of the vitamin B complex, not effective in improving the blood.

Relapses in ability to produce new blood cells in pernicious anaemia followed the discontinuance of liver in from 8 to 18 months, although some did not show anaemia over a period of 26 to 29 months. Vitamin B_{12} was found to be effective in the megaloblastic anaemia of infancy.

Increased attention was given to the iron deficiency anaemias and the mechanism of absorption of iron. Radioactive iron was absorbed by the cells of the circulating blood in proportion to the number of reticulocytes. During infection or in the presence of an abscess (turpentine) there was a fall in plasma iron and a delay in the uptake of radioiron by the red blood cells, although the deficiency was less marked in anaemic dogs on a diet low in iron. In recovery from anaemia of infection, there was a sharp increase in the iron binding capacity of the serum, although the low serum iron concentration associated with anaemia in acute and chronic infections was not the result of the low iron binding capacity of the serum. In iron deficiency anaemia there was a low percentage saturation of the iron-binding material of the serum. In dogs with anaemia of haemorrhage, haemoglobin regeneration was most definite after liver or beef muscle feeding, whereas total blood proteins regenerated well after liver, meat, casein and egg proteins. In anaemic rats haemoglobin regeneration followed the use of dietary proteins in the following order: first eggs, then meat, processed soya, casein, peanut, maize, wheat and gelatin. Of these, casein, soya and maize protein were more effective in haemoglobin regeneration. In diets with caloric deficiency, haemoglobin regeneration was favoured at the expense of weight recovery. Molybdenum-iron complex was found to be more effective in some patients with anaemia during pregnancy, than other forms of iron. An iron-sucrose preparation was developed which was effective when given intravenously with but minimum reactions.

Vegetarian Indian soldiers in Iraq had significantly lower blood levels than meat-eating individuals, several showing nutritional macrocytic anaemia, even though they were on a 3,000-calorie diet with 80 g. of vegetable protein. One hundred and twenty seven cases of severe refractory, tropical macrocytic anaemia were found in Sepoys serving in Assam and eastern Bengal. The most effective therapeutic measures were adequate diet, control of infections and transfusions, but 38% died.

In congenital haemolytic anaemia an extreme maturation arrest, especially of the red blood cell forming tissue, in the marrow developed during the major crises. In contrast to patients with congenital haemolytic anaemia, those with the acquired form showed evidence of sensitization of their erythrocytes by an antibodylike agent in the plasma, although it was adsorbed on the erythrocytes at times. In nocturnal haemoglobinuria, the cause of haemolysis was attributed to an abnormality of the erythrocytes. Rapid improvement was noted in a patient with acute haemolytic anaemia of favism after therapy with ferrous sulphate. Diasone (disodium formaldehyde sulphoxylate diaminodiphenylsulphone), used in the treatment of leprosy, produced a mild haemolytic anaemia in some patients, responding to iron, liver and vitamin B complex.

Haemolytic anaemia developed in newborn dogs from absorption of isoantibody present during the first day in the breast milk of immunized mothers.

Acute haemolytic anaemia appeared in approximately 2% of all births in otherwise healthy Rh-positive infants when there had been placental immunization of the mother with the Rh antigen.

Breaks in the foetal and maternal blood vessels in the placenta accounted for the contact of foetal and maternal blood in erythroblastosis foetalis, allowing the agglutinative and haemolytic maternal antibodies to destroy the foetal cells and produce a haemolytic anaemia. Exchange transfusions in newborn babies with haemolytic anaemia reduced the mortality from 63.5% to 18.1%. After the use of Rh hapten, 20 of 27 babies with severe erythroblastosis recovered and remained well, 5 dying of other causes. A number of reports added to the data on Rh occurrence, types, variants and inheritance.

Acute macrocytic anaemia developed in rats several weeks or months after the surgical formation of a blind loop in the small intestine. Nutritional macrocytic anaemia was produced in swine by feeding a purified diet containing a folic acid antagonist. In 45 patients with tropical macrocytic anaemia, improvement was noted in 39 after the use of refined liver extract.

Severe hypoplastic anaemia was noted in 7 patients who had prolonged administration of atabrine. Recovery was spontaneous and gradual, apparently not influenced by therapeutic measures. (*See* also VITAMINS.)

Anaesthesiology. The introduction of decamethonium bromide (C-10) under the trade name of Syncurine gave workers in anaesthesiology and in the field of shock therapy an agent with a curarelike effect but one which could be more easily obtained and prepared for use. A safe and effective antidote, however, was not known. The action of this agent appeared to be more fleeting than that of curare, the duration of a fully effective dose being from a third to a fourth as many minutes as for curare. Decamethonium bromide produced less effect on the pharyngeal and respiratory muscles than curare and was less active than the latter in causing release of any histaminelike substance. The optimal dose was 2 to 3 mg., injected at the rate of 1 mg. per minute. It appeared to act quickly, that is, in the matter of a minute or two as compared to the five to ten minutes required for the action of curare. Satisfactory and safe relaxation were obtained with the use of this new drug, and it was a welcome addition to the list of relaxants previously available.

The number of so-called pain clinics increased in 1949, and the quality of results obtained was improved. The use of dolamin (benzyl alcohol 0.75%, ammonium sulphate 0.75%, sodium chloride 0.48% in an ampule with sufficient water to make 10 c.c.) prevailed; the effect could never be predicted. In cases in which little of the material was to be used on but one or two nerves, variations in the solution were tried such as omitting the benzyl alcohol and increasing the ammonium sulphate up to 1.5% or in some cases up to 2.5% of the solution. Checking of accurate placement of needles by roentgenograms continued, and greater accuracy in technique was developed. It was made clear that paravertebral somatic injection of alcohol near the nerve roots could not be repeated for some weeks after the first injection without danger of a bizarre pattern of paralysis.

The injection of local anaesthetics suspended in peanut oil into the caudal canal or other vascular areas was found to be complicated by the inadvertent administration of the oil into the veins. It was recommended that a 6% solution of phenol be employed for destruction of nervous pain paths.

R. E. Courtin described seven electroencephalographic levels of anaesthesia and suggested their use as practical measures of the depth of anaesthesia. Subsequently R. G. Bickford invented a device which automatically controlled the depth of anaesthesia both in human beings and animals. The apparatus which injected the anaesthetic agent worked on the principle of activation by the electrical potentials emanating from the brain of the subject. (*See* also SURGERY.)

Anderson, Eugenie (1909–), U.S. ambassador to Denmark, was born May 26 at Adair, Ia. She attended Stephens college, Columbia, Mo., and Carleton college, Northfield, Minn., and the Institute of Musical Arts in New York city. She and her husband, John P. Anderson, operated a 500-ac. farm near Red Wing, Minn. In 1944 she entered Minnesota politics, and became active in Democratic-Farmer-Labor party work. In 1948 she became Democratic national committeewoman, and delegate-at-large from Minnesota to the Democratic national convention. During the 1948 elections, she campaigned strongly to carry Minnesota for Pres. Harry S. Truman, and on Oct. 12, 1949, the president announced her appointment as ambassador to Denmark. She was the first woman in U.S. history to be offered the rank of ambassador. The U.S. senate confirmed the appointment, and she was sworn in as ambassador Oct. 28, 1949.

Andorra.

Andorra is a small autonomous state between France and Spain. Area: 174 sq.mi. Pop. (1948 est.): 5,000. Language: Catalan. Religion: Roman Catholic. Capital: Andorra-la-Vieja (pop. *c.* 1,000). Coprinces: the president of the French republic and the bishop of Urgel, Spain, respectively represented in 1949 by André Bertrand and Jaime Sansa Nequi, their *viguiers* or representatives.

History.—The event of the year 1949 was an order given on March 8 by a Paris court to the Radiodiffusion Française to cease jamming the broadcasts of Radio Andorra. This order was confirmed by the Paris court of appeal on May 24. The jamming had started in April 1948 when the proprietors of Radio Andorra refused to sell their station to a French concern.

The general council suggested during the year the building of an airfield and the linking of Andorra to the international telephone trunk system; but since 1945 the strained relations between France and Spain had rendered any common decision by the two *viguiers* practically impossible.

Angling.

Fishing licence sales in the U.S. increased to a new high total of 14,582,739 in the year ending June 30, 1948. The gross revenue derived by the 48 states from licence sales was $28,350,069. California headed the list with 1,374,029 licences sold; Michigan was second with 1,108,510. Nonresident licence sales totalled 1,605,661. Michigan attracted the greatest number of nonresident sport fishermen with 281,825, with Wisconsin second and Minnesota third.

In the 1949 national casting tournament one new world record was established in the ⅝-ounce distance bait event by Wilbur Brooks, who made a long cast of 427 ft. The 1949 tournament was the largest on record with 250 registrations. Four new events were added in fly and bait casting which required the use of regular fishing tackle instead of tournament tackle. Glass salmon rods made their first appearance in tournament competition.

The 6th international tuna cup match was held at Wedgeport, Nova Scotia. Five teams using 20 boats competed on Sept. 14, 15 and 16, during which time 72 bluefin tuna were caught. The U.S. team, captained by Hugo Rutherford, successfully defended the championship and retained the solid silver Alton B. Sharp trophy. The U.S. team landed 19 tuna, winning 8,391 points; Brazil was second (6,220), Cuba third (5,296), the British commonwealth fourth (4,697) and Argentina fifth (4,257).

Four world-record fish were caught by rod and reel during 1949. A 15-lb. 3-oz. spotted weakfish (length 34½ in., girth 20½ in.) was captured at Fort Pierce, Fla., by C. W. Hubbard on Jan. 13. A 55-lb. channel catfish (length 50 in., girth 27 in.) was caught by Roy A. Groves in the James river, S.D., on May 18. On May 22 this same angler set another world record with a 94½-lb. blue catfish (length 56 in., girth 35 in.). On July 24 a 67½-lb. muskellunge was caught by Cal Johnson in Lac Court Oreilles, near Hayward, Wis. (length 60¼ in., girth 33½ in.).

CANADIAN CONSERVATIONISTS stripping a muskellunge of spawn for incubation at the Deer Lake hatchery near Peterborough, Ont. Plans were under way in 1949 for greatly increasing the numbers of this species of pike, the largest North American fresh-water game fish

FILMS OF 1949.— *Spinning for Steelheads* (Hawley-Lord).

Anglo-Egyptian Sudan.

A territory in northeast Africa, the Anglo-Egyptian Sudan is under the joint sovereignty of Great Britain and Egypt. Area: 967,500 sq.mi.; pop. (1948 est.): 7,919,000. Languages: English, Arabic and various Nilotic and Negro tribal dialects in the south. Religion: Arabic minority is Moslem; the bulk of the Negro population is heathen; *c.* 20% of the population in the south is Christian. Chief towns (1948 est.): Khartoum (cap., 61,800); Omdurman (117,600); Wad Medani (56,600); El Obeid (65,800); Port Sudan (47,000). Governor general: Sir Robert George Howe.

History.—The comprehensive scheme of constitutional reforms, which had been announced in June 1948, was given substance by the election of a legislative assembly on Nov. 15, 1948, and, eight days before the end of 1948, this was formally opened by Sir Robert Howe. The assembly met under the leadership of Mohammed Saleh Shengeiti, formerly a judge of the Sudan high court, who was appointed speaker.

In spite of the boycotting of the elections by an important group of small parties, the house was probably a fairly representative one. Superficially, the main political issue concerned the question of the relations between a self-governing Sudan and the kingdom of Egypt. Those parties who had boycotted the election and who adopted the general title of Internal Struggle front, or Unionists, demanded a closer relationship with that country, varying from complete union to a sort of dominion status, with the corresponding right of secession. The other main group was the Independence front, composed of parties whose declared objective was complete independence from both Egypt and the United Kingdom. The third group, the Black block, claimed to represent the relatively few literate Sudanese who originated from the southern Sudan. (*See* also Egypt.)

The influence of the Independence front was strong in the assembly, which elected as its president Miralai Abdallah Bey Khalil—the secretary general of the Umma (Nation), its largest party. In spite of the fact that the apparently dominating issue was that of future relations with Egypt, religious and other internal differences underlay a good deal of the strife of the various parties—in particular, the partisans of a closer relationship with Egypt were linked with a religious sect, under the leadership of Sir Ali el-Miraghani Pasha, who, however, rejected political leadership, while the Umma acknowledged the leadership, both religious and political, of Sir Abdel Rahman el-Mahdi Pasha, a son of the 19th-century Sudanese leader.

On Feb. 17, Sir James Robertson, the senior executive member, announced the government's policy. It was to encourage the achievement of full self-government before a decision should be made about relations with the condominium powers, or about the eventual constitution of the Sudanese state. There was to be an active policy of social welfare within the limits of sound finance, in particular a ten-year educational program, together with the creation of school dental services and the development of important new medical facilities.

Economic measures announced at this time included a search for new resources to offset the country's dependence upon cotton. In this connection an important development in the future life of the Sudan was foreshadowed by the signature on Feb. 10 of the Uganda hydroelectric scheme, whereby, among other plans, it was hoped to drain the great Sudd swamp area of the southern Sudan, allowing for its possible development as a ranching area and conserving great quantities of Nile water for irrigation, not only in Egypt, but in the northern Sudan, where it would make possible a large expansion of the Gezira plantations, which were due to be nationalized in June 1950.

(H. S. D.)

Education.—(1946) Northern System: government schools: elementary 197, pupils 29,762; subgrade and Koran 415, pupils 28,292; intermediate 16, pupils 2,210; technical 2, pupils 317; teachers' training colleges 2, pupils 204; secondary 5, pupils 686. Nongovernment schools 55, pupils 12,287. Gordon Memorial college, students 207. Southern System: government schools 2, pupils 179. Mission schools 484, pupils 15,413.

Finance and Banking.—Budget: (1948 est.) revenue £E11,293,531, expenditure £E10,014,640; (1949 est.) revenue £E15,578,766, expenditure £E11,573,745. External debt (Dec. 31, 1947) £E13,128,000. Monetary unit: Egyptian pound with an exchange rate of £E0.975 to the pound sterling, or $2.87 U.S. on Dec. 15, 1949.

Foreign Trade.—Imports: (1948) £E22,100,000. Exports; (1948) £E24,700,000. Main import in 1948 was cotton piece goods, accounting for 20.5% of total value of imports, and main exports were cotton and cottonseed, accounting for 75.6% of total exports. Main sources of imports were United Kingdom 24%, India 22% and Egypt 19%. Main destinations of exports were United Kingdom 37%, India 25% and Egypt 18%.

Transport and Communications.—Licensed motor vehicles (Dec. 1948): cars 2,645, commercial vehicles 3,374. Railways (1947) 2,013 mi. Telephones (1948): subscribers 3,520.

Agriculture.—Main crops (metric tons): cotton (1948) 54,000; gum arabic (1947–48) 37,000; peanuts (1948) 8,000. Livestock: cattle (Jan. 1948) 3,500,000; sheep (1947–48) 5,500,000; horses (1946–47) 20,000; asses (1947–48) 500,000; goats (1946–47) 4,200,000; camels (1946–47) 1,400,000.

Antarctica. Between 1772–75, when the English explorer Sir James Cook circumnavigated Antarctica without actually sighting land, and 1949, about 170 expeditions from many nations had contributed to the comparatively limited knowledge of this last-discovered continent. Antarctica has approximately 14,000 mi. of coast line. Of the total land area of about 6,000,000 sq.mi., nine-tenths of which is a vast continental ice sheet, in some places thousands of feet thick, only 2,000,000 sq.mi. has ever been seen by man.

During 1949 there were no further developments in the dispute over sovereignty of the antarctic, where land was claimed by Argentina, Chile, Great Britain, Australia, France and Norway. Although not based on initial exploration, the claims of three nations overlapped in the Palmer Land sector. The Argentines and Chileans maintained two bases each, while Great Britain had six bases in operation there. No claim, however, was recognized by the United States, which also made none of its own, but reserved all rights to future antarctic claims.

At the annual meeting of the soviet All-Union Geographical society in Moscow on Feb. 11, 1949, it was declared that any decisions made by the claimant nations were invalid, and a resolution was adopted calling for soviet participation in all future international discussions on Antarctica.

On Jan. 18, 1949, the British foreign office announced that an agreement had been reached between Great Britain, Argentina and Chile whereby no warships would be sent south of latitude 60° S., in the antarctic summer season of 1948–49 except on customary routine movements. On Nov. 18, 1949, this agreement was renewed for the 1949-50 season.

In February and March 1949, a British supply ship was able to change personnel and replenish supplies at all British bases on Palmer Land except at the Stonington Island base in Marguerite bay. The ship was unable to penetrate the heavy pack ice and some of the men were involuntarily forced to spend their third winter on the Antarctic continent. It was hoped that the ice conditions in February–March 1950 would be such that the ship could get to this station with supplies and new personnel.

The French expedition ship "Commandant Charcot," with Andre Frank Liotard in command, also was unable to reach the French-claimed Adélie Land sector. This area was first seen by Jules Dumont d'Urville in 1840, when he claimed it for France. The "Commandant Charcot" was forced to return to France, but left again in late Sept. 1949 for her second attempt to reach shore in the early summer season of 1949–50.

The joint Norwegian-Swedish-British expedition departed from Norway in the early part of Nov. 1949 aboard the sealing vessel "Norsel." Its destination was the Norwegian-claimed Queen Maud Land sector where a party of scientists, under the leadership of Capt. John Giaver of Norway, would conduct scientific investigations and geographical exploration until March 1952. The general direction of the expedition was under the supervision of Harald U. Sverdrup of Oslo, previously director of the Scripps Institute of Oceanography, La Jolla, Calif.

(F. Re.)

Anthropology. The steady postwar growth of anthropology continued during 1949, especially in the large number of important publications that appeared during the year, the growth of anthropology departments in the universities and the expansion of field studies and various international activities. In the United States one indication of anthropological progress was the large increase in membership of the American Anthropological association.

The 29th session of the International Congress of Americanists, held at the American Museum of Natural History in New York, N.Y., from Sept. 5 to 12, was attended by 395 anthropologists from Europe and the western hemisphere. More than 200 papers were presented, and symposia were held on: Early Man in America; Comparative Studies in Peru; Middle American and Andean Relations; Origin and Relationships of the Eskimo; Population in Native America; Language and Culture; Afro-American Studies; and Modern Indian, Mixed and Creole Cultures. F. G. Rainey headed the organization committee which planned the congress, of which A. L. Kroeber was elected president. A special exhibit at the museum, arranged by Gordon Ekholm, Robert von Heine-Geldern and Carl Schuster, demonstrated striking parallels in art and material culture between America and the far east and raised anew the question of trans-Pacific influences in western America, something which most North American anthropologists had formerly rejected.

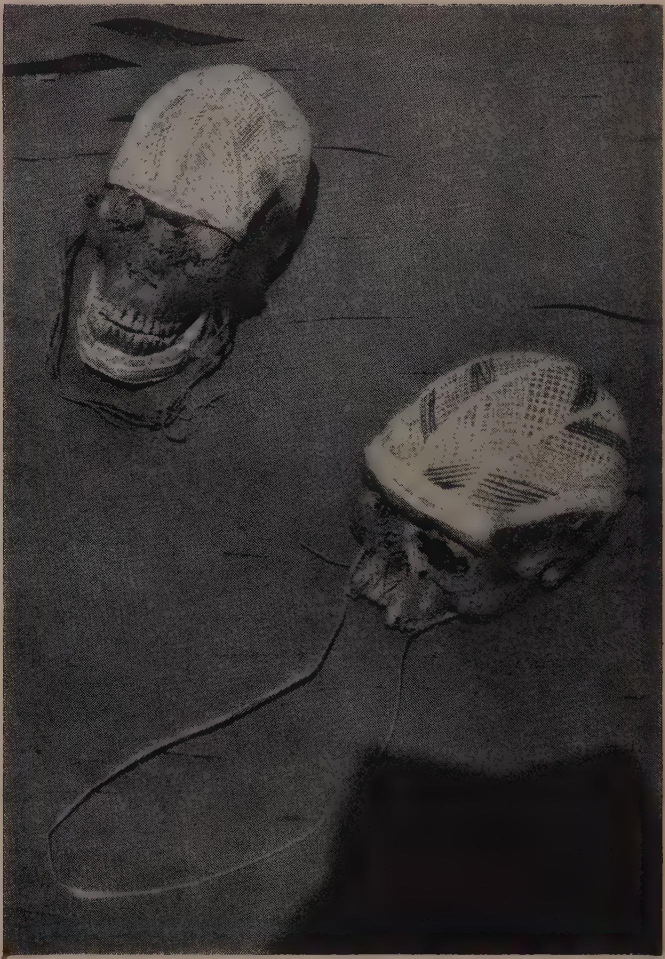
Anthropological problems and needed research programs for the Pacific area were among the subjects discussed at the Seventh Pacific Science congress which convened in Auckland and Christchurch, New Zealand, in February and March, after an interruption of ten years occasioned by World War II.

In London the International African institute began publication of a new quarterly review, *African Abstracts*, edited by Daryll Forde, carrying abstracts of current African publications in ethnology, social anthropology and linguistics. The Ethnographical institute of the Pázmány Péter university of Budapest, Hungary, issued a new journal, *Folia Ethnographica*, for the purpose of describing in English, French and Russian the results of Hungarian researches in ethnography. The American Association of Physical Anthropologists also began a new series, Studies in Physical Anthropology, under the editorship of W. W. Howells, the first number being a symposium, *Early Man in the Far East*, with papers on various aspects of Pleistocene geology, archaeology, palaeontology, and somatology by Hellmut de Terra, Hallam L. Movius, G. H. R. von Koenigswald, E. A. Colbert and Franz Weidenreich.

Two volumes bearing the title *Social Structure* appeared in 1949—a collection of essays edited by Meyer Fortes and a volume by G. P. Murdock. Basing his postulates on an analysis of 250 societies in all parts of the world, Murdock presented a new theory of the evolution of social organization and showed for the first time that human and social behaviour could be analyzed and predicted with a precision comparable to that in the exact sciences. Another study which marked a notable advance toward the goal of formulating regularities for cultural data was Julian H. Steward's "Cultural Causality and Law: A Trial Formulation of the Development of Early Civilizations." In this paper, published in the *American Anthropologist*, Steward showed that there had been parallel stages or eras, each with similar diagnostic features, in the development of early civilization in northern Peru, middle America, Mesopotamia, Egypt and China, and postulated the cause-and-effect relationships responsible therefor. Leslie A. White's series of papers on the evolution of culture, which had exercised a profound influence on anthropological thinking, were assembled in a volume *The Science of Culture; A Study of Man and Civilization.*

Works which reasserted the unique importance of anthropology and the other social sciences for the understanding of world problems included Clyde Kluckhohn's prize-winning book *Mirror for Man; The Relation of Anthropology to Modern Life* and Alexander H. Leighton's *Human Relations in a Changing World; Observations on the Use of the Social Sciences.* Robert Endleman criticized the claims of anthropology as expressed by these and other authors in an essay "The New Anthropology: The Science of Man in Messianic Dress," published in *Commentary.*

An unusually large number of important descriptive works in ethnography were published in 1949. Among these were *The Bella Coola Indians*, by T. F. McIlwraith; *The Comparative Ethnology of South American Indians*, vol. 5 of the Handbook of South American Indians, edited by Julian H. Steward; *The Lapps*, by Bjorn Collinder; *Palauan Society, A Study of Contemporary Native Life in the Palau Islands*, by Homer G. Barnett; *Majuro, A Village in the Marshall Islands*, by Alexander Spoehr; *Culture and Ethos of Kaska Society*, by John J. Honigmann; *The Bantu of North Kavirondo*, by Günter Wagner; *The Tenetehara Indians of Brazil*, by Charles Wagley and Eduardo Galvão.



PAINTED SKULLS used in ceremonial dances by natives of Milingimbi in the Crocodile Islands. These were among thousands of anthropological specimens being catalogued in 1949 following an expedition to Arnhem Land, Austr., sponsored jointly by the Smithsonian institution, the National Geographic society and the Australian government

Other important publications of the year were *History of the Primates: An Introduction to the Study of Fossil Man*, by W. E. Le Gros Clark; *External Morphology of the Primate Brain*, by Cornelius J. Connolly; *The Anthropology of Iraq*, part 1, no. 2, *The Lower Euphrates*, by Henry Field; *Tepexpan Man*, by Hellmut de Terra, Janier Romero and T. D. Stewart; *The Web of Kinship among the Tallensi*, by Meyer Fortes; *Social Class in America*, by W. Lloyd Warner; *Magic, A Sociological Study*, by Hutton Webster; *Male and Female*, by Margaret Mead; *General Anthropology* and *Primitive War: Its Practice and Concepts*, by H. H. Turney-High; *Law and Government of the Grand River Iroquois*, by John A. Noon; *The Social and Religious Life of a Guatemalan Village*, by Charles Wagley; and *Primitive Money in Its Ethnological, Historical and Economic Aspects*, by Paul Einzig.

There was a marked increase in field investigations during 1949, made possible principally by grants from the Fulbright fund and other organizations such as the Viking fund, Guggenheim foundation, Social Science Research council, National Re-

U OF T LIBRARY

search council and Arctic Institute of North America. Fred Eggan of the University of Chicago began a survey of social organization and culture in the mountain provinces of Mindanao and Visayan Islands in the Philippines. Another Philippine research project was that of Grace L. Wood, who undertook ethnological studies among the Negritos and other primitive groups on Negros Island.

W. C. Pei of the Cenozoic research laboratory, Peking Union Medical college, resumed excavations at Chou Kou Tien in search for further remains of Peking man. Carleton Coon made anthropological and archaeological studies in Iraq, and J. Lawrence Angel studied skeletal collections at Nikosia, Cyprus and Athens in continuation of his research on the biological history of ancient and modern Greece.

David G. Mandelbaum of the University of California returned to southern India to resume his ethnological work with the Kota people in the Nilgiri area. Morris E. Opler also undertook research on village life in India. Alexander Spoehr began a year's program of anthropological research for the Chicago Natural History museum on Saipan and the other Mariana Islands. His program included study of cultural change among the native Chamorros and archaeological excavations to determine how the islands were originally peopled. The Pacific Science board of the National Research council continued its Micronesian investigations, with I. Dyen studying linguistics on Yap, and Ann Meredith making a study of the socialization process in the Truk area.

The Peabody museum of Harvard's Aleutian expedition, directed by William S. Laughlin, continued its archaeological, anthropological and linguistic investigations on Umnak and islands to the westward. Frederica de Laguna began an ethnological and archaeological survey of the northern Tlingit country in southeastern Alaska as part of an integrated study of the origin and development of Tlingit culture. A notable accomplishment in the field of arctic anthropology was the independent discovery of pre-Eskimo cultural remains by J. L. Giddings at Cape Denbigh on Norton sound, by Helge Larsen in the interior of Seward peninsula and by Ralph Solecki on the north slope of the Brooks range in the interior of northern Alaska. Information on the distribution and movements of prehistoric Eskimo population in the little known northern part of the Canadian arctic archipelago resulted from H. B. Collins' excavation of old village sites on Cornwallis Island.

Robert Broom and J. T. Robinson reported in *Nature* the discovery of a lower jaw, probably of Lower Pleistocene Age, from the cave at Swartkrans, South Africa, which earlier had yielded remains of the huge ape man, *Paranthropus crassidens*. The jaw resembled that of Heidelberg, though smaller. It was described as intermediate between true man and the Australopithecinae and was given the name *Telanthropus capensis*. A detailed study of the pelvis of *Australopithecus prometheus* by Raymond A. Dart, published in the *American Journal of Physical Anthropology*, emphasized its human character, the pelvis in some respects being intermediate between that of Bushman and Bantu. In the same journal Howard M. Kern and William L. Straus, Jr., expressed an opposing viewpoint regarding *Plesianthropus transvaalensis*, another of the Australopithecinae. The *Plesianthropus* femur, they found, was as close to that of the cercopithecid monkeys as to man.

The fossil skull fragments discovered by Mlle. G. Henri-Martin in the Fontéchevade cave, Charente, France, were described in the *American Journal of Physical Anthropology* by Henri V. Vallois, who concluded that they were non-Neanderthaloid and representative of an older human line which, beginning with Piltdown and Swanscombe, led on to *Homo sapiens*. Meanwhile, another European fossil was removed from the list of man's early ancestors when M. F. Ashley Montagu and Kenneth P. Oakley showed that the Galley Hill skeleton, from Kent, England, was a post-Pleistocene burial.

The Viking fund medals and prizes for distinguished work in anthropology were awarded to John R. Swanton, ethnology; Adolph H. Schultz, physical anthropology, and Alex D. Krieger, archaeology. (*See* also ARCHAEOLOGY.) (H. B. Cs.)

Aqueducts.

The world's largest system of aqueducts, canals, dams and storage reservoirs is provided by the program of the United States bureau of reclamation for multipurpose use of the water resources in the river basins of 17 western states. The man-made waterways include thousands of miles of canals, ditches, tunnels, siphons and pipe lines, and the world's largest and highest concrete dams.

An all-time record of construction was set by the bureau during 1949 in carrying forward its work schedule for man-made waterways, a $250,000,000 expenditure being 40% greater than the previous year's outlay.

On the Colorado-Big Thompson project in Colorado, construction contracts were completed during 1949 for the 1.3-mi. Rams Horn tunnel, the 2.47-mi. Prospect Mountain tunnel and conduit and the 1.3-mi. Aspen Creek conduit and siphon, all within the 14-mi. Estes-Foothills aqueduct and power system. This system has an initial diversion capacity of 550 cu.ft. of water per second.

On the Columbia Basin project in central Washington, the bureau of reclamation had under construction several large canals. The 1.6-mi. Feeder canal was to have a capacity of 16,000 sec.-ft., making it the nation's largest irrigation canal. Columbia river water stored in Lake Roosevelt behind Grand Coulee dam was to be lifted 280 to 360 ft. by giant pumps and discharged into the Feeder canal which leads to a 27-mi. long reservoir. From there, the water would flow by gravity through siphons, tunnels, an artificial lake and the Main canal to be used for the irrigation of about 1,000,000 ac. of land beginning about 40 mi. south of Grand Coulee dam. Other canals under construction on this project included the 88-mi. West canal and the 130-mi. East Low canal which was to branch from the Main canal. Construction was completed on Long Lake dam and a 5.5-mi. section of the Main canal during the year.

The Central Valley project in California, when completed, would consist of a network of canals, including the Friant-Kern and the Delta-Mendota, to carry irrigation water to farms and cities. The 153-mi. Friant-Kern canal would convey 5,000 sec.-ft. of San Joaquin river water from back of Friant dam near Friant, Calif., to farmlands as far south as the Kern river near Bakersfield, Calif. The Delta-Mendota canal would carry 4,600 sec.-ft. of Sacramento river water from the San Francisco bay area southward 120 mi. along the San Joaquin river and discharge it into the San Joaquin at Mendota, Calif., thereby providing irrigation water to replace that diverted into the Friant-Kern canal.

During 1949, construction contracts were completed covering 23 mi. of the Delta-Mendota canal, 51 mi. of the Friant-Kern canal, Clayton and Ygnacio canals and the final section of the Contra Costa canal.

The 125-mi. Coachella canal, with an initial carrying capacity of 2,500 sec.-ft. of water, branches from the 80-mi. All-American main canal near the Mexican border, about 20 mi. west of Yuma, Ariz., extends in a northwesterly direction past the Salton sea and terminates near Indio, Calif. The final sections of this canal had been completed and placed in limited use pending completion of the lateral distribution system, which was under construction in 1949.

The All-American canal is the largest irrigation canal in operation in the United States. It is 232 ft. wide at the water surface, 160 ft. wide at the bottom and 20.6 ft. in depth, with a maximum diversion of 15,155 cu.ft. of water per second.

Final stages of construction were reached during the year on the 41-mi. Salt Lake aqueduct on the Provo River project in Utah, which was to transport nearly 100,000,000 gal. of water daily from Deer Creek reservoir to the vicinity of Salt Lake City for industrial, municipal and irrigation purposes. (*See* also CANALS AND INLAND WATERWAYS; DAMS; IRRIGATION; TUNNELS.) (M. W. Ss.)

Arabia. A peninsula of Asia of approximately 1,027,000 sq.mi. with a total population estimated at 9,526,000, Arabia consists politically of two independent Arab states, Saudi Arabia and Yemen (*q.v.*), the independent sultanates of Oman and Masqat or Muscat; the autonomous sheikhdoms of Bahrein, Kuwait, Qatar and the Trucial sheikhdoms; and Aden colony and protectorates (*q.v.*). Religion: overwhelmingly Moslem (Sunni). Language: Arabic.

Saudi Arabia.—Area: *c.* 597,000 sq.mi. (excluding the Rub' al-Khali desert covering approximately 193,000 sq.mi.); pop. (mid-1948 est.): 6,000,000. Chief towns: Riyadh (cap., 60,000); Mecca (150,000); Medina (45,000); Jedda (40,000); Hufuf (31,500). Ruler, King 'Abd-al-'Aziz Ibn-'Abd-al-Rahman Ibn-Faisal Ibn-Sa'ud.

History.—The United States and Saudi Arabia announced on Jan. 21, 1949, that they had agreed to raise the status of their respective missions to the rank of embassies. The U.S. aircraft carrier "Tarawa" paid a good will visit to Jedda in January. The agreement with the U.S. regarding the use of Dhahran air base was extended temporarily on March 15 pending final negotiations.

The economic development of the country continued. Oil production during Jan.–July 1949 averaged over 2,000,000 metric tons a month (not far short of that of Iran). On this the Saudi government received royalties at the rate of $50,000,000–$60,000,000 yearly. On March 4 it was announced that a U.S. company, the Pacific Western Oil corporation, had obtained an oil concession covering Saudi Arabia's undivided half interest in the Kuwait-Saudi neutral zone. A first year's minimum royalty of $1,000,000 was paid over on Feb. 21.

A large number of U.S. and some British engineers and specialists, together with skilled men from Moslem countries, were employed on public works, including rail and port construction, roadmaking, an electricity installation in Mecca and a broadcasting transmitter at Jedda.

Egypt was asked in May to assist in forming a customs administration and in August to lend some professors to act as educational inspectors.

A trade treaty with Egypt, valid for one year, was signed in Cairo on May 31. It was on the basis of most-favoured-nation treatment and had annexed to it a payments agreement. It provided, too, for a permanent exhibition of Egyptian products at Jedda.

SKILLED ARAB WORKER taking instrument readings at an Arabian American Oil company plant in Ras at Tannura, Saudi Arabia. As a result of increased training facilities, more and more Arab labour was available in 1949 for manning complicated oil refining equipment

In Arab league politics King Ibn-Sa'ud generally supported Egypt. (C. He.)

Oman and Masqat.—Area: *c.* 65,000 sq.mi. Pop. (mid-1948 est.): 830,000. Ruler: Sultan Sayyid Said bin Taimur.

Bahrein.—Area: 213 sq.mi. Pop. (mid-1948 est.): 125,000. Ruler: Sheikh Sir Sulman ibn Hamad al Khalifah.

Kuwait.—Area: *c.* 9,000 sq.mi. Pop. (mid-1948 est.): 120,000. Ruler: Sheikh Sir Ahmed ibn Jabir al Subah.

Qatar.—Area: *c.* 4,000 sq.mi. Pop. (mid-1948 est.): 16,000. Ruler: Sheikh Abdullah ibn Jasim al Thani.

Trucial Sheikhdoms.—Area: *c.* 16,000 sq.mi. (including the sheikhdoms of Shargah, Ras al Khaimah, Umm al Qawain, Ajman, Debai, Abu Dhabi and Kalba). Pop. (mid-1948 est.): 105,000.

Finance.—The monetary unit is the Saudi rial, nominally equal to R. 1 (Indian), which fluctuates strongly. The recognized standard is the George V gold sovereign. The chief sources of revenue are oil royalties (more than £20,000,000 yearly) and pilgrimage dues (1946 est. £1,600,000).

Transport and Communications.—Licensed motor vehicles (Dec. 1948): cars 3,990, commercial vehicles 5,000. Air transport (1947): miles flown 774,453, passengers flown 18,663.

Industry.—Crude oil production: 19,260,000 metric tons in 1948; 12,410,000 metric tons in first six months of 1949.

Oil production in Kuwait reached 45,000,000 bbl. in the first 6 months of 1949, against 47,000,000 bbl. in 12 months of 1948.

Arab League: *see* ARABIA; EGYPT; IRAQ; JORDAN; LEBANON; PALESTINE; SYRIA.

Archaeology.

Western Hemisphere.—There were substantial gains in knowledge of the archaeology of the western hemisphere during 1949. An outstanding event was a demonstration of the system of dating certain kinds of archaeological remains by means of the radioactivity of the carbon isotope, Carbon 14. The method was developed by W. F. Libby and James Arnold of the University of Chicago. By measuring the radioactivity of the carbon isotope in wood, charcoal, shell, horn, ivory and vegetal remains found in ancient archaeological sites, the age of the site may be determined. A number of sites in the western hemisphere had been dated by the radiocarbon method.

The 1948 Viking Fund medal for archaeology was awarded to Alex D. Krieger of the University of Texas, Austin, Tex.

Arctic Area.—Under the auspices of the Smithsonian institution and the National museum of Canada, Henry B. Collins assisted by J. P. Michea excavated a number of ancient Eskimo sites on Resolute bay, Cornwallis Island, in the heretofore archaeologically unknown Canadian Arctic archipelago. Ruins of four villages of 6 to 14 well preserved houses of Thule culture type were excavated. More than 1,000 characteristic Thule artifacts were excavated from the houses and middens. A number of fine examples of pictographic art were obtained as well as a style of composite pottery and stone lamp previously unknown. The excavations revealed that bowhead whales and driftwood were abundant at the time of the Thule occupancy although they have been absent from the region in modern times.

A joint expedition of the Danish National museum and the University of Pennsylvania museum conducted archaeological investigations at several sites on the Seward peninsula in Alaska. The expedition was led by Helge Larsen assisted by Charles Lucier. A previously unknown phase of Ipiutak culture was found beneath a late Eskimo village midden at Cape Spencer. Iron knife blades and elaborate carvings of ivory were found in the Ipiutak levels. Two sites were excavated at the Deering airfield. One of these sites was western Thule, the other was Ipiutak with artifacts identical with those of the type site at Point Hope. In a limestone cave 30 mi. from Deering, stratified deposits revealed a sequence from what may be pre-Eskimo culture to recent Eskimo culture in the uppermost levels.

With a grant from the Arctic Institute of North America, Louis Giddings of the University of Alaska continued his excavations at Nukleet and Iyatayet on Cape Denbigh in Norton sound, Alaska. Excavations at Nukleet were carried through the permafrost to bedrock revealing several stages of Eskimo culture. The oldest level showed relations with Early Punuk or Birnirk cultures. Quantities of well-preserved artifacts made of organic materials were found.

At Iyatayet the upper layers contained artifacts similar to those found at Nukleet. In the lower levels Ipiutaklike artifacts of flint were found. And underneath the site, sealed by a sterile layer of sandy clay was a thin, bottom deposit containing nearly 1,000 chipped stone artifacts. Included in the lithic complex were burins and lamellar knives of styles known from the old world and additional types of artifacts known from Folsom or Yuma horizons in the western states. With the Folsom and Yumalike materials was a fluted point and a broken blade of the type known as "oblique Yuma."

Ralph S. Solecki of the Smithsonian institution undertook an archaeological reconnaissance in northwestern Alaska for the U.S. geological survey in co-operation with the office of naval research. From the foothills of the DeLong mountains to the Arctic ocean at Point Lay 192 sites were located along the drainages of the Kukpowruk and Koklik rivers. Two sites yielded polygonal cores and lamellar flakes that were believed to be of ancient types.

Supported by a grant from the Arctic Institute of North America and a fellowship from the Viking fund, Frederica de Laguna spent the summer in archaeological and ethnological investigations of the Tlingit area of southern Alaska. A large number of villages and refuge island forts were located and it was found that the original population of Yakutat was Eyak, and not Tlingit as generally supposed.

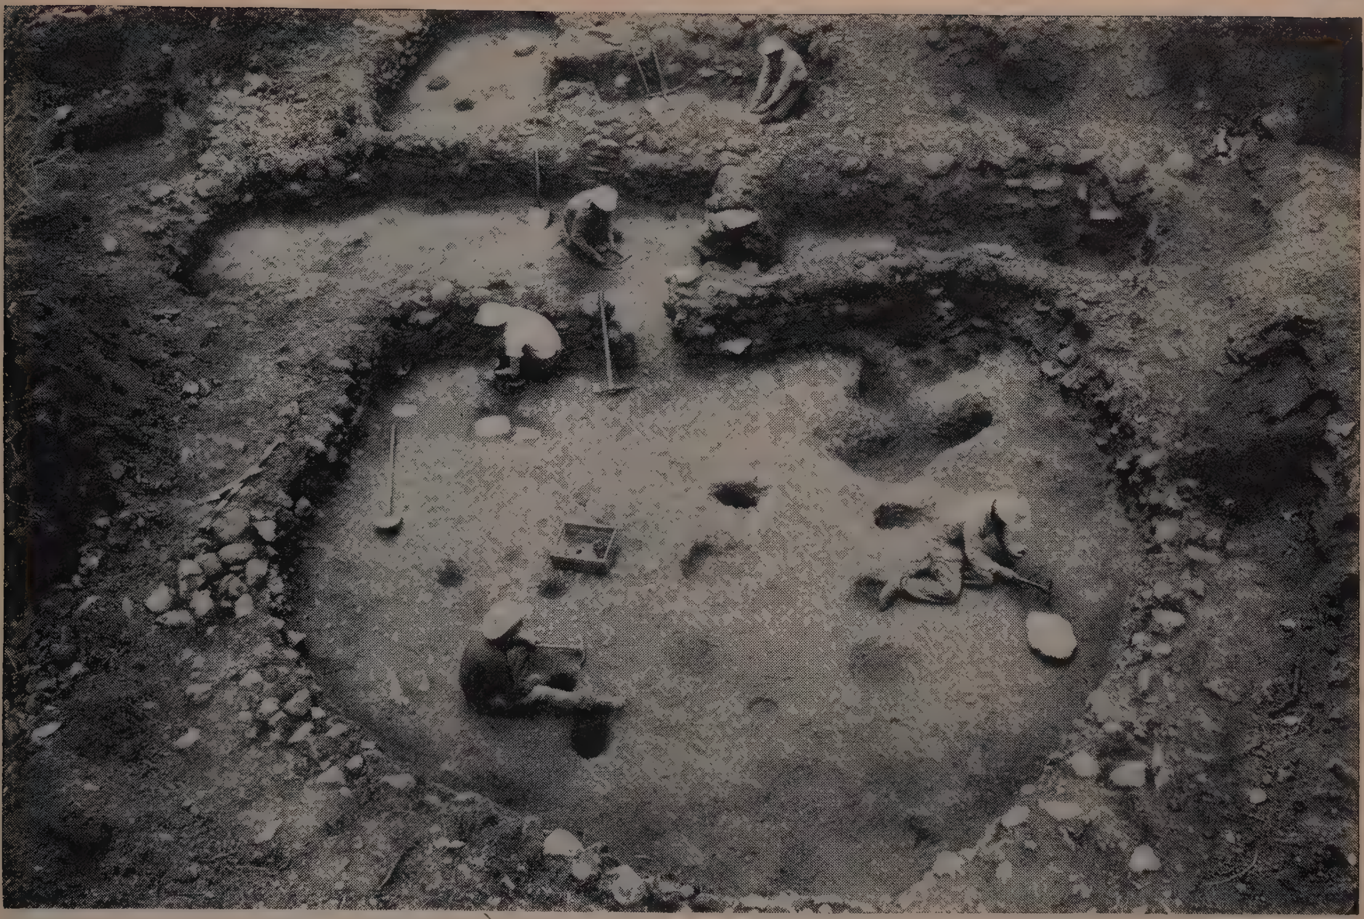
As part of the Harvard university anthropological project in the Aleutian Islands, archaeological investigations were undertaken under the direction of William Laughlin. Excavations were made at sites on Clam lagoon, Adak; at Nikolski on Umnak; and at Nurder point on Attu. At least two periods of Aleut culture were recognized and Ales Hrdlicka's idea that there were two morphological types involved in the peopling of the Aleutians was confirmed.

Richard S. MacNeish made an archaeological survey along the Mackenzie river from Fort Providence to Norman Wells, the east shore of Great Slave lake, the area east of Great Bear and Great Slave lakes, and the Lake Athabaska region. More than 30 sites were discovered and three recurring lithic assemblages were represented.

Eastern North America.—A student field party sponsored by the Illinois State museum and the University of Chicago investigated sites in the Starved Rock area, La Salle county, Ill. This field party was directed by Kenneth G. Orr of the University of Chicago. Excavations were undertaken in five different sites containing cultural assemblages ranging from paleo-Indian through early and middle Woodland and Upper Mississippi to historic.

Under the direction of Raymond Baby assisted by Robert Goslin, an Ohio State museum field party excavated two sites in Ohio during the summer. A large Adena mound in the Cowan Creek reservoir area contained 18 burials, some in log tombs and one in a subfloor pit. Beneath the mound was a circular house pattern of paired post moulds. Pottery, other artifacts and food refuse were associated with the house. In the Delaware dam area a communal burial in a glacial kame was excavated. Fragments of charred fabric and artifacts of stone, copper and shell were recovered.

Under the auspices of the National museum of Canada,



ROOMS of a pueblo house outlined by the remains of its stone walls, as unearthed by archaeologists of the Chicago Natural History museum in the summer of 1949. Dating from about A.D. 900, it was the earliest-known example of a masonry house in the region of western New Mexico

Thomas E. Lee conducted an archaeological survey during the summer along the north shore of Lake Erie. He recorded 88 sites, at least 14 of which were nonceramic.

A field party led by William A. Ritchie worked in eastern New York under the joint sponsorship of the Rochester museum and the New York State museum. The party explored an early Mohawk site in the Schoharie valley where Owascolike chipped stone artifacts were associated with Mohawk type pottery. In the same valley an early Owasco site was partly excavated; late period Owasco sites were not found.

Another and larger early Owasco site was excavated at west St. Johnsville in the Mohawk valley. The pottery exhibited the use of the linear punctating or interrupted incising technique for applying decoration. This technique might foreshadow the incising technique of Iroquois potters.

William S. Fowler of the Attleboro museum undertook investigations of two sites in New England. He assisted the Narragansett Archaeological society of New England in completing excavation of a stratified shell midden containing a prepottery, steatite bowl occupancy beneath a pottery-agriculture level. At the Nunkatuset site in the Taunton River basin in Massachusetts evidence of three cultural horizons was found: earliest level marked by ulus, plummets, ground slate objects and grooveless stemmed gouges; middle level marked by steatite bowls; and top level characterized by pottery.

The summer school of the department of anthropology of the University of Georgia undertook investigations in the lower Flint and Chattahoochee valleys, under the direction of A. R. Kelly. A large midden site revealed a Weeden Island occupation overlying a Swift Creek occupancy.

Under the direction of John L. Champe the laboratory of anthropology of the University of Nebraska undertook excavations at White Cat village and at Sterns creek. White Cat village was a manifestation of the Dismal river culture which is associated with Lipanan Apache. The revised Sterns creek chronology was as follows: an ancient preceramic culture followed by Sterns creek culture which was followed by Hopewellian and the Nebraska culture latest.

Southwestern United States.—The University of Utah field school of archaeology under the direction of Jesse D. Jennings made an archaeological survey of the upper Virgin river area in Washington county, Utah, and excavated the Jukebox and Danger cave sites near Wendover in Tooele county. The caves contained ancient preceramic cultures overlain by cultures with pottery.

The Upper Gila expedition of the Peabody Museum of Archaeology and Ethnology, Harvard university, under the direction of J. O. Brew carried out archaeological survey and excavation of sites in west central New Mexico about 40 mi. south and east of Zuni pueblo. A Pueblo II and a large Pueblo III site were excavated.

A field party from the University of New Mexico directed by Frank Hibben carried out excavations at a Gallina site at Rattlesnake Point, 12 mi. south of El Vado, New Mexico.

Under the direction of Paul Reiter the personnel of the University of New Mexico's summer field session in archaeology investigated a number of sites in the Albuquerque region.

Under the auspices of Gila Pueblo museum Deric O'Brien excavated a late Reserve Phase pueblo site near Quemado, New Mexico.

From June to September the Southwestern Archaeological expedition of the Chicago Natural History museum excavated sites in the Pine Lawn valley near Reserve in western New Mexico. The expedition was directed by Paul S. Martin assisted by John B. Rinaldo. Work of the expedition included the excavation of three pueblo sites of the Reserve Phase (Pueblo II); of four early Mogollon pithouses; and the excavation of a Cochise occupation floor. The Cochise loci on Wet Leggett arroyo were investigated as in previous years and Ernst Antevs continued his geological studies of ancient sites and chronology in the Pine Lawn basin.

Financed by a grant from the graduate school of the University of Illinois and a grant from the Viking fund to the Museum of Northern Arizona, a field party led by John C. McGregor investigated more than 12 sites of the little known Cohonina culture (a branch of the Patayan Root) in northern Arizona. Half of the summer was spent in the field and the other half spent in the Museum of Northern Arizona laboratory at Flagstaff. The Cohonina sites ranged in age from the 8th to the 11th centuries of our era.

The University of Arizona's archaeological field school held its regular session at the University's station at Point of Pines in a remote part of the San Carlos reservation in eastern Arizona. A number of early Mogollon pit houses were excavated and investigations were continued in a Pueblo III ruin. The work of the field party was directed by Emil Haury, E. B. Sayles and J. B. Wheat.

Pacific Coast.—Under the direction of Douglas Osborne assisted by Joel Shiner, seven sites in the McNary reservoir of Oregon were investigated for Washington State college and the Smithsonian River Basins survey. Buried middens or the bottom levels of deep middens produced artifacts of basalt and of a different style.

From June 20 to Sept. 8 six regular field parties of the California archaeological survey and the department of anthropology of the University of California carried out archaeological investigations in 18 sites, recorded 150 previously unknown sites, excavated 109 burials and collected about 30,000 artifacts.

A party directed by Clement Mughan undertook excavations in a shell mound at Drakes bay in search of Caucasian artifacts derived from a Spanish galleon wrecked there in 1595.

William S. King made a six-weeks archaeological survey in the northern district of Baja California. Pottery producing sites were found to increase in number and size away from the ocean and toward the San Felipe desert. In the north most sites were historic. A number of pure lithic sites were found in the interior valleys.

Under the direction of J. Bennyhoff, a field party salvaged archaeological data from a midden near Carpinteria in Santa Barbara county. Two cultures were uncovered, one related to the Oak Grove horizon, the other belonging to the Hunting horizon.

An emergency excavation in a large shell mound on Bodega bay, Sonoma county, directed by Franklin Fenenga revealed a pure cultural manifestation of the McClure facies of the Middle horizon.

During July and August, A. F. Riddell and W. Evans made an archaeological survey of Honey Lake valley in Larsen county, and located 75 sites and collected about 1,000 specimens.

Under the direction of M. R. Harrington a Southwest museum field party carried out excavations in the Pinto site at Little Lake, Inyo county, Calif. Two circular houses, the largest 12 ft. in diameter, were outlined by post holes. The site produced many Pinto points and some Lake Mohave and Silver Lake types, along with scrapers, gravers, crude metates and manos.

Middle America.—In Mexico the many archaeological activities of the National Museum of Anthropology, the Institute of Anthropology and History and the Direction of Prehispanic Monuments continued. Among the numerous projects of these government institutions were investigations at Teotihuacan and Xochicalco, at the middle archaic period site of Tlatilco, and clearing and restoration of the Mayan site, Palenque.

Under the sponsorship of the Carnegie Institution of Washington, George Brainerd spent six months in Yucatan and Campeche where he studied the stratigraphic sequence of Maya pottery types in a series of sites lying between the central and northern Maya areas.

In the early part of the year Edwin N. Ferndon of the School of American Research completed an archaeological survey of the Pacific coast of Chiapas, Mex.

During the first half of the year, Richard S. MacNeish continued survey of excavation in Tamaulipas, Mex. Excavations were made in more than 12 sites including a series of caves along the Canyon Diablo in the Sierra de Tamaulipas. The sites revealed a sequence of cultures ranging from prepottery to late Huastecan. This work was financed by the Viking fund.

Under the sponsorship of the Chicago Natural History museum, the University of Chicago and the Arizona State museum, Donald Lehmer made an archaeological survey of Sonora, Mex. A number of prepottery sites were located and several pottery traditions were recognized. It was concluded that pottery bearing sites were quite late in most of Sonora.

The Peabody Museum-Harvard University expedition to Costa Rica, directed by S. K. Lothrop, made a survey of the southern Pacific plains on lands of the United Fruit company. Testing of stratified deposits revealed three periods of ceramic styles. The early style was reminiscent of Amazon valley pottery and the intermediate style might be ancestral to both classical Chiriqui and classical Cocle.

South America.—Financed by a grant from the Viking fund and a Cutting fellowship from Columbia university, Mr. and Mrs. Clifford Evans, Jr., undertook archaeological investigations in the lower Amazon basin of Brazil. Mounds on central Marajó Island were excavated. Three mounds of the Monte Carmelo group along the Rio Anajas were investigated and 20 village mounds and one cemetery mound were excavated in the Igarapé Os Camutins in the headwaters of the Rio Anajas.

These investigations revealed six separate phases of occupation in the islands of Marajó, Mexiana and Caviana and two additional phases in the territory of Amapá.

Under the direction of Luis Duque Gomez, the Colombian government's Instituto Ethnologico y de Arqueologia continued its broad program of archaeological surveys in Colombia. Included in the projects of the institute were the following: excavations in Sibate, Cundinamarca by Rafael Reyes Parga; an archaeological survey of the department of Magdalena by Blanca Ochoa Sierra and Joaquín Parra Rojas; investigations of the Pueblito site in the Santa Marta area by G. Reichel-D.; and emergency excavation of a rich tomb of the San Augustín culture. (G. I. Q.)

Eastern Hemisphere.—For old world archaeology, the year 1949 continued the marked postwar acceleration in field work already noted in 1948. The news summaries contained in the *American Journal of Archaeology*, the British *Archaeological News Letter* and the *Bulletin de la Société Préhistorique Française* became increasingly detailed, and even the number of tantalizingly brief notes on archaeological activity behind the "iron curtain" increased. The writer restricts himself here to what he considers the more important archaeological events of the year.

A basic contribution to the study of Pleistocene chronology appeared—H. L. Movius' paper on Villafranchian stratigraphy in the *Journal of Geology.*

Pleistocene Prehistory.—The most spectacular find of the year was the "portrait" head of a bearded man, found in Magdalenian context in the rock-shelter of Angles-sur-l'Anglin, in

PORTAL LION of black basalt with Phoenician inscription, dating from about 730 B.C., which was excavated at Karatepe, Turkey. Findings of the expedition, headed by Helmuth Th. Bossert of the University of Istanbul, were published in 1949 and included bilingual inscriptions (Old Phoenician and Hittite hieroglyphics), which were expected to yield a key to previously undecipherable Hittite hieroglyphic texts

central France, by Dorothy Garrod of Cambridge university. Human beings were only rarely known in the cave-art repertoire, and when found, were usually rough, sketchy, self-conscious delineations. The Angles-sur-l'Anglin man was almost life size, and was carefully rendered, in profile, in a combination of relief sculpture, painting and engraving. A very fine head of an ibex, in relief, also came from the same deposit. The year 1949 also saw the arrival of the key publication on *Lascaux*, by F. Windels, and the publication, as well, of the remarkable engraved pebble, found in 1948 at the rock-shelter of La Colombière, by H. L. Movius, Jr., of the Peabody museum, Harvard university. The fine Lascaux cave paintings (found during the occupation) and the La Colombière engraved pebble were both pre-Magdalenian; taken together with the Angles-sur-l'Anglin head, they might be considered the starting point for a new and much needed resynthesis of late Pleistocene art.

Work of considerable interest continued in Africa. In the north, C. Arambourg found, at a site called Ain al-Hanech, a homogenius group of "boules" or "bolas," in a context which was very early Pleistocene (probably Villafranchian—first glacial). Few details were available on this find, but it appeared that they might be the earliest stone tools known anywhere in the world produced according to a persistent habit. The Tufts College-American School of Prehistoric Research expedition, under Hugh Hencken, also worked in North Africa, particularly at Kouali in Algeria, where a continuous sequence from early postglacial to Roman times was excavated in conjunction with detailed geological studies of the ancient Mediterranean shore lines. For Cyrenaica, a region of crucial importance for an understanding of prehistoric interrelationships between Egypt and northwest Africa but hitherto little known, W. Watson reported the results of an important survey made by C. B. M. McBurney of Cambridge university. Traces of the major North African industries appeared, but the blade-tool situation remained somewhat unclear, and proper geometric microliths were very rare. A. J. Arkell's definitive works on *The Old Stone Age in the Anglo-Egyptian Sudan* and on "mesolithic"-"neolithic" *Early Khartoum* appeared, and Arkell continued his work in the Sudan; at a site called Esh Shaheinab, materials comparable to the stage of the Fayum "neolithic" were recovered.

Great interest continued to focus on work in South African caves, especially those in the Makapansgat valley, Transvaal. While there were caves here with Pleistocene artifacts, the predominant interest had been with human palaeontological materials which had tended to appear without positive archaeological associations, despite some extravagant claims to the contrary. Some of the humanlike fossil finds indicated small beings, some large, and the associated faunas were different in many ways, indicating that the materials were of several ages. In a lecture to the Royal Anthropological institute in May 1949, Robert Broom admitted that evidence for the use of fire by *Australopithecus prometheus* was far from conclusive, and that while his beings "must have used sticks and stones as weapons or they could not have survived," said that he had seen no stone artefacts with them in spite of a close watch having been kept.

The most important early postglacial find in Europe was the Maglemosian site at Star Carr, Yorks., Eng., excavated under the direction of Grahame Clark of Cambridge university. The Maglemosian assemblage, which typified the changes made by the forest folk of northern Europe to suit their economy to a postglacial environment, had so far been best known from Scandinavia; Clark's work increased the available Maglemosian material in Britain more than tenfold and tapped what promised to be one of the richest of all Maglemose sites. Several layers of timber flooring (evidently placed along side the shore of a bog, by which the original dwellers lived) were cleared. The excavations yielded a variety of antler tools, stone beads, bits of amber, traces of birch-bark containers and flint tools, as well as much unworked organic material which would allow the reconstruction of the climatic history of the site.

The Near-Middle East.—Important work continued at Kanes (Kültepe) in Turkey, for the Turkish Historical Society, headed by Tahsin Özgüç. The "Karum" or trading centre of this town had a colony of Assyrian merchants living, more-or-less self contained, within the larger Anatolian town. Four building levels were encountered in an eight metre depth of deposit: the uppermost level was of the Hittite New Empire, the second level was of the later Assyrian merchant colony, level three contained the earlier Assyrian phase and the fourth level (on virgin soil) was "Hittite" but without trace of Assyrian merchants. Both the second and third levels had ended with catastrophic fires, both contained rich yields of artefacts and as many as 1,500 cuneiform tablets—many still in clay "envelopes" or covers which bore the impressions of cylinder seals—were recovered from these two levels. Some of the tablets of the second level had references to the Assyrian king Erišum, who reigned some 150 years earlier than the Babylonian Hammurabi.

In Egypt, the situation for foreigners remained somewhat restless because of the Palestinian troubles, and few Europeans or Americans were at work, save for those in the employ of the government Service des Antiquités. Happily, the Oriental institute's work in copying the temple reliefs at Luxor proceeded. The service itself was active. Abd Essalam M. Hussein continued his architectural clearances on the pyramid temple of Dadkare at Sakkara and in the two pyramids of Snefru at Dahshur, but at the end of the year came sad news of Abd Essalam's premature death by heart attack.

In Jordan, G. Lankester Harding (chief government curator of antiquities) and Père R. de Vaux (director, École Biblique et Archéologique, Jerusalem) conducted a test excavation in the cave where a goatherd accidentally found the "Dead sea scrolls" in 1947. The cave was relocated by an Arab legion search party by means of the newly turned soil; it was in desolate

CLAY "ENVELOPE" with inscription and seal enclosing a cuneiform tablet, excavated at Kültepe, Turkey, by archaeologists of the Turkish Historical society in 1949; the envelope dated from about 2,000 B.C.

foothills about seven miles south of Jericho, overlooking the Dead sea. Harding and Père de Vaux proved—by reclaiming many small fragments of inscribed leather, the inscriptions being like those of the available scrolls—that the cave was indeed the findspot of the "Dead sea scrolls." The traces of about 40 large jars of late Hellenistic date (which corresponded with the dates given the scrolls by most authorities on palaeographic grounds) were found. Unfortunately, the cave seemed to have been disturbed in ancient times; only eight scrolls were available, but Harding believed that each jar could have held five or six such scrolls. As indication that all of the Old Testament may once have been in the deposit the fragments reclaimed by Harding and Père de Vaux yielded scraps of the books of Genesis, Deuteronomy, Leviticus, Judges and Daniel. In 1949 four of the "complete" available scrolls were in E. K. Sukenik's hands in the Hebrew University of Jerusalem (they included an apocryphal book "The War of the Children of Light Against the Children of Darkness," a book of Hymns and Psalms and two which were as yet unrolled), and the other four were in the United States for publication by scholars of the American School of Oriental Research (these latter scrolls included the book of Isaiah, a commentary on Habakkuk, a book of ritual and part of the book of Enoch in Aramaic). Save for the Enoch, the scrolls were in post-Exilic Hebrew; some of the Harding-De Vaux fragments were in earlier Phoenicianlike Hebrew. Thanks to the painstaking clean-up of the cave by Harding and Père de Vaux, there could be no question of the authenticity of the scrolls, nor that their date was far removed from the early 1st century B.C.

In Syria, Claude Schaeffer was able to return for his 12th campaign at Ras Shamra-Ugarit, and D. Dikaios (curator of the Cyprus museum) commenced work on what had been identified as the town of Alasia, at Enkomi, Cyprus. A building of considerable size was cleared, and in it a fine bronze figure of a horned god (Nergal-Reshef-Apollo) was found. Historically, Alasia was the probable capital of Cyprus, as referred to in the Amarna correspondence of the 14th century B.C.

The endeavours of the directorate general of antiquities of Iraq were indicated in the current numbers of *Sumer*. The clearance of Tell Harmal, near Baghdad, was virtually completed by Mohammed Ali Mustafa, under the supervision of Curator Taha Bakir. It was at Tell Harmal that the directorate recovered the important law-code, and more texts were found in 1949. Fuad Safar was again in charge of the work at Tell Abu Shahrain, the important site of ancient Eridu, in the south. A final stratigraphic check was made in the core of the main north mound, and on a secondary mound not hitherto explored, a large building of the type of the "A" palace at Kish appeared, including fragments of Sumerian sculpture. Fuad Safar also made preliminary clearances on Tell al-Laham, a very large mound about 25 mi. southeast of Eridu, near the railroad. The mound was found to have been occupied from the Early Dynastic period down through Kassite times, and then sporadically through Neo-Babylonian times.

Two major foreign programs were under way in Iraq. A short introductory campaign, mainly of clearance of sand and debris from the old excavations, was begun at Nippur by D. E. McCown for the joint Oriental Institute (University of Chicago)–University Museum (University of Pennsylvania) expedition in the winter of 1948–49. Undisturbed materials were encountered in two areas; one proved to be Assyrian, the other probably Achaemenian. Work was resumed in the fall of 1949 under R. C. Haines, and earlier levels were reached, in which it was reported that cuneiform tablets of some importance had begun to appear. In March 1949, M. E. L. Mallowan, director of the British School of Archaeology in Iraq, commenced an equally long-range program at Nimrud, concentrating on the palaces of Shalmaneser III and Ashurnasirpal III. About 80 tablets and a variety of ivory inlays were recovered. The work of both these expeditions was important in more ways than one; they could in a sense be said to mark the resumption of old responsibilities. Nippur, a classic Sumerian site in the south was first worked by the University museum in 1887, while Nimrud, once capital of Assyria, in the north, was opened first by Sir Henry Layard in 1845.

In Iran, M. R. Ghirshman continued his work at the site of Susa, where the northwest foundations of the Achaemenid palace were cleared, and Graeco-Parthian, Sassanid and Arab materials were encountered otherwise. In the northwest, in the Azerbaijan area, T. Burton-Brown excavated a relatively long sequence of materials. The excavator was somewhat facile in claiming analogies for his artifacts, which he saw as covering the period from the Ubaid stage to the Cypriote or Aegean Iron Age, but there was no question but that he had discovered a very interesting group of antiquities from a very little known area. M. D. Schlumberger explored a group of Ghaznavid buildings at Lashkari Bazar, in Afghanistan, for the French Délégation Archéologique.

In Turkey, as well as the work at Kanes mentioned above, the year saw the close of Sir Leonard Woolley's important excavations at Tell Atchana—Alalakh, in the Amuq plain. In all, a magnificent sequence for the whole 2nd millennium B.C. had been gained, and important early village material, in the range of Amouq phase E was encountered on a small mound nearby, Tell es-Sheikh.

Classical Lands.—In Greece, where ECA aid had been granted to the museums, and much reconstitution had already been effected, the government's policy of allowing no new work but only the completion and conservation of old work was relaxed. The French school worked at Thasos, Delos and Delphi, the American school on the Athenian Agora, and New York university at Samothrace. The British school was active, but in Turkey, where it excavated a site near Izmir (Smyrna) jointly with the University of Ankara, this joint expedition recovered interesting prehistoric (*cf.* Troy I) and 7th century B.C. Greek materials. The Swedish school also worked in Turkey, at Carian Labranda, where traces of an unknown Carian script were found.

Europe.—The *American Journal of Archaeology* news section on Europe contained many details of postwar clearances and small finds, but little news of work in 1949. Work was continued on the large Viking site of Jarlshof, in the Shetland Islands, by the British ministry of works, with an idea of establishing stratigraphic subdivisions of house types in this important 9th century A.D. village. Informative materials for understanding the Roman and mediaeval towns of Canterbury, Eng., continued to come from excavations in that fifth of the modern "old city" which was destroyed in the air raids.

Very little later archaeological material was reported for the year 1949 from farther Asia or Africa. (*See* also ANTHROPOLOGY.)

J. B.)

Archery.

The 65th annual tournament of the National Archery association of the United States was held at Fond du Lac, Wis., Aug. 1–6, 1949, with 277 archers from 23 states and Canada participating. Thirty-three new national records were established. The champions and their scores were:

Target Archery

Men's championship			Russ Reynolds, Cleveland, O.	
	Scores:	Double York round	279–1,745*	
		Double American round	180–1,472*	3,217
Ladies' championship			Jean Lee, Greenfield, Mass.	
	Scores:	Double National round	144–1,080	
		Double Columbia round	144–1,178*	
		Double American round	180–1,422*	3,680
Boys' championship			Edward N. Berg, Jr., Salt Lake City, Utah	
	Scores:	Double Junior American round	180–1,442*	
		Quadruple Junior American round	360–2,880*	
Girls' championship			Grace Frye, Toledo, O.	
	Scores:	Double Columbia round	143–1,009	
		Double Junior American round	179–1,219	2,228

Flight Archery

Men	Regular style	Jack Stewart, Austin, Tex.	640 yd.*
	Free style	Paul Berry, Middletown, O.	719 yd. 2 ft.*
Ladies	Regular style	Blanche Stewart, Austin, Tex.	447 yd.
	Free style	Eunice Modlin, Evansville, Ind.	575 yd. 2 ft.*
Boys	Regular style	Edward N. Berg, Jr., Salt Lake City, Utah	447 yd.*
Girls	Regular style	Grace Frye, Toledo, O.	291 yd.

Clout Shoot

Men	(36 arrows at 180 yd.)	Walter Hissey, Baltimore, Md.	30–192
Ladies	(36 arrows at 140 yd.)	Ann M. Weber, Bloomfield, N.J.	36–242
Ladies	(36 arrows at 120 yd.)	Jean Lee, Greenfield, Mass.	36–252
Boys	(36 arrows at 120 yd.)	Michael Moga, Niagara Falls, N.Y.	36–230
Girls	(36 arrows at 120 yd.)	Christine Richards, Laguna Beach, Calif.	35–203

*Indicates new record.

The Minneapolis (Minn.) Archery club with a team of four won the men's team shoot event; their combined scores totalling 381–2,537. The Orioles of Baltimore, Md., won the ladies' team shoot with a score of 382–2,442.

A world's record was set for the men's international Long round when Russ Reynolds of Cleveland, O., shot the amazing score of 907, with 143 hits. This round was added to the regular events in 1949, replacing the English York which had been abandoned in England in favour of the American York round. Jean Richards of Laguna Beach, Calif., also established a world's record for the Hereford round with 143 hits for a score of 921. This round originated in England. At the 30-yd. distance of the Columbia round, Jean Lee of Greenfield, Mass., shot 23 perfect arrows out of a total of 24, thus setting a record of 214 out of a possible 216.

Two records were established by junior girls. Barbara Van Popering, Old Greenwich, Conn., age 13 yr., established a new national record of 90–648 in a Junior American round. Christine Richards, Laguna Beach, Calif., age 15 yr., established a new national record of 72–536 in a Columbia round.

Field Archery

Men's championship	Erwin Pletcher, Bakersfield, Calif.	2,508
Ladies' championship	Mrs. Henry Bitzenburger, Los Angeles, Calif.	1,816
Boys' championship	Edward N. Berg, Jr., Salt Lake City, Utah	1,824
Girls' championship	Christine Richards, Laguna Beach, Calif.	655

The National Field Archery tournament was held the first week of July in Pasadena, Calif.

The 66th national tournament of the National Archery association was to be held at Franklin and Marshall college in Lancaster, Pa., Aug. 7–12, 1950.

FILMS OF 1949.—*Archery for Girls* (Coronet Instructional Films). (O. U. C.)

Architecture.

Residential.—Early in the year 1949 there were signs that building costs in the United States might come down a bit, but as the year wore on, the decline proved to be very slight, and there appeared instead a general acceptance of higher prices as the apparently normal level. This resulted in an increase in the number of luxury buildings commissioned and sold, for the first time since the end of World War II. Houses of greater size and more lavishly equipped, costing roughly twice as much as similar ones had before the war, were being built. Similarly, new apartments on the Park avenues of the country were renting easily at high rents, partly because none had been built for so long and partly because of the wider acceptance of higher rents as the new normal. These units were not large in number of rooms; the trend to smaller and smaller residences reflected the continuous decline in the availability of domestic help. However, the rooms were often large and the units contained numerous features intended to compensate for fewer square feet, such as glass walls, terraces and usable balconies. Families with many children sought out older, roomier buildings, while small families moved into the new, more easily maintained, units. The architect was once more building private houses, often quite large, a situation which had been considered unlikely only a few years before. Stephen C. Pepper asserted that this phenomenon, a characteristic of the 20th century, reflected the general cultural trend to put more and more emphasis on the individual.

In all types of domestic architecture the trend toward one-story, open-planned houses continued. In the speculative field, the "ranch house" was the name generally used for the looser, freer character of these buildings. It seemed as though the public had in many instances swung from the Cape Cod cottage and colonial types into the ranch house without having stopped at the intermediate phase, the flat-roofed international style. Many of these ranch house units were deplorably lacking in restraint, in studied proportions, and, as usual in this class of building, played up the clichés of the moment. This led to some alarm that the new mood was too relaxed, that the discipline of materials and design had been too suddenly jettisoned for merchandising appeal. In spite of some optimistic opinions that a single widely accepted mode of building was at hand, the eclectic variety of taste and approach seemed hardly checked. Two buildings, of opposed concept, both widely published and visited, dramatized the extent of this range. Marcel Breuer's exhibition house, built in the garden of the Museum of Modern Art in New York city, was in sharp contrast to Philip Johnson's own house in near-by New Canaan, Conn. Breuer's house for a normal family was intended as a model house, a prototype; Johnson's as a unique, luxurious, week-end house. Breuer's was a single unit, multistoried, carefully planned to provide for the needs of a typical growing family at several stages in the growth of the family. It had a butterfly roof and used stone, wood and glass walls. Johnson's was made up of separate, wholly detached pavilions, in an extensive estate. Its principal building was entirely glass walled. Its austere intellectual design was at the same time poetic and moving. Breuer's house, although warmed by its use of more familiar and varied materials, nevertheless seemed, to some, to be inflexible and dogmatic.

The "pace setter" house sponsored by *House Beautiful* was noteworthy in three respects: it was an extensive application of the principles of climate control; it had a garden designed by Thomas D. Church which stressed eye-appeal during the winter months; and it glorified the gadget, the climax of an American state of mind, which can be expressed as the belief that "happiness comes through handy helps in the home."

Since 60% of building in 1949 was in the residential field, it was significant that new federal legislation was enacted to finance more public housing, about 200,000 units having been approved by the Public Housing administration by the end of the year. Congress, on the other hand, had not taken positive action to extend federal aid to housing in the medium-price bracket.

The two principal makers of prefabricated houses were searching for better ways in which to market their products. The small Gunnison houses seemed to be started on a sounder basis than the somewhat larger and more expensive Lustron house. The latter was the subject of much controversy. Lustron was not producing the expected volume; its prices were higher than anticipated; and it was losing money. There was, however, reason to think that Lustron would survive. It was inevitable that the first large-scale, factory-produced house would need time as well as capital to pioneer its way.

One of the large developers changed his model and attracted ready customers by such devices as placing the living rooms off the street, exposing girders, building fireplaces in brick with deeply raked joints and using natural shingles and large glass areas.

Techniques and Materials.—Increasing labour costs, which were higher than ever before and higher than anywhere else in the world, continued to force invention in techniques and materials. It should be noted, though, that in the United States the cost of building in 1949 as compared with 1939 had risen less than almost anywhere else in the world. British observers commented that the United States continued to lead the world in the use of building machinery, such as volume-mixers for concrete, thus offsetting some of the high costs of labour. Other steps in this direction noted during the year were the increasing use of larger wall panels, new and lighter sandwiches for walls, insulated precast-slabs and wider application of prestressing and of lightweight structural metal members. Radiant heating continued as a favourite system with wider application to driveways, terraces and pavements, and although it was recognized that the distribution of heat in this system was easily blocked by furniture such as desks and drafting tables, the advantages were on its side.

Aluminum was used as a substitute for conventional metals in the Alcoa building at Davenport, Ia., in designs for a proposed Alcoa building in Pittsburgh, Pa., and throughout an entire school in Bristol, England. It was suggested that the future of the material would develop more rapidly when its own characteristics were stressed. Stainless steel for exterior surfaces was used in several buildings and projected for others. The architectural uses of magnesium were not notably advanced. The trend toward lightening the weight and bulk of structures continued. Many experiments were made toward this general end, through wider application of lightweight aggregates and lightweight combinations of natural and synthetic materials. Buckminster Fuller's observation, 20 years before, that when structure became rational, buildings would be sold by the pound, seemed slightly nearer realization. The Building Research Advisory board moved toward centralizing and disseminating private research in building techniques and materials, while modular co-ordination seemed to be losing ground.

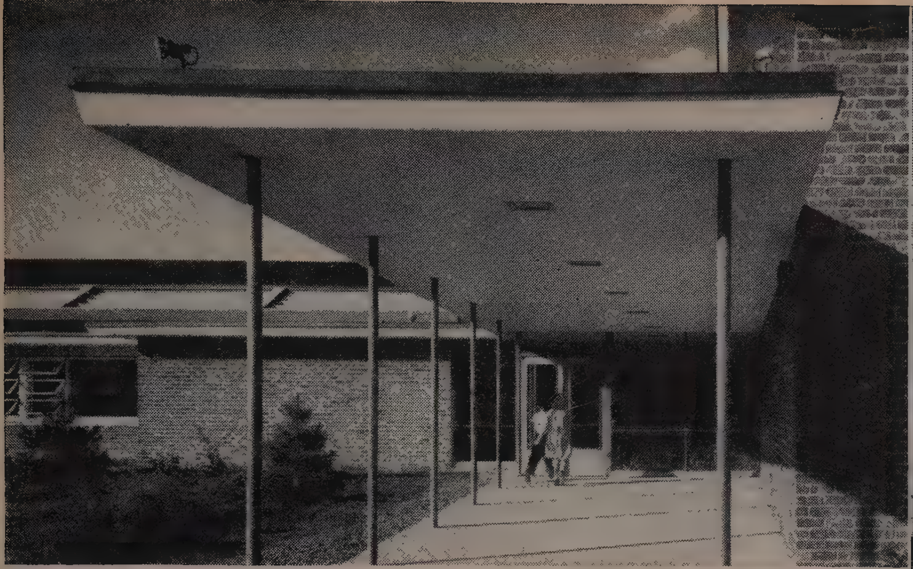
Commercial.—Perhaps as a by-product of greater costs and perhaps as a consequence of a longer period of familiarity with the modern approach to building design, the onset of a period of maturity in the design of commercial and industrial buildings could be detected. An outstanding example was the office building of the United Nations nearing completion in New York city. Its characteristics, such as reserving part of the lot for walks and parking, thus eliminating the need for interior courts and complicated set-backs and providing better light and air, were shared by other projects both under construction and in the design stage. This was a return toward two of the prototypes of the '30s, the direct verticality of the Philadelphia Saving Fund Society building and the slab form of Rockefeller Center. The U.N. building also showed maturity in the way its end façades were left unpierced, and by distinguishing the utility floors from the office floors by louvres, thus departing from the domination of the traditional grid.

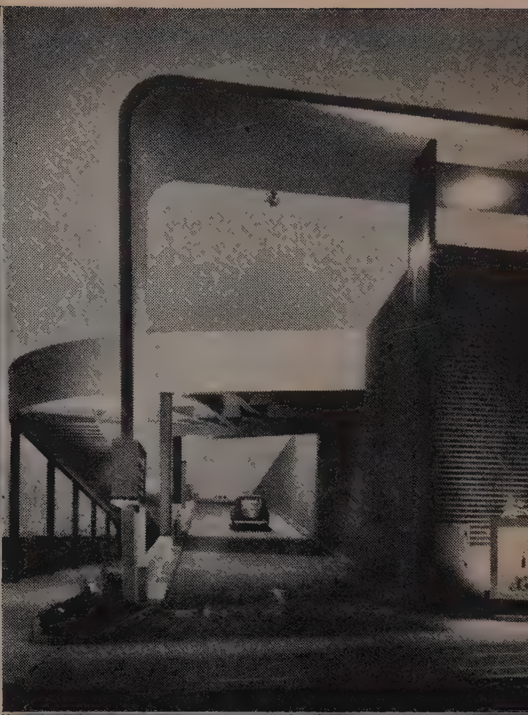
A marked freedom from the conventional idea that a building must be built and then finished with another set of materials, detail, trim, etc., showed itself during the year as a possible trend. Here and there buildings appeared in which the structure and materials were left to express themselves, as in the Lunt-Lake apartments in Chicago and in many houses. The most striking application of this general concept was the Bluebonnet plant in Texas, in which walls and even roofs were omitted in parts if their function permitted. In this development, economy quite clearly played a major role, but there were in it also elements of romantic delight in the resulting forms and textures and of mature assurance on the part of the designers.

The highest distinction conferred by the American Institute of Architects, its gold medal, was awarded to the great U.S. architect Frank Lloyd Wright. At the age of 80, he maintained his role as bête noire of conservatives; he suggested moving the capital of the United States to a more western point, and he continued his output of original creative buildings, houses which could be partly built by the owner's own labour, and a theatre which by its triple stage proposed to make use of the lessons of the cinema. The influence of his ideas and of his buildings seemed to be growing, as the austerity of the '30s and '40s was superseded by a warmer, sometimes excessively mannered mood. The effect of greater relaxation was shown also in a number of laboratories and office buildings erected in rural settings, such as the Air Reduction corporation's laboratory at Murray Hill, N.J., where there were adequate parking facilities as well as room for expansion and the building could be kept low and could ramble freely. This approach was paralleled in building for other purposes such as the completed Aalto dormitory at the Massachusetts Institute of Technology, the Lamont library at Harvard, Paul Nelson's hospital at St. Lô, France, Eliel Saarinen's Des Moines Art centre and Eliel and Eero Saarinen's General Motors Research centre.

(C. L. V. M.)

Great Britain.—Two ambitious building schemes completed in London during 1949 were blocks of flats at Finsbury and Holborn. The former comprised three blocks, two of eight stories containing 48 flats and one of five stories containing 32



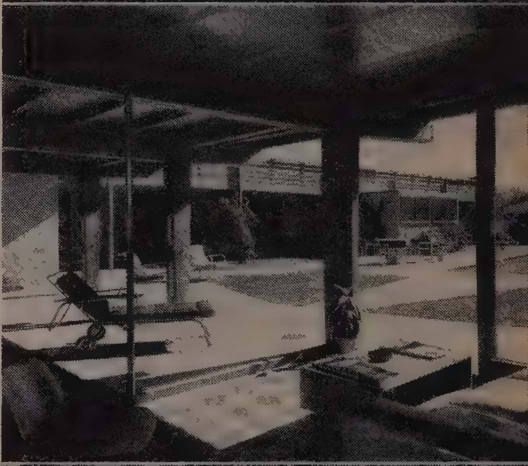


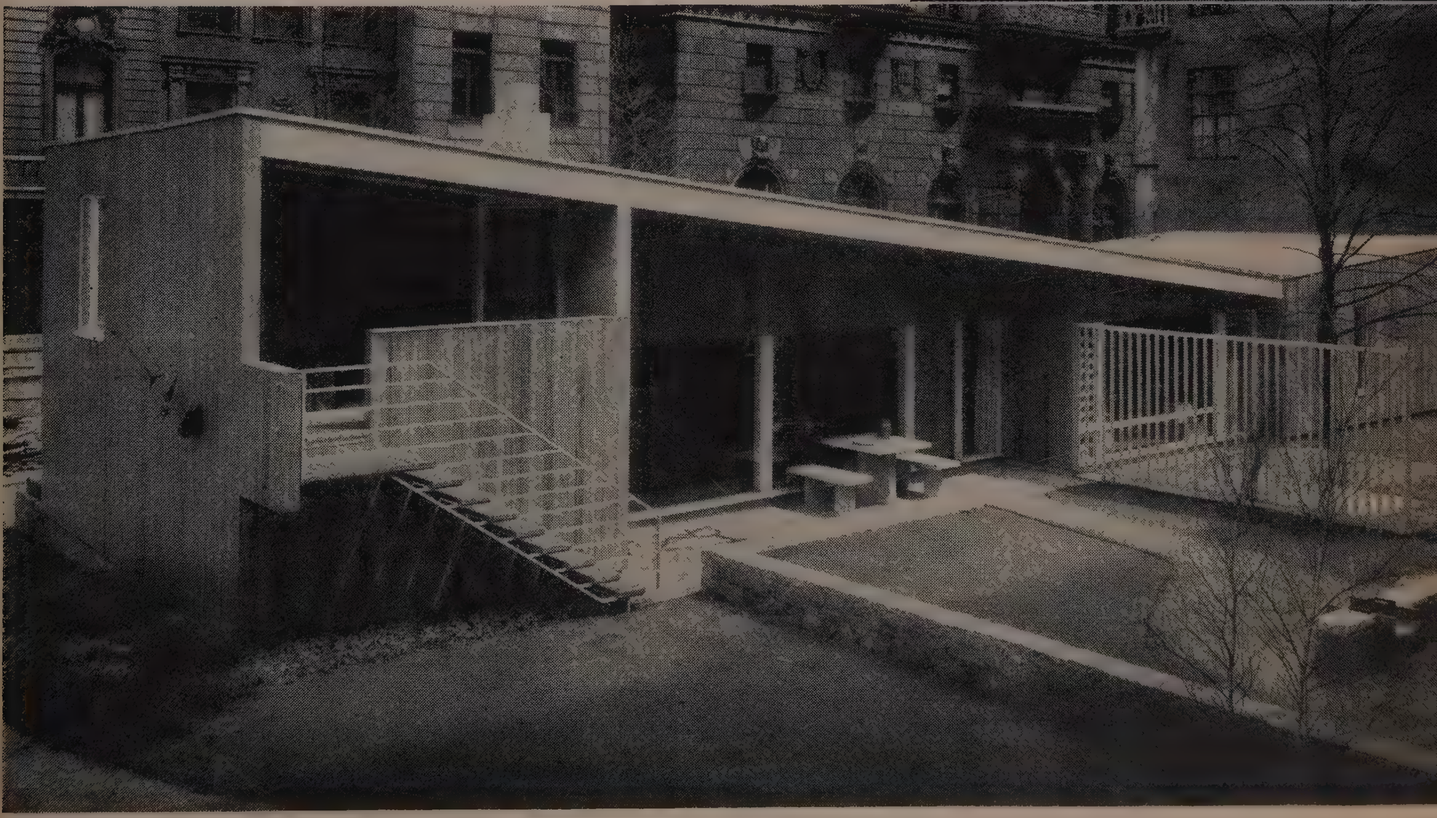
Above: RURAL GRADE SCHOOL at Clarksville, N.Y., built with a north-south exposure on the architect's belief that in that climate the disadvantages of solar heat and glare in spring and fall outweighed its winter advantages. Henry L. Blatner, architect

Above, right: RAMP ENTRANCE to rooftop parking spaces above a department store in Westchester, a suburb of Los Angeles, Calif. With most of the store's shoppers auto borne, the main entrance is from a penthouse at the centre of the roof; there, too, is an indoor-outdoor nursery for "checking" shoppers' children. Gruen and Krummeck, architects; Karl Van Leuven, associate in charge

Right: HOTEL at Palm Springs, Calif., illustrating a postwar trend toward small, luxurious resort structures, with a simple employment of natural materials (redwood and stone in this case). All rooms overlook the swimming pool with its landscaped seating space and shaded areas beneath a balcony. William F. Cody, architect

Below: EXPANSIBLE HOUSE designed by Marcel Breuer specifically for the Museum of Modern Art, New York city, and exhibited there in 1949. Breuer was commissioned to produce "a moderately priced house for a man who works in a large city and commutes to a so-called 'dormitory town' on its outskirts where he lives with his family"





flats. The construction, of reinforced concrete, was based on the box-frame principle of continuous slabs and walls and utilized a new system of hydraulically jacked shuttering, never previously used in England.

The Holborn scheme included five blocks of flats, one of ten stories and the rest of five stories, containing 162 flats in all. Construction was steel frame with hollow tile floors and reinforced concrete flank walls, staircases and cantilevered balconies. Cavity walls were used as panel infillings, the first time this had been permitted for high buildings in London. On the flank walls precast concrete slabs, surfaced with broken brick, were used as permanent shuttering.

Among the most notable schools were those built by the Hertfordshire county council. They were all designed in the county architect's department, under the direction of C. H. Aslin, and employed a standardized system of construction which was intended for use throughout the whole schools' program of the department. It was based on a light steel frame, designed as a series of component parts capable of mass production and easy assembly. Precast concrete blocks and fibrous plaster covered the frame. The use of colour and the design and placing of windows were carefully considered from the point of view of the child.

Great Britain's first permanent prefabricated aluminum school was opened during March. With accommodation for 480 pupils, it was built in approximately nine months.

One of the largest building projects to be completed in England during 1949 was a group of buildings for the Bristol Aeroplane company at Filton near Bristol. These buildings included an aircraft assembly hall, together with a canteen, boiler house, workshops, storage buildings and a two-story block of offices and workshops for British Overseas Airways corporation. The assembly hall consisted of three bays, equal in span (358 ft. between main supports) but with the centre bay 420 ft. deep and the two side bays each 270 ft. deep. The eight acres of floor space were kept free of such things as buried pipes and heating panels, allowing the position of the jigs on which the aircraft were built to be altered in accordance with changes in the production layout.

Commonwealth.—The results of the competition for the new provincial administration headquarters office building at Pietermaritzburg, Natal, were published. The competition was restricted to the architects of Natal, and the competitors were required to limit the total cost of the building, including professional fees, to £250,000.

The Cranbrooke private hotel in Johannesburg was among the most imaginatively conceived buildings completed in South Africa during the year. Accommodation comprised a basement car park and boiler room, ground floor public rooms, kitchen and staff quarters, six bedroom floors with 135 furnished rooms, and native servants' quarters at roof level.

The results of the Anzac House competition were published. The winning design (for Sydney, Australia) was planned in two distinct parts, an auditorium with ancillary rooms and an office building, the two sections being independent with separate entrances. Auditorium accommodation was provided for 787 people.

Europe.—In Sweden an 11-story block of flats was erected outside the town of Örebro. Built of reinforced concrete, the building was finished in bright coloured cement.

In Czechoslovakia two office buildings were completed in Prague. One had a reinforced concrete frame with brick panel infilling, faced with light-brown stone. The other was the first large building in Czechoslovakia to employ the patent Swedish pivoting side-hung double window. Archives, National.

Established by congress in 1934 as an independent agency, the national archives was transferred on July 1, 1949, along with the division of the federal register and the Franklin D. Roosevelt library at Hyde Park, N.Y., the other parts of the national archives establishment, to the newly created General Services administration. On Dec. 1, 1949, these parts and a new records management division were formed into the national archives and records service of the General Services administration. Archivist of the United States in 1949 was Wayne C. Grover.

The functions of the national archives, the division of the federal register, and the Franklin D. Roosevelt library were not changed. The new records management division was to make surveys of government records, develop standards and methods for improving records management, and promote such programs throughout the government in order to reduce as rapidly as possible the huge, costly backlog of noncurrent government records by disposing of those of no further value and by transferring permanently valuable documents to the national archives.

By the close of 1949 there were more than 900,000 cu.ft. of permanently valuable, noncurrent records of the federal government in the national archives. More than 365,000 reference services on them were performed for the government and the public during the year.

Work on the 1949 edition of the *Code of Federal Regulations* was a major activity of the division of the federal register. Because so many regulations in effect on June 30, 1943, when a regular five-year codification was due, were temporary, congress authorized a cumulative supplement instead. The 1949 *Code*, more than half of which was off the press by the end of the year, therefore covers a ten-year period.

Of President Roosevelt's papers, 1910–45, which were in the Franklin D. Roosevelt library, 85% were to be opened for research in March 1950. By that time the preliminary examination of them would have been completed by the library staff and reviewed by Grace Tully and Judge Samuel Rosenman, named with Harry Hopkins by Roosevelt to screen his papers.

Areas and Populations of the Countries of the World.

The political entities of the world are listed here with their areas, populations and number of persons per square mile. The latest census or official estimates are given for each country. Areas in square miles, including inland water areas, are in accordance with the boundaries for the year of the population figure unless otherwise noted. Some of the later boundary adjustments had not been recognized at the end of 1949 by the U.S. government. The subtotals for colonial groupings within continents do not carry density figures.

Where two figures are given for a country, the most recent is used in the continental and world totals.

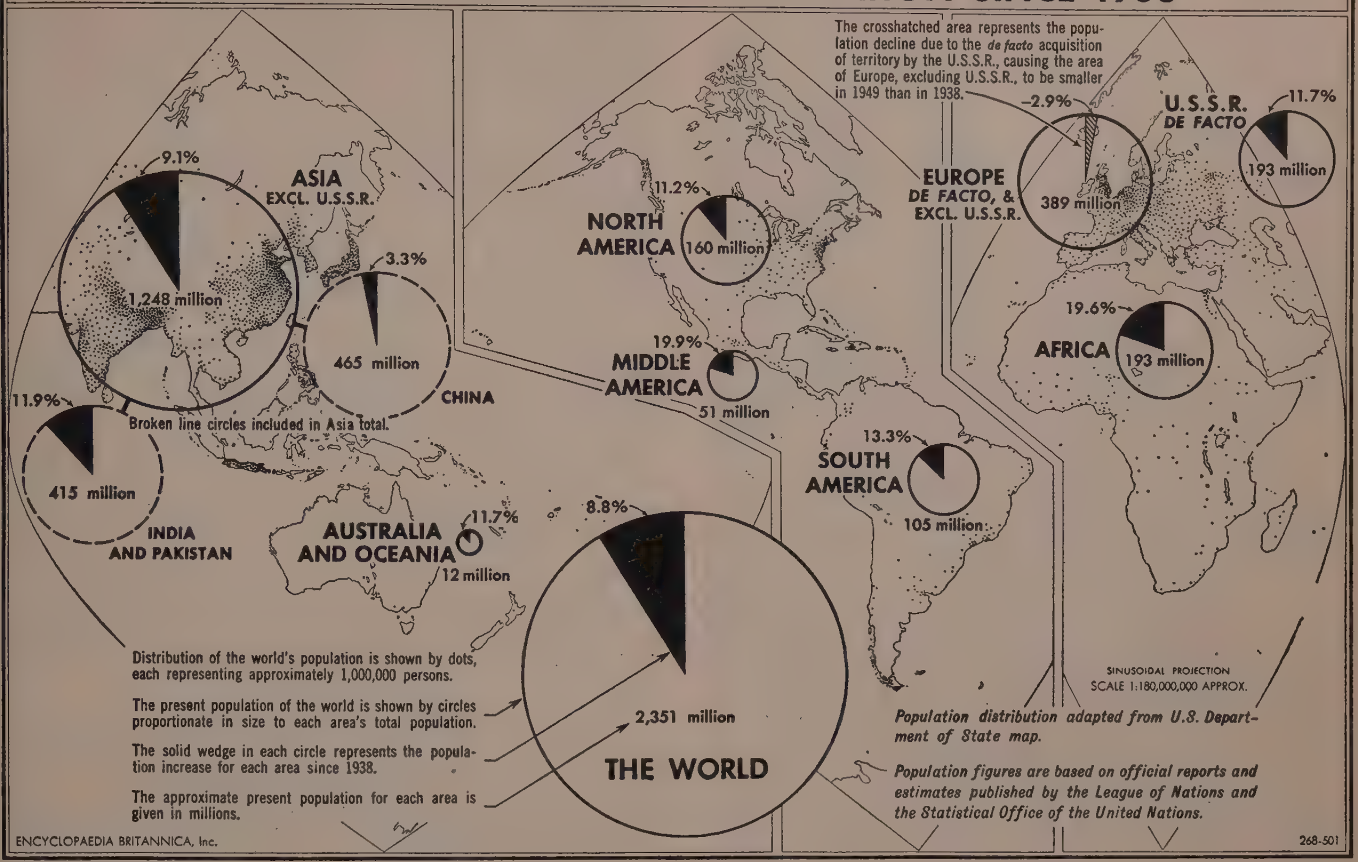
The table, on this and the following two pages, provides a fundamental basis for country comparisons.

Areas and Populations of the Countries of the World

(For statistical details and dates see separate country and empire articles)

Name of continent and state	Area (In sq.mi.)	Population (In thousands)	Persons per sq.mi.
World total	58,087,756	2,341,154	44.9*
AFRICA	11,596,043	187,494	16.2
Belgian colony and trusteeship	925,094	14,748	
†British colonies, dependencies, protectorates and trusteeships	3,916,650	68,647	
Egypt	383,000	19,528	51.0
Ethiopia	350,000	8,000	22.9
French colonies, trusteeships, protectorates, department and metropolitan area	4,258,070	49,301	

INCREASE OF THE WORLD'S POPULATION SINCE 1938



The crosshatched area represents the population decline due to the *de facto* acquisition of territory by the U.S.S.R., causing the area of Europe, excluding U.S.S.R., to be smaller in 1949 than in 1938.

Distribution of the world's population is shown by dots, each representing approximately 1,000,000 persons.

The present population of the world is shown by circles proportionate in size to each area's total population.

The solid wedge in each circle represents the population increase for each area since 1938.

The approximate present population for each area is given in millions.

Population distribution adapted from U.S. Department of State map.

Population figures are based on official reports and estimates published by the League of Nations and the Statistical Office of the United Nations.

Argentina. A republic in southern South America, Argentina is bounded on the north by Bolivia, Paraguay and Brazil; on the south and west by Chile; and on the east by Uruguay, the Río de la Plata and the Atlantic ocean. Next to Brazil it is the largest country in South America, with an area of 1,079,965 sq.mi. and a population of 16,300,000 (est. mid-1948), mostly of European ancestry. The capital and leading port, Buenos Aires, has a population of 3,000,371 (1947 census). Other principal cities are: Rosario (464,688); Avellaneda (279,572); Córdoba (351,644); La Plata (271,738); Lanús (242,760); Mar del Plata (104,513); Tucumán (152,508); Santa Fé (168,011); Bahía Blanca (93,122); and Mendoza (105,328). Religion: Christian, mainly Roman Catholic. President in 1949: Gen. Juan Domingo Perón.

History.—During 1949 there was a trend in Argentina toward a more authoritarian central government, denial of civil liberties and economic self-sufficiency. This was brought about by approving a new constitution, enacting laws regulating the formation of new political parties and punishing insults against public officials, and negotiating a commercial treaty with Great Britain.

Early in the year, at the Inter-American Economic conference held in Buenos Aires, there was some disagreement with the United States. The expected flow of dollars to be obtained through sales to European countries benefiting from the Marshall plan and the Economic Cooperation administration program failed to materialize. The requirements of the five-year industrialization and development plan launched by Perón in 1946 called for ever-increasing quantities of steel and machinery. A reduction in foreign trade, as a result of high Argentine prices and large crops elsewhere, created additional economic difficulties.

Miguel Miranda, head of the National Economic council and who through the ministry of commerce and industry controlled the Institute for the Promotion of Trade, continued to advocate a nationalistic economic policy of high prices, nationalization of foreign-held assets and self-sufficiency. His theories were mildly opposed by Orlando Maroglio, president of the Central bank, who advocated economic liberalization.

This dispute prompted Perón to remove Maroglio and appoint Alfredo Gómez Morales as minister of finance and head of the Central bank. He also removed Miranda and appointed Roberto A. Arés as minister of national economy. For a few days Miranda's status seemed uncertain and he was reported to continue as financial adviser to the president. But he finally resigned and went to Montevideo, Urug. The reorganization of the National Economic council seemed to indicate a desire to correct mismanagement and inflation. Postage, telephone rates and taxes were increased, especially in Buenos Aires province.

These measures, however, did not bring about prompt relief. A report issued by the Institute of International Finance of New York university, *The Economic Situation in Argentina*, claimed that Argentine inability to use sterling and other nonconvertible currency arising from its trade with Europe to cover its large deficit with the United States was responsible for most of its economic difficulties. The purchase of foreign-owned enterprises, nationalization of internal air lines, railroads, telephones and merchant fleet, the retirement of the dollar debt and conversion to a government-controlled economy were contributory factors to the economic crisis. The report added, however, that Argentine economy was basically sound.

On June 27, Perón signed a commercial treaty with Great Britain. Basically, it was a barter arrangement whereby Argentina would receive machinery and manufactured goods and Great Britain would receive wheat, meat and linseed oil. The treaty constituted an attempt by Perón to overcome the dollar shortage. In the midst of the negotiations, the United States granted $28,000,000 of ECA funds to purchase Mexican and U.S. meat to be sent to Britain. This was regarded by the Peronistas as unfair interference in their internal affairs. The United States, on the other hand, considered the treaty as a denial of multilateral trade principles envisioned by the tariff reciprocity program and the Marshall plan. It was announced, however, that ECA aid to Britain would not be withheld on account of the treaty.

As a further stimulus to foreign trade the peso was devalued late in the year. The budget announced for 1950, the largest in Argentine history, amounted to 11,000,000,000 pesos. About one-fourth of it was appropriated for the armed forces.

The constitutional convention, made up of 109 Peronistas, 48 Radicals and one Labourite, met in Buenos Aires early in the year. The outstanding provisions of the new charter were: (1) it allowed the re-election of the president; (2) it incorporated provisions for rights of workers—whereby they were granted increased wages and seniority rights—and rights of old age; (3) deputies and senators were to be elected together with the president every six years; (4) it incorporated article 40 which granted the government power to nationalize enterprises where mutual sale agreements were not reached; this provision hampered relations with the United States and made foreign capital fearful of investing locally; (5) foreigners could become citizens after residing in Argentina two years; after five years' residence they must become citizens unless they express a desire to the contrary. This article caused apprehension in diplomatic circles, since in its original form it gave foreigners no alternative. As originally drafted, it was considered contrary to the treaty of friendship, commerce and navigation of 1854 with the United States.

The constitution was approved, after the opposition had walked out, charging steam roller tactics by the Peronistas, by a vote of 101 to 0; the Radical opposition decided by a vote of 80 to 18 to pledge their allegiance to it.

In midyear, Foreign Minister Juan A. Bramuglia, who had acquired international renown for his work in the United Nations assembly, was removed. It was reported he differed with Ambassador Jerónimo Remorino over Argentine policy toward the United States. Bramuglia was reported friendly toward international co-operation and was regarded as the outstanding member of the cabinet and possible presidential candidate. Hipólito Jesús Paz, a law professor, succeeded Bramuglia.

In the provincial elections held in April in Santiago del Estero and Catamarca, the Peronista vote was reduced from 79% in the previous election to 62%, but in the elections held in Jujuy in November the Peronistas seemed to have regained their previous advantage.

During November and December, a subcommittee made up of José Emilio Visca and Rodolfo P. Decker, acting in the name of the congressional committee on anti-Argentine activities, took over the account books of Associated Press, United Press, the National City Bank of New York, the Bank of London and seven newspapers including *La Prensa*, *La Nación* and the Catholic *El Pueblo*. The subcommittee claimed it was investigating the funds obtained by Perón's opposition. The latter alleged that Visca and Decker were acting without authority.

The Joint United States-Argentine Commission for Commercial Studies finished its work and was reported optimistic over the possibility of eliminating barriers and improving trade between the two countries. (*See* ANTARCTICA.) (J. MCAD.)

Education.—In 1949 there were 14,649 primary schools, with 2,074,233 pupils and 91,024 teachers. The 744 secondary, normal and special schools had 185,283 students; they included 136 national colleges with 44,901 students, 219 national normal schools with 67,968 students and 91 national commercial schools with 25,973 students. The 670 incorporated (*i.e.*, private) secondary, normal and special schools had 55,693 students. There were national universities at Buenos Aires (34,988 students), La Plata (18,181), Córdoba (8,881), Cuyo (6,749), Tucumán (2,308), the national university of the Litoral at Santa Fé (17,716) and the technical institute at Bahía Blanca (254).

Finance.—The monetary unit is the peso, valued at $0.1109 U.S. currency, free rate, on Nov. 30, 1949. Selling rates for imports on that date were: preferential A $0.2681; preferential B $0.1862; and basic $0.1642, depending upon the importance of the imports to the economy. The 1950 budget, as presented to congress, totalled 11,258,400,000 pesos, distributed as follows: national administration 4,870,000,000 pesos (balanced by general revenues); public works 964,800,000 pesos (to be covered by borrowing); special accounts 400,900,000 pesos (self-balancing); autonomous agencies 5,022,400,000 pesos (self-balancing). In addition, 1,253,200,000 pesos were allocated for the five-year plan. Actual expenditure in 1948 included: national administration 3,740,100,000 pesos; public works 1,702,000,000 pesos; special accounts 288,600,000 pesos; five-year plan 1,253,200,000 pesos; autonomous agencies 2,332,900,000 pesos. The national debt totalled 13,992,100,000 pesos on June 30, 1949 (Dec. 31, 1948: 12,940,000,000 pesos; Dec. 31, 1947: 11,538,600,000 pesos), and was made up as follows: funded 11,802,900,000 pesos (foreign: 61,000,000 pesos, internal 13,418,600,000 pesos, less bonds held by the treasury amounting to 1,676,700,000 pesos); floating 2,189,200,000 pesos. Currency and subsidiary money in circulation on Sept. 30, 1949, totalled 7,374,000,000 pesos. On May 31, 1949, the Central Bank had gold holdings of $142,000,000; foreign-exchange holdings totalled $556,000,000 on Aug. 31, 1949.

Trade and Communications.—Exports in the first six months of 1948, the latest period for which definitive trade data were available in 1949, totalled 3,153,000,000 pesos; imports were 3,030,000,000 pesos. On the basis of a statement made to congress by the minister of finance, it was unofficially estimated that exports in 1948 totalled about 5,458,000,000 pesos and imports about 5,354,000,000 pesos. Exports in 1947 were 5,505,000,000 pesos; imports were 5,349,000,000 pesos. Chief exports were wheat and maize (31%), oilseeds and products (21%), meats (14%), wool (6%) and hides and skins (6%).

The railway system totalled 26,923 mi. in 1949 (including the Argentine section of the new Salta-Antofagasta line), all of which was owned and operated by the government. In 1947 the railroads carried 334,900,000 passengers and 54,169,000 short tons of freight. National highway mileage in 1949 was about 43,500, of which about one-fourth was paved or improved. Total mileage of all roads was more than 300,000. According to *Lloyd's Register of Shipping*, the merchant marine (June 30, 1948) had 330 steamers and motorships (100 tons and over) aggregating 682,606 gross tons and 41 sailing ships and barges aggregating 19,746 tons. Commercial air lines flew 9,708,500 mi. in 1947 and carried 223,500 passengers.

Agriculture.—In the absence of official data, it was estimated that in the crop year 1947–48, 13,634,400 ac. produced 7,345,300 short tons of wheat; 3,386,370 ac., 882,600 tons of oats; 9,304,490 ac., 7,165,000 tons of maize; 4,007,822 ac., 1,039,000 tons of linseed. In the crop year 1948–49, an estimated 13,590,000 ac. produced 5,400,000 tons of wheat and 2,110,000 ac., 440,000 tons of linseed. Exports during the period Jan. 1–Nov. 29, 1949, were estimated in short tons as follows (total for entire year 1948 in parentheses): wheat 1,855,804 (2,402,314); maize 1,050,909 (2,800,139); oats 169,489 (91,069); barley 207,887 (750,778).

The livestock census of July 1, 1947, showed 41,268,470 cattle, 7,237,663 horses, 50,856,556 sheep, 2,981,406 pigs and 4,933,679 goats. Wool exports in the wool year ending Sept. 30, 1949, were 179,370 bales (1947–48: 496,578 bales). Livestock slaughtered in the frigorificos and slaughterhouses in 1947 included 8,773,102 cattle, 12,315,086 sheep and 1,099,726 pigs. Meat exports in 1948 included 3,802,883 frozen beef carcasses, 584,294 frozen mutton carcasses, 3,033,296 frozen lamb carcasses and 121,915 short tons of canned meat. Exports of hides and skins included 2,082,343 calf skins, 610,314 dried ox hides, 4,874,977 salted ox hides and 15,589 short tons of sheep skins. Exports of dairy products included 13,462 short tons of butter and 33,318 tons of casein. Exports of quebracho extract were estimated at 170,627 short tons, of which 28,612 tons were re-exported from Paraguay.

Manufactures.—Industrial establishments numbered 101,884 in 1947 (65,803 in 1943). Most important were the meat-packing establishments, flour mills and textile mills. Representative production data for 1947 included wheat flour 2,133,000 short tons; cotton yarn 72,620 tons; cement 1,500,000 tons; electric energy 3,348,000,000 kw.hr. On the basis of President Perón's 1949 message to congress, it was unofficially estimated that the cost-of-living index stood at 244 in March 1949, and the industrial-wage index at 284 for the year 1948 (1937 = 100).

Mineral Production.—Petroleum production in 1947 was 21,845,925 bbl., slightly more than one-half the domestic consumption. Gold, lead, zinc, copper, tin and coal were also produced. Coal imports in 1948 were 2,119,000 long tons.

Arizona.

Arizona, nicknamed the "Grand Canyon state," lies in the southwestern part of the United States; the Colorado river forms most of the western boundary. Its area is 113,909 sq.mi. The U.S. census bureau's estimate of the state population as of July 1, 1949, was 745,000. The 1940 census gave rural population, 65.2%; urban, 34.8%; foreign-born whites (including Mexicans) 7.3%; other races, including Negroes and Indians, 14.4%. The capital is Phoenix with an estimated population (1949) of 125,000; other chief cities with estimated 1949 populations are: Tucson, 50,000; Mesa, 15,000; Yuma, 12,000; Prescott, 10,000; Douglas, 10,000; Flagstaff, 9,000; Glendale, 8,000; and Globe, 7,000.

History.—The state's officers (1949) were: chief justice, Arthur T. La Prade; governor, Dan E. Garvey; secretary of state, Wesley Bolin; treasurer, J. W. Kelly; attorney general, Fred O. Wilson; superintendent of public instruction, Marion L. Brooks. The 19th legislature met Jan. 10 and adjourned March 19, having run 9 days without pay beyond the legal limit of 60. The Upper Colorado River Basin compact, formulated the previous October, was approved and accepted; a teachers' tenure bill was passed with some limitations; a county zoning measure was adopted and a zoning commission was created; provision was made for the operation and maintenance of that portion of old Ft. Huachuca allocated by congress to the Arizona national guard; the library extension was authorized to prepare a plan for state-wide public library service; the governor was given power to appoint a state dairy commissioner who was to regulate the industry and especially to secure brucellosis tests for all dairy animals. After long debates and threats of a special session, the Arizona racing commission was created with a time limit for both horse and dog racing. The building appropriations for the state university, state colleges, state hospital, prison and children's colony totalled the largest in the history of the state.

Education.—The net enrolment and the number of teachers in the public schools for 1948–49 stood respectively as follows: elementary schools, 128,643 and 3,582; high schools, 29,500 and 1,195, each number being an increase. There were about 50 private and parochial schools.

Social Insurance and Assistance, Public Welfare and Related Programs.—During the month of Sept. 1949, the number of recipients of social service was 18,489. The state appropriations for 1949 for welfare were: for girl juvenile offenders, $139,525; aid to the blind, $365,000; dependent children, $1,950,000; old-age assistance, $3,430,000; crippled children, $153,100; direct relief, $625,000. Other appropriations: industrial school, $176,833; prison, $441,200; state hospital, $1,084,260; pioneer home, $127,062.

Communications.—Arizona highways in 1949 were as follows: mileage of primary state highways, 3,945; county roads, 15,871; federal aid highways, 2,490; national roads, 7,593. Railroad mileage was 2,154. There were five air bases for interstate travel, besides the municipal air bases of the various towns. There were 143,000 telephones.

Banking and Finance.—National banks, June 30, 1949, had deposits of $299,096,279; loans and discounts, $124,203,656; U.S. government se-

Table I.—*Leading Agricultural Products of Arizona*

Crop	Estimate 1949	1948	Average 1938–47
Barley, bu.	5,440,000	6,400,000	2,058,000
Wheat, bu.	700,000	644,000	628,000
Oats, bu.	330,000	330,000	268,000
Grain sorghums, bu.	3,000,000	3,000,000	1,331,000
Corn, bu.	420,000	408,000	354,000
Alfalfa seed, bu.	208,340	120,000	118,300
Flaxseed, bu.	950,000	1,064,000	369,000
Cotton, bales	460,000	328,000	174,000
Grapefruit, boxes	3,500,000	1,880,000	3,326,000
Oranges, boxes	1,240,000	710,000	838,000
Potatoes, bu.	1,268,000	1,749,000	914,000

curities, $100,601,889. State banks had deposits of $115,309,950; loans and discounts, $31,965,578; U.S. government securities, $56,233,255.

Agriculture.—The lettuce crop in 1948 was 7,128,000 crates, but as a result of the low price in 1949 the Yuma and Salt river valley growers agreed in Dec. 1949 to harvest only from one-third to one-half of their crop.

On Jan. 1, 1949, the livestock population of Arizona included 66,000 horses and colts, 866,000 cattle and calves and 420,000 sheep and lambs.

Manufacturing.—Production of manufactures, exclusive of smelting, for the fiscal year 1948–49 was $134,777,589, an excess of $8,164,944 over the previous fiscal period. As a result of high costs and lowered prices from May to August, production and the number employed decreased during the calendar year 1949.

Table II.—*Mineral Production of Arizona*

Mineral	Production 1948	Value
Copper	750,242,000 lb.	$162,802,514
Gold	109,487 oz.	3,832,045
Silver	4,837,740 oz.	4,378,399
Zinc	108,956,000 lb.	14,491,148
Lead	59,798,000 lb.	10,708,842

Mineral Production.—Miami mines were on a five-day week for a period in 1949, but returned to a six-day week on Nov. 21. Total production and the number employed in the state was decreasing by August.

(H. A. H.)

Arkansas.

Arkansas, a south-central state of the United States, was admitted to the union in 1836. Termed the "Wonder state," its area is 53,102 sq.mi., including about 377 sq.mi. of water. The population was 1,949,387 in 1940, and approximately 1,964,000 (U.S. census est.) on July 1, 1949, a 0.7% increase. The 1940 population was 22.2% urban; the Negro population, principally in southeastern Arkansas, was 482,578. The capital city, Little Rock, had 88,039 inhabitants in 1940, and approximately 100,000 in 1949. Other cities and 1949 population (U.S. census enumeration): Fort Smith, 50,724; Pine Bluff, 34,630; Jonesboro, 14,852; Paragould, 9,413; West Memphis, 7,975. Estimated 1949 population: North Little Rock, 40,000; Hot Springs, 27,500; El Dorado, 19,500; Texarkana (Ark.), 19,000; Blytheville, 15,500; Fayetteville, 13,500; Camden, 11,000.

History.—Legislative enactments in 1949 created a tax commission, a claims commission, a committee to survey higher education and a reformatory for Negro girls; reorganized the legislative council; strengthened election administration; improved the probate code; and authorized establishment of a medical centre. A state-wide referendum approved issuance of $28,000,000 of highway bonds, and voters in many school districts approved higher local property tax rates for expansion of school plants and maintenance. The War Memorial stadium in Little Rock was completed during the year. Disbursement of cash funds without legislative appropriation was sanctioned by the state supreme court. The principal state officers inaugurated in Jan. 1949 were: Sidney McMath, governor; Nathan Gordon, lieutenant governor; Ike Murry, attorney general; C. G. Hall, secretary of state; J. Oscar Humphrey, auditor; J. Vance Clayton, treasurer; Claude Rankin, land commissioner.

Education.—There were 2,554 elementary schools during the year ending June 1, 1949, and 588 secondary schools. Elementary school enrolment was 295,791; secondary 121,639. Teachers and principals in elementary schools numbered 8,224; in secondary 4,972. Expenditures during fiscal 1949 by the state government for educational purposes amounted to $29,674,617. A. B. Bonds, Jr., was commissioner of education.

Social Insurance and Assistance, Public Welfare and Related Programs.—During 1949 old-age assistance grants totalling $15,199,670 were paid to a monthly average of 56,137 recipients. A monthly average of 10,905 families received a total of $5,478,088 for dependent children; an average of 1,773 blind persons received $563,930; an average of approximately 2,600 general relief cases received $387,901. Unemployment benefits totalling $6,229,650 were paid through Nov. 1949 to a weekly average of 12,163 beneficiaries. Arkansas maintained three penitentiaries and four reformatories at a total expense of $1,055,392 during fiscal 1949. There were 1,595 adult and 201 juvenile inmates in penal institutions on Dec. 31, 1949.

Communications.—Expenditures by the state government on highways in fiscal 1949 totalled $16,386,547. The state highway system comprised 9,739.04 mi. at the end of 1949. Rural roads not in the highway system had a mileage of approximately 50,000. Railway mileage was 4,442.01; airway mileage, 832. There were 92 airports at the end of 1949. Approximately 236,000 telephones were in use at that time.

Banking and Finance.—There were 175 state and 51 national banks on Dec. 31, 1949. Deposits in state banks on June 30, 1949, totalled $344,900,734; resources $371,711,871. Deposits in national banks on Nov. 1, 1949, totalled $403,967,000; resources $433,952,000. The 8 state and the 34 federal saving and loan associations in Arkansas had total resources of $54,138,162 on Nov. 1, 1949. State government revenues during the year ending June 30, 1949, were $113,479,034; expenditures $112,437,062. The gross state government debt on Dec. 31, 1949, was $122,415,000; the net debt was $115,253,823.

Agriculture.—The crop reporting service estimated the value of principal crops harvested from 6,040,000 ac. during 1949 at $414,000,000, or 22% below 1948. Cash receipts during 1949 from farm marketings, estimated on the basis of preliminary data for the first ten months of the year, totalled $543,471,000: from crops $380,019,000; from livestock and products $157,452,000; from government payments approximately $6,000,000. Frequent summer rains and severe damage by boll weevils reduced cotton yields.

Table I.—*Leading Agricultural Products of Arkansas*

Crop	1949	1948	Average 1938–47
Corn, bu.	28,368,000	34,052,000	31,979,000
Cotton, bales	1,660,000	1,982,000	1,329,000
Cottonseed, tons	661,000	756,000	553,000
Hay, tons	1,681,000	1,887,000	1,521,000
Rice, bu.	20,502,000	20,490,000	12,309,000
Soybeans, bu.	5,820,000	5,148,000	2,544,000

Manufacturing.—The value of manufactures in 1949 was approximately $600,000,000. Wages in manufacturing during the year, totalling approximately $137,500,000, were paid to a monthly average (January through November) of 69,400 employees. During 1949, according to the Resources and Development commission, 100 new industrial units located in the state and substantial expansions were made by 30 existing industries.

Table II.—*Principal Industries of Arkansas*

Industry	Value added by manufacturing 1947	1939
Chemicals and allied products	$29,194,000	$4,303,000
Food and kindred products	41,020,000	12,414,000
Lumber and products	92,800,000	29,596,000
Paper and allied products	21,887,000	4,443,000
Petroleum and coal products	17,064,000	3,894,000
Primary metal industries	18,885,000	747,000
Stone, clay and glass products	10,237,000	2,736,000

Table III.—*Principal Mineral Products of Arkansas*

Mineral	Value, 1949	Value, 1948
Barite	$2,500,000	$2,681,782
Bauxite	8,000,000	8,573,593
Coal	10,500,000	11,118,160
Natural gas	9,000,000	8,580,000
Petroleum	70,000,000	73,775,528

Minerals.—Minerals produced during 1949, as estimated by the state geologist, had a value of about $120,000,000. Notable progress during the year was made in the technique of secondary recovery of petroleum.

(H. M. A.)

Armies of the World.

The outstanding development during 1949 in the armies of the world was an increased standardization of arms into two basic types: soviet and American.

Regional agreements for military assistance, the groundwork for which was laid in 1948, were formalized to a large degree in 1949. The two most important alliances were the North Atlantic treaty and the soviet bloc.

The year saw the North Atlantic alliance nations commence the formation of integrated programs. Included in the over-all alliance were 12 nations: Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the United Kingdom and the United States. At a meeting of the defense committee of the alliance, composed of the defense ministers of the 12 member nations, agreement was reached on the over-all strategy, an armament production program and the co-ordination of planning among the five regional groups. The five regional groups were set up as follows: North America, North Atlantic, northern Europe, western Europe and Mediterranean.

Certain important developments also took place in the soviet bloc of powers. Most important was the defection of Yugoslavia, whose army could no longer be assumed to be part of the soviet alliance. As far as the balance of powers in the U.S.S.R. orbit was concerned—Poland, Czechoslovakia, Hungary, Bulgaria, Rumania and Albania—the outstanding feature of 1949 was an increased sovietization.

Indicative of the extent to which the U.S.S.R. would carry sovietization of the armies of its satellites was the situation in Poland. Marshal Konstantin Rokossovsky, one of the outstanding soviet commanders in World War II, was named head of the Polish armed forces. Rokossovsky joined numerous other soviet officers who had been placed in key positions in the Polish army since the end of World War II. Like Rokossovsky most of these officers were of Polish origin, although thoroughly indoctrinated, trained and tested by the soviets.

The intensive rearmament, particularly of the western powers, which commenced in 1948, continued apace in 1949. However, economy measures in Britain, France and the United States indicated that the extent of the rearmament was to be definitely limited. The passage of the Military Aid program by the United States congress assured the Atlantic pact nations of certain assistance in modernizing their armies.

Another outstanding development of 1949 saw the almost complete destruction of the Chinese armies of Chiang Kai-shek by those of Mao Tse-tung. The exact political alignment of the new army in China, while definitely Communist, was questionable. The general consensus of observers was that while Mao's armies were definitely anti-U.S., as a consequence of U.S. aid to Chiang, they probably could not be counted upon by the soviets.

A new nation, and army, emerged in 1949 with the recognition by the Netherlands of the Republic of Indonesia.

While extensive research and development of new types of equipment continued, most equipment remained that which was in use at the end of World War II. Economy measures restricted re-equipping by the western powers, although it appeared that under the Military Aid program certain new types of equipment, particularly late model tanks, would be made available. (*See* also MUNITIONS OF WAR.)

United States.—The year 1949 may well be marked by historians of the United States army as the peak of its postwar appropriations. With funds for the fiscal year 1950 (July 1, 1949–June 30, 1950) lower than those for the previous year, the army commenced curtailing certain of its activities in 1949. Economy measures taken included closing of numerous army posts and concentrating cadres on fewer major posts, reducing the number of reserve officers on active duty and calling up fewer men in the draft. Previous authorization to expand the army to more than 900,000 men was rescinded, and at the end of 1949 strength was at 670,000.

To the regular army strength should be added the national guard as reserve strength. After a year of intensive training, national guard units were in a far better position to bolster the regular force in the event of emergency. Army units of the national guard reached a strength of approximately 350,000 officers and men. While this could not be considered as entirely effective combat strength, the national guard units had a large number of combat veterans.

Disposition.—Disposition of U.S. units remained approximately the same as in 1948 with the exception that the 11th air-borne division returned from Japan to Camp Campbell, Ky.

Approximate Strength of U.S. Forces in 1949

Far east	127,000	Trieste	5,000
Hawaii	7,000	Caribbean	14,000
Alaska	13,000	United States	411,000
Europe	92,000		

Training.—Exercises were conducted on all scales during the year by both regular and reserve units. Most of the reserve and national guard units conducted some form of divisional exercises during the year. All of the regular army divisions engaged in extensive unit retraining.

Major exercises conducted by the United States army during the year included: Operation "Snowdrop" held in the U.S. zone of Germany in January, involving 16,000 men and designed to test the troops in winter warfare; the Vieques manoeuvres held in the Caribbean in February—a combined operation held with the navy and naval aviation—in which the 2nd marine division and the 65th infantry participated; Exercise "Harvest" conducted in Germany in September involving about 112,000 troops in which the 18th infantry was transported approximately 300 mi. by air.

COMMUNICATIONS HEADQUARTERS for the combined Allied command at Fontainebleau, France, military nerve centre of the western European union

Manoeuvres held at Fort Benning, Ga., stressed the two-bladed attack—infantry-artillery-tank teams advancing in conjunction with air-borne assaults. In these exercises, units of the 11th and 82nd air-borne divisions were preceded into the drop zone by so-called "pathfinder teams" which guided the principal attack formations of transports and gliders to the target by radio beams.

Equipment.—There was continued development of new air-borne equipment. In 1949 a new technique was successfully developed for dropping completely assembled 105-mm. howitzers. The 376th air-borne artillery battalion successfully dropped a battery of four howitzers with ammunition and 150 men during the exercises at Fort Benning.

Great Britain.—The defense budget for the British army was cut by approximately 20% for the year 1949. The ground forces received 44% of a defense outlay of $2,768,000,000, or funds amounting to $1,220,000,000.

British army strength dropped to less than 400,000 men, of which more than 175,000 were overseas. Difficulty was experienced in keeping the army up to strength through voluntary enlistments, and there was considerable discussion in parliament about extending the period of conscription from 12 to 18 months.

Disposition.—At the beginning of the year defense critics pointed out that not a single organized division was in the United Kingdom. British army strength was spread throughout the world during 1949 with two divisions in Germany, one division and three scattered brigades in the middle east and the equivalent of almost two divisions throughout the far east.

Major troop movements in 1949 saw the reinforcement of Hong Kong, bringing the strength of the garrison to approximately 25,000. Troop commitments in Malaya remained heavy.

With the end of hostilities in Greece that particular drain on British manpower was ended, and the 3,000 troops were withdrawn.

Training.—In addition to the defense exercises conducted in Hong Kong and the actual experience of combating insurgents in Malaya, British training was concentrated in the army of the Rhine. Exercises in Germany stressed co-ordination of air, artillery, infantry and tanks, much the same as the current doctrine in the United States army. British officers also set about training an army of 3,000 in Ceylon. When trained the Ceylonese would take over the coastal and anti-aircraft defense duties.

U.S.S.R.—Expenditures for the soviet armed forces totalled 19% of the budget in 1949, compared with 17% in 1948.

The Soviet Union continued to maintain approximately 2,500,000 men on active duty organized into 175 to 200 divisions. In as much as soviet divisional strength is 8,000 men, the U.S.S.R. had 1,600,000 first-line combat troops available for immediate action. Of the active divisions, 50 were armoured units, giving the Red army a powerful striking force.

In addition to the active units the Soviet Union could mobilize sufficient reserves to field another 100 divisions within 60 to 90 days. Ultimate Red army strength could equal 500 combat divisions.

To Red army strength should be added that of the satellite armies consisting of about 40 to 60 divisions. Also, there were indications during the year that the long-heralded east German army was closer to a reality. Latest unverified reports stated that a *Volksarmee* of 60,000 men was to be completely organized by March 1950. The army was to be composed of six motorized divisions equipped with tanks and artillery. The similarity of this force to the 100,000-man army of Germany under the treaty of Versailles was striking. Each man was to be qualified as a weapons instructor, thus immediately identifying the army as a training cadre. The force was ultimately to consist of 360,000 men, with conscription of all men 18 to 30 reportedly scheduled to commence early in 1950.

Disposition.—The principal changes during 1949 in the disposition of the soviet army units occurred as a result of the "cold war" between the U.S.S.R. and Yugoslavia. Three new soviet divisions moved into Rumania and Hungary in August, giving the Red army between seven and nine divisions in these two countries. About half of the soviet forces in these two countries was composed of tank units. In addition there was a combat division in the soviet zone of Austria and another in Bulgaria. While far from sufficient strength to mount an attack, soviet divisional moves kept the Yugoslav army in a constant state of alert.

Training.—Soviet training indicated more and more a reversion to the pomp, ceremony and caste of the tsarist army. The Red army, for example, had three grades of field marshal, adapted a modified version of the "goose step" for parade purposes and encouraged postwar units to identify themselves with famous wartime outfits.

Important soviet training exercises were held in Germany. Among the largest were the autumn manoeuvres at Ohrdruf in which all of the garrisons of the soviet zone—including the German people's police—participated. Spring manoeuvres were held in Brandenburg.

Organization.—Marshal Alexander M. Vasilevsky replaced Nikolai A. Bulganin as minister of the armed forces. For the first time since 1940, before the German invasion, the Red army was under the control of a professional soldier. Next to Georgi K. Zhukov, Marshal Vasilevsky was considered one of the Red army's most gifted strategists.

France.—The budget for the French army (ground forces) amounted to $806,200,000 in 1949. This represented about 28% of the total budget, or about the same proportion as in 1948.

The maximum authorized strength of the army in 1949 was 493,000, although actual strength was closer to 470,000. One of the principal problems of the French army was maintaining the strength of the fighting formations with the short term of service. A bill to broaden conscription was presented to parliament during the year but was not passed.

Disposition.—France was still heavily committed in Indo-China in 1949. The French forces, however, were unable to make substantial progress and were able to hold only the main cities and principal lines of communication. At the end of the year the French forces were patrolling the Indo-China-Chinese frontier to monitor the flow of the defeated troops of Chiang Kai-shek seeking refuge in Indo-China.

Over-all disposition of the French army in 1949 was: 150,000 troops in France; 60,000 in Germany and Austria; 91,000 in North Africa; 69,000 in other colonies; and 100,000 to 120,000 in Indo-China.

Training.—Training of the new French army was still restricted to exercises of divisional size and smaller as a result of overseas commitments. Recruits were called for one year, and most training concentrated on fundamentals. After the completion of 1 year's service, a period of 16 years must be served in the first reserve, followed by 8 years in the second reserve.

Professional army schools, having been reorganized and restaffed to eliminate all traces of the army of 1940, had commenced turning out regular officers and noncommissioned officers of high calibre. The École de Sous Officiers at Strasbourg had an enrolment of 2,500 students, while the Military academy at Coetquidan had an enrolment of 1,200 future officers. Requirements for successful completion of both courses were rigorous, and there was careful screening of all candidates. From Coetquidan—the successor to St. Cyr—officers advanced to specialized training for their particular branch of the service at the Écoles d'Application.

Organization.—Under Defense Minister René Pleven, Gen. Georges Revers was replaced as chief of staff by Maj. Gen. Clement Blanc. Blanc was formerly chief of staff to Gen. Jean de Lattre de Tassigny at Fontainebleau in the high command of the western European union. A specialist in matériel and motor transport, Blanc's appointment was part of the general reorganization of the consolidated military establishment. Another important appointment in the French army was that of General LeCote to command all air-borne troops.

China.—During 1949 the forces of Chiang Kai-shek were virtually destroyed by those of Mao Tse-tung. The year's end saw only limited parts of China still held by forces loyal to Chiang. The principal Nationalist stronghold was Formosa, to which Chiang had succeeded in evacuating about 200,000 combat effectives.

Perhaps the outstanding factor in Mao's victory was not so much the ability of his own forces, but the complete disorganization of Chiang's armies. Defection and disorder contributed heavily to Chiang's defeat.

The so-called People's army was in possession of the bulk of the United States equipment given to China under lend-lease and sold after the war as surplus. To this should be added all of the Japanese arms left in China in 1945 and a certain amount of soviet equipment picked up in Manchuria.

The most important question concerning the Chinese armed forces was whether Mao could hold together the army of more than 2,000,000 men which had been assembled. Organized into a disciplined army, Mao's force could become the most powerful military instrument to emerge in Asia in modern time, with a potential strength exceeding 5,000,000.

Other European Powers.—*Albania.*—Soviet officers were attempting in Albania to develop a force capable, at least, of guerrilla activity. Alarmed by defection of Yugoslavia from the soviet orbit, the Red army appeared to be developing Albania as a shuttle base for a two-pronged attack on Tito, if necessary.

Belgium.—The ministry of national defense announced the creation of a new military base at Kamina in the Congo.

Czechoslovakia.—Although the information could not be confirmed, there was some indication that the progress of sovietization of the Czech army was well advanced. Soviet General Chitinov was reported to be taking over the command of the Czech army.

Denmark.—The Danish defense budget for 1949 was $50,200,000, an increase of approximately 10% over 1948. After considerable discussion between the Danish high command and Britain, the decision was reached to leave the Danish brigade in Germany for another two years. August manoeuvres were held by the Jutland division.

Finland.—Manoeuvres were held near Sappola with approximately 14,500 men participating, the largest held since World War II. Finnish army strength was being maintained by conscription for a nine-month period.

Greece.—The heavy fighting ended in Greece in 1949. The guerrilla forces announced their withdrawal, and survivors of the insurgent army were reported in Bulgaria and Albania. Fewer than 2,500 rebels were believed left in Greece, with no bands larger than 200. Exceedingly heavy casualties had marked the fighting throughout. The Greek army announced its intention of keeping units in the Grammos and Vitsi mountains throughout the winter of 1949–50 to prevent any reinfiltration. Meanwhile steps were taken to return the army to a peacetime footing. At the end of the fighting there were 210,000 men in the army, plus 50,000 gendarmes. Of these 68,000 were to be demobilized, although a new class of 18,000 conscripts would be called up.

Hungary.—There were definite indications that the new Hungarian army—soviet model—was nearing treaty strength of 70,000 men in 1949. Intensive military activity throughout the country characterized 1949. This included, in addition to the rebuilding of the army, the enlargement and expansion of certain key military aerodromes and the building of guided missile sites.

Italy.—The strength of Italian forces was approximately 170,000 in 1949, organized into five divisions with three infantry regiments each and three divisions with two regiments each, one Alpine brigade and one armoured brigade. Plans called for bringing up the over-all strength of the Italian army from 8 to 12 divisions. The Julia Alpine brigade of 5,000 men, organized around one infantry regiment, would be reinforced by two more Alpine brigades of comparable organization. Two new armoured brigades would be formed, modelled on the existing Ariete brigade. Both spring and fall manoeuvres were held in 1949, the former involving the use of armour.

Netherlands.—Out of a military budget of approximately $200,000,000 in 1949, the Netherlands allocated $37,700,000 for its contribution to the western European union. Repatriation of the troops from the Netherlands Indies relieved certain of the problems in meeting western European union commitments. During the early part of 1949 the only troops in the Netherlands were two battalions of combat troops plus about 25,000 men in training. However, by the end of 1949 the bulk of the "Seventh of December" division was repatriated, and the 2nd division and guards units were en route. The bulk of the 85,000 troops in Indonesia were expected to be returned to the Netherlands or demobilized during 1950.

Norway.—Regular army strength totalled 30,000 men in 1949, but a home guard of 95,000 was being trained to support the regular force.

Norwegian units held training manoeuvres in conjunction with Swedish army units.

Poland.—Field Marshal Konstantin Rokossovsky, hero of the soviet army, became minister of national defense of Poland. Together with the issuance of dual citizenship on a large scale to high-ranking soviet officers, so that they could serve in the Polish army, this assured the virtual integration of this force with that of the Red army. A majority of the high-ranking officers were soviet. All equipment, tactical and strategic direction of the Polish army thereafter came from the U.S.S.R. The combat strength of the army in 1949 consisted of 16 divisions, composed of 4 in each military district: Warsaw, Pomerania, Breslau and Cracow. Supporting these infantry units were three artillery brigades, ten tank regiments, plus service troops. In addition nearly another 100,000 men were in the frontier and security corps.

Rumania.—Poorly trained and indifferently equipped with cast-off soviet equipment, the Rumanian army had approximately five effective combat divisions.

Sweden.—Serious differences arose between Sweden and the balance of the Scandinavian bloc over whether to enter the North Atlantic alliance. Sweden decided to continue its traditional policy of neutrality. Maintaining armed forces at a high state of efficiency, Sweden organized a number of armoured brigades during the year.

Yugoslavia.—The budget for defense for the year totalled $560,000,000 or approximately 16% of the national expenditures. This represented an increase of $60,000,000 over the previous year. The Yugoslav army was the strongest force in the Balkans, with 30 infantry divisions and 2 armoured divisions. In addition four security divisions were used as border patrols, although armed only with light weapons. Training in Yugoslavia required two years' compulsory military service. The largest manoeuvres since World War II were held in September, indicating to Moscow that Yugoslavia was not yielding to any mere threat of force.

Commonwealth Powers.—*Australia.*—The regular Australian army was composed of 16,000, with a reserve strength of approximately the same, and a cadet corps of 24,000. There was legislation to increase the regular army by 3,000 and the number of reserves by 26,000. Another bill was introduced to make the Australian regular army a permanent part of defenses. Officers were exchanged with other commonwealth powers, and several were sent to the United Kingdom to study the latest developments in land-air warfare.

Talks on the problems of South Pacific defense were held with British and New Zealand officers.

Canada.—An intensification in the training of reserves was put into effect in 1949. Closer integration of the Canadian and United States armies was achieved with the use of the same communications systems, tactics and command channels. There was continued interchange of officers, and standardization of weapons was effected as far as possible.

India.—The Indian army concentrated its efforts on the development of a sound system of military education and the creation of an adequate body of reserves. Construction was commenced on the National War academy at Khadakvasla, near Poona. On completion in 1953, the Armed Forces academy at Dehra Dun would be transferred to the new location, where officers for all three services, army, navy and air would be trained. The new National War academy, which was modelled on British Sandhurst and the United States Military academy at West Point, would admit 500 cadets every year to take the four-year course. An intensive drive was conducted to recruit about 75,000 students for the national cadet corps. At the end of the year slightly under 60,000 had enrolled. In addition a territorial army of 130,000 was being organized to act as reserve for the regular Indian army. The territorial army was to be similar in all respects to the regular force, except that its units would not be required to serve outside of India in peacetime. About 197 British army officers continued to assist the dominion in the organization of its military forces. An Indian guards brigade was formed, modelled on the similar British unit.

New Zealand.—Conscription was adopted by referendum vote. Training would start at the age of 18, and approximately 2,800 men would be called up each year. In addition territorial forces were being organized, including about 2,000 volunteer and noncommissioned officers.

Pakistan.—With tension continuing between Pakistan and India, no cuts were made in the strength of the Pakistan army. The Quetta Staff college was expanded to handle the additional functions of the army. The last of the 400 British officers in the army were expected to be relieved by early 1950.

Pacific Powers.—*Burma.*—British officers assisted the Burmese in the establishment of their own armed forces. The problem was complicated by a revolt of the Karens and sporadic insurgency throughout the country.

Indonesia.—With the withdrawal of the Netherlands' forces from Indonesia, a major problem in maintaining order remained for the Indonesian Republican army (Tantara Nasional Indonesia). The T.N.I., which was largely Japanese trained and armed, could mobilize 420,000 men, largely disorganized and to a certain degree antagonistic. General Soedirman had the problem of organizing a fighting force out of at least 20 different major fighting units ranging in political belief from the extreme left to the fanatic Moslem right. Nearly all of these forces were well armed with Japanese equipment.

Korea.—There was an outbreak of fighting in 1949 as the North Korean forces probed southward to test the strength of the southern forces. The 65,000 well-equipped and trained men of the South Korean army were apparently too much for the soviet-inspired forces of the north, which broke off action after a short time.

Philippines.—With equipment promised by the United States, the Philippines planned to increase the strength of the constabulary from 12,000 to 20,000, and the army from 17,000 to 25,000. The United States military mission continued to recommend the consolidation of the constabulary units with those of the army. Manoeuvres were held in Tarlac province in February by artillery, air and ground attack teams.

Thailand.—Active steps were taken to organize the equivalent of five full-strength divisions. Strength in 1949 amounted to 40,000 police and 30,000 army troops. Five fully armed battalions guarded the Malaya border. Compulsory service of two years was required, and reserves were called up for three months' intensive training in antiguerrilla tactics. A total of 50 amphibious tanks were obtained from the Philippines.

Middle Eastern Powers.—An uneasy truce prevailed in the middle east. On the one hand, there were continuous but unsuccessful efforts on the part of the Arab league nations to agree on a plan for common defense. Political differences, the principal factor in the Arab defeat of 1948, continued to keep the Arabs weak.

On the other hand, Israel passed a compulsory service law and commenced the establishment of a regular army in which all men were required to serve. Provision was made for service in the reserves.

Art Exhibitions.

At the 144th annual exhibition at the Pennsylvania Academy of the Fine Arts, the oldest annual in America, Henry Koerner won the Temple gold medal for "Junk Yard"; Karl Zerbe was awarded the J. Henry Schiedt Memorial prize for "Survivors"; and Philip Evergood the Carol H. Beck medal for "Her World." The National Academy of Design's 1949 annual, next oldest, was in its 123rd year. Top prizes went to Fletcher Martin for his "Cherry Tree" ($1,200 Altman prize), and to Raphael Gleitsmann for "Winter Trees" (Obrig prize). Only one prize winner was a member of the academy.

At the biennial of the Corcoran gallery in Washington, D.C., $5,200 in prizes was distributed. The $2,000 W. A. Clark prize and Corcoran gold medal went to Eric Isenburger for "Romantic Figure"; Fred Conway won the $1,500 second Clark prize for "Witchery"; and B. J. O. Nordfeldt received the $1,000 third prize for "Flood."

In Pittsburgh, Pa., Carnegie institute's "Painting in the United States, 1949" marked their last national exhibition, as in 1950 they planned to return their exhibition to the prewar international scope. Max Beckmann's expressionistic and symbolical "Fisherwomen" won the $1,500 first prize in an otherwise conservative exhibition. Second prize went to Philip Evergood for "High Places" and third prize to Hobson Pittman for "Spring Festival."

The State University of Iowa, Iowa City, devoted its fifth annual summer show entirely to sculpture. Sculpture also had a prominent showing during the summer at the Third Fairmount Park Sculpture International in the rotunda and in the garden court of the Philadelphia museum. The exhibition was to serve as a basis for selection of sculptors to create the remaining historical groups of the Ellen Phillips Samuel memorial in Fairmount park. Foreign artists represented numbered 32, compared with 216 from the United States. Forty-five thousand dollars in commissions was handed out and $30,000 in outright purchases.

Another summer attraction at the Philadelphia museum was the showing of the Henry P. McIlhenny collection, containing some of the finest pictures of the 19th century and contemporary period. Among these were Jacques Louis David's "Pius VII" and "Cardinal Caprara"; Ingres' "Countess of Tournon"; Renoir's "Mlle. Legrande"; Cézanne's "Mme. Cézanne"; and Picasso's "Pitcher and Bowl of Fruit."

The Museum of Modern Art in New York had its usual busy season with a full-scale retrospective one-man show of Georges Braque (in collaboration with the Cleveland museum) covering work from 1904 to 1947. It also held a survey of 20th-century Italian art. Beginning with early experiments in sustained motion by the Futurists, Boccioni and Balla, the exhibition then showed an impressive group of early works by De Chirico, and came down to the present with emphasis on the sculpture of Marini and various abstract painters.

San Francisco's California Palace of the Legion of Honor celebrated its 25th anniversary with 32 paintings and 24 drawings of the French 18th century lent by the Louvre and several French provincial museums.

Best known of the seven Watteaus was "Le Faux Pas," lent by the Louvre, and equally famous was Chardin's "Le Jeune Homme au Violon," also from the Louvre.

The Italian government made two good-will gestures of gratitude for help from the United States in the restoration of Italian monuments. Michelangelo's "David" (from the Bargello in Florence) was lent to the National gallery and Donatello's

"San Lodovico" (1423), which had been cleaned to reveal the full splendour of the original gilt bronze, was sent from the church of Sante Croce in Florence to the Metropolitan museum, Art Institute of Chicago and a few other American museums.

American art of the earlier periods was prominent on the year's exhibition calendar. Washington's Corcoran gallery under the title "De Gustibus" showed 100 years of American taste from Thomas Cole to the present. In the meantime the Wadsworth atheneum in Hartford, Conn., in collaboration with the Whitney Museum of American Art, New York, N.Y., arranged a large exhibition of the work of Thomas Cole (1801–1848).

The Art Institute of Chicago put on a comprehensive showing of American paintings, silver and blown-up architectural photographs under the title "From Colony to Nation" covering the period 1650–1815. This featured not only the best works of Copley, Gilbert Stuart and other notables, but emphasized the little known and the unknown from Maine to Charleston.

Leonardo da Vinci and his contemporaries were shown in an exhibition at the Los Angeles County museum. A feature was the "Madonna of the Pomegranate," thought to be his earliest painting, and nine Da Vinci drawings which were among the best things in the show. Of great interest were the reconstructions of several of Leonardo's forward-looking designs for mechanical contrivances, including a flying machine.

Alexander Girard designed an unusual exhibition for the Detroit Institute of Arts called "An Exhibition for Modern Living." The principles of many contemporary designs were found to have been inherent in many 19th-century functional constructions.

A regional exhibition of unusual interest was staged by the City Art Museum of St. Louis under the title "Mississippi Panorama." This included more than 200 paintings and prints, mostly 19th-century, showing the river trade, the retreating Indians and the oncoming white man and subsequent development of the west. An old-time river panorama, 350 ft. long, by John J. Egan was rolled from one cylinder to another across a stage reconstructed in authentic 1850 style.

For the first time the Louise and Walter Arensberg collection of 20th-century art was permitted to leave their home in Hollywood, Calif., and was featured at the Art Institute of Chicago. More than 200 paintings, water colours and pieces of sculpture made up the group which marks the foundation of the art of this century. Sculpture by Brancusi, early paintings by Braque, Picasso and Marcel Duchamp (including all four versions of the "Nude Descending a Staircase"), and works by Miro, Paul Klee and Dali were notable in the collection.

The Metropolitan museum opened the fall season with a great exhibition of the work of Vincent van Gogh (organized in co-operation with the Art Institute of Chicago). Made up of 97 oils and 67 drawings lent for the most part from two Dutch sources, the Kröller-Müller museum in Otterlo, Neth., and the collection of the artist's nephew and namesake, Vincent van Gogh, the value of the collection was reputed to be $3,000,000.

"Art Treasures from the Vienna Collections" was another great European exhibition which crossed the Atlantic; it opened at the National gallery in Washington, D.C., in November. In the group were 131 paintings as well as tapestries, gold work (Benvenuto Cellini saltcellar), crystal and other precious objects. Among the paintings were 7 Rubens', 12 Titians, 6 Velazquez' and the famous Tintoretto "Susanna and the Elders." (*See* also ART SALES; MUSEUMS; PAINTING.)

FILMS OF 1949.—*Art for Everybody* (National Film Board of Canada); *Circling the Square* (Contemporary Films, Inc.); *What Is Modern Art?* (Princeton Film Center). (F. A. Sw.)

Great Britain and Europe.—Cultural agreements were concluded between a number of nations during 1949 and, as restrictions were dropped, the interchange of exhibitions became progressively easier than at any time after 1939. After a long continental tour a collection of art treasures from Vienna arrived in May at the Tate gallery in London—the same collection which, later in the year, travelled on to the United States. This sumptuous and dazzling display of art treasures was preceded by 121 paintings from the Alte Pinakothek in Munich, which were simultaneously on view at the National gallery. Remarkable concentrations of work by certain masters resulted. Together with those in the National gallery's own collection, there were, for example, more than 50 important Rubens' on view in London.

In the autumn a depleted version of the collection of work by Gerard David and his followers, which had been seen earlier in the year at Bruges, Belg., was shown by the Arts council at

GEORGES BRAQUE, French painter, shown in his Paris studio. A retrospective show of his work was held at the Museum of Modern Art, New York city, in the spring of 1949

Messrs. Wildenstein's gallery. In December the winter exhibition of "Landscape in French Art" was opened at Burlington house; it was composed mainly of oils but included also drawings, engravings and tapestries. The exhibition was chiefly notable for the display of landscapes by Claude Lorrain and Nicolas Poussin, the finest perhaps that had ever been assembled.

At its own headquarters gallery the Arts council showed an exhibition of German graphic art of the last 50 years, which was initiated by the Institute of Contemporary Arts. This gave London its most comprehensive view of German expressionism since before 1939.

The Tate gallery showed an exhibition of work by Richard Wilson (organized the previous year in Birmingham, Eng.) and a memorial exhibition of paintings by James Pryde.

In February Walter Hutchinson opened his so-called National Gallery of British Sports and Pastimes in London at the fine 18th-century mansion that used to be known as Derby house. The collection, which was extensive, was seen to contain many works of curious interest and not a few—more particularly the examples of George Stubbs's work and Constable's "Stratford Mill"—were of real artistic worth.

The *Sunday Pictorial's* second annual show of children's drawings and paintings, at the Royal Institute galleries, was selected in 1949 from nearly 47,000 entries submitted from all parts of the country. The Society for Education in Art held its third "Pictures for Schools" exhibition, at the Whitechapel Art gallery.

The summer show of the Royal academy was remarkable chiefly for the inclusion of a gallery devoted to more modern works in which John Minton's large decorative landscape held a dominating position. The academic idiom was seen at its most incisive in the works of Pietro Annigoni; two of whose portraits later attracted attention at the Royal Society of Portrait Painters. By far the most enterprising of the other exhibiting societies was the Royal Society of British Artists, which gave hospitality to a lively show by London art students, to recent work by Giorgio de Chirico and, in the winter, to the most exciting collection of contemporary sculpture since Battersea park in 1948.

In Glasgow, Scot., a selection from the rich Burrell collection, which was presented to the city in 1944, was seen publicly for the first time.

From the many displays in Europe arranged during 1949, mention may be made of the 200 paintings of "Rembrandt and His Time," at Schaffhausen, Switz.; of the opening to the public of the Thyssen collection at Lugano, Switz.; of the belated centenary exhibition of Paul Gauguin in Paris; and the assembly in Venice of more than 100 paintings and drawings by Giovanni Bellini from all over western Europe and America.

(M. H. Mn.)

Arthritis.

During 1949 all advances in rheumatic diseases were overshadowed by the contribution of P. S. Hench, E. C. Kendall, C. H. Slocumb and H. F. Polley wherein the effects on rheumatoid arthritis of Kendall's Compound E (later renamed "Cortisone") were demonstrated.

While investigating the mechanism whereby remissions of rheumatoid arthritis occur during pregnancy and certain diseases complicated by jaundice, Hench and his co-workers conceived that the factor responsible for benefit in arthritis might be a hormone liberated by one of the endocrine glands other than the sex glands. Trials of various hormones available prior to 1948 had failed. Kendall had isolated various fractions of the secretion of the adrenal cortex, one of which was called Compound E. The quantity of isolated material was inadequate to allow studies of the effect of this adrenal cortical fraction on arthritis. For many years, Kendall and his associates and biochemists in other laboratories had been collaborating to synthesize this compound. Finally in 1948 enough of this material was produced (starting from one of the acids in ox bile) to permit study of its effects in patients. Through the winter of 1948–49 at the Mayo clinic the effects of Compound E were carefully observed in several patients with rheumatoid arthritis. In all patients remarkable improvement of the arthritis occurred. Stiffness quickly lessened, movement of the joints increased, pain, swelling and tenderness of the inflamed joints reduced or disappeared in a period of only a few weeks, and there was a gratifying increase in general health. Report of these investigations was made in the spring of 1949. Through the remainder of the year Compound E was made available to other investigators, all of whom confirmed the reports of Hench and his collaborators.

Cortisone was given by injection daily to accomplish remission or near-remission of the disease. When it was discontinued after a short period of administration the arthritis usually re-

MAYO CLINIC GROUP of (left to right) Drs. C. H. Slocumb, E. C. Kendall, P. S. Hench and H. F. Polley, who carried out the research and medical application of Cortisone, a hormone from the cortex of the adrenal gland, which appears to exert a notable effect on patients with rheumatoid arthritis and perhaps certain other related diseases, as demonstrated at Rochester, Minn., in 1949 lapsed, although some patients maintained a portion of the improvement. In some persons receiving the drug for longer periods, various undesirable side effects were noted—all of which disappeared after administration of the hormone was discontinued.

A fraction of the hormone complex produced by the pituitary gland stimulated the adrenal glands to liberate an increased amount of cortical hormones including Cortisone. This pituitary secretion, known as adrenocorticotropic hormone (ACTH) was isolated in a potent and purified form suitable for injection into humans, and when administered to patients with rheumatoid arthritis effects were observed similar to those resulting from Cortisone.

The effects of Cortisone and ACTH were studied in other rheumatic disorders and connective tissue diseases. Benefit was observed in rheumatic fever, gout, diffuse lupus erythematosus, neurodermatomyositis and other collagen diseases.

The extreme difficulty of isolation of ACTH and the tedious and difficult task of synthesis of Cortisone together with the limited supply of ox-bile acid permitted production in only small quantities; consequently both these substances were important in 1949 chiefly as research tools in the study of rheumatic diseases. The whole problem of connective tissue and rheumatic diseases took on a new light. Mysteries surrounding rheumatism might now be clarified so that the management of these devastating ills could be improved. Much research lay ahead: studies to improve methods of manufacture so that larger supplies could be produced at lower cost; definition of the scope and limitations of effects of the hormones in different diseases; methods of administration to produce greatest benefit and the least or no undesired effects; elucidation of the mechanism of effect of these hormones—which in time should reveal the nature and possibly the cause of the diseases; study of the effects of steroids chemically similar to Cortisone; and the influence of all effective steroids on the entire endocrine glandular system and metabolic functions.

Art Sales.

Kende galleries announced a 1948–49 season totalling more than $1,000,000, their largest single sale having been to the Cortlandt F. Bishop library which brought $325,900. An *Aesop* in maioli binding went for $24,000; a Paris Tasso (1771) with 68 original Gravelot drawings went for $23,500; and a Molière (1734) for $20,250.

In the Oscar Bondy sale Dosso Dossi's "The Combat between Roland and Rodomonte" went at $12,000 and Giovanni di Paolo's "Adoration of the Magi" for $11,000.

The Plaza galleries announced a season's business of $1,322,656.95 with no spectacular individual sales but steady values being maintained in high quality merchandise.

Parke-Bernet galleries of New York city, the leading art auction house of the country, reported that their season amounted to $5,618,628.50, which was a $400,000 increase over the previous year. The highest price paid for a single item was $54,000 for Lincoln's "Gettysburg Address" and the largest individual sale was comprised mostly of early Christian and Byzantine art from the estate of Joseph Brummer and totalled $739,510. The top item in this sale was a pair of Burgundian Gothic tapestries at $42,000. A Saxon 12th-century champlevé plaque brought $11,000.

Leading prices at sales of paintings were $25,000 for Degas's "L'Ecole de Ballet"; $12,000 for Winslow Homer's water colour "The Voice from the Cliffs"; $10,500 for Renoir's "Young Bather"; $7,000 for Frederic Remington's "Among the Led Horses"; and $6,500 for Grant Wood's "Birthplace of Herbert Hoover."

The sale of the Joseph H. Seaman prints brought $90,067. Of these, Rembrandt's "Christ Healing the Sick" went for $7,500, "The Young Haaring" for $3,200, "Ephraim Bonus" for $3,000, and "Clement de Jonghe" for $2,600.

Many books came up at auction including a first edition of Dante's *Divine Comedy* at $9,000 and a Caxton edition (1478) of Chaucer's *Canterbury Tales* at $4,000.

In London the sensational auction of the year was the collection of Sir Bernard Eckstein. The collection was offered at Sotheby's in several lots at different times throughout the season and brought a total of £220,000. Among the paintings was Constable's "Hampstead Heath" which was bought by the Fitzwilliam museum, Cambridge, for £13,000. Other lots included a group of oriental manuscripts and miniatures at £6,287; gold, enamels and jewellery at £14,988; antique silver at £7,554, with the top item of this group being a silver-gilt covered salt (1606) at £4,400. The Eckstein English porcelains brought £18,482 and the continental ceramics £16,552.

Sotheby sold the H. A. C. Gregory collection of Constable paintings and drawings at £28,467, top item of which was an oil, the "Marine Parade," at £13,500. This was shown in the "Masterpieces of English Painting" exhibition at the Art Institute of Chicago in 1946.

Christie's held several important sales during the season including 139 lots of antique gold and silver sold for the earl of Strathmore (Queen Elizabeth's brother) at a total of £15,704. The rarest item was a Charles II gold porringer (1675) which sold for £4,200. Christie's auctioned the collection of Mrs. Arthur James in which a notable Guardi, "Entrance into the Grand Canal," went for £10,290.

On July 22 Christie sold the famous William Blake collection from the estate of W. Graham Robertson for £61,599. "The Ascension" brought £7,350 and "The Lord Confessing His Presumption," £7,770. Many of the best items were acquired by leading British museums through the generosity of the Robertson estate. (F. A. Sw.)

Astronomy.

Announcement was made in June 1949 of the beginning of the most ambitious sky-mapping plan in history. The project—a joint undertaking of the California Institute of Technology, Pasadena, Calif., and the National Geographic society—was being carried out with the 48-in. Schmidt telescope lately installed on Mount Palomar. The great advantage of the Schmidt-type telescope for a program of this kind was the fact that it was a camera of the wide-angle

PHOTOGRAPH OF THE NORTH AMERICAN NEBULA, the first of about 2,000 pictures of the heavens being taken with the wide-angle Schmidt phototelescope at Mount Palomar for a projected *National Geographic Society-Palomar Observatory Sky Atlas.* Work was begun on July 19, 1949, and was scheduled for completion in 1953. The nebula in this first plate is in the northern part of the Milky Way in the constellation of Cygnus (the Swan)

type; that is, a considerable part of the sky could be photographed in a single exposure. It was estimated that about four years would be needed to complete the survey; if the great 200-in. reflector were to be used, around 5,000 yr. would be needed for the same program; the 200-in. reflector would photograph fainter stars than the 48-in. Schmidt, but the field of the latter was far greater. The completed sky atlas would consist of around 2,000 reproductions of the original photographs. Duplicate exposures of each field were being made, one of which recorded the stars in blue light and the other in red light. About three-fourths of the whole sky could be mapped from the location of the Palomar observatory in southern California.

Solar System.—A remarkable new asteroid was discovered by W. Baade on a plate taken with the 48-in. Schmidt telescope on Mount Palomar on June 26, 1949. The orbit, as computed by S. B. Nicholson and R. S. Richardson, showed that the mean distance from the sun is less than that of any other asteroid or comet. At its closest, the asteroid passes inside the orbit of Mercury to a distance of around 21,000,000 mi. from the sun; its greatest distance from the sun is around 177,000,000 mi.—outside the orbit of Mars. Its period of revolution around the sun is only about a month longer than that of the earth. In spite of its nearness, it is a very faint object; its actual diameter is probably about a mile.

A second satellite of the planet Neptune was discovered by G. P. Kuiper at the McDonald observatory, Mount Locke, Tex., on two photographs obtained with the 82-in. reflector on May 1. It was an excessively faint object of between the 19th and 20th magnitude and revolved around Neptune in a period of the order of two years. The name Nereid was bestowed upon the satellite by its discoverer.

No conspicuous comets were under observation in 1949.

The Stars and Nebulae.—A major astronomical discovery was reported during the year by W. A. Hiltner of the University of Chicago, Chicago, Ill., and John S. Hall of Amherst College, Amherst, Mass., and the U.S. Naval observatory, Washington, D.C. Their work—first carried out together and later separately—showed that the light from certain distant stars is polarized by material in interstellar space. All of the implications of this discovery were not clear by the end of the year, but it was considered certain to exercise a profound influence over both theoretical and observational research.

Very rapid fluctuations in the brightness of certain stars were observed. In the case of the eclipsing binary UX Ursae Majoris, A. P. Linnell of Harvard university, Cambridge, Mass., found variations in light of the order of 10% in a rough period of around 4 min. Of great astrophysical interest was the recording of sudden outbursts of light in several of the most numerous of stars in space: the small, red M-dwarfs. Earlier observations by A. van Maanen at Mount Wilson, Pasadena, Calif., had shown sudden brightening in the light of two red dwarfs. W. J. Luyten of the University of Minnesota, Minneapolis, Minn., reported in 1949 the outburst of a red dwarf discovered by him; in the course of about 20 min. the light of the star increased by a factor of around 10 and decreased again to nearly its original brightness. A total of three outbursts of Luyten's star were recorded, two by the discoverer and one by A. H. Joy and M. L. Humason of Mount Wilson. The last-named outburst was of especial interest, since the spectrum of the star was being obtained when it occurred. The spectrum showed remarkable changes from normal; in some respects it resembled that of a very hot star instead of the relatively cool star observed at normal light.

Phenomena for 1950.—*Eclipses.*—A total eclipse of the sun would occur on Sept. 12, 1950; the path of totality would begin near the north pole, pass over the northeastern tip of Siberia and end over the Pacific ocean, north of the Hawaiian Islands. There would be two total eclipses of the moon; the first on April 2, 1950. It would be visible generally in Europe, most of Asia, Africa and part of Australia. The ending of the eclipse would be visible also in central and eastern South America. The second lunar eclipse would occur on Sept. 26, 1950; it would be visible generally in North America and South America and in parts of Europe, Africa and southwestern Asia.

Planets.—The planets Mars and Saturn would be in opposition in March 1950 and would be conspicuous objects in the evening sky throughout the spring months.

Atomic Energy.

A new chapter in the history of atomic energy began on Sept. 23, 1949, when Pres. Harry S. Truman announced, "We have evidence that within recent weeks an atomic explosion occurred in the U.S.S.R." The announcement meant that the monopoly of atomic weapons by the United States had ended. The world was entering a period in which more than one major power possessed an atomic bomb.

U.S. policy, Truman added, had always taken such an eventuality into account. This was emphasized later the same day by both Secy. of State Dean G. Acheson and Gen. Omar N. Bradley, chairman of the joint chiefs of staff.

On Sept. 25, Tass, the soviet official news agency, stated in an English language broadcast that the U.S.S.R. had possessed an atomic bomb since 1947.

Other events of importance in the realm of atomic energy during 1949 included the continued but unsuccessful attempts to reach an agreement on the international control of atomic energy; the three-power negotiations of the United States, Great Britain and Canada to formulate a joint policy on atomic weapons; the substantial achievements of the U.S. Atomic Energy commission including the development of new techniques, the construction of new facilities, the production of improved bombs, the design of a "breeder" type of reactor and the expansion of physical and biological research; the congressional investigation of charges against the commission; and the resignation of the commission's chairman, David E. Lilienthal (*q.v.*).

The Ninth Explosion.—The explosion of the first soviet atomic bomb, believed to have occurred about Sept. 1, 1949, was the ninth nuclear explosion in the history of the world. The United States had set off the other eight: the first, in a test at Alamogordo Air Base in New Mexico on July 16, 1945; the second, over Hiroshima on Aug. 6, 1945; the third, over Nagasaki on Aug. 9, 1945; the fourth and fifth, in tests at Bikini Atoll on July 1 and 25, 1946; and the next three, in tests at Eniwetok Atoll in April and May 1948.

Detecting the Explosion.—An immediate question raised by President Truman's announcement was how the United States government knew that an atomic explosion had occurred in the Soviet Union. In all probability some information had come from undercover sources of the central intelligence agency.

There are, however, three scientific methods of detecting an atomic explosion. The ground vibrations are revealed by seismographs. The air vibrations can be recorded by the microbarograph, an ultra-sensitive barometer which detects minute and sudden changes in atmospheric pressure. The radioactive cloud, which drifts with the wind, can be detected by Geiger counters and similar instruments.

When the first Bikini bomb was set off, evidences of the radioactive cloud were recorded 10 days later by Geiger counters on the Pacific coast of the United States.

The Soviet Program.—It was impossible, of course, to say what point the U.S.S.R. had reached in its atomic program. U.S. observers were inclined to discount the claim that the Soviet Union had had the bomb since 1947. It was known, however, that the Soviet Union had been operating the Czech, Austrian and Saxon pitchblende mines at a feverish rate. The U.S.S.R. was reported to possess uranium deposits in the Tashkent area in the central Asia sector of the Soviet Union; in the Ossetia area, north of Tiflis; in Svanetia in northwestern Georgia; in the region between Samarkand and the Ferghan mountains; in the Alai mountains in Turkestan; and in the Kara-Mazar mountains, north of Khodzhent.

Reports circulating in western Europe stated that the Soviet Union had created a large underground factory for processing uranium on the Sanga river, a few miles north of Erivan, capital of the Armenian S.S.R.

Information received by the U.S. state department indicated that the Soviet Union had deported more than 17,000 Greeks and other non-Russians from the Caucasus area since June 1949. It was believed that the soviet bomb explosion occurred in this area.

U.S. v. U.S.S.R.—In 1947 the president's air policy commission fixed the end of 1952 as A-day, the time after which other nations would possess atomic bombs in quantity. Although by the close of 1949 the U.S. monopoly on atomic bombs no longer existed, it was felt that A-day might yet be a year or two away. There seemed no reason to suppose that the Soviet Union had as yet accumulated as many as ten atomic bombs.

The U.S. stockpile was believed to be in excess of 100 bombs although the true figure was one of the nation's most carefully guarded secrets.

An immediate effect of the soviet atomic explosion was to accelerate the U.S. program. On Oct. 18 President Truman authorized the U.S. Atomic Energy commission to draw on its budgetary reserve for funds to begin a major expansion of its production program. Soon after, congress rushed through legislation to relax the curb it had placed on the commission's spending powers in July. Under the new legislation, the commission could start construction of unbudgeted facilities if it satisfied the director of the budget that they were necessary for national defense.

New Eniwetok Tests.—On Nov. 29, 1949, the U.S. Atomic Energy commission announced that a new series of tests of atomic weapons would be held at Eniwetok Atoll in the Marshall Islands in 1950. The assumption was that a new and yet more powerful bomb was ready for testing. The field operations were to be carried out by joint task force 3, representing the army, navy, air force and Atomic Energy commission.

The Ultimate Weapon.—Scientists believed that the ultimate weapon would be a rocket powered by atomic energy, capable of crossing an ocean or the arctic regions and carrying an atomic bomb in its nose. However, they believed that before that day arrived, there would be rockets of the familiar V-2 type capable of delivering atomic bombs.

Defense Against Bombs.—The soviet bomb explosion stimulated the discussion of defense measures in the United States. On Nov. 17, 1949, the U.S. Atomic Energy commission made public a report entitled "City of Washington and an Atomic Bomb Attack." This report stated that a bomb bursting in the air could be expected to destroy all residences in an area of six to eight square miles and that none of the public buildings in Washington would offer adequate protection to their personnel.

The report stated that there were "three obvious targets" in the Washington area: (1) the Pentagon, (2) the capitol and adjoining area and (3) the area including the White House and the public buildings on or near Constitution Ave. In the opinion of the commission, the most adequate solution of the problem would be dispersal of key buildings, thus reducing their attractiveness as targets. The construction of bomb-proof shelters was not recommended as a practical solution because, while it might save the lives of the persons who took shelter, it would not guarantee the resumption of vital functions. The report also urged the dispersal of hospitals, fire stations and other essential emergency services.

The Effects of Atomic Bombs.—A section of the sixth semiannual report of the U.S. Atomic Energy commission summarized the available data on the effects of atomic bombs on people and areas. At Hiroshima and Nagasaki, 50% to 60% of the casualties were due to blast effects and flame burns, 20% to 30% to flash burns and 15% to 20% to radioactivity. "However," the report states, "had there been protection from blast and fire, nearly as many people would have died from radiation effects alone."

At Hiroshima, the average limit of general structural damage was roughly two miles from "ground zero," the point directly under the bomb explosion. The limit of fire damage was approximately the same.

The Atomic Bomb Casualty commission of the National Research council was carrying on an intensive study in Japan to determine what delayed effects, if any, would result from the bombing of Hiroshima and Nagasaki. By the close of 1949, no evidence had been found of an increase in any disease including cancer. However, in Sept. 1949 a 19-year-old girl who had been injured at Hiroshima was found to be developing radiation cataracts. About a dozen such cases were subsequently found.

No serious amount of residual radioactivity was found on the ground at Hiroshima or Nagasaki. However, at Alamogordo, N.M., where the bomb exploded close to the ground and created a crater, the crater was still dangerously radioactive, but the danger was confined to an area of only 100 ac.

The underwater bomb explosion at Bikini showed that such an explosion disseminates dangerous materials over an extensive area, depending on wind direction and velocity. The lethal area may extend half a mile upwind and two or more miles downwind. The target ships were coated with an invisible radioactive film that defied all attempts at decontamination. Subsequently about 25 of them were either scuttled or sunk by gunfire in naval manoeuvres.

International Control.—All attempts during 1949 to resolve the fundamental differences of opinion between the majority of nations in the United Nations and the soviet bloc on the international control of atomic energy failed.

On Nov. 4, 1948, the United Nations general assembly, meeting in Paris, France, had adopted by a vote of 40 to 6 a fourfold resolution which (1) approved the plan of international control outlined in the three reports of the United Nations Atomic Energy commission, (2) expressed deep concern over the impasse in the commission, (3) requested the representatives of the Big Five and Canada to initiate private conversations in an effort to end the impasse and (4) called on the commission to resume its deliberations.

The majority plan was based on the premise that a mere agreement outlawing the atomic bomb would be insufficient. The plan would create an international control agency which would have ownership or managerial control of the production of uranium, the manufacture of fissionable materials and all atomic activities potentially dangerous to world security. It would have the power to license, control and inspect all other atomic activities. The agency would be empowered to create an international inspection service, make aerial surveys, require accountings, maintain guards and otherwise take precautions to prevent clandestine operations. It specified that the veto power vested in the Security council of the United Nations would not apply to the control agency.

The Commission Fails.—Pursuant to the directive of the general assembly, the United Nations Atomic Energy commission resumed its meetings near the end of Jan. 1949. It became

Engineers are shown measuring the intensity of gamma rays from the isotope (located on opposite side of this jobbing foundry cupola) by means of a Geiger counter. Results were to aid in designing a permanent installation to determine liquid metal heights in production foundry cupolas

apparent almost immediately that the soviet delegation had no intention of receding from the position it had taken during the previous three years.

On July 29 the commission voted to suspend its work indefinitely. The vote, following the characteristic pattern of the previous three years, was 9 to 2 with the Soviet Union and the Ukraine casting the negative votes.

Six-Power Conversations.—Following the adjournment of the United Nations Atomic Energy commission, the Big Five and Canada initiated the private conversations requested by the general assembly. These six powers, the U.S., U.S.S.R., United Kingdom, France, China and Canada, were the permanent members of the Atomic Energy commission and were known as "the sponsoring powers." The first meeting was held behind closed doors at Lake Success, N.Y., on Aug. 9, 1949.

On Oct. 26, after 11 secret meetings, the six powers made an interim report to the general assembly. It revealed that no progress had been made. At the same time five of the powers, all but the U.S.S.R., issued a joint statement explaining their objections to the soviet proposals.

The statement summarized "three basic obstacles in the way of agreement." These were the proposals of the Soviet Union that (1) nations should continue to own explosive atomic materials, (2) nations continue to own, operate and manage facilities making or using dangerous quantities of such materials and (3) a system of control be adopted depending on periodic inspection of facilities the existence of which the national government concerned has reported to the international agency, supplemented by special investigations on suspicion of treaty violation.

The five powers believed that these proposals were insufficient to prevent the sudden or clandestine diversion of atomic materials to purposes of war.

The General Assembly.—While the six-power secret talks were in progress, the debate over the control of atomic energy flared out again in the United Nations general assembly. In several addresses soviet Foreign Minister Andrei Y. Vishinsky (*q.v.*) accused the U.S. and Great Britain of plotting an atomic war. Sharp exchanges took place between Vishinsky and the representatives of the U.S., Great Britain and Canada.

It became obvious that many nations were extremely unhappy

over the prospect of becoming involved in an atomic war between the U.S. and the U.S.S.R. and that they were seeking a way to break the deadlock. Sir Benegal Rau, chief of the Indian delegation, suggested that the question be transferred to the United Nations International Law commission.

In a letter to the six sponsoring powers, Brig. Gen. Carlos P. Romulo, president of the general assembly, suggested the exploration of four possibilities: (1) a short-term armistice accompanied by an inspection system; (2) an interim prohibition on the use of atomic weapons, with adequate safeguards; (3) further compromises between the majority and minority plans for atomic energy control; and (4) a new approach based on an assessment of the present requirements of atomic energy for peaceful purposes.

An address by Vishinsky on Nov. 10 before the Special Political committee of the assembly was interpreted by most delegates as a final rejection of the majority plan.

In the course of the address Vishinsky said, "Right now we are utilizing atomic energy for our economic needs in our own economic interests. We are razing mountains; we are irrigating deserts; we are cutting through the jungle and the tundra; we are spreading life, happiness, prosperity, and welfare in places where the human footstep has not been seen for a thousand years."

It was subsequently noted that the version of Vishinsky's speech printed in the Moscow newspaper *Pravda* differed from the speech as delivered. It quoted him as saying, "We want to put atomic energy to blowing up mountains, changing the course of rivers, irrigating deserts, laying new lines of life there, where the human foot has rarely stepped."

On Nov. 14 the Special Political committee by a vote of 48 to 5 adopted a resolution introduced by France and Canada calling on the six sponsoring powers to continue their private talks in an attempt to solve the problem. The five negative votes were those of the soviet bloc.

Early in Dec. 1949, Gen. A. G. L. McNaughton, chairman of the United Nations Atomic Energy commission, in keeping with this resolution asked Gen. Carlos P. Romulo and Sir Benegal Rau to submit new proposals on the control of atomic energy. Replying on Dec. 16, Romulo suggested that the search for a permanent solution be suspended for a few months and an attempt made to arrive at a short-term interim agreement along the lines of his previous suggestions.

Three-Power Conferences.—Considerable interest was aroused by a secret meeting called by President Truman at Blair House in Washington on the evening of July 10, 1949. It was attended by the secretary of state, secretary of defense, temporary chairman of the joint chiefs of staff, chairman of the U.S. Atomic Energy commission and a group of congressmen representing the foreign affairs, military and atomic energy committees. It was later disclosed that the meeting had been called to discuss relations of the United States, Great Britain and Canada in the field of atomic energy. It was understood that the British government had requested secret data from the United States.

The situation was clarified on July 28 when President Truman announced that the three nations would hold exploratory talks on the question of sharing atomic information and allotting supplies of uranium ores.

The three-power conferences began in Washington on Sept. 20. The expressed purpose of the conference was to consider establishing a partnership for the joint utilization of materials, techniques and knowledge in the field of atomic energy.

U.S. Atomic Energy Commission.—The year 1949 was one of even greater progress and achievement than 1948 for the U.S. Atomic Energy commission. Chief emphasis was placed on the development and production of atomic weapons and of the fissionable materials required for their manufacture. Increasing attention was given to the design of new types of nuclear reactors. The research programs in the physical, biological and medical sciences were expanded, and important additions were made to the commission's laboratories.

The improved atomic bombs tested at Eniwetok in 1948 were put into production during 1949. Component parts were produced on an industrial basis by manufacturing concerns and special government facilities.

In collaboration with the U.S. geological survey, the commission continued the examination of virtually every rock formation in the country for uranium ores.

Fissionable materials were produced in 1949 in greater quantities than ever before. Increased shipments of ore from Canada and the Belgian Congo were supplemented by domestic production. The chemical and metallurgical plants which converted ore into "feed materials" for the Oak Ridge, Tenn., and Hanford, Wash., plants were put on a sound operating basis. Unit production costs were reduced 30% below the 1947 level, and intermediate stock piles were built up to adequate levels.

Installation of new equipment and improvements in operating technique reduced the cost of producing uranium 235 in the gaseous diffusion plant at Oak Ridge by 50%. In addition, the yield from a given amount of uranium was increased.

Improvements in the operation of the Hanford plutonium plant increased by 40% the amount of plutonium produced per dollar of operating cost.

A new uranium pile for the production of plutonium and a new plutonium metal fabrication plant began operations at Hanford in 1949.

Construction work was started at Oak Ridge on a $67,000,000 expansion of the plant for the production of uranium 235.

The "Breeder" Reactor.—On Nov. 28, 1949, L. R. Hafstad, director of the division of reactor development of the U.S. Atomic Energy commission disclosed that the final work was being done on the design of a "breeder" nuclear reactor, a uranium pile that would produce more fissionable fuel in the form of plutonium than it consumes in the form of uranium 235. He described this reactor as the greatest peacetime development in the history of atomic energy and said that it was hoped to build the device during the following year at the Nuclear Reactor Testing station near Arco, Ida. Construction of other reactors at Arco, including a materials testing reactor, was also being planned.

On Dec. 13 Hafstad revealed that his division was also working on another reactor of revolutionary design, a so-called homogeneous reactor. This device would employ nuclear fuel in a constantly circulating liquid form instead of a solid form. It was anticipated that this would eliminate the difficulty of removing the fission products, the nuclear "ashes" which clog up the reactor.

Research on a type of reactor suitable for ship propulsion was being carried on by the Argonne National laboratory near Chicago, Ill., and the Westinghouse Electric corporation.

An "intermediate power breeder reactor" which would generate power as well as breed some additional fuel was being designed at the Knolls Atomic Power laboratory near Schenectady, N.Y.

A reactor for research purposes, nearing completion at the Brookhaven National laboratory, Long Island, N.Y., was expected to begin operation in 1950.

Radioactive Isotopes.—An average of 400 shipments per month of radioactive isotopes was made during 1949 from Oak Ridge to laboratories all over the United States and to 22 foreign countries. Radioactive isotopes had been called the most useful research tool for biology and medicine since the discovery of the microscope.

The use of radioactive isotopes was constantly increasing. Physicians and biologists were using them as "tracers" to follow complicated biological processes in living organisms; to investigate the formation of the blood and body secretions; to understand the physiological action of hormones, vitamins and drugs; to delineate the changes in such diseases as diabetes, heart disease and kidney disease; and to follow the growth and death of cancer cells.

Radioactive isotopes were also being used in researches in physics, chemistry, metallurgy and many industries.

For many purposes it is necessary to incorporate the radioactive isotope in a complex compound such as a sugar, protein or dye. The U.S. Atomic Energy commission entered into contract with six organizations for the production of more than 65 such compounds.

An important development was the experimental use of radioactive cobalt as a substitute for radium in the treatment of cancer.

The division of biology and medicine of the commission was carrying on an extensive program to investigate the effects of radioactivity on living organisms and to devise safeguards.

New Atom Smashers.—Two particle accelerators or atom smashers of gigantic proportion were under construction by the U.S. Atomic Energy commission. They would dwarf the 184-in. cyclotron at Berkeley, Calif., which was in 1949 the largest in the world.

At Brookhaven National laboratory, scientists were building a proton synchrotron which had been named the cosmotron. It would impart energies of 2,000,000,000 to 3,000,000,000 ev to subatomic particles. An even larger proton synchrotron, the bevatron, was being built at the Berkeley Radiation laboratory. It would develop 5,000,000,000 to 7,000,000,000 ev.

Smaller atom-smashing devices were completed or were nearing completion at the Brookhaven, Argonne, Oak Ridge and Los Alamos laboratories. In addition the commission was financing researches in the physical sciences in more than 50 university and industrial laboratories.

Congressional Investigation.—On May 22, 1949, Sen. Bourke B. Hickenlooper, former chairman and ranking Republican member of the congressional joint committee on atomic energy, issued a statement charging Chairman Lilienthal of the U.S. Atomic Energy commission with "incredible mismanagement" and demanding his resignation. Two events preceded his action, the discovery that a commission fellowship had been awarded to an acknowledged Communist, and the disclosure that a container of about 9 or 10 oz. of uranium oxide enriched with 32 g. of uranium 235 was missing at the Argonne National laboratory.

Hearings were held before the congressional joint committee on atomic energy. The committee brought in a majority and a minority report in October, splitting on straight party lines. The ten Democratic members signed the majority report; six of the eight Republican members signed the minority report. The majority report held that all of the charges had been satisfactorily answered and, moreover, that the commission had done an exceptionally fine job of administering the atomic energy program.

The minority report virtually ignored the subject matter of the hearings and, taking a new tack, raised a new issue, charging the commission with hesitation and insufficient boldness in initiating a major development program.

Changes in Membership of Commission.—In Nov. 1949, Lilienthal gave President Truman his resignation as chairman of the U.S. Atomic Energy commission, to take effect at the end of the year. He gave as his reasons for resigning the length of his public service, financial considerations for his family and his desire to enter into public discussions of atomic energy with greater freedom than was possible as chairman of the commission.

On May 9, 1949, President Truman appointed Henry DeWolf Smyth and Gordon Dean to the U.S. Atomic Energy commission. They replaced Robert F. Bacher and W. W. Waymack, who had resigned.

Sumner T. Pike and Lewis L. Strauss continued as members of the commission during 1949. (*See* also METALLURGY; PHYSICS; URANIUM.)

Attlee, Clement Richard (1883–), British prime minister, was born in London on Jan. 3. After leaving Oxford university, he worked in the East End of London and in 1913 became a lecturer at the London School of Economics. In World War I he served in Gallipoli, Mesopotamia and France. He was elected mayor of Stepney in 1919, member of parliament for Limehouse in 1922, and in the second Labour government he was chancellor of the duchy of Lancaster and later postmaster general. He was deputy prime minister in the wartime coalition government and became prime minister when the Labour party achieved a majority in July 1945.

In April 1949 he presided over the second meeting within a year of the commonwealth prime ministers, and in January he held talks with Sir Basil Brooke, prime minister of Northern Ireland. In March he flew to Germany where he saw the Berlin air lift and had discussions with western German political leaders. In the autumn there was widespread feeling that he would dissolve parliament and call a general election, but on Oct. 13 he issued a statement declaring that he would not recommend that the king dissolve parliament in 1949. During the absence of senior cabinet members in August and September—Sir Stafford Cripps (*q.v.*), because of illness and later at Washington; Ernest Bevin (*q.v.*), on holiday, at Strasbourg and later in the United States; and Herbert Morrison, lord president of the council, at Strasbourg—he undertook control of their departments. He again acted for the foreign secretary in December when Ernest Bevin was on leave.

Auriol, Vincent (1884–), French statesman, was born on Aug. 27 at Revel (Haute-Garonne department). He was elected to the chamber of deputies as Socialist member for Muret in 1904, and was constantly reelected up to the collapse of France in June 1940. Auriol's first cabinet post was in Léon Blum's popular front government in 1936, when he was appointed minister of finance. In that capacity he negotiated the tripartite monetary accord with the U.S. and Great Britain. He was minister of justice in the Camille Chautemps government (1937–38) and held a cabinet post in the second and short-lived Blum government in 1938.

Auriol protested against the armistice of 1940 and against Marshal Henri Philippe Pétain's efforts to establish totalitarian rule, and was imprisoned by Vichy authorities for several months. In Oct. 1943 he escaped to London where he joined General Charles de Gaulle's movement. He became a member of the consultative assembly set up in Paris after its liberation in Aug. 1944. In Nov. 1945 he was appointed minister of state without portfolio in the De Gaulle government. He was elected president of the French constituent assembly on Jan. 31, 1946, and on Jan. 16, 1947, became the first president under the constitution of the Fourth Republic.

Speaking at Tours, on May 7, 1949, he said that France remained convinced that there would be no lasting peace and prosperity without an association of national sovereignties. On May 29, 1949, he arrived at Algiers on the first presidential visit since that of Gaston Doumergue in 1930 and during his stay visited Bone, Oran, Constantine and Tlemçen. (*See* also France.)

Austin, Warren Robinson (1877–), U.S. delegate to the United Nations, was born at Highgate, Vt., Nov. 12, and was graduated from the University of Vermont, Burlington, Vt., in 1899. He practised law and became active in Republican politics. Elected U.S. senator from Vermont in 1931 to fill an unexpired term, he was re-elected in 1934 and 1940, but resigned to become acting U.S. representative to the United Nations, by appointment of Pres. Harry S. Truman, June 5, 1946. On Jan. 13, 1947, Austin became U.S. representative at the seat of the United Nations, with the rank of envoy extraordinary and plenipotentiary, and U.S. representative on the Security Council, as well as member of the U.N. Atomic Energy commission. In Feb. 1949 he termed soviet demands for limitation of armaments and control of the atomic bomb a "succotash" of earlier soviet proposals that the U.N. general assembly had turned down. In the latter body on April 13, when soviet Deputy Foreign Minister Andrei A. Gromyko charged that the North Atlantic treaty was an "aggressive" conspiracy against the U.S.S.R., Austin replied that the pact need worry no state conforming to the principles of the U.N. charter; that soviet propaganda against the treaty was dangerous because it confused and misled nationals of other states; and that Russian isolation was of its own making. On Sept. 29, after President Truman's disclosure of the atomic explosion in the U.S.S.R., Austin reiterated the U.S. belief that the plan approved by the U.N. assembly for atomic control appeared to be the only one "which would be likely to prevent atomic war," and he charged that the U.S.S.R.'s counter-proposals failed to provide for either international control of atomic production and stocks or for adequate inspection of such production.

Australia, Commonwealth of. A self-governing member of the British Commonwealth of Nations, situated in the southern hemisphere, Australia has an area of 2,974,581 sq.mi. The total 1947 census figure of 7,580,820 excludes full blood aboriginals estimated at 47,000; half-castes numbered 24,881 in 1944. Chief towns (pop., June 30, 1947): Sydney (1,484,434); Melbourne (1,226,923); Brisbane (402,172); Adelaide (382,604); Perth (272,586); Newcastle (127,188); Hobart (76,567). Language: English. Religion: Christian (census 1933: Anglican 2,565,118; Roman Catholic 1,161,455; Presbyterian 713,229; Methodist 684,022; other Christians 603,914); Jewish 29,600. Ruler: King George VI; governor general: William John McKell; prime ministers in 1949: Joseph Benedict Chifley and, from December, Robert Gordon Menzies.

History.—The main event of the year 1949 was the general election held on Dec. 10, in which the Labour government was defeated.

Several decisions of the high court given during the year had a profound effect on public life and on the relations between the commonwealth and the states. The high court held that the commonwealth no longer had the power to ration petrol. As a result, petrol was derationed; but as the commonwealth largely depended on dollar area imports, a severe shortage developed. The petrol question displaced the Bank Nationalization act, 1947, as a major election issue. The privy council upheld the high court in declaring vital sections of the Bank Nationalization act invalid.

Social service expenditure for 1948–49 at less than £A81,000,000 remained below the estimate, mainly because of the protracted struggle between the commonwealth government and the British Medical association over the Pharmaceutical Benefits scheme. Under instructions from the B.M.A., the vast majority of doctors refused to issue free prescriptions on government forms. The B.M.A. successfully challenged the act before the high court, which by a majority held that the compulsion for doctors to use government prescriptions and forms was an unconstitutional "civil conscription." The wider National Health Service act, passed in 1948, was not implemented.

The minister for external territories, E. J. Ward, was cleared of charges of corruption by a judge of the supreme court of South Australia functioning as royal commissioner.

Communism.—Politically, the increased tension between the Communist movement and the rest of the community was the outstanding development. A coal strike lasting from June 27 to Aug. 15 affected practically all hard coal mines in the country and paralyzed the industrial life of the country. It arose out of the decision by the Communist-dominated executive of the Miner's federation not to await the decision of the Coal Industry tribunal on a claim for long-service leave. The strike was clearly political in character. The commonwealth parliament reacted by passing an act prohibiting the payment or receipt of money for the continuance of the strike. The commonwealth arbitration court was given power to grant injunctions for the purpose of preventing breaches of the act. When leaders of the Miner's federation and other unions refused to disclose the use of their funds, they were sent to prison for contempt of court; they were released after the collapse of the strike and after having apologized to the court. The commonwealth also used troops to work opencut mines. The strike collapsed completely without any new concession being obtained by the miners. The Coal Industry tribunal later awarded long-service leave, subject to certain penalties for the disruption caused by the strike.

Immigration.—The flow of immigrants increased vastly during the year; 75,000 immigrants arrived in the first six months. The government rigidly adhered to its exclusion of non-white immigrants.

In 1948–49, 52,573 new houses were completed, but the coal strike affected building in the second half of the year.

External Affairs.—H. V. Evatt was president of the third session of the general assembly of the United Nations. Australian representatives were active in supporting the recognition of the new state of Israel and the sovereignty of the new republic of Indonesia. Australia sent an official observer to the Conference of Asian Nations convened by the Indian prime minister at New Delhi, India, which strongly condemned the Netherlands police action in Indonesia. Australia also took a lead in demanding U.N. investigation of the trial of religious leaders in Hungary and Bulgaria. As one of the main wheat-exporting countries, Australia ratified the International Wheat agreement.

In April, Chifley attended the conference of British Commonwealth of Nations prime ministers in London, which resulted in a declaration that the republican status of India was compatible with continued membership of the commonwealth. A few months later, J. J. Dedman, minister for postwar reconstruction, attended in London a conference concerning the financial crisis of Great Britain and the sterling area. The Australian Nationality and Citizenship act, 1948, came into force on Jan. 26, 1949. It was the first to recognize officially Australian citizenship.

Defense.—Expenditure for defense services was £A61,000,000, slightly above estimates. Expenditure for total war and repatriation services at nearly £A150,000,000 was considerably above estimates. Corresponding estimates for 1949–50 were £A60,000,000 and £A121,000,000. A new aircraft carrier, H.M.A.S. "Sydney," joined the fleet. The most important naval manoeuvres after World War II were held by the joint Australian and New Zealand navies in October. Further progress was made on the guided missiles project in South Australia.

Finance and Economics.—The budget was balanced at £A535,000,000. National income rose by 12% to a new record of £A1,955,000,000, nearly 2½ times the prewar figure. The income of primary producers still showed by far the greatest proportional increase, as the exceptional world demand for wool at very high prices continued through the year. Substantial price rises accounted for an increase of the "C" rate index of retail prices by nearly 9% between Sept. 1948 and Sept. 1949.

Exports of merchandise and gold rose to £A536,000,000 as against imports of £A415,000,000. Australia's international balance of payments resulted in a surplus of £A41,000,000, but the prime minister gave grave warning of the dangers to Australia's prosperity that would follow from a world depression and from the dollar crisis of the sterling area. To safeguard against a slump, Australia maintained a large sterling balance estimated at more than £A400,000,000 in London. The government made another gift of £A10,000,000 to the United Kingdom. Australia followed the devaluation of the British pound, thus maintaining the ratio of £4 British to £5 Australian. Australia agreed to cut its dollar imports by 25% and in October obtained a loan of $20,000,000 from the International Monetary fund.

Of many industrial development plans, the official start of the Snowy River Power scheme, which would provide a large proportion of Australia's power and conserve water for irrigation in the Murray and Murrumbidgee valleys, was the most important.

Despite substantial immigration, there were still labour and material shortages in almost every industry. About 30,000 new immigrants were absorbed in national production. Full employment was maintained. The commonwealth court of arbitration was, for the second part of the year, mainly engaged in taking evidence on a trade union claim for a basic minimum wage of £A10. (W. Fn.)

Education.—(1945) state schools 8,447, pupils 726,440, teachers 31,061; private schools 1,817, pupils 249,024, teachers 11,799; technical schools 114, pupils 110,841, teachers 5,175; business colleges 109, pupils 23,270, teachers 659; universities (1947) 8, students 30,477, teachers 2,141.

Banking and Finance.—Budget: (1948–49) revenue £A535,000,000, expenditure £A535,000,000; (1949–50 est.) revenue £A532,000,000, expenditure £A567,000,000. National debt (Dec. 1948) £A2,829,000,000. Gold and foreign exchange (Aug. 1949) $1,231,000,000 (U.S.). Bank deposits (Aug. 1949) £A678,000,000. Monetary unit is the Australian pound with an exchange rate after Sept. 18, 1949, of £A1=$2.228 U.S.

Foreign Trade.—Imports: (1948) £A338,000,000; (1949, six months) £A215,000,000. Exports: (1948) £A407,000,000; (1949, six months) £A282,000,000.

Communications.—Roads (1945): 500,000 mi. Licensed motor vehicles (Dec. 1948): cars, 669,688; commercial vehicles, 389,394. Government railways (1947–48): 27,123 mi. Shipping (July 1948): number of merchant vessels of 100 tons and upward, 352; total tonnage, 527,647. Air transport (1947): miles flown, 33,963,000; passengers flown, 1,035,695; cargo carried, 18,711 tons; air mail carried, 1,101 tons. Telephones (May 1949): subscribers, 1,022,174. Radio licences (May 1949): 1,916,310.

Agriculture.—Main crops (metric tons, 1948–49): wheat 5,162,000; oats 540,000; maize 152,000; barley 450,000; sugar cane, raw value, 930,000; potatoes 569,000. Livestock (March 1948): sheep 102,559,000; cattle 13,785,000; pigs 1,255,000; horses 1,165,000. Wool production (metric tons, greasy basis, 1948–49) 490,000. Food production (metric tons, 1948–49): butter 163,900; cheese 44,000; meat 987,100, of which 584,700 were beef.

Industry.—Manufacturing establishments (1948), 37,375; persons employed, 848,872. Fuel and power (1948; 1949, six months, in parentheses): coal (metric tons) 15,059,000 (7,114,000); lignite (metric tons) 6,792,000 (3,622,000). Raw materials (1948; 1949, six months, in parentheses): gold (fine ounces) 890,000 (448,000); pig iron (metric tons) 1,155,000 (509,000); steel ingots and castings (metric tons) 1,236,000 (571,000). Cement production (metric tons, 1948; 1949, six months in parentheses) 1,004,000 (527,000). Employment in manufacturing (index 1937=100) 1948: 158; 1949 (six months): 161.

FILMS OF 1949.—*Australia* (Encyclopædia Britannica Films Inc.).

Austria. A republic in central Europe, Austria has an area of 32,388 sq.mi. Pop. (Oct. 1948 est.): 6,953,000. Chief towns (pop., June 1948 est.): Vienna (cap., 1,730,613); Graz (226,229); Linz (184,336); Salzburg (106,919); Innsbruck (98,561); Klagenfurt (65,950). Language: German 98%, other 2% (mainly Slovene in Carinthia). Religion: mainly Roman Catholic. President of the republic: Karl Renner; chancellor (prime minister): Leopold Figl. During 1949 the Austrian government had jurisdiction throughout Austria, with certain limitations regarding matters control over which was reserved to quadripartite decision in the Allied Council for Austria. By Dec. 31, 1949, members of the A.C.A. were: France, Général de Corps d'Armée Emile-Marie Béthouart; United Kingdom, Lieut. Gen. Sir Alexander Galloway (succeeded from Jan. 1, 1950, by Maj. Gen. T. J. W. Winterton); U.S., Lieut. Gen. Geoffrey Keyes; U.S.S.R. (from May 1949), Lieut. Gen. V. P. Sviridov.

History.—A return to normal political life was the salient feature of 1949 in Austria. The growing self-confidence of the coalition government under Chancellor Figl, which continued in office (with some changes) after the general election on Oct. 9, meant that, in practice, less importance than hitherto attached to the continuing failure of the Council of Foreign Ministers to reach agreement on a peace treaty.

There was, indeed, during the year, a mitigation of Allied control in certain minor respects. Beginning Jan. 1 the United Kingdom handed over to the Austrian authorities full responsibility for the control of the Austro-Italian frontier; in February airfields in the United States zone were restored to the Austrian government for agricultural purposes; a relaxation of the control over traffic of merchandise between the soviet and the western zones was announced by the soviet authorities to take effect from May 25; and at a meeting of the Allied council on July 19 notice was given of the relinquishing of certain controls over Austria's mail and telegraph administration. Finally, the council, without yielding on the principle that Allied approval was necessary for any addition to the three recognized political parties—People's party (Christian Social), Socialists and Communists—in fact attempted no interference with the formation of new political groups. The new electoral law, indeed, which was approved by the Allied council on June 24, specifically provided that any electoral group that could muster 100 supporters was entitled to put up candidates in the general election.

The meetings of the foreign ministers' deputies were resumed (for the sixth time in three years) on Feb. 9 in London. The soviet deputy at once brought up again the territorial demands and claims for reparations of Yugoslavia—which provoked the Austrian government into a fresh assertion that Austria would not accept any treaty involving loss of territory or the creation of an autonomous zone for the Slovenes of Carinthia. The Yugoslav delegate, A. Bebler, was given a hearing, but his compromise proposals were not acceptable to the three western powers. A similar deadlock developed over the reparations issue, the compensation to the U.S.S.R. for those German assets to

AUSTRIAN BORDER PATROL at the Loibl pass in Lower Carinthia. Yugoslav claims on this region, based on the presence of a Slovene minority, were given up during the peace treaty talks of June 1949, but no final terms were drawn up during the year

which a claim had been relinquished and the question of compulsory repatriation of displaced persons, etc. When the talks were adjourned on April 8, to enable the governments to be consulted, the western deputies made a significant gesture in abandoning all reparations claims in their zones, subject to the Austrian government assuming an obligation to liquidate all Reich German ownership of the German assets in question.

By the time the Council of Foreign Ministers itself met in Paris (May 23–June 20) the situation had been substantially eased by the abandonment by the soviet government of support for Yugoslavia's territorial claims. The ministers agreed that, while no reparations should be exacted, Yugoslavia should retain all Austrian property rights and interests within Yugoslavia; that the U.S.S.R. should receive from Austria (1) $150,000,000 in freely convertible currency to be paid within a period of six years; (2) the assets of the Danube Shipping company in Bulgaria, Hungary and Rumania as well as eastern Austria; (3) concession rights to oil production areas equivalent to 60% of Austrian oil production, as also to 60% of all exploration areas in eastern Austria which come in the category of German assets, and that, in return, the U.S.S.R. should relinquish all property, interests or rights held as German assets or war booty, with the exception of the oil and shipping assets previously conceded. But the deputies were unable to compose their differences in the time allotted (by Sept. 1), and the negotiations were taken up again by the ministers in New York city on Sept. 23.

In internal politics, the Communists were unable to make any real impression on the emphatically western orientation of the country. Relations between the Socialist party and the Austrian People's party became somewhat strained in the middle of the year because of the latter's reputed electoral bargaining with certain prominent former nazis, and on July 13 a bill for a further amnesty for certain groups of incriminated nazis, which had been sponsored by the People's party, was defeated in parliament. But the makers of Socialist policy made it clear that they had no intention of breaking up the coalition before the general election; and, in the end, both the principal parties pledged themselves to its continuance, whatever the outcome of the polling.

The election produced little change in the balance of parties. The People's party won 77 seats, the Socialists 67, the Communists 5 and the Independents 16. This represented a loss of 8 seats by the People's party and 9 by the Socialists. The Communists gained one seat, chiefly on account of the defection of a left-wing Socialist leader, Erwin Scharf, who set up a left bloc shortly before the elections.

In February an occupation costs levy was imposed to defray the outstanding costs for 1948. On March 24 a four-year plan for Austrian agriculture was issued, to be operated within the framework of the European Recovery plan. The outlay was estimated at 4,900,000,000 schillings, with finance largely supplied by the farmers themselves. On May 8 the government announced its program of financial consolidation to replace the wage-price agreement of Sept. 1948. Trade agreements were made with Italy, Hungary (under U.S. auspices) and Germany. (*See* also COUNCIL OF FOREIGN MINISTERS.) (W. H. CAR.)

Education.—(1948–49) Elementary schools 5,016, pupils 829,326, teachers 25,601. Secondary schools (including commercial schools and training colleges) 695, pupils 73,949, teachers 10,301. Universities 4 and institutions of higher education 9, students 31,959.

Finance and Banking.—Budget estimates: (1948) revenue 5,294,000,000 schillings, expenditure 5,891,000,000 schillings; (1949) revenue 6,090,000,000 schillings, expenditure 7,531,000,000 schillings. Domestic debt (Dec. 1948) 10,671,000,000 schillings. Currency circulation (Sept. 1949) 5,817,000,000 schillings. Gold reserve (Sept. 1949) $4,900,000. Bank deposits (Aug. 1949) 5,367,000,000 schillings. Monetary unit: the *schilling*, which was devalued on Nov. 21, 1949, from the former official rate of 10 to the U.S. dollar to a basic rate of 14.4 to the U.S. dollar.

Foreign Trade.—Imports: (1948) 2,603,000,000 schillings; (1949, six months) 1,996,000,000 schillings. Exports: (1948) 1,984,000,000 schillings; (1949, six months) 1,583,000,000 schillings. Main imports: coal, cotton, wool and vegetables. Main exports: iron and steel products, lumber and paper.

Transport and Communications.—Roads (1947): 53,000 mi. Licensed motor vehicles (Dec. 1948): cars 26,775, commercial vehicles 39,275. Railways (1948): 3,758 mi.; passenger miles 4,414,000,000; freight net ton-miles 3,700,000,000. Telephones (1949): subscribers 219,164. Radio receiving set licences (1948) 892,058.

Agriculture.—Main crops (in metric tons, 1948): wheat 261,000; barley 125,000; oats 225,000; rye 289,000; potatoes 2,069,000. Livestock: cattle (May 1949) 2,125,000; sheep (Dec. 1948) 454,000; pigs (May 1949) 1,431,000; horses (Dec. 1948) 284,000; poultry (Dec. 1948) 4,114,000.

Industry.—Insured persons employed (Aug. 1949) 1,978,000. Fuel and power (1948): coal (in metric tons) 178,000; lignite (in metric tons) 3,336,000; natural and manufactured gas 388,000,000 cu. metres; electricity 4,213,000,000 kw.hr. Raw materials (in metric tons 1948): pig iron 613,000; steel ingots and castings 648,000. Manufactured goods (1948): cement 721,000 metric tons; leather shoes 2,269,000 pairs.

Automobile Industry.

In 1949 the long-standing U.S. production record of 1929 was shattered, with an output of 6,255,401 vehicles, one-sixth greater than the peak set 20 years before. Passenger car production reached a total of 5,119,911, an increase of 11.6% over 1929, 35.5% over 1941 and 31% above 1948. Motor truck output attained a mark of 1,135,490, a gain of 47.3% over 1941. Compared with 1948, however, there was a decrease of 18.5%. (*See* Table I.)

The 1949 wholesale value of passenger cars was estimated at $6,900,000,000, an increase of 42% over 1929, 169% over 1941 and 42% over 1948. Motor truck wholesale value was estimated at $1,560,000,000, an increase of 175% over 1929, 46% over 1941, but a decrease of 16% below 1948. The combined wholesale value of passenger cars, motor trucks and motor buses was $8,460,000,000, surpassing the previous peak of 1948 by 26%.

The activities of the U.S. automotive industry as a whole remained remarkably steady throughout the year in terms of number of units produced, despite the strike in one large company during part of May, and the major strikes in the steel and coal industries during the latter part of the year. This relative stability was made possible by purchasing reserve supplies of steel, coal and other materials in anticipation of a possible major strike in those industries.

Table I.—*Motor Vehicle Factory Sales From Plants Located in United States, 1949*

	Passenger cars	Motor trucks	Motor coaches	Total
January	326,019	104,599	658	431,276

Factory sales of passenger cars to the U.S. domestic market reached a total of 4,969,928, surpassing the 1929 total of 4,587,400 by 8.2%. Motor truck factory sales to the U.S. domestic market in 1949 was 1,007,938, compared with 1,173,115 in 1948, or a decrease of 14.2%. However, 1949 factory sales to U.S. domestic market surpassed all years prior to 1948. (*See* Table II.)

As in the preceding year, foreign markets continued to reflect shortages in U.S. dollars, resulting in a decrease of 35.6% in factory sales of passenger cars to foreign markets, and a decline of 37.3% in the motor trucks exported, or a combined decrease of 36.5%. The decrease was progressive throughout the year, with the lowest point reached in December.

Passenger car factory sales to foreign markets in 1949 comprised 2.9% of total passenger car factory sales, while motor truck exports represented 11.3%, compared with 6% for passenger cars and 14.8% for motor trucks in 1948. In 1947 passenger car exports represented 7.3% and motor trucks 20.3%. In 1929 passenger cars exported comprised 9.8% of total passenger car factory sales, motor trucks 36.7% of total truck factory sales, or combined car and truck exports of 13.7% of total factory sales. (*See* Table II.)

Table II.—*Factory Sales to U.S. Domestic and Foreign Markets, 1949*

The largest foreign demand for passenger cars in 1949 came from the Union of South Africa, Belgium, Luxembourg, Venezuela, Mexico, Hawaii, Cuba and Brazil. The leading markets for motor trucks came primarily from South American countries, particularly from Brazil and Venezuela, but Belgium, Luxembourg, South Africa, Mexico and India furnished a relatively strong demand for motor trucks. Even though the overall trend in exports was downward during the year, U.S. manufacturers continued to make every effort to keep foreign markets alive, since normally exports had accounted for approximately 10% of the industry's annual production.

The demand for motor trucks continued the trend toward a higher proportion of the lighter-type of vehicles. During the first 11 months of 1949, 45.3% of motor truck factory sales were in the class of 5,000 lb. and less gross vehicle weight (G.V.W.) compared with 36% in 1948 and 30.5% in 1947. The class 5,001–10,000 lb. G.V.W. comprised 25% of total truck factory sales in 1949, 19.2% in 1948 and 14.7% in 1947. (*See* Table III.)

Table III.—*Motor Truck Factory Sales by Maximum Gross Vehicle Weight* Groups From Plants Located in United States*

	1947 (1st 11 months)		1948 (1st 11 months)		1949 (1st 11 months)

*Gross vehicle weight includes weight of the truck and the maximum load.
Source: Automobile Manufacturers Association.

Of the special-purpose vehicles produced in 1949, station wagons showed the largest increase. Cab-over-engine trucks and school-bus chassis showed a considerable drop in output, as did six-wheel trucks. Multistop delivery trucks, used by dairies, laundries and other door-to-door delivery type services, experienced a small increase during the year. (*See* Table IV.)

With the increase in number of new vehicles added to the rolling stock on the highways, the demand for replacement parts and accessories in 1949 reflected a passing of the most critical

Table IV.—*U.S. Factory Sales of Special-Purpose Vehicles*

Types	1st 9 months 1949	1948
Station wagons	85,271	78,925
Cab-over-engine trucks	10,896	24,195
Multistop delivery trucks	16,579	15,905
Trucks with diesel engines	4,028	4,329
Trucks with 6 wheels and 3 axles	3,435	4,496
School bus chassis	12,314	20,810

Source: Automobile Manufacturers Association.

need for repairs. There was a decline of 23% in the dollar value of replacement parts and accessories sold in 1949, compared with the preceding year. Even with such a sizable decline, the aggregate dollar value of $1,962,000,000 represented one of the major industrial activities of the United States. The preceding year established a peak of $2,553,000,000. (*See* Table V.)

The shortage of steel and other raw materials was almost at an end in 1949, although steel at times was a limiting factor in production, especially toward the end of the year when major strikes in the steel and coal industries were in progress. In the first eight months of 1949, the automotive industry consumed 18.3% of total finished steel produced in the United States, compared with 15.3% in 1948 and 14.7 in 1947. The industry also consumed 39.5% of all alloy steels except stainless, and 20.5% of the total stainless-steel shipments. The industry used 16.9% of the carbon steel.

Employment in the industry in 1949 averaged 655,000 production workers, and a total of 782,000, including salaried workers. The number of production workers was only slightly below the 657,600 employed in 1948. (*See* Table VI.) Earnings per week averaged $66.40; hours of work, 39.2. Average hourly earnings for production workers were $1.695. The aggregate pay roll of production workers in 1949 was $2,265,000,000, or $43,000,000 a week.

Registrations.—Preliminary registration totals released by the U.S. bureau of public roads for the end of 1949 were 35,491,000 passenger cars and 7,807,000 motor trucks and buses, or a combined total of 43,298,000. This was an increase of 6.7% over 1948 for passenger cars and 6.1% for motor trucks. Compared with the prewar year 1940, motor truck registrations in 1949 reflected a greater increase than that of passenger cars, with a gain of 68%, as against an increase of 30% for passenger cars. The largest numerical increase in registrations occurred in the states of California, Texas and New York. (*See* Table VII.)

The latest count of passenger cars in use by year model was for July 1, 1948; it showed that there were 12,439,000 units ten

THE *VOLKSWAGEN* or "People's Car," long promised the German people by Hitler, was at last in production in 1949 at the rate of more than 3,000 a month. One of them is shown here on exhibit in New York city

years or more of age, representing 41.9% of the total count of 29,968,000. It was expected that the July 1, 1949, count would show only a slightly reduced percentage of cars ten years or older as compared to 1948. Another tabulation made by the R. L. Polk and Co. as of July 1, 1948, covering motor trucks, showed a total of 2,251,000 units ten years or older, comprising 34.5% of the total of 6,605,000 vehicles registered on that date. As in the case of passenger cars, the percentage of vehicles ten years or older on July 1, 1949, was expected to be only slightly smaller than the 34.5% shown in 1948. The prewar average age of passenger cars was approximately 5.6 years, and the motor truck average age in the 1940 and 1941 period was 5.7 years. The peak average age of motor vehicles in use occurred in 1946—9.0 years for passenger cars and 8.6 years for motor trucks. In 1941 the R. L. Polk and Co. count showed that 17% of the passenger cars registered were ten years or more of age, and motor trucks ten years or older comprised 18% of total registrations.

From the end of World War II through Dec. 1949 the cumulative total number of passenger cars produced in plants in the United States was 14,805,590, and the aggregate total for motor trucks and buses was 4,833,524.

Prices and Imports.—U.S. motor vehicle prices appeared to have reached a peak level in 1949, and there were several decreases in prices as shown by the index in several months during the year; but the net gain up to Nov. 1949 was 6.4%, compared with the 1948 average for passenger cars, while the motor truck wholesale price index for November was the same as the 1948 average, according to the U.S. bureau of labour statistics. Compared with Dec. 1941, the average wholesale price for passenger cars reflected an increase of 58%, while that of motor trucks showed a gain of 54.3%. The weighted average wholesale price index for passenger cars and trucks combined reflected a gain of 57.2% over the Dec. 1941 base. Most used car prices continued on the downward trend.

Imports of motor vehicles into the United States during the first ten months of 1949 were 5,493 passenger cars and 462 motor trucks; 5,353 of the passenger cars and 367 of the trucks were imported from the United Kingdom. In the full year 1948, imports of passenger cars were 28,047, and trucks, 684; nearly all were from the United Kingdom.

Table VII.—*Registrations of Motor Vehicles in the United States*

Dec. 31	Passenger cars	Buses	Trucks	Total
1940	27,372,397	72,641	4,590,386	32,035,424
1941	29,524,101	88,800	4,859,244	34,472,145
1942	27,868,746	102,093	4,608,086	32,578,925
1943	25,912,730	106,702	4,480,176	30,499,608
1944	25,466,331	106,518	4,513,340	30,086,189
1945	25,691,434	112,253	4,834,742	30,638,429
1946	28,100,188	119,937	5,725,692	33,945,817
1947	30,718,852	128,983	6,512,628	37,360,463
1948	33,261,454	133,430	7,227,380	40,622,264

Source: U.S. Bureau of Public Roads.

Canada.—Shipments of motor vehicles from plants located in Canada during the first 11 months of 1949 were 173,927 passenger cars and 90,786 trucks, or an increase of 17% for passenger cars and 2% for trucks, compared with 1948. Exports of motor vehicles from Canada during the first 11 months of 1949 decreased considerably under the same period of the previous year. Also, the proportion of total shipments exported dropped from 17.9% for passenger cars in 1948 to 8.9% in 1949, while the proportion of motor trucks exported dropped from 24.3% in 1948 to 13.5% in 1949. The proportion of total output of motor vehicles in Canada that was exported in 1949 was considerably greater, however, than the proportion exported from U.S. plants; but the proportion of output going to foreign markets from Canadian plants was far below the proportion exported by Great Britain and France.

Great Britain.—Motor vehicle production in Great Britain during the first ten months of 1949 continued the postwar upward trend, with an increase of 19% in passenger cars and 23% in motor trucks over the same period in 1948. Exports likewise continued the postwar upward trend in 1949, as shown in Table VIII, but the proportion of production exported dropped somewhat below that of 1948. In 1949, 64.7% of passenger cars were exported, and 47.5% of motor trucks, or a combined total of 58.6% of total production. In 1948, 71.3% of passenger cars were exported, while 48.4% of motor trucks, or a combined total of 63.5% of motor vehicles built, were exported. Motor truck production in 1949 established a new high mark.

Table VIII.—*Motor Vehicle Production and Exports in Great Britain*

Production	Passenger cars	Commercial vehicles	Total
First 10 months 1949.	333,832	176,474	510,306

First 10 months 1946.	45.9	35.0	41.5

Germany.—Production of passenger cars in the first nine months of 1949 was 67,350 units, and motor truck and bus output reached 49,050, according to the Dec. 15, 1949, issue of *L'Argus*, compared with 17,878 passenger cars and 17,417 trucks in the first nine month of 1948, for western Germany. (*See* also MOTOR TRANSPORTATION.) (O. P. P.)

Automobile Insurance: *see* INSURANCE.

Automobile Racing.

Bill Holland of Reading, Pa., after being second to Mauri Rose of South Bend, Ind., two straight years, roared over the finish line in record-breaking time to capture the 500-mi. Memorial day classic at Indianapolis speedway in 1949. Driving his Blue Crown Special at an average speed of 121.327 mi. per hour, Holland was clocked in 4 hr. 7 min. 15.97 sec. The previous average mark of 119.813 m.p.h. was set by Rose in 1948.

A crowd of 175,000 cheered Holland, who had been locked in a close contest with Rose until Rose was forced out by engine trouble on the 190th lap.

Second place was taken by Johnny Parsons, Van Nuys, Calif., winner of the American Automobile association point championship for 1949. George Connor, Speedway City, Ind., was third and Myron Fohr, Milwaukee, Wis., fourth.

A number of crashes marked the trials and the final, Duke Nalon cheating death on the 24th lap when a wheel tore loose and his Novi Mibil Special burst into flames as it struck a wall. Nalon had set a first-lap record of 126.564 m.p.h. and had accumulated $2,300 in prize money. The former high of 123.02 m.p.h. had been established by Rex Mays, Glendale, Calif., the year before. Mays, a veteran star, met death on Nov. 6, at Del Mar, Calif., when his car struck a hole and threw him into the path of another racer.

Alex Xydias, Burbank, Calif., set a world record of 153 m.p.h. in the first annual speed meet for American stock power motor cars at Bonneville Salt Flats, Utah. Xydias held the previous mark of 138.74 m.p.h. (T. V. H.)

Aviation, Civil.

Most branches of aviation experienced substantial improvement in 1949. The air lines in general reported their greatest peacetime activity and profits, the manufacturing industry continued to improve its financial position and personal aviation established a stronger foothold in the agricultural and industrial markets.

Scheduled Air Transport.—Scheduled air lines of the world, exclusive of the U.S.S.R., operated about 3,800 aircraft of all types at the end of 1949. Approximately three-fourths of all these transports were of U.S. manufacture. Aircraft produced in the United States carried about 90% of the world's scheduled air traffic. Principal U.S. air-line transport types in production at the year end were the four-motored Boeing Stratocruiser, the Lockheed Constellation, the Douglas DC-6 and the twin-motored Consolidated Vultee 240 and Martin 2-O-2.

Table I.—*U.S. Scheduled Air Carrier Operations*

(Calendar year)

	1948	1949 (CAA estimate)
Revenue passengers carried—Total	14,540,951	16,500,000
Domestic	13,168,095	15,000,000
International	1,372,856	1,500,000
Revenue miles flown—Total	436,270,224	459,691,000
Domestic	338,216,783	352,384,000
International	98,053,441	107,307,000
Revenue passenger-miles flown (000)—Total	7,852,177	8,800,000
Domestic	5,963,180	6,700,000
International	1,888,997	2,100,000
Passenger-miles flown (000)—Total	8,189,726	9,218,000
Domestic	6,227,932	7,012,000
International	1,961,794	2,206,000
Ton-miles of express carried—Total	71,497,167	80,233,000
Domestic	30,092,833	26,469,000
International	41,404,334	53,764,000
Ton-miles of freight carried—Total	75,472,194	106,095,000
Domestic	71,283,727	97,724,000
International	4,188,467	8,371,000

Throughout the world the DC-3s and DC-4s, largely war surplus equipment, were still the main work horses of the air lines, but in the United States air carriers were fast changing over to the more efficient postwar types of equipment. American Airlines, Inc., for example, retired the last of its prewar planes from passenger service during the first half of the year and by December was operating with 50 DC-6s and 74 Convairs.

Scheduled American air carriers operated 1,083 planes on both domestic and international services by the end of 1949, and carried close to two-thirds of the world's air traffic. The year 1949 was the biggest the air lines of the United States had experienced to date. An estimated 16,500,000 passengers were carried a total of 8,800,000,000 passenger-mi., representing about a 12% increase over 1948. Scheduled U.S. domestic and international air lines employed 78,500 persons in the fall of 1949 and provided service to 705 U.S. cities, as well as their overseas points of call. It was estimated that the domestic lines were carrying 43% of the first-class rail and air travel market in the U.S. in 1949 as against 39% in 1948 and only 13% in 1945.

The year 1949 witnessed the introduction of air coach travel on a wide scale. Irregular carriers, operating under exemption permits from the Civil Aeronautics board, had proved that lower fares and less emphasis on the usual air travel luxuries would attract many new passengers to air travel, and one by one the major certificated air lines entered the coach field. Pan American World Airways' coach-type service between Puerto Rico and New York, inaugurated in the latter part of 1948, proved very popular during 1949 and the record disclosed little diversion of first-class passengers to the new coach service. Capital Airlines' initial coach service between New York and

THE BRITISH DE HAVILLAND COMET (left), world's first jet-driven air liner being readied for its maiden flight in 1949. Designed for express runs on Commonwealth and intercontinental routes, the plane had a speed approaching 500 m.p.h. and was expected to be in service in 1952

Table II.—*U.S. Scheduled Air Carrier Operating Revenues and Income*

(Calendar year)	1948	1949
Revenues:		
Domestic trunk air lines	$413,353,000	$460,000,000
International air lines	249,234,000	283,000,000
Feeder air lines	16,292,000	21,000,000
Total revenues	$678,879,000	$764,000,000
Income:		
Domestic trunk air lines	$ 2,075,000	$25,800,000
International air lines	13,947,000	20,000,000
Feeder air lines	369,000	(1,000,000)*
Total income	$ 16,391,000	$44,800,000

*Loss.

Chicago was an immediate success and by the last week of Dec. 1949 both American Airlines and T.W.A. (Transcontinental & Western Air) had begun low cost ($110) transcontinental coach service between New York and California. Many regarded the widespread introduction of coach service during 1949 as a significant step toward ushering in an era of mass air travel.

Substantial improvement in passenger and cargo traffic, increased mail pay and a reduction in unit operating costs through the installation of new postwar equipment and more efficient operations, combined to produce the best revenue period since World War II for U.S. carriers. Gross revenues increased about 13% over 1948, according to Air Transport association estimates, totalling $764,000,000 in 1949, as compared with $678,879,000 in 1948. Gross operating expenses were estimated at $720,000,000 as against $662,558,000 in 1948, resulting in a major increase in net operating income to more than $44,000,000 for 1949—an impressive improvement for an industry which was operating heavily in the red only three years before. Of the total 1949 revenues, passenger traffic contributed about 72%; mail 18%; with freight, express, excess baggage and other services making up the remaining 10%.

While the 14 feeder air lines experienced substantial increases in all categories of traffic except mail during 1949, most of them were too new to be out of their initial developmental period. E. W. Wiggins Airways, for example, operating in New England, and Central Airlines in Texas and Oklahoma, did not begin operations until Sept. 1949. Helicopter Air Service, serving the Chicago area, commenced operations Aug. 20, 1949. It was the second helicopter mail service to be started, following Los Angeles Airways, which began in May 1947. The Civil Aeronautics board finally awarded five-year temporary all-cargo operating certificates in Aug. 1949 to Slick Airways, Flying Tigers and U.S. Airlines, culminating a three and one-half year battle for recognition on the part of these "irregulars" against determined opposition from the major certificated carriers.

Safety Record.—In spite of four unfortunate accidents in the last half of the year, U.S. scheduled air lines set a new safety record in 1949, operating domestically and on routes around the globe at an over-all average rate of 1.0 passenger fatality per 100,000,000 passenger-mi. On international routes U.S. carriers had a perfect safety record, flying 2,100,000,000 passenger-mi. during the year. On domestic routes, the safety record was the same as in 1948; namely, 1.3 fatalities per 100,000,000 passenger-mi.—but the air lines flew more than 1,000,000,000 more passenger-miles than during the year before; this was the equivalent of 3,000 trips around the earth at the equator for each of the 93 passenger fatalities. Two of the accidents during the year were caused by nontransport craft colliding with regular air liners. (*See* also DISASTERS.)

Other U.S. Civil Aviation Activities.—There were an estimated 510,000 certificated pilots in the United States at year's end, as against 491,306 the preceding year. Of these, 9,678 were women pilots. About 1,800 women were rated as air traffic control operators, about one-fifth of the total in that specialty. The number of new student and private pilot certificates issued showed a sharp decrease. Partly because of a revision of its records, the Civil Aeronautics administration reported a decrease in the number of civil aircraft registered, to 92,700 at the end of the year. The number of airports in operation remained about 6,100.

As a result of the growing use of landing and air navigation aids installed on the federal airways by the CAA, the air lines continued to increase the regularity of their scheduled operations without reducing safety standards. Instrument landing systems were in daily use at 87 points in the continental U.S. and at 2 points in Alaska. Static-free very high frequency radio ranges were installed at 370 points by the end of the year. Under the Federal Aid Airport program, the CAA made grants totalling about $99,000,000 for improvements at 783 different airports. (*See* also AIRPORTS AND FLYING FIELDS; CIVIL AERONAUTICS ADMINISTRATION.)

Meanwhile, the Civil Aeronautics board was wrestling with approximately 1,100 undecided proceedings which had piled up on its calendar, including new route applications, proposed mergers, interchange agreements, foreign permits, mail rate decisions and other matters importantly affecting the economic future of the air-line industry.

Other Western Hemisphere Activities.—Trans-Canada Air Lines handled a record volume of traffic on its domestic and overseas routes in 1949, carrying more than 690,000 passengers, an increase of 23% over 1948. Air cargo and air express were up 55%, totalling more than 3,600,000 ton-mi. Mail was almost double the 1948 total, exceeding 3,900,000 ton-mi. Financial results were not reported, but in 1948 T.C.A. showed a loss of about $3,000,000, 60% of which was on its overseas services across the Atlantic and to the Caribbean, and 40% on domestic operations. The route from Montreal, Que., to Bermuda and Trinidad was flown once a week with Canadair Fours. On Dec. 1, 1949, it was extended to Barbados.

Canadian Pacific Air Lines, which at first had been refused permission to operate international services, and then had been awarded the transpacific route, had negotiations under way at the close of the year to extend its services beyond Australia to Auckland, N.Z. Altogether, there were eight private carriers in Canada authorized to operate scheduled services, three of which were reported to have shown profits. In addition, there were about 150 private operators whose gross revenues exceeded $10,000 a year.

Four Canadian aircraft manufacturing companies produced civil aircraft during 1949: the Canadian Car and Foundry company produced the Norseman; the de Havillands, the Chipmunk and the Beaver; Canadair Ltd., the Four; and A. V. Roe Canada, Ltd., the Avro C.102 Jetliner. The last named was the first jet-powered civil transport to fly in the western hemisphere.

In Argentina one of the most imposing airports in the world, the Pistarini International airport located 15 mi. from Buenos Aires, was opened to traffic on Oct. 27, 1949. The four Argentine air lines, however, had reported heavy losses ever since the government took them over a few years before. Fama, the principal international air line, which had been expected to commence operations between Buenos Aires and New York in 1949,

Table III.—*Selected Statistics for U.S. Civil Aviation*

(Calendar year)	1948	1949 (CAA estimated)
Number of certificated pilots	491,306*	510,000
Number of student pilot permits issued	117,725	45,000
Number of private pilot certificates issued	86,838	30,000
Number of commercial pilot certificates issued	8,151	7,300
Number of air-line transport pilot certificates issued	1,110	1,000
Number of U.S. civil aircraft	96,000	92,700
Number of four-engine civil transports	433	455
Number of two-engine civil transports	604	610
Number of civil airports	6,016	6,100

was planning to do so during 1950.

In Brazil, Panair do Brasil maintained four round trips a week to Europe, Africa and the middle east with Constellations. Together with Cruzeiro do Sul it operated seven round trips weekly to Uruguay, Argentina and Paraguay. These two carriers and Aerovias Brasil accounted for more than three-fourths of Brazil's air-line traffic.

At La Paz, Bol., which boasts the highest airport in the world (altitude 13,398 ft.), Braniff Airways operated DC-4s using jet-assisted take-off (Jato) and Panagra was planning to extend similar Jato DC-4 operations into other high-altitude airports along the Andean chain, notably at Cochabamba, Bol., and Arequipa, Peru.

Pan American World Airways' Latin American division reported a record year for 1949, carrying 709,000 revenue passengers a total of 586,000,000 passenger-mi., compared with 683,600 passengers and 548,000,000 passenger-mi. in 1948. Cargo totalled 16,650 tons in 1949, compared with 14,620 tons the preceding year. The Latin American division completed four and one-half years of accident-free operation as of Dec. 31, 1949, during which about 2,500,000,000 passenger-mi. were flown without injury to passengers or crew. (*See* also AIRCRAFT MANUFACTURE; AVIATION, MILITARY; CIVIL AERONAUTICS ADMINISTRATION; JET PROPULSION; PETROLEUM; POST OFFICE.)

(J. P. V. Z.)

Great Britain and Europe.—Relatively little expansion occurred in European air transport during 1949. There were few new services; and few new types of aircraft were put into service but business on the air lines generally improved. The Dutch and the Belgian lines (K.L.M. and Sabena) had a surplus on operations in 1948. Sabena appeared to have made a profit on the work in 1949. K.L.M. had its line to the east closed for two months and diverted for another five months by the closing of Pakistan to its aircraft, and, like the other major operators, showed a loss on the year. Yet almost without exception the European air lines were busier than they had been in 1948. As compared with 1948, passengers were more by 35% and aircraft movements were more than double. At London airport aircraft movements rose from 1,145 in Dec. 1948 to 2,423 in July 1949 and at Northolt, in the same months, the rise was from 1,319 to 4,565. These figures marked the peak of the holiday season but they also marked a large increase over the corresponding period of 1948.

The general rise in the volume of traffic in 1949 seems to have amounted to about 30%.

Competition for the improved traffic remained as keen as ever and was no doubt responsible for the failure in the early part of the year of an Anglo-American attempt to introduce the full freedom of the air for the whole of Europe outside the Russian-controlled areas. The proposal, sponsored by the United Kingdom and the United States, that the existing bilateral air agreements (giving reciprocal rights of operation) should be replaced by multilateral agreements (giving general freedom to operate commercial services) was rejected by a regional conference of the International Civil Aviation organization held at Geneva, Switz.

Authority to operate international services had, therefore, still to be sought by individual negotiation and countries were still inclined to make their air agreements depend on the conclusion of satisfactory bargains. This was beginning to be modified by pooling arrangements on certain routes. The United Kingdom had a pooling agreement with France before World War II on the route between London and Paris. A similar arrangement was reported in 1949 between K.L.M., Scandinavian Airlines system, the Czech line and one of the Italian companies on certain common routes. The precise terms of these agreements were not disclosed but their effect was expected to restrict some forms of competition as well as lead to some measure of co-operation.

Passenger fares, agreed upon by operators through their established International Air Transport association, remained steady at an average of $7\frac{1}{2}$*d.* a mile on European routes. Throughout the year there was some pressure toward lowering freight rates and toward introducing lower passenger rates on nonregular services. Indirect competition by British charter companies, which were forbidden to operate regular services, had been checked partially by allowing a number of them to become "associates" of British European airways, operating particular services under agreements specifying frequencies and fares. With the return of aircraft from the Berlin air lift, there was a renewal of the movement toward cheaper fares. One charter company, operating Tudor II and Tudor V aircraft, offered them at rates which, if all seats were filled, would represent 2*d.* to 3*d.* a passenger-mile. As the overheads of air line com-

WILLIAM ODOM'S MONOPLANE taxiing to a halt at Teterboro, N.J., March 8, 1949, after flying 5,300 mi. from Honolulu, T.H., a long-distance nonstop record for light planes. Odom was killed in an air crash Sept. 5

panies were not supposed to exceed 33% of total costs, this seemed to argue that fares should not be so high as 7½*d.* a mile even if air-line companies assumed that, on the average, they could not expect to fill more than 60% of their aircraft capacity.

The two British corporations—British Overseas Airways and British European Airways—were engaged during 1949 in reorganizations designed to reduce overheads and to diminish the losses on their operations. In the middle of the year the smaller, third corporation, British South American Airways, was amalgamated with B.O.A.C. This was a direct result of the ban put on passenger-carrying in Tudor I and Tudor IV aircraft after two had been lost inexplicably over the Atlantic. This left B.S.A.A. with an inadequate fleet and with no prospect of acquiring quickly other types of suitable aircraft. B.O.A.C. on the other hand had good aircraft prospects. Not only had it six Stratocruisers on order but it had succeeded in acquiring from Scandinavian Airlines system the right to four more which were on order for that company. It had also taken over from the Irish company 4 additional Constellations; and it was expecting delivery of 22 Canadair Argonauts and 25 Hermes IVs. The deliveries of the Hermes IVs and the Stratocruisers were much delayed and B.O.A.C. was somewhat handicapped both in handling its own business and in providing for the services which B.S.A.A. had intended to operate.

British European Airways, equipped chiefly with Viking aircraft, had fully recovered from its early difficulties with this type and did good business during 1949. In the preceding financial year its losses were about £2,250,000. Improved traffic, combined with more economical management and maintenance, gave a much better outlook for the financial year ending in March 1950. The signs were that the deficit would be reduced by about £1,000,000. B.O.A.C., which lost £5,250,000 in 1948–49, had not begun to feel the benefit of its new aircraft and was not expecting to show large additional savings on the year 1949–50. This corporation had already made notable economies in administration and reduced its deficit by nearly £2,000,000 in the course of the previous financial year.

To fill capacity was the chief difficulty of air operators in a period of high fares and many competitors. Evidence of the competition was to be found in the fact that 17 international air companies used London airport regularly during 1949, although the daily passenger totals at that airport varied only between 600 and 1,000 and the daily freight loads between 20 and 25 tons. Standards of operation and the quality of the aircraft in use were becoming important factors in securing traffic as well as in economical running. During 1949 the first signs appeared of a probable British advantage on the air lines serving Europe. These arose from the successful application of the gas turbine to the needs of commercial air transport.

In all other countries except Canada, the gas turbine, at the stage of development it had reached in 1949, had been considered unsuitable for commercial operation, largely because of its high rate of fuel consumption. In the face of that prejudice, British and Canadian constructors had proceeded with the preparation of air liners using gas turbines both as the motive power for driving airscrews and as the means of providing jet propulsion. The disadvantage in fuel consumption per horsepower-hour or per pound-thrust was admitted but a counterargument based on cost per passenger-mile or on the probable return on capital invested was advanced by the aircraft manufacturers. Proof that this argument must be taken seriously was contained in the interest shown by United States operators when the first batch of gas turbine aircraft was exhibited during 1949. There were four liners of various sizes using gas turbines to turn their airscrews. These were the Vickers Viscount 40- to 53-seater, the Armstrong Whitworth Apollo 26- to 41-seater, the Handley Page Hermes V 48- to 74-seater and the Miles Marathon 16- to 20-seater. One jet liner, the de Havilland Comet 36-seater appeared in England and one, the Avro Jetliner 36- to 40-seater, in Canada. The designer of the Viscount produced figures to show that it could be operated as cheaply per passenger-mile, up to a maximum practical range of 900 mi., as a comparable piston-engine liner. These figures had yet to be tested in conditions of regular service, but early experience with liners of this type suggested that an additional economic advantage might be derived from the smooth running and relative absence of vibration in the rotary engine which is responsible for a large part of the cost of airframe and instrument maintenance. This fact impressed air-line operators, first because of its probable attractiveness to passengers and also because of other economic implications. These aircraft did not offer high speeds. They were likely to cruise at speeds between 270 and 330 mi. per hour but they did appear to offer new standards of passenger comfort.

The one new liner which promised high speed was the Comet. A number of its long-range test flights were made at a speed of about 500 mi. per hour. To obtain this speed it flew at heights between 36,000 ft. and 40,000 ft. If operators should decide to fly it at a lower level, the cruising speed might be 450 mi. per hour or less. Its value on a highly competitive route like that between Europe and America was so obvious that the appearance of the first Comet caused a stir among operators and aircraft manufacturers alike in the United States. Sixteen Comets were ordered, 14 of them for use by British Overseas Airways.

About 40 Viscount turboprop liners were also ordered for use by the two corporations and these also were thought likely to go into service in 1953. There were also indications that B.O.A.C. expected good results from the 140-ton flying-boats which were being built by Saunders-Roe. This type too would use gas turbines to turn its airscrews and was expected to cruise at 380 mi. per hour.

The commercial version of the Bristol Brabazon seemed likely to appear two years later.

There was little news of developments in the U.S.S.R. A big network of air services was still being operated inside the country but few outside, and there was no information of new air liners. (E. C. SD.)

Aviation, Military.

United States Air Force.—Operation "Vittles," until the lifting of the rail and road blockade of Berlin, Germany, on May 12 by the Russians, was a major U.S. air force activity during 1949. The Berlin air lift had begun operations on June 26, 1948, by flying, in a 24-hr. period, 80 tons of food and other needed supplies into Berlin. The planes during the first days of the project were two-engined C-47s. The amount of supplies flown by air was greatly increased by the addition of four-engined C-54 transports and by May 12, 1949, a total of 195,998 flights had been made by U.S. and British transports, carrying 1,589,567 cargo and passenger tons. With the announcement of the lifting of the rail and road blockade, the combined air lift was gradually inactivated as part of a plan to reduce the scope of operations. This phasing out continued until Sept. 30, the closing day of the Berlin air lift. During its 15 months of operation, U.S. planes had massed a total of 591,347 flying hours and U.S. air lift planes, including navy transports, carried 1,783,826 tons of food, coal and other supplies into Berlin. British planes on the air lift had flown 538,416 tons through the air corridors to Berlin in addition to the U.S. tonnage.

Production of the Consolidated B-36 long-range bomber continued during 1949 and it was announced that a second U.S.A.F. operational group was equipped with the B-36 by June 30. Four

J-47 jet engines were installed on a B-36D, giving more than 20,000 additional pounds of thrust to the 21,000 h.p. supplied by the six Wasp-Major engines with which the pusher-type bomber was equipped. Jet engines were being added to all existing B-36s.

The nonstop around-the-world flight of an air force B-50 bomber, the "Lucky Lady II," Feb. 26 to March 2, 1949, demonstrated progress in increasing the range of aircraft by inflight refuelling and fuel conservation by cruise control techniques. The B-50 left Carswell air force base, Fort Worth, Tex., Feb. 26, headed east and landed at the take-off point after being aloft 94 hr. 1 min. B-29 tanker planes refuelled the "Lucky Lady II" by a flexible-hose gravity-feed system at four points along its global route of more than 23,000 mi.

The Boeing B-47 Stratojet, a high-speed medium bomber powered by six jet engines, established a record flight for bombers by flying from Moses Lake, Wash., to Andrews field, Camp Springs, Md., on Feb. 8, 1949, in 3 hr. 46 min. The 125,000-lb. bomber, accepted by the air force late in 1948, utilized a new type landing gear with wheels mounted in tandem or bicycle fashion.

Four new jet fighter planes were among the new aircraft to be test flown during the year. One of these, the XF-92A, formerly designated the Model 7002 research plane, was a radically designed fighter using the Delta wing for the first time. Experimentation and evaluation of the aerodynamic characteristics of the Delta wing, which has a sweepback of 60°, had previously been conducted in wind tunnel tests.

The Republic XF-91, interceptor, and the Lockheed XF-90, penetration fighter, made initial flights at Muroc air force base, Calif. Flight evaluation of the XF-94, a radar-equipped advanced design of the Lockheed TF-80, was also made.

Two trainer aircraft were test flown in September. The North American T-28, a single-engined low-wing monoplane, was designed to replace the T-6 Texan, which was used widely in training pilots during World War II. The T-28 included several improvements over its predecessor. The T-29, a modification of the Convair Model 240 transport, was designed to train student navigators. This flying classroom had 14 stations, each equipped with a Loran scope, radio compass, altimeter, airspeed indicator, drift meter and map table.

Other new aircraft included the XC-123, a twin-engined assault transport, and an experimental bomber, the Martin XB-51. Powered by three turbojet engines, the XB-51 was the first postwar aeroplane specifically designed for the destruction of surface targets in co-operation with ground forces. The XB-52, which was under development, was a jet long-range heavy bomber.

The total number of officers and airmen on duty in the U.S.A.F. reached 419,919 as of Aug. 31, 1949. This total represented full-time military personnel, regulars and reserves, on active duty.

As of July 1949, there were 9,400 U.S.A.F. planes in active status including postwar types. Included in this total were combat and utility aircraft.

A new distinctive blue uniform, identical for officers and airmen except for insignia of rank, was approved by the air force at the beginning of the year. All airmen were to be equipped with new uniforms by Sept. 1, 1950.

The headquarters of four numbered air forces (the 1st, 10th, 14th and 15th) and several tactical units in the United States were relocated and six tactical groups were scheduled to be inactivated in accordance with a program of economies announced in August by the department of defense. Under this plan, nine bases were declared surplus to the needs of the U.S.A.F.; and disposal, under the provisions of public law 152, 81st congress, was initiated. The group structure of the air force was reduced from 54 to 48. In Oct. 1949, the congress passed legislation authorizing a group structure of 58.

A major air force peacetime activity, Operation "Haylift," a 24-day emergency air lift to supply snowbound ranchers in the Nevada area, ended Feb. 18, 1949, after 1,879 tons of cattle feed, food rations, medical supplies and emergency medical equipment had been dropped from 27 Fairchild C-82 Packets and 10 Douglas C-47s. More than 100 U.S.A.F. personnel took part in the emergency flights.

Air Indoctrination Course II, a special exercise conducted by the U.S. air force in co-operation with the U.S. army and U.S. navy, was held at Eglin air force base, Valparaiso, Fla., beginning Oct. 11. The manoeuvres, the fourth in an annual series, were held to indoctrinate students of the various U.S. and foreign armed forces service schools and other observers in the tactics and techniques of air-ground operations. Long-range emergency air-raid defense plans were tested in a 10-state aircraft detection exercise, sponsored by the air defense command and assisted by the Office of Civil Defense Planning. The six-day exercise, known as Operation "Lookout," utilized both radar and civilian ground observers serving on a voluntary basis.

(H. S. Vg.)

United States Navy.—Reduction of the aeronautic organization of the U.S. navy to the level permitted by the national military establishment budget for fiscal 1950 began early in 1949. By July, the number of operating and support aircraft was lowered to 10,500, aviation officers to 12,205, and enlisted rates to 63,490. By the same month, 3 battle, 5 attack, 3 light, and 3 escort carriers and 14 aircraft tenders were operating with the fleet; active aviation shore stations numbered 60; overseas bases, 13.

Several Pacific bases were closed and some Atlantic bases used in World War II were reactivated.

Flight training was concentrated at Pensacola, Fla., and Corpus Christi, Tex., and technical training at Memphis, Tenn. The F8F fighter, AD attack plane, and P2V patrol plane were introduced in flight courses and jet fighters were introduced in operational training.

The organized reserve was expanded to 7,800 officers and 21,500 men. Training was conducted on a year-round basis and 15 air groups completed two-week cruises aboard carriers. Reserve squadrons of the marine corps carried out their annual summer mobilization and manoeuvres at Cherry Point, N.C., and El Toro, Calif.

In fleet operations, naval aviation literally covered the globe. The carrier "Tarawa" completed her around-the-world cruise in February. A carrier task force operated in the Mediterranean for the entire year. The escort carrier "Palau" conducted cold weather tests off New England in January, and during the summer, navy and coast guard helicopters and air force RB-17s flew aerial reconnaissance for a naval force supplying weather bureau stations in the arctic. Patrol squadrons completed aerial photographic surveys in Alaska, Labrador, Newfoundland and Central and South America. Naval and marine air covered the amphibious landings of troops in Atlantic fleet exercises in the Caribbean during the spring. In a Pacific fleet minor cold weather exercise, amphibious landings on Kodiak Island were supported by navy and marine squadrons operating from carriers against the opposition of shore-based air force and navy squadrons.

On March 4, the "Caroline Mars," one of four large seaplanes operating with fleet logistic support wings, Pacific, broke a record by carrying 263 passengers in addition to her crew of 6 from San Diego, Calif., to Alameda, Calif. The same month, a P2V-3C patrol plane with a 10,000-lb. bomb load took off from the carrier "Coral Sea" in the Atlantic, flew across the United States to drop its bomb load and returned nonstop to Patuxent river, Md., after a flight of more than 4,000 mi.

Naval planes assisted the air force in Operation "Haylift" during February, dropping 1,100 tons of hay to snowbound cattle on the western range. In support of the Berlin air lift, Operation "Vittles," aircraft and engines were overhauled and repaired, GCA crews and equipment were transferred, and transport squadrons redeployed. Navy squadrons VR-6 and 8 participated in the air lift from Nov. 1948 to June 1949. VR-8 not only carried the most tons in any month, but with VR-6 a close second led all air force and navy squadrons in the efficient use of aircraft over the entire period.

The former seaplane tender "Norton Sound," placed in operation early in the year as a test ship, aided in solving many launching and directing problems in the field of guided missiles. Wind tunnel facilities and equipment were improved. Research in turbojet engines increased performance. The jet fighters F2H Banshee, F9F Panther, and F6U Pirate and the conventional attack planes AD-3 Skyraider and AM-1 Mauler, which was capable of carrying a heavier bomb load than any known single-engined plane, were operating with the fleet. Helicopters had replaced single-engined seaplanes on battleships and cruisers. Work was begun on the modernization of three carriers and installation of more powerful deck gear for the operation of larger aircraft. (*See* also NAVIES OF THE WORLD.)

(C. T. D.)

Air Forces of the World.—The outstanding development of the year 1949 was the formal ratification through the North Atlantic treaty (*q.v.*) of the policy through which England was already furnishing jet fighters and engines to nations of the western European union and their democratic neighbours, under the Brussels treaty of 1948. Nations which signed the Atlantic pact of March 1949, or were in sympathy with its purposes, had already begun to equip their air forces with British Vampire and Meteor fighters. British jet engines were also available to them.

France purchased British fighters and was beginning to manufacture British jet engines under licence. Belgium purchased Meteors and Meteor trainers, and the Rolls-Royce Derwent turbojets for these were being built at Liége under licence. About 20 Meteors were purchased by the Netherlands, where the Meteor trainer was also in use. Netherlands' naval aviation was using the British Hawker Sea Fury and the Fairey Firefly among its piston-engined aircraft.

Switzerland purchased 75 Vampires and was licensed to build 100 more, with Goblin engines to be sent from England. Both Norway and Sweden purchased Vampires, and Sweden was manufacturing the de Havilland Vampire and the Goblin turbojet under licence. Italy ordered 50 Vampires in 1949, to be delivered by March 1950.

Under the Atlantic pact, United States financial aid had much to do with such purchasing of British equipment. The formalizing of the western European union defense plan included the establishment of a central supply and resources board under the Western European Union Defense committee. According to British interpretations, the excellence and availability of British jet fighters and jet engines, plus the fact that they were already being purchased, made their use in western Europe natural. British sources noted at the same time that the western hemisphere would tend to use U.S. equipment.

The U.S. was responsible under the Atlantic pact for long-range strategic-bombing requirements, on the basis of existing equipment. England's Lancasters and Lincolns, and the coastal-defense Shackleton, were limited in range, though England's position in this respect might be improved by the acquisition of B-29s which were stationed in England. The existing plan called for short-range attack bombing and fighter defense by England, France and the other pact nations. This was being pursued at the end of 1949 to such an extent that the pact nations were receiving fighters from England while R.A.F. reserves and overseas units were still using a great deal of wartime reciprocating-engine powered equipment.

U.S.S.R.—The main sources of information regarding aeronautical progress in the U.S.S.R. were reports of observers of soviet aircraft on the traditional May day and Aviation day displays, the latter of which was in July 1949. No close-up inspection of aircraft was allowed. Visitors had to be content with what they could see as the machines flew overhead.

Because of the variety of types that had been observed on such occasions there was no question but that the Russians were exploiting their knowledge of jet aircraft and jet engines to the limit. In this they were unquestionably aided by large numbers of Germans who were picked up in soviet areas in Germany and who had been at work for the Russian government during the past five years.

It was known that the Russians had been heavily occupied with the development of the guided-missiles projects based on German wartime research. This lent weight to speculation that development of liquid-fuel rocket engines on a considerable scale was under way, both for piloted aircraft and for guided missiles.

The Russians claimed to have flown an experimental jet-powered aeroplane at speeds greater than the speed of sound. There was, however, no proof of this accomplishment.

In the bomber categories, only two new types were definitely identified, the Ilyushin four-jet bomber and the Tupolev twin-jet attack bomber. They appeared to be in the medium bomber category. The best guess was that the range of the Ilyushin four-jet bomber was approximately 1,500 mi. with a bomb load of about 5,000 lb. It was thought that the Tupolev twin-jet bomber might be capable of carrying a 5,000 lb. bomb load somewhat less than 1,000 mi. and that it had a speed of at least 445 m.p.h.

In the jet-fighter category the work of only three designers had been definitely identified: Lavochkin, Mikoyan and Gurevich, and Yakovlev.

Lavochkin had a long background of design of successful single-seat fighters of conventional types. As early as 1947, an LA-9 fitted with auxiliary jet and rocket power plants was reported in the Aviation day display. Newer LAV jet designs had also been seen but details were entirely lacking.

The MIG-9 twin-jet fighter by Mikoyan was a single-seat monoplane of conventional configuration. The engines were believed to be German axial-flow type turbines developing a thrust of approximately 3,500 lb. each. Its estimated speed was of the order of 600 m.p.h.

Two Yakovlev jet fighters were described. The YAK-15 was apparently based on an earlier design (the YAK-3) in which the conventional reciprocating engine had been replaced by a JUMO 004H axial-flow turbojet engine mounted underneath the fuselage. Other dimensions and weights were lacking. The maximum speed was probably in the 500 m.p.h. range. The YAK-17 was a later development—resembling in general the Republic F-84 Thunderjet of the U.S. air force. The probability was that this machine was in the 600–650 m.p.h. class. It appeared to be the best of the 1949 U.S.S.R. fighter designs.

Reports continued of production of a Tupolev modification of the B-29 bomber. A transport modification, the TU-70, was also reported. This was a four-engined type designed for 72 passengers and a crew of 4 or 5. Ilyushin also appeared to be in production on cargo and transport types.

Above, left: THE NORTH AMERICAN F-86 SABRE, U.S.A.F. single-place, low-wing fighter

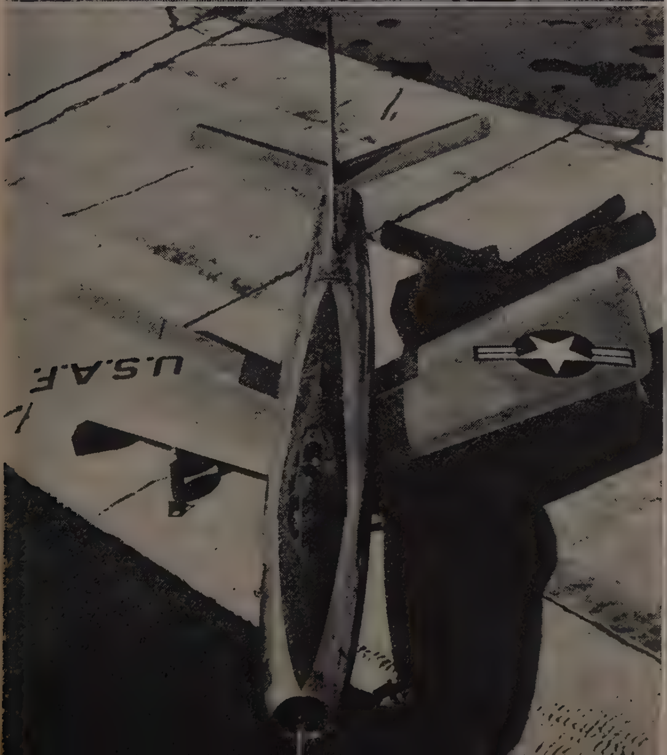
Above, right: THE CONSOLIDATED VULTEE XP5Y-1, U.S. navy flying boat, under construction in July 1949. It was designed for long search-rescue, patrol or antisubmarine missions and was to be powered by four propeller-turbine engines

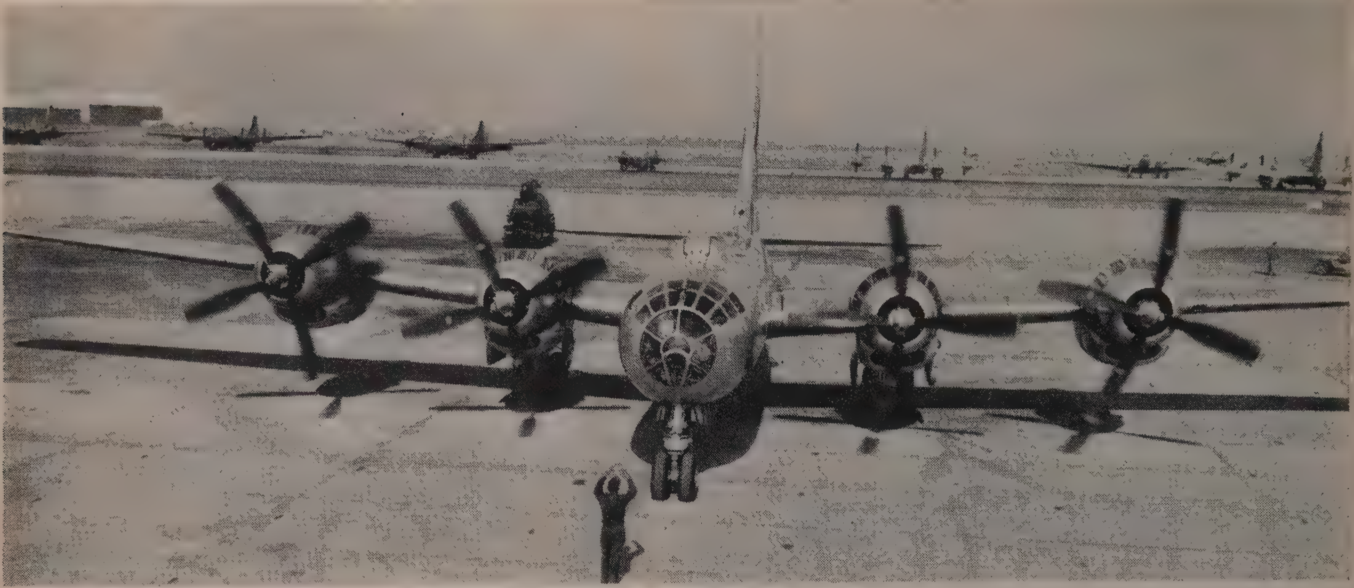
Left: THE LOCKHEED XF-90, a U.S.A.F. heavy penetration fighter, designed for high speed and long range, to enable flights deep into enemy territory. It had two turbojet engines, swept wings and a needle-nose, and was test-flown in May 1949

Below: THE BOEING B-47 STRATOJET, a U.S.A.F. bomber which in Feb. 1949 was flown 2,289 mi. from Moses Lake, Wash., to Camp Springs, Md., at an average ground speed of 607 m.p.h.; the plane had a combat radius of more than 800 mi. and could carry a bomb load in excess of 10 tons

Lower left: THE REPUBLIC XF-91, U.S.A.F. interceptor fighter powered by a turbojet engine; details of the plane were first made public in Feb. 1949

Lower right: THE McDONNELL F2H-1 BANSHEE, U.S. navy twin-jet-engined, carrier-based fighter plane





"LUCKY LADY II," U.S.A.F. B-50, landing at Fort Worth, Tex., on March 2, 1949, after the first nonstop flight around the world. The plane was in flight for 94 hr. 1 min. and was refuelled four times in mid-air

The total number of aircraft in the Russian military and civil air fleets was entirely unknown as was the 1949 rate of aircraft production. There was undoubtedly a very considerable aviation activity within the borders of the U.S.S.R. Their designers appeared to be competent and they seemed to have access to up-to-date information from their own research laboratories and from those outside the U.S.S.R. The chances were good that a large well-manned air fleet was in being, backed up by an industry of considerable capacity, but British and U.S. sources were in agreement that, as of the close of 1949, the western European union powers had a marked edge in technological development.

Great Britain.—The appropriations for the R.A.F. were increased by £34,480,000 during the year.

British Bombers.—The first British jet-propelled bomber, the English Electric A.1 Canberra, was first flown in May 1949. It was powered by two Rolls-Royce Avon turbojets mounted in nacelles in the wings.

The conventional Avro Shackleton, powered by four Rolls-Royce reciprocating Griffons with counter-rotating propellers, continued as the only British bomber developed since the war in the 100,000-lb. class. The A. V. Roe company's Avro 707, a delta-wing research fighter powered by one Rolls-Royce Derwent, was said to be part of a research program leading toward a delta-wing bomber using twin turbojets contained in the wing. Handley Page was reported to be working on a jet bomber of unconventional design, and the de Havilland company on a jet bomber which might be based upon its successful civil turbojet transport, the Comet.

British Fighters.—The Vickers Supermarine 510 was one of the experimental-fighter types to appear during the year. It was estimated to have flown at about 660 m.p.h. and to handle well at high altitudes. A Rolls-Royce Nene turbojet was the power plant. The experimental Hawker P.1052 was also powered by a Rolls-Royce Nene. The manufacturers claimed an unusually long range for it.

The de Havilland Venom F.B.1, first flown on Sept. 2, was powered by a de Havilland Ghost turbojet. Its manoeuvrability at altitude, climb and speed were favourably reported, and the Venom was known to be an all-around improvement on the Vampire.

The navy's Westland Wyvern torpedo fighter appeared as the first front-line military aeroplane to be powered by a turboprop.

While Vampires and Meteors were the standard fighters of the R.A.F., the de Havilland Hornet and Mosquito, the Hawker Tempest, the Supermarine Spitfire, and the Bristol Brigand continued among the reciprocating-engined aircraft in service for various duties as long-range fighters, night fighters, fighter bombers and light bombers.

In addition to the jet-propelled de Havilland Sea Vampire and Supermarine Attacker, the navy continued with the de Havilland Sea Hornet, Hawker Sea Fury, Supermarine Seafire, Blackburn Firebrand, and Fairey Barracuda and Firefly for carrier-based fighting, night fighting, fighter reconnaissance and strike aircraft duties.

Two new R.A.F. antisubmarine aircraft were announced late in 1949, the Blackburn Y.A.5 and the Fairey 17.

British Jets.—British gas-turbine development continued intensively during 1949, with definite trends toward increased use of axial-flow designs, and higher power in both turbojets and turboprops, and a renewed interest in afterburning as a source of additional power.

The first British rocket motor made its appearance in 1949, the de Havilland Sprite, giving a thrust of 5,000 lb. for 9 sec. The Sprite was intended for use in the assisted take-off of such aeroplanes as the de Havilland Comet.

Among the new engines were the Rolls-Royce Avon and the Rolls-Royce Tay turbojets, the Armstrong Siddeley Double Mamba, consisting of two Mamba 3s driving a single shaft, and the Napier Double Naiad, which was reported under development. Both the Mamba and the Naiad were axial-flow turboprops. The Bristol Proteus turboprop, which was expected to be flown in 1950, was to power the Bristol Brabazon II and the Saunders-Roe Princess, the giant transports. The Armstrong Siddeley Sapphire, latest of the turbojets, was reported to be a development of the Metropolitan-Vickers Beryl.

Military Transports.—The R.A.F. was using or had ordered principally the Handley Page Hastings (75,000 lb.) as a heavy transport, the Bristol 170 (40,000 lb.) and the lighter Percival Prince and Vickers Valetta during 1949. The civil jet-transport program proceeded intensively, and the possibilities of jet transports in military transportation and in bomber development were mentioned by observers. The 130-ton Brabazon I was first flown in September, and construction on the Brabazon II and the giant Saunders-Roe Princess flying boat was proceeding. These would be powered by the Bristol Proteus turboprop. The first flights of the de Havilland Comet, powered by four Ghost turbojets, were successful, and this plane was expected by British and several U.S. observers to have an excellent future. Among the turboprop civil aircraft to fly first in 1949 were the Handley Page Hermes, heaviest turboprop transport at 84,000 lb., and the Handley Page Miles Marathon, at 18,000 lb. Both the Vickers Viscount and the Armstrong-Whitworth Apollo underwent considerable flight testing in 1949.

Helicopters.—The Westland-Sikorsky S-51 was the only helicopter reported in quantity production for military purposes, a number having been ordered by the royal navy.

France.—The French air force in 1949 was still equipped largely with surplus aircraft of World War II, except for a few British de Havilland Vampire jet fighters. Modernizing was discussed and reported upon, but action was slow. Purchases abroad were expected to provide most new types, such as jet fighters, but in the fall there was another election, with changes in the defense ministry, and a new plan was reported late in the year which would involve a considerable overhauling of the aircraft industry.

French Jets.—The outstanding French jet plane of 1949 was the Leduc 0.10 ram-jet research plane, which made its first powered flight on April 21. This plane had left the ground only on the back of a Languedoc 161 air liner, but it might be fitted with rockets for take-off power. The Leduc ram-jet engine propelled it at more than 450 m.p.h. at half power on its first powered flight.

The Dassault MD 450 Ouragan fighter, powered by a Rolls-Royce Nene turbojet built by Hispano Suiza in France under licence, appeared to be the choice under the new plan as the standard French interceptor fighter.

The SNCA de Sud-Ouest S.O. 6020 Nene-powered fighter would probably be built to the number of several hundred as all-weather fighters under the new plan.

Experimental jets of the SNCA du Nord were the Nord 1600 and the Nord 2200. The latter was designed as a carrier-borne fighter.

The Arsenal V.G. 90, also designed as a carrier-based fighter, was expected to fly late in 1949. The Bréguet 96-0, under construction, was another naval strike fighter, with a Nene turbojet in the rear and a Mamba turboprop in the nose. Among jet bombers under development were the SNCA de Sud-Ouest S.O. 4000 and the SNCA du Centre N.C. 270. Both were twin-jet designs.

Apparently no heavy bombers and heavy transports were included in the French military procurement program, and relatively few naval aircraft were included. British Supermarine Attacker naval fighters would supply this need for the present, and the development program called for work on a carrier-based torpedo bomber and a long-range seaplane.

French Engines.—The jet engines used in military aeroplanes in France were British, either imported or manufactured under licence. French development of the gas turbine began in 1946. The SNECMA ATAR 101B turbojet, at 5,000 lb. thrust, and the TB.1000 turboprop of the same company, at 1,220 shaft h.p., were in bench-test stages. The SOCEMA TGAR 1008 turbojet, at 4,850 lb. thrust, and its TGA 1*bis* turboprop, at 2,410 shaft h.p., were in the prototype-testing stage.

The Rateau SRA-101 turbojet, made by the SNECMA company, developed 8,820 lb. thrust. New piston-engine development in France was almost at a standstill at the end of 1949, and the engine industry was considered to be in a stage of transition to emphasize gas turbines.

Italy.—The Italian air force, by peace treaty provisions, was limited to 200 defensive fighter and reconnaissance aircraft and 150 trainers and transports. Front-line aircraft in 1949 were surplus Supermarine Spitfires from England and North American Mustangs and Lockheed Lightnings from the U.S.

The aircraft and engine industries in Italy made slow progress in recovering from war damage and were producing only a few light transports, light aeroplanes and military trainers at the end of 1949. Among Italian transports, the Breda-Zappata B.Z. 308 transport for 55 to 80 passengers, powered by four Bristol Centaurus engines, was still undergoing its flight tests in 1949. This was the most advanced transport being built in Italy. The Argentine government ordered ten of these late in 1949.

The engine manufacturers were making light engines principally, but Alfa Romeo and Isotta-Fraschini continued to develop engines for transports and trainers. Isotta's two new engines, the 8-cylinder air-cooled Cypselus at 400 h.p., and the 18-cylinder liquid-cooled Gypagus at about 1,600 h.p., with its latest Delta at 800 h.p., indicated the state of Italian engine development at the end of 1949. Alfa Romeo was producing excellent engines in the medium and light class, but little activity in jet propulsion was in evidence.

The industry was in such a state that both the Caproni and Cant companies were reported closed down, but a new development late in the year placed the Fiat, Macchi, Ambrosini and Alfa Romeo companies in a new position. These firms formed a company to sign contracts with the British de Havilland company to manufacture Vampire fighters and Goblin turbojet engines. An order for 50 Vampires by the Italian government, to be delivered by March 1950, would furnish the air force with jet fighters until the Italian jet-building program should get under way.

Other Countries.—Reflecting the strong research and development program on military aeroplanes and gas turbines in England, Canada and Australia were working on independent designs which might affect the future equipment of their air forces. In *Canada,* the Avro Orenda turbojet completed more than 750 hr. of ground tests, and was being test flown in a North American F-86A fighter. The CF-100 (formerly the XC-100) was expected to make its first flight late in 1949 or early 1950. The outstanding transport development in Canada was the first flights of the Avro C.102, powered by four Rolls-Royce Derwent turbojets. This aeroplane was flown at 500 m.p.h. above 30,000 ft.

In *Australia,* a twin-jet all-weather fighter was reported under development, probably to be powered by Rolls-Royce Tay turbojets. Commonwealth Aircraft corporation was licensed in September to produce the Canberra bomber and the Hawker P.1040 fighter. The Rolls-Royce Nene was being manufactured under licence in Australia, and the de Havilland company in Australia was manufacturing the Vampire, the standard fighter of the R.A.A.F.

In *Sweden* the SAAB Aircraft company received an order for 500 of its SAAB-29 swept-wing jet fighters for the R.S.A.F. The de Havilland Ghost turbojets for this fighter were built in Sweden under licence. The manufacturer reported that the top design speed of 665 m.p.h. had been reached.

The *Dutch* and *Belgian* governments co-operated in an arrangement for building 150 Gloster Meteor fighters. The Fokker Aircraft company of Amsterdam and Aviolanda would build the aeroplanes, and Rolls-Royce Derwent turbojets for them would be built in Belgium. It was reported late in 1949 that the Dutch government would support development of a jet-powered civil transport, to be built by Fokker.

Few changes in equipment were reported from *South America* during the year. The *Argentine* jet fighter, the I.Ae 27 Pulqui, might go into production, as the government factory at Cordoba had a licence to make the Rolls-Royce Derwent turbojet, which that plane uses. The Argentine air force used some Gloster Meteor jet fighters. The possibility that *Brazil* and some other countries might acquire North American F-86 fighters was mentioned in the press, but on the whole South American air forces were equipped with U.S. and British surplus aircraft. (*See* also AIRCRAFT MANUFACTURE; AIRPORTS AND FLYING FIELDS; AVIATION, CIVIL; CIVIL AERONAUTICS ADMINISTRATION; JET PROPULSION; MUNITIONS OF WAR.)

Bacteriology. The Society of American Bacteriologists held its 49th annual convention at Cincinnati, O., in May 1949 with a full program, including 217 scientific papers. The annual Eli Lilly award was made to Elvin A. Kabat of the Columbia University College of Physicians and Surgeons for his outstanding studies on immunophysics and immunochemistry.

A representative paper in the field of general bacteriology presented at that time dealt with dye replacement in bacterial cells, by J. W. Bartholomew and E. E. Evans of the University of Southern California.

A typical study in the field of bacterial physiology was presented by S. J. Ajl and C. H. Werkman of the Iowa agricultural experiment station who extended knowledge of the new concept that heterotrophic metabolism utilized CO_2 in synthesis. A related paper by S. M. Martin and P. W. Wilson of the University of Wisconsin reported the utilization of CO_2 by *Aspergillus niger*. Among the reports on agricultural bacteriology was a study of nitrogen-fixing bacteria (*Rhizobium*) from *Caragana arborescens* by K. F. Gregory and O. N. Allen of the University of Wisconsin.

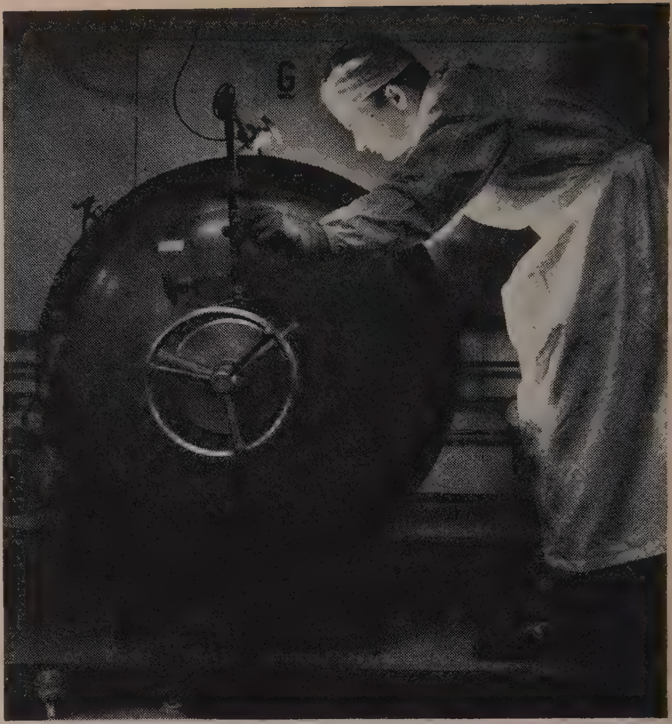
A representative research in the field of industrial microbiology was reported by D. G. Reihard and J. C. Garey of the Pennsylvania State college, who studied the development of free amino acids in cheese during the curing period.

Of many papers on medical bacteriology one of interest to students of streptococci was that by N. B. Williams and M. A. Judson of the University of Pennsylvania school of dentistry, who found enterococci in apical abscesses of teeth and demonstrated *S. faecalis, S. liquefaciens* and *S. zymogenes* in the normal mouth of many persons.

All local branches of the Society of American Bacteriologists held meetings during the year and researches in all fields were described. One interesting study made at the U.S. public health service communicable disease centre, Atlanta, Ga., dealt with the in-vitro virulence test for *C. diphtheriae*. The test was made in a special culture medium and would eventually eliminate the necessity for animals in this important laboratory procedure. At a meeting of the southeastern branch, held at Tuscaloosa, Ala., a motion picture of a simple method for the prolonged preservation of bacteria by desiccation in vacuo was shown for the first time. The film, with sound effects and spoken narrative, was to be made available on loan from the communicable disease centre, U.S.P.H.S., Atlanta, Ga. Many valuable new films and other visual aids to education in bacteriology were also made available during the year by the Society of American Bacteriologists.

A symposium on brucellosis was held at Bethesda, Md., in September and papers were read on every important aspect of the subject by a panel of experts in the field.

On Oct. 28 and 29 the New York Academy of Science sponsored a conference on the mechanism and evaluation of antiseptics. The first session was devoted to antibiotics, the second to surface-active antimicrobial agents, the third dealt with the use of miscellaneous chemicals, especially halogens, as antiseptics. The value of ethyl alcohol as a general disinfectant, long regarded as insignificant, was re-emphasized during this meeting. It appeared that 2% solutions of iodine in alcohol might be one of the most useful disinfectants for external application to the body.



SEALED OBSERVATION CHAMBER housing guinea pigs or rats infected with virulent diseases, at the bacteriology laboratory of the University of California at Berkeley. Devised to protect research workers from infection, the machine was being used in 1949 for a U.S. navy-sponsored study of air-borne bacteria and viruses

Much interest was also shown in new surface-active, synthetic, disinfectant-detergents, a great many of which appeared on the market and in the trade during the year. Special interest centred around the quaternary ammonium compounds, especially their mode of action and inactivators for them to be used in differentiating between their bactericidal action and their bacteriostatic action.

In November the American Type Culture collection published a new catalogue, the first since 1938. In the new edition 2,975 strains of organisms were listed, of which 49% were bacteria, 28% higher fungi and 16% yeast. Included also were algae, protozoa and bacteriophages. Viruses and rickettsiae were to be handled separately and listed in a separate catalogue. (*See* also EPIDEMICS.)

McCutcheon, "Synthetic Detergents," *Soap & Sanit. Chemicals*, 25:33–45 (Aug. 1949); 42–53 (Sept. 1949); 40–52 (Oct. 1949). (M. FR.)

Badminton. Marten Mendez of San Diego, Calif., captured men's singles honours in the 1949 national badminton championships at Chicago, Ill., when he turned back the challenge of Joseph Alston, also of San Diego, 15–8, 12–15, 15–5, while Ethel Marshall, Buffalo, N.Y., won the women's laurels for the third straight season. Miss Marshall routed Marianna Gott of West Los Angeles, Calif., 11–2, 11–8, in the title round.

In the absence of David Freeman of Pasadena, Calif., with whom he had won the doubles in 1948, Wynn Rogers of Arcadia, Calif., teamed with Barney McCay of Alhambra, Calif., to retain his honours. Thelma Scovil and Janet Wright, both of San Francisco, Calif., again repeated in the women's doubles and Rogers triumphed in the mixed doubles with Mrs. Loma Smith of Arcadia as his partner.

Freeman led a United States team to Great Britain in quest of the Sir George Thomas cup, placed in competition as a prize for international supremacy in the sport. The Americans lost to Malaya, the Pacific zone winner, 6–3, in the semifinal round at Glasgow, Scotland, their conquerors going on to annex the trophy with an 8–1 rout of Denmark in the last round at Preston, England. Freeman, six times the national singles champion, added the all-England and Danish international singles titles to his collection while overseas.

The national junior championships at Baltimore, Md., resulted in three victories each for Ronnie Ryan of Berkeley, Calif., and Judy Devlin of Baltimore. Ryan defeated James Bishop of Hollywood, Calif., 18–17, 8–15, 15–12, in the boys' singles; paired with Bishop to trounce Howard Herbst, Jr., and Michael Roche, a Baltimore team, 15–0, 15–0, in the doubles; then took the mixed doubles with Judy Devlin as they set back Joyce Leach of Baltimore and Bishop, 15–7, 15–5.

Judy Devlin defeated her sister Susan, 11–3, 7–11, 11–8, to capture the girls' individual championship, and then the two combined to annex the doubles crown with a victory over the sister team of Eleanor and Jane Marsh of Wilmington, Del., by a score of 15–7, 15–3. (T. V. H.)

Bahamas. This British colony consists of an archipelago outside the Gulf of Mexico and off the coast of Florida. Area: 4,400 sq.mi. Pop. (1948 est.): *c.* 75,000. Capital: Nassau. The governorship was vacant in 1949.

History.—Rapid progress was made during 1949 in the construction of Butlin's vacation village at West End, Grand Bahama. Announcement was made of negotiations with the United States for passage over the colony of rockets from Florida on the first 500-mi. leg of a Caribbean guided-missile range. A general election in the summer resulted in 13 new members being elected to the house of assembly.

Finance and Trade.—The legal tender is British sterling currency, though U.S. currency is also generally accepted. Budget (1948): revenue £1,360,226; expenditure £1,317,621. Foreign trade (1948): imports £4,720,151; exports (visible) £551,920. Tomatoes, lumber and crawfish were the principal exports in 1948, but the economy of the colony is primarily dependent on the tourist industry. After further re-examination it was decided the sponge beds were not yet sufficiently restored to justify reopening. (Jo. A. Hn.)

Baltimore. Baltimore is the metropolis of Maryland and had a population of 859,100 in 1940. Of the total population, 692,705 were white persons and 166,395 (19.4%) nonwhite, principally Negro. The estimated population as of July 1, 1948, was 958,000, of which 757,000 were white and 201,000 nonwhite. The land area of the city is 78.72 sq.mi.; the water area, 13.21 sq.mi. Thomas D'Alesandro, Jr., Democrat, was mayor in 1949, having been elected for a four-year term in May, 1947.

Budget appropriations for 1950 were $122,620,039.97; for 1949, $168,557,542.24. The city tax rate for 1950 was $2.88 per $100 of assessed valuation and the rate for 1949 was $2.78. The taxable basis for 1950 was $2,327,049,041 and for 1949 it was $2,210,953,989. The gross funded debt as of Nov. 30, 1949, was $191,415,000; the sinking funds amounted to $43,244,521, leaving a debt of $148,170,478 as of Nov. 30, 1949, not including accrued income. The percentage of net debt to the taxable basis (excluding self-supporting indebtedness) was 4.60% for the year 1949.

The net enrolment on Oct. 31, 1949, in the public schools of the city was 76,358 white students and 39,654 Negro students; and, in addition, 8,715 white and 4,872 Negro students were enrolled in adult education classes. William H. Lemmel had been superintendent of the Baltimore city schools since July, 1946. The public schools of Baltimore are a separate and distinct unit, and are not under the jurisdiction of the state department of education.

Ranking as the second United States port in foreign-trade tonnage, the combined value of exports and imports at the port of Baltimore during the first seven months of 1949 came to nearly 8,764,000 long tons, an increase of 7.2% over the corresponding period of the previous year. Import tonnage advanced 24.3% but export traffic, largely on account of a sharp reduction in overseas coal shipments, declined 17.1%.

Although manufacturing activity in the Baltimore area during 1949 receded somewhat from the high level for 1948, the total output for the year represented one of the best peacetime showings on record. During the first nine months of the year employment in manufacturing averaged around 162,500. The leading industries, based upon the volume of employment, included iron and steel products, shipbuilding and repairing, aircraft, communications equipment, men's clothing, bakery products, beverages, metal stampings, tin containers and meat products. Total nonagricultural employment in Baltimore and vicinity at the middle of 1949 was estimated as 535,000, including self-employed persons and domestic servants. (H. E. F.)

Bananas: *see* Fruit.

Banking. In 1949, banking and monetary developments followed a pattern first of moderate contraction of bank credit and then of renewed expansion. Contraction of bank credit occurred in the winter and spring, accompanying the downward movement in business. Later in the year, recovery in levels of economic activity brought about a resumption of bank credit expansion.

A notable development in the field of banking which occurred during 1949 was a comprehensive congressional study and investigation into the effectiveness and co-ordination of monetary, credit and fiscal policies. The subcommittee on monetary, credit and fiscal policies of the joint committee on the economic report received statements on the issues involved from the chairman of the board of governors of the federal reserve system, the presidents of the federal reserve banks, the secretary of the treasury, the comptroller of the currency, the chairman of the Federal Deposit Insurance corporation and the director of the budget, as well as from heads of other government agencies in the credit field, and from a number of leading economists, bankers and businessmen. Publication of this collection of statements was followed by hearings before the subcommittee, headed by Sen. Paul H. Douglas of Illinois, during November and December, and by a submission of a report by the subcommittee in Jan. 1950. Strong differences in opinion among government officials, bankers and economists appeared in the course of the congressional inquiry. In its report, the subcommittee recommended "not only that an appropriate, vigorous, and coordinated monetary, credit, and fiscal policy be employed to promote the purposes of the Employment Act, but also that such policies constitute the Government's primary and principal method of promoting those purposes." The subcommittee further stated that "the advantages of avoiding inflation are so great and that a restrictive monetary policy can contribute so much to this end that the freedom of the Federal Reserve to restrict credit and raise interest rates for general stabilization purposes should be restored even if the cost should prove to be a significant increase in service charges on the Federal debt and a greater inconvenience to the Treasury in its sale of securities for new financing and refunding purposes."

In 1949 total bank deposits, other than interbank and United States government, and currency outside banks rose by $1,000,000,000 to reach a new all-time high level of $170,100,000,000 at the end of 1949. The decline in currency outside banks of about $1,100,000,000 marked an acceleration of the decline of the preceding two years. Demand deposits adjusted rose $1,200,000,000 during the year. The rise in total time deposits adjusted, amounting to $1,000,000,000, represented a corresponding increase of time deposits at mutual savings banks with an increase of $100,000,000 in time deposits at commercial banks being offset by a decline of about the same amount in postal savings deposits.

During the year as a whole, total loans of all commercial banks increased by about $800,000,000. Holdings of government securities rose $4,700,000,000 and holdings of other securities increased about $1,000,000,000. Total loans and investments rose by about $6,500,000,000 during 1949. These developments were in sharp contrast to those of the previous year when a large increase in total loans of all commercial banks was offset by a greater decline in holdings of government securities with total loans and investments showing a decline.

At the end of the year, total loans of all commercial banks amounted to $43,300,000,000, exceeding all previous records. During the years 1946, 1947, 1948 and 1949, major changes had taken place in the composition of loans and investments of all commercial banks. Total earning assets of all commercial banks showed some decline in the four years from $124,000,000,000 on Dec. 31, 1945, to $120,800,000,000 at the end of 1949. Total loans were up $17,200,000,000. In contrast, holdings of government securities declined by $23,300,000,000. Holdings of other securities rose $3,000,000,000.

On June 30, 1949, national banks, which numbered almost 5,000, held $78,200,000,000 of total deposits. State banks, which numbered somewhat over 9,000, had total deposits of $59,300,000,000.

During 1949 as a whole the gross federal debt rose by almost $4,400,000,000 to $257,100,000,000 on Dec. 31, 1949. The low point in the gross public debt during the year was reached on June 27 when it stood at $251,200,000,000. This was in contrast to the preceding postwar years of reduction in the federal debt. Total marketable obligations were reduced by $2,400,000,000, with increases in amounts outstanding of treasury certificates of indebtedness and notes partially offsetting a substantial retirement of marketable treasury bonds. Nonmarketable public issues outstanding continued to rise, with increases of more than $3,000,000,000 in treasury savings notes outstanding and $1,700,000,000 in United States savings bonds. Special issues, held by government trust funds and corporations, rose during the year by $2,200,000,000.

In the first 11 months of calendar year 1949 the treasury incurred a net cash deficit of $1,500,000,000, in sharp contrast to an excess of cash receipts of the federal government over cash expenditures of $8,200,000,000 in calendar year 1948. The budget document for fiscal year 1951 forecasted continued cash deficits and increases in the public debt through cash borrowing from the public. Official estimates indicated that the cash surplus of $1,000,000,000 in fiscal 1949 would be followed by cash deficits of $4,900,000,000 in fiscal 1950 and $2,700,000,000 in fiscal 1951 on the basis of legislation proposed in the budget message. According to these estimates the gross federal debt would reach a figure of $263,800,000,000 by June 30, 1951.

Total consumer credit outstanding stood at $18,800,000,000 at the end of Dec. 1949, an increase of 15%, or $2,500,000,000 during the year. Almost all of the total growth occurred in the instalment credit category, with noninstalment credit, including charge accounts, single payment loans and service credit rising only slightly. Outstanding automobile sale credit rose by $1,200,000,000 or 61% during the year, as sales of new cars continued at peak levels and consumers increased the proportion of durable goods purchases bought on time. Apparently in response to eased credit terms, which occurred after expiration of regulation W on June 30, other instalment sale credit outstanding (appliances, furniture, radio and television sets) was 21% greater than at the end of 1948. Cash instalment loans increased 14% during 1949, evidencing a gradually weakening liquid asset position on the part of individual consumers.

The gold stock showed little change during the year as a whole. An increase of almost $400,000,000 in the gold stock in the first nine months of the year was followed by a decline of almost $300,000,000 after devaluation of the British pound and other currencies in September. Just before the devaluation of the pound sterling on Sept. 18 and the subsequent changes in other currency values, the gold stock reached an all-time high of about $24,700,000,000.

The volume of bank debits of the banks in 333 reporting centres during 1949 was 1.5% less than in 1948, although it remained considerably more than twice the prewar volume. The slight percentage decline in bank debits was about the same as the percentage decline in gross national product from 1948 to 1949. The annual rate of turnover of demand deposits outside New York city declined during the year in contrast to increases in previous postwar years.

Corporate issues for new capital decreased in 1949, compared with the preceding year, but nevertheless remained at a high level. New corporate security financing fell off sharply during the last six months of the year, however, in large part as a result of a moderate decrease in business capital expenditures and lessened working capital requirements. The tendency for a growing reliance on internal sources of funds continued in 1949. Bond issues comprised the bulk of corporate issues for new capital purposes, although the volume of new stock issues somewhat exceeded the 1948 total. Refunding issues were in small volume. (*See* also BUSINESS REVIEW; CONSUMER CREDIT; EXPORT-IMPORT BANK OF WASHINGTON; FEDERAL RESERVE SYSTEM.) (J. K. L.)

Mutual Savings Banks.—The mutual savings banks of the United States ended the year July 1, 1949, with assets totalling $21,112,142,047, deposits of $18,948,020,111, and surplus of $2,062,634,259, equivalent to 10.9% of deposits. During the year ended July 1, 1949, the net increase in assets was $849,184,942 or 4.2%, and the net increase in deposits was $738,588,044 or 4.1%. These increases were less than those recorded during the previous year of $910,356,586 or 4.7%, and $793,955,422 or 4.6% respectively. There were 19,186,258 accounts on July 1, 1949, a net gain of 432,579 or 2.3% during the year, whereas during the previous year there was a net gain of 566,661 accounts or 3.1%.

On Dec. 31, 1949, there were 531 banks and 198 branches in operation, a net decrease of one bank and an increase of 17 branches during 1949, two of which were the result of mergers.

The annual growth of the savings banks had become relatively stabilized during the past three years at an amount less than $1,000,000,000. In the calendar year 1947 the net increase in deposits of mutual savings banks was $946,407,838; in the year 1948 it was $641,345,892, and for the first half of 1949 $547,742,152. In this same period the private share capital in savings and loan associations grew at the rate of $1,200,000,000 annually, and private life insurance reserves increased $3,500,000,000 annually. In addition the savings departments of commercial banks, the post offices by means of postal savings, the U.S. treasury department by selling savings bonds, and open-end investment trusts actively competed for the savings of the small investor. Since the portion of national income available for current savings had declined sharply since World War II, it had become necessary for the savings banks to extend their efforts to get new business. More branches, longer hours and higher dividend payments were adopted by many banks, and legal investment provisions of various savings bank states were changed to enable the banks to broaden their investments and so to increase earnings.

On July 1, 1949, the combined assets of all mutual savings banks consisted of the following: U.S. government securities 55.22%; other securities 11.21%; mortgage loans 28.18%; cash and other assets 5.39%. Mortgage loans amounted to $5,950,000,000, an increase of $816,000,000 over the amount outstanding July 1, 1948. Since July 1, 1949, more than $146,000,000 in loans were purchased from the Home Owners Loan corporation by savings banks in Massachusetts, New Jersey and New York in addition to loans made by the usual procedure. The combined portfolio of FHA and Veterans' administration insured loans was $1,334,000,000, or 23.9% of all mortgage loans on Jan. 1, 1949, the latest date for which detailed mortgage figures were reported. (HE. BR.)

Great Britain.—The year 1949 opened in Great Britain with a decisive downturn in the volume of bank money, explained partly by seasonal factors and partly by the pressures exerted by the government's money policy. The budget proposals introduced in April turned out to be less disinflationary in their effect than Sir Stafford Cripps, the chancellor of the exchequer, had intended and bank deposits showed a tendency during the summer and autumn months to climb at a pace that could not be wholly explained by seasonal considerations. The table giving the outturn for 1949 up to October of the 11 London clearing banks (which together accounted for about 95% of all commercial banking resources in Britain) showed that at that time the total of bank deposits was virtually as high as a year before.

Eleven London Clearing Banks

(£ million)

	Oct. 1947	Oct. 1948	Oct. 1949
Deposits	5,690	6,040	6,049.6
True deposits	5,510	5,855	5,867.9
Cash	468	485	498.7
Call money	466	497	555.7
Bill holdings	825	802	1,162.1
Treasury deposit receipts	1,147	1,313	744.0
Investments	1,500	1,475	1,516.8
Advances	1,176	1,355	1,465.5
Acceptances, etc.	238	243	260.8

Examination of the banks' asset figures given in the table reveals that although total bank resources showed little net change in 1949, there were important changes in the way in which these resources were employed. In the first place, there was a considerable drop in the volume of bank lending to the public sector of the economy and an equally large expansion in lending to the private sector. The fact that cash, call money, holdings of bills and treasury deposit receipts together showed a substantial net decline during the year was the result of a reduction in the volume of bank financing of the government's floating debt. The rise in bank loans reflected the provision of additional finance by the banks to industry and commerce. Further, as there was no reason to suppose that the government was a net seller of medium and longer-dated government securities during the year, the presumption was that the increase recorded in the banks' investments also indicated purchases from the general public and therefore an indirect method of extending additional finance to the private sector of the economy.

An original intention of the Cripps disinflation policy was to repay the government debt held by the banks with the aid of a budget surplus and so place these institutions in a position to furnish, without increasing total lendings, the additional monetary resources needed by industry to finance reconstruction and development. This intention appeared to have been largely realized in 1949 so far as the switch from official to private lending by the banks was concerned. But in the event the contraction in bank lending to the government was due more to an unexpected accumulation of sterling resources in the hands of the government departments caused by the development of a substantial over-all trade gap in the middle of the year than to an excess of government receipts over payments on budget account.

The second major change in the deployment of British bank resources in 1949 was the result of the official decision to reduce the amount of government borrowing on the treasury deposit receipts in favour of increased borrowing on treasury bills. This development was welcomed, the banking community in general having long argued that the treasury deposit receipt, introduced during World War II as a means of drawing finance in the required amounts from the banking system quickly and conveniently, was not suited to peacetime conditions. (*See* also BANK OF ENGLAND.)

FILMS OF 1949.—*Banking and Credit* (Coronet Instructional Films).
(C. H. G. T.)

Bank of England. Developments in Great Britain's external affairs were the main concern of the Bank of England during 1949. The bank normally acts as adviser to the treasury in currency matters and also undertakes main responsibility for the operation of the country's exchange control machinery. In consequence, in the period prior to the devaluation of sterling in September it was called upon to play a large part in devising and enforcing measures to check the growth of evasion of the sterling area exchange regulations stimulated by the increased profitability of overseas black market dealings in cut-price sterling. Such measures were designed in particular to prevent legitimate sterling area dollar earnings being tapped by third countries and largely took the form of a general tightening-up of restrictions on transactions in sterling among the nonsterling countries. In the devaluation period, the bank's services were in demand in connection with the determination of the pound's new level and with preparations for the execution of the realignment operation. Subsequently it was required to devote its energies to an examination of the opportunities created by devaluation for adjustments in British exchange control policies to assist the flow of international trade and payments.

Movements in the note circulation were within narrower limits in 1949 than in the previous year, there being no evidence of

Bank of England

(£ million)

	Oct. 26, 1949	Oct. 27, 1948	Oct. 29, 1947
Issue Department:			
Notes in circulation	1,259	1,231	1,361
Fiduciary issue	1,300	1,300	1,450

Government securities	403	322	288
Other securities	27	57	37
Reserve	47	72	91

large-scale hoarding or dishoarding of bank notes by the public. In the first half of the year, the amount of currency in circulation showed a tendency to rise more rapidly than could be explained by seasonal factors, presumably because of the existence of inflationary pressures in the country. The total value of notes was raised by £50,000,000 by temporarily increasing the fiduciary issue to £1,350,000,000 between July and September to meet the summer holiday demand for additional currency.

The bank's annual report to Feb. 28, 1949, contained an analysis of the note circulation by denominations, as well as other statistical material relating to the bank's activities and a summary of external financial agreements concluded by the British authorities in the previous 12 months. (C. H. G. T.)

Bankruptcy: *see* SECURITIES AND EXCHANGE COMMISSION.

Baptist Church. The Northern Baptist convention of the United States meeting in San Francisco, Calif., May 30 to June 3, 1949, registered 5,071 delegates. It was reported that, of the $16,163,601 pledged to the World Mission crusade in 1947, 92.9% had been received. It was voted to allocate a larger percentage of the budget than formerly to foreign missions. Negotiations with the Disciples of Christ concerning the merger of the two bodies were to continue. A proposal to change the name, Northern Baptist convention, to American Baptist convention was approved. A general secretaryship was created by combining the corresponding secretaryship and the recording secretaryship, the incumbent to serve as the recognized spokesman for the convention. Mrs. Howard G. Colwell of Loveland, Colo., was chosen president for the year 1949–50, the third woman to hold the office. The 1950 convention was scheduled to meet in Boston, Mass., May 21 to 26, 1950. Dr. G. Pitt Beers, executive secretary of the American Baptist Home Mission society of the Northern convention assured the Church World service the denomination would provide homes for 1,200 families of displaced persons.

BAPTIST TEMPLE built at Akron, O., to house what church officials estimated was the largest Baptist congregation in the U.S. The new temple was opened for services in April 1949

The Southern Baptist convention met in Oklahoma City, May 18 to 22, 1949, registering 9,357 messengers. Total gifts for the year 1948–49 amounted to $156,605,521. The Foreign Mission board proposed a goal of 1,750 foreign missionaries and an annual budget of $10,000,000. The 26,822 convention churches reported 312,246 baptisms, bringing the total membership to 6,491,981. The convention also operates 25 hospitals valued at $42,176,301. Its three theological seminaries, Southern, Southwestern and New Orleans, reported a total enrolment of 2,551 students. The convention formed a special organization through which individuals and churches may become sponsors for displaced persons. The 1950 convention was to be held May 7 to 12, in Chicago.

A new Baptist church at Nagyvarsany, Hungary, was consecrated May 9, 1949, with 1,000 Baptists present. The World Congress of Baptist Youth, numbering 1,350 delegates from 23 countries, met Aug. 3 to 9, 1949, in Stockholm, Sweden.

During the first week of Sept. 1949, the Baptists of Wales celebrated the Tercentennial of the founding of the first Baptist church in the principality. A memorial lectern to William Carey, the great Baptist missionary appointed by English Baptists to India in 1792, was dedicated in Westminster abbey, Oct. 11, 1949. Dr. S. Pearce Carey presented the lectern which was received and dedicated by the dean of the abbey.

During 1949 plans were being consummated for a Commonwealth and Empire Baptist congress to be held in London, England, June 3 to 10, 1951.

The Ontario and Quebec Baptist convention, Canada, celebrated its diamond jubilee, June 9 to 12, 1949. (*See* also CHURCH MEMBERSHIP.) (R. E. E. H.)

Barbados. Barbados is a British colony consisting of the most easterly of the Caribbean islands. Area: 166 sq.mi. Pop. (1948 est.): 198,000. Capital and chief port: Bridgetown (pop. 13,345). Governor in 1949: A. W. L. Savage.

History.—During 1949 constitutional changes were proposed by the house of assembly to the effect that it should have undivided authority in matters of finance, the life of the assembly should be extended from two to three years and a parliament bill should be introduced to regulate relations between the assembly and the legislative council on the basis of those existing between the British house of commons and the house of lords; and that if necessary the governor request the secretary of state for power to nominate sufficient additional legislative councillors to secure the passage of the bill.

A report on local government by Sir John Maude recommended that the 300-year-old system of 11 vestries and 32 parochial boards should be abolished, and that the colony should be divided up into three areas for local government purposes: a northern district and a southern district (each with a council) and the town of Bridgetown, which should be granted municipal status with its local government entrusted to a city council.

Finance and Trade.—Currency: West Indian dollar, set at 4.8 to the pound. On Nov. 14, 1949, the West Indian dollar was valued at 58.33 cents U.S. Budget (1948-49): revenue £1,940,467; expenditure £2,051,-626. Foreign trade (1948): imports £6,346,230; exports £3,048,165. Principal exports: sugar and its by-products, molasses and rum.

(Jo. A. Hn.)

Barkley, Alben William

(1877–), vice-president of the United States, was born on a farm in Graves county, Ky., on Nov. 24, and attended Marvin college, Clinton, Ky., Emory college, Oxford, Ga., and the University of Virginia law school, Charlottesville, Va. He was elected prosecuting attorney of McCracken county, Ky., in 1905, and was judge of McCracken county court, 1909–13.

He was elected to the U.S. house of representatives in 1913 and after 14 years there was elected to the senate. He was keynote speaker at the 1936 Democratic national convention; permanent chairman of the 1940 convention; and delivered the speech nominating Franklin D. Roosevelt for a fourth term at the 1944 convention.

Throughout much of World War II he was senate majority leader and, as such, shepherded numerous wartime and emergency acts through that body. In 1946, when the Republicans gained control, he became senate minority leader. Keynote speaker at the Democratic national convention in Philadelphia, Pa., in 1948, he was there nominated Democratic candidate for the vice-presidency and was elected with Pres. Harry S. Truman, taking office in 1949 as the nation's first vice-president since April 12, 1945.

As president of the senate, Barkley participated in President Truman's first major defeat by the 81st congress, when he sought to accept a "gag" petition that would have ended a southern filibuster against a civil rights bill, but was overruled by the senate. He attended, with President Truman, the signing of the North Atlantic treaty in April. Repeatedly during the summer he was quoted as urging the passage of one or another piece of Truman's legislative program, including a modified labour law and acts to reorganize the executive branch of the government. On Nov. 18, Barkley, who had been a widower since 1947, married Mrs. Carleton S. Hadley, whose husband had died in 1945.

Barley.

The United States barley crop of 1949 was estimated at 238,104,000 bu., the smallest crop since 1937 and only about three-fourths as large as the 315,894,000 bu. of 1948 and a ten-year average of 304,741,000 bu. The total harvested acreage of 9,879,000 was 18% less than in 1948 and 22% less than average, the major reduction coming in the important producing states of North Dakota (26,608,000 bu.), Minnesota (25,464,000 bu.) and South Dakota (14,958,000 bu.). California, as usual, led in production with 47,038,000 bu., and Colorado was fourth with 23,256,000 bu. The average yield of 24.1 bu. per acre was less than the 26.4 bu. of 1948 but approximately average for the decade.

Barley prices during 1949 broke to new lows since World War II, the national average price to farmers falling from $1.15 per bushel early in the year to 93 cents in June, then recovering to about $1.10 per bushel late in the year. The probable average price for the crop was estimated at $1.05 per bushel compared with $1.17 per bushel for the 1948 crop. Government support at 72% of the April 1949 parity or $1.09 per bushel helped to stabilize the price.

The world crop of barley was estimated preliminarily at 2,250,000,000 bu., compared with 2,380,000,000 bu. in 1948 and an average of 2,358,000,000 bu. for 1935–39. Harvested acreage, estimated at 111,640,000, was 2,000,000 less than in 1948 and slightly less than the prewar average. Canadian production of 120,383,000 bu. was sharply lower than in 1948 and European production was 675,000,000 bu., compared with 630,000,000 bu. in 1948.

(J. K. R.)

Baseball.

On June 5, 1949, more than three years after they had been suspended for five years from professional baseball for jumping to the Mexican league, 18 former major league players were granted complete amnesty by Commissioner A. B. Chandler and invited to return to their former clubs immediately.

Among the athletes restored to good standing were pitchers Max Lanier and Fred Martin and infielder Lou Klein, who rejoined the St. Louis Cardinals and took leading roles in the pennant race.

Catcher Mickey Owen, who had been one of the prime movers toward removal of the ban, returned to the Brooklyn Dodgers, but, after a few games, was sold to the Chicago Cubs because of Brooklyn's abundance of catchers. Luis Olmo, an outfielder, also rejoined the Dodgers. Other clubs benefitting immediately by the commissioner's amnesty included the Giants, who received pitcher Adrian Zabala and infielder George Hausmann, and the Athletics, who received outfielder Bobby Estalella.

Reinstatement of the players eventually led to the cancellation of a $2,500,000 damage suit filed against professional baseball by pitchers Lanier and Martin and a $300,000 suit brought by Danny Gardella, former New York Giant outfielder. Lanier and Martin had filed their suit on March 8 in New York city, Lanier asking $1,500,000 in damages and Martin $1,000,000, on the grounds that professional baseball violated antitrust laws in banning them from making a livelihood as professional ballplayers in the United States.

Gardella's suit, which had been reinstated by the U.S. court of appeals in New York on Feb. 9 after it had been thrown out earlier by the federal district court, was dropped on Oct. 7, clearing the final legal obstacle for professional baseball. Gardella was subsequently released by the Giants and signed with the St. Louis Cardinals for 1950.

Managerial Changes.—Frank Frisch, Hall of Fame second baseman who had previous experience as a major league pilot with the St. Louis Cardinals and Pittsburgh Pirates, became the new skipper of the Chicago Cubs on June 10. Frisch, who had opened the season as coach for the New York Giants, replaced Charlie Grimm, who was promoted to vice-president in charge of player operations.

On Aug. 16, the National league champion Boston Braves gave Manager Billy Southworth a leave of absence for the remainder of the season because of declining health. Coach Johnny Cooney was put in charge by Pres. Lou Perini.

Bucky Walters, who replaced Johnny Neun at the helm of the Cincinnati Reds on Aug. 6, 1948, was released Sept. 29, and Coach Luke Sewell piloted the Rhinelanders in their remaining games, after which he was signed to pilot the club in 1950. The fourth managerial head to fall was that of Joe Kuhel, who was dismissed as skipper of the Washington Senators after the close of the campaign. He was replaced by Stanley (Bucky) Harris, manager at San Diego, Calif. (Pacific Coast), in 1949, who had served two previous terms as pilot of the Senators—in 1924–28 and 1935–42.

Ownership, Other Changes.—For the first time in major league history, two clubs changed ownership within one week's time. In the first instance, Jan. 27, Fred Saigh, Jr., bought out his partner, Bob Hannegan, as owner of the St. Louis Cardinals. On Feb. 2, the DeWitt brothers, William O. and Charles W., acquired control of the St. Louis Browns from Richard Muckerman.

A third organization changed ownership on Nov. 21, when

Bill Veeck, who had headed a syndicate which purchased the Cleveland Indians in 1946, sold the club to a seven-man group headed by Ellis W. Ryan, insurance executive, for an estimated $2,200,000.

The top player deal transferred pitcher Murry Dickson from the Cardinals to the Pirates for $125,000. In other manoeuvres, the Dodgers brought up pitcher Don Newcombe from their Montreal, Que., farm, May 15, and the Negro righthander immediately became one of the aces of Manager Burt Shotton's staff. The Boston Red Sox also sought to strengthen their hill staff by trading pitcher Mickey Harris and outfielder Sam Mele to the Washington Senators for hurler Walter Masterson. The New York Giants sent catcher Walker Cooper to the Cincinnati Reds for catcher Ray Mueller and later disposed of first baseman Johnny Mize to the New York Yankees via the waiver route.

Charlie Gehringer, former second-base star with the Detroit Tigers, was the only modern player elected to the Hall of Fame by the Baseball Writers Association of America, although Charles A. (Kid) Nichols and Mordecai (Three-Finger) Brown, standout moundsmen in the early years of the century, were also voted into the shrine by a permanent baseball Hall of Fame committee.

The influx of Negro players into the majors continued at a steady pace. The Giants brought up second baseman Hank Thompson, who had a trial with the Browns in 1947, and outfielder Monte Irvin, from Jersey City, N.J., at midseason and the Cleveland Indians added their third Negro athlete in August when Luke Easter, giant first baseman from San Diego, joined outfielder Larry Doby and pitcher Leroy (Satchel) Paige on the club's roster.

An early-season squabble between the Yankees and the Indians was settled by Commissioner Chandler, who ordered the Indians to give infielder Artie Wilson to Newark, farm club of the Yankees, while instructing Newark to return outfielder Luis Marquez to the Indians. Chandler ruled that the Indians had interfered with Wilson while the Yankees were negotiating with the athlete, and adjudged the Yankees guilty of signing Marquez while the Indians had an option on him.

After more than two months on the side lines because of an ailing heel, Joe DiMaggio made his 1949 debut at Boston, Mass., June 28. In his first game, the Yankee Clipper clouted a two-run homer to feature a 5 to 4 victory. The next day he poled two round-trippers, one with two mates on the basepaths, to highlight a 9 to 7 victory, and the third day he rapped a three-run homer as New York scored a 6 to 3 win.

The game experienced a near-fatal tragedy on June 15 when Eddie Waitkus, first baseman of the Philadelphia Phillies, was shot by a young typist in a Chicago hotel room. The girl, Ruth Ann Steinhagen, lured Waitkus into the room on the pretext of having an urgent message for him. Following examination, the girl was confined to an institution for the mentally deranged.

Violations and Penalties.—Commissioner Chandler cracked down on the New York Giants for alleged violation of the game's "no tampering" rule on Jan. 12. He assessed the club $2,000 for negotiating with Coach Fred Fitzsimmons while the former pitcher was on the reserve list of the Boston Braves; fined Manager Leo Durocher $500 for instituting negotiations and also docked Fitzsimmons $500 and suspended him 31 days, beginning March 1, for his part in the incident.

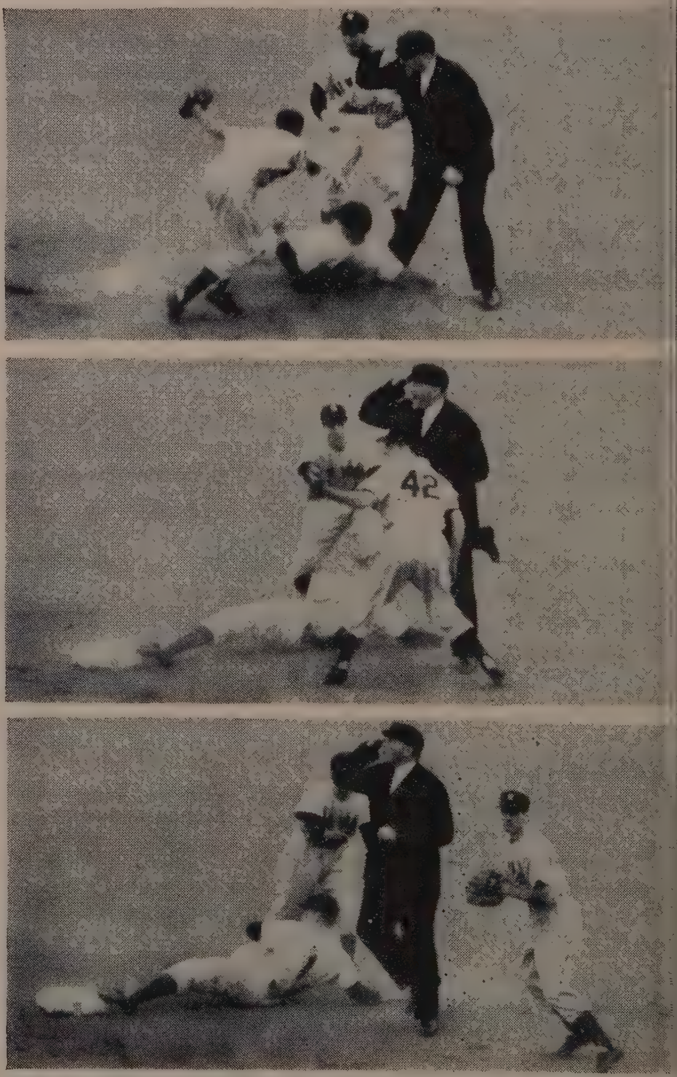
Durocher experienced a second brush with Commissioner Chandler on April 29, when he was indefinitely suspended for allegedly assaulting a fan following a game at the Polo Grounds. The Giant pilot was cleared and reinstated, however, on May 3, following a hearing at the commissioner's offices in Cincinnati, O.

Records.—Albert (Red) Schoendienst of the St. Louis Cardinals established a National league record at second base, May 22, when he played his 39th consecutive game without an error, breaking the former mark of 38 games set by Buck Herzog of the Cubs in 1919. By handling 236 chances without a bobble during that stretch, Schoendienst also surpassed the former mark of 196 chances set by Hugh Critz of the Giants in 1932. Before his flawless fielding streak ended, May 29, Schoendienst played 44 consecutive games and handled 268 chances without a bobble.

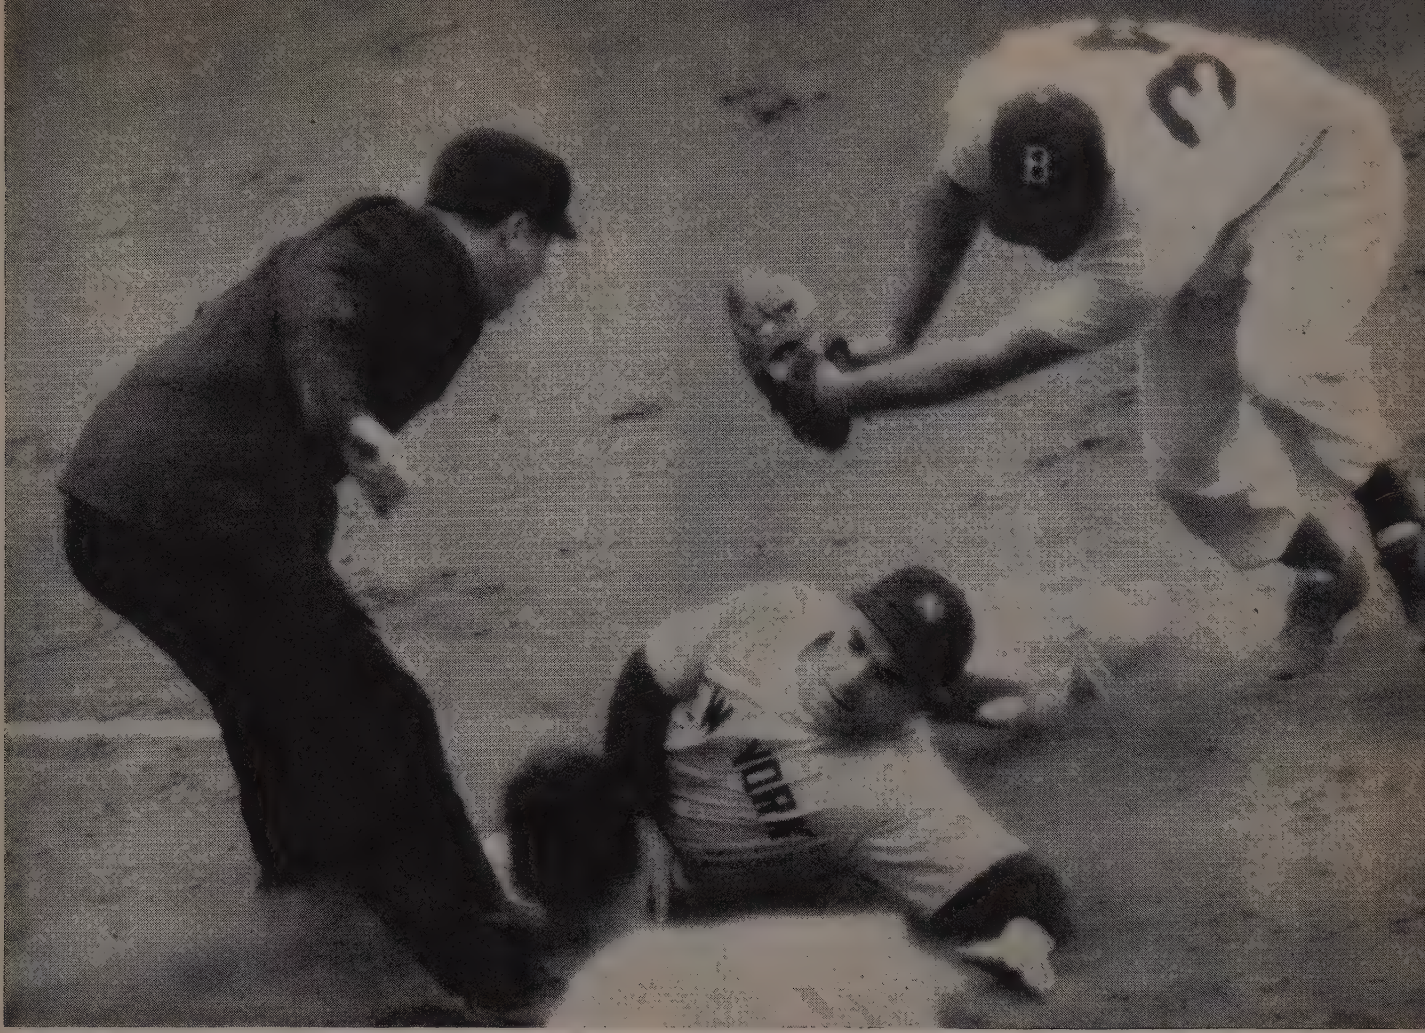
Luke Appling of the Chicago White Sox played his 2,154th game at shortstop on Aug. 6, to break the former standard for games at that position held by Walter (Rabbit) Maranville.

On July 26, Wally Moses, Athletics' outfielder, became the 86th player to collect 2,000 hits during his major league career, when he singled in the fifth inning of a 5 to 4 victory over the Browns.

Major League Races.—In what were probably the most dramatic races in big league history, the New York Yankees and Brooklyn Dodgers captured the American and National league championships, respectively. Each pennant was decided on the closing day of the season with the Yankees defeating the Boston Red Sox, 5 to 3, to edge out Joe McCarthy's club by one game, and the Dodgers defeating the Phillies, 9 to 7, to protect their one-game margin over the St. Louis Cardinals.



PEEWEE REESE, Brooklyn Dodger shortstop, being tagged out by New York Yankee second baseman Gerald Coleman (42), as he tried to slide into second base in the first inning of the third game of the 1949 world series. The umpire was Cal Hubbard, and Yankee shortstop Phil Rizzuto backed up the play



YOGI BERRA, New York Yankee catcher, safe at third base as he eluded attempted tag of Eddie Miksis (34), Brooklyn Dodger third baseman. Brooklyn's catcher tried to pick him off base in the first inning of the fourth game of the 1949 world series, played in Brooklyn, N.Y., on Oct. 8. The umpire was Art Passarella

who beat the Chicago Cubs.

The Yankees, picked to finish third in preseason forecasts, amazed the experts by leading the pack from the opening day until they were replaced briefly by the Red Sox in the closing week of the campaign. Trailing by one game with only two to go, New York defeated Boston on the next to last day and then completed the rout the following day.

In the senior circuit, the Cardinals had a one and one-half game edge over the Dodgers with only five games remaining. However, the St. Louisans went into a tailspin the final week and lost four straight contests—two to Pittsburgh and two to Chicago—before righting themselves, too late, to cop the final game of the season.

Individual Performances.—Ted Williams' bid to win the triple crown—high-batting-average, runs-batted-in and home-run leadership—was thwarted on the final day of the season when George Kell, Detroit third baseman, passed up the Boston outfielder, posting a mark of .3429 to Ted's .3427. Williams won home-run honours, however, with 43, and tied for runs-batted-in laurels with his teammate Vern Stephens at 159. In a poll of baseball writers, Williams also was acclaimed the most valuable player of the year in the American league.

Although losing the flag, the Red Sox produced the two top winning pitchers of the year in the majors. Mel Parnell won 25 games against 7 losses and Ellis Kinder posted 23 victories compared with only 6 setbacks.

Jackie Robinson won the National league batting title with .342, shading Stan Musial, who finished second, by three points, and gained the most valuable laurels in the senior circuit. At one stage the Dodger Negro star had a lead of more than 30 points, but slipped in the late stages and barely managed to stave off the Cardinal ace's rush.

Warren Spahn, Boston lefthander, registered the most wins in the senior loop with 21, while Howie Pollet of the Cardinals annexed his 20th triumph on the closing day. The top hurler in percentage, based on moundsmen who figured in ten or more decisions was Ted Wilks, St. Louis relief specialist, who posted a 10–3 record.

Among the rookie performers, Roy Sievers, who hit .306 for the Browns, and Don Newcombe, who posted a 17–8 mark for the Dodgers, were voted the outstanding freshmen in the American and National leagues, respectively, by the *Sporting News* and the Baseball Writers Association of America.

Final Standings

AMERICAN LEAGUE				NATIONAL LEAGUE			
Club	Won	Lost	Pct.	Club	Won	Lost	Pct.
New York	97	57	.630	Brooklyn	97	57	.630
Boston	96	58	.623	St. Louis	96	58	.623
Cleveland	89	65	.578	Philadelphia	81	73	.526
Detroit	87	67	.565	Boston	75	79	.487
Philadelphia	81	73	.526	New York	73	81	.474
Chicago	63	91	.409	Pittsburgh	71	83	.461
St. Louis	53	101	.344	Cincinnati	62	92	.403
Washington	50	104	.325	Chicago	61	93	.396

All-Star Game.—The American league registered its 12th victory against only 4 losses in the mid-season classic by defeating the senior circuit, 11 to 7, July 12, at Ebbets field in Brooklyn. Ralph Kiner and Stan Musial clouted home runs for the National league, but five errors led to the older loop's defeat.

Lou Boudreau of Cleveland managed the winners, while Billy Southworth of the Braves was at the helm for the losers.

The game was witnessed by 32,577 spectators, who contributed $79,255 to the players' pension fund.

World Series.—The Yankees chalked up their 12th world championship out of 16 postseason series in which they participated by defeating the Dodgers 4 games to 1.

Allie Reynolds hurled the Bombers to a 1 to 0 victory in the first game, which was decided in the ninth frame when Tommy Henrich, the first batter, clouted one of Don Newcombe's pitches for a home run. Reynolds yielded only two hits, while the Yanks solved Newcombe for five.

The following day, Elwin (Preacher) Roe, Brooklyn southpaw, turned the tables and blanked the Yankees 1 to 0, marking the first time in series history that the first two games resulted in 1 to 0 shutouts. The game was decided in the second inning when Jackie Robinson doubled off Vic Raschi, advanced to third after Gene Hermanski fouled to second baseman Gerry Coleman and scored as Gil Hodges singled.

The Bombers then swept the remaining three games. They won the third game, 4 to 3, highlighted by Johnny Mize's pinch-single with the bases loaded in the ninth inning; captured the fourth contest, 6 to 4, with Ed Lopat gaining credit for the triumph; and completed their conquest with a 10 to 6 victory in the final game.

Bobby Brown, Yankee third baseman, emerged as the hitting champion of the series with six hits, including two triples and a double. Duke Snider, Brooklyn outfielder, struck out eight times to match a record for a five-game series set by Rogers Hornsby of the Cubs in 1929.

The series drew 236,710 spectators with net receipts, exclusive of radio and television fees, amounting to $1,129,627.88. The commissioner's share was $169,444.17, while the clubs' and leagues' dividend amounted to $469,327.96. Players of the series contenders divided $490,855.75.

Attendance.—Although the Detroit Tigers, Boston Red Sox and St. Louis Cardinals established club records at the gate during the season, the major leagues suffered a decline of 595,855 in admissions from 1948.

The New York Yankees set the pace at the turnstiles with 2,321,302 paid, while the Indians, who drew a major league record total for 2,620,627 the previous season, attracted 2,233,871.

Following are the attendance figures for 1949, compared with those of 1948:

AMERICAN LEAGUE

Club	1949	1948	Change
New York	2,321,302	2,373,901	− 52,599
Cleveland	2,233,871	2,620,627	−386,756
Detroit	1,821,204	1,743,035	+ 78,169
Boston	1,596,650	1,558,798	+ 37,852
Chicago	939,494	777,844	+161,650
Philadelphia	816,514	945,076	−128,562
Washington	765,015	795,254	− 30,239
St. Louis	310,646	335,564	− 24,918
Totals	10,804,696	11,150,099	−345,403

NATIONAL LEAGUE

Club	1949	1948	Change
Brooklyn	1,635,237	1,398,967	+236,260
Pittsburgh	1,449,435	1,517,021	− 67,586
St. Louis	1,430,586	1,111,440	+319,146
New York	1,220,558	1,459,269	−238,711
Chicago	1,157,200	1,237,792	− 80,592
Boston	1,081,831	1,455,439	−373,608
Philadelphia	834,348	767,429	+ 66,919
Cincinnati	711,096	823,386	−112,290
Totals	9,520,291	9,770,743	−250,452
Major league totals	20,324,987	20,920,842	−595,855

Rules.—At the December meetings in New York, the controversial bonus rule was on the agenda for discussion. The American league voted to eliminate the rule and the National league to retain it. Commissioner Chandler voted with the American league. The minors had previously voted in Baltimore, Md., at the National association convention, to retain the rule. The action of the majors required resubmission of the question to the clubs of the National association.

Postseason Player Deals.—The year 1949 closed with some major trades in the middle of December. The St. Louis Cardinals traded Ron Northey and Lou Klein to the Cincinnati Reds for Harry Walker and a minor league player to be named. In a deal between the Boston Braves and the New York Giants, Alvin Dark and Eddie Stanky went to the New York club for Willard Marshall, Sid Gordon, Buddy Kerr and Sam Webb. White Sox player Edward Klieman was traded to the Philadelphia Athletics for Henry Majeski. The Detroit Tigers acquired Gerald Priddy from the St. Louis Browns, and Lou Kretlow went to the St. Louis club in the deal. The Philadelphia Athletics acquired Robert Dillinger from the St. Louis Browns, and the Chicago Cubs acquired William Voiselle from the Boston Braves.

The Minor Leagues.—A record total of 59 minor leagues operated in 1949 with every circuit that started the season still doing business at the finish and only a few clubs finding it necessary to withdraw from the field because of financial reasons. The 59 circuits played to 41,978,235 spectators during the season, marking the fourth consecutive year the minors had exceeded the previous season's gate. At the same time, more than 60 clubs set attendance records for their respective cities.

Minor league pennant and play-off winners for 1949 follow:

Class	League	Pennant winner	Play-off winner
AAA	American association	St. Paul (Minn.)	Indianapolis (Ind.)
	International	Buffalo (N.Y.)	Montreal (Que.)
	Pacific Coast	Hollywood (Calif.)	Hollywood
AA	Southern association	Nashville (Tenn.)	Nashville

	Western Carolina	Newton-Conover (N.C.)	Rutherford(Spindale,N.C.)
	Wisconsin State	Oshkosh (Wis.)	(no play-offs)

*Play-off winner awarded pennant.

The 1949 interleague series champions were: Junior world series—Indianapolis (American association) 4, Montreal (International) 2; Dixie series—Nashville (Southern) 4, Tulsa

(Texas) 3; East Texas-Evangeline series—Gladewater (East Texas) 4, Hammond (Evangeline) 0; Little Dixie series—Pensacola (Southeastern) 4, Tampa (Florida International) 2; Georgia Alabama-Georgia Florida—Waycross (Georgia-Florida) 4, Alexander City (Georgia-Alabama) 1; Texas series—Corpus Christi (Rio Grande) 4, Big Spring (Longhorn) 1.

(A. B. Cr.)

Basketball.

The championship of the National Collegiate Athletic association was decided in 1949 when the University of Kentucky, Lexington, defending titleholder, defeated a hard-fighting band of Oklahoma Aggies (Oklahoma Agricultural and Mechanical college, Stillwater) by a score of 46–36, in a play-off for the crown at Seattle, Wash. Alex Groza, six-foot seven-inch centre, was the big gun of the winners' attack, tossing in 25 points before fouling out of the battle in the last five minutes of play. Third place went to the University of Illinois, Urbana, when it subdued Oregon State college, Corvallis, 57–53.

Kentucky had won the eastern regional eliminations by defeating Illinois at New York city's Madison Square Garden, while Oklahoma A. and M. was fighting its way through to the top at the expense of Oregon State in the western group trials.

In its drive to the title, Kentucky set or shared in seven new National Collegiate Athletic association records. They scored 85 points, 23 on foul shots, to set two single-game marks in their first-round clash with Villanova college, Villanova, Pa., and the 85–72 final score of that meeting represented the highest total ever made by two teams in one contest. Kentucky also amassed 207 points for three contests to establish a new standard.

Groza's 82 points, 31 field goals and 20 successful foul shots during the two eastern regional contests and the title play-off accounted for a trio of three-game records.

The University of San Francisco captured first prize in the annual National Invitation tournament after Kentucky suffered one of its few reversals of the season by bowing to Loyola university, Chicago, Ill., 67–56, in the quarter-final round. Kentucky continued its reign as champion of the Southeastern conference, sweeping to the title of that circuit for the sixth consecutive season.

Yale, paced by All-American Tony Lavelli, won the Eastern Intercollegiate league crown. Illinois led the Western (Big Nine) conference and Oregon State triumphed in the Pacific Coast conference. The first national Catholic invitation tournament, played at Denver, Colo., resulted in victory for Regis college of Denver, which set back St. Francis college, Brooklyn, N.Y., 51–47, in the title contest.

Other major college champions for the 1948–49 campaign included the following: Southern conference, North Carolina State; Missouri Valley, Oklahoma A. and M.; Southwest, Rice; Big Seven, Nebraska and Oklahoma tied; Big Six, Wyoming; National Association, Hamline; Negro, West Virginia State.

The domination of the Phillips "66" Oilers of Bartlesville, Okla., in national Amateur Athletic union competition came to an end after six years when the Oilers bowed to the powerful Bittners of Oakland, Calif., by a 55–51 count in the final of the annual championship held at Oklahoma City in March. Don Barksdale, Oakland Negro ace, paced his team to victory with 17 points.

Two Nashville, Tenn., teams battled it out for women's national A.A.U. laurels, the Goldblumes winning honours for the second season in a row when they conquered the Nashville Business college team, 35–17, in the final round of a six-day tournament at St. Joseph, Mo.

Professional court teams enjoyed a busy campaign, the Minneapolis Lakers defeating the Washington Capitols four games to two, in the final play-off series for honours in the Basketball Association of America. The Anderson Packers were crowned champions of the National league and the Wilkes-Barre (Pa.) Barons captured the title of the American league.

ACTION DURING final game of the National Invitation basketball tournament, between Loyola of Chicago and San Francisco university, played at New York city, March 19, 1949. San Francisco won the championship, 48 to 47

Representatives of the Basketball Association of America and the National league came together late in the summer of 1949 to end the heated battle between the two big professional circuits. Coming out of the parleys was a new National Basketball association composed of 18 quintets. The teams opened the new campaign in National and American divisions, with each division further broken down into Eastern and Western sections.

Belgian Colonial Empire.

The Belgian colonial empire consists of the colony of the Congo in central Africa and the adjacent trust territories of Ruanda and Urundi. The accompanying table gives material relative to all territories administered by Belgium. Total area: about 925,094 sq.mi. Total population (1949 est.): about 14,748,000. Chief towns (white population only, Dec. 1948 est.): Léopoldville (cap., 7,244); Elisabethville (6,240); Stanleyville (1,517); Costermansville (1,511). Governor general: Eugène Jungers.

Belgian Congo.—The prosperity enjoyed by Belgium's African colony after World War II showed no signs of diminishing in 1949; the year was one of consolidation, though there was, to begin with, a fall in the prices of oil-bearing products and fibres and later of mining products.

Belgian Colonial Empire

Country and Area (In sq.mi.)	Population (Feb. 28, 1949, est.)	Capital, Status and Governor	Principal Products (1948)	Foreign Trade (Francs '000) (Including Ruanda and Urundi)	Road, Rail and Waterways (Including Ruanda and Urundi)	Budget (Francs '000)

*Including Ruanda and Urundi.

With a view to adapting the economy of the Belgian Congo to peacetime conditions and to consolidating results already achieved, a team of experts at Léopoldville under the chairmanship of the governor general, and another in Brussels under the chairmanship of Pierre Wigny, the minister for colonies, drew up a ten-year plan for economic and social development, allocating 25,000,000,000 fr. to public investment. Under the plan, which was published in June, the government would ask parliament each year to vote the necessary credits for the next 12 months, and this would afford the opportunity for checking the working of the plan and making any adjustments which might be required.

The ten-year plan was intended not only to improve the living standards of the Belgian Congo's 10,000,000 population whose essential needs were not yet satisfied, but also to create a domestic market hitherto lacking. To this end, the government was to pursue a policy of wage increases for natives which could be secured by developing output, conservation of crops and improving distribution and transport.

In the mining sector, since alluvial deposits were almost exhausted, new techniques were perfected for exploiting deep seams. In the agricultural domain greater mechanization, curing processes and the construction of silos were foreshadowed.

In all, the public authorities were to devote, for the welfare of the native population, 1,500,000,000 fr. for the agricultural program, 2,000,000,000 fr. for housing, 1,000,000,000 fr. for drinking water, 2,000,000,000 fr. for education and 2,000,000,000 fr. for technical instruction.

Also envisaged in the ten-year plan was intensive development of public works, including improvement of the road, railway and airway systems, of navigable waterways and of telecommunications, modernization of sea and river ports and the construction of wharves, hydroelectrical works, refrigerating plants, scientific laboratories, etc.

Operation of the agricultural provisions of the ten-year plan began on July 15, 1949, with the passing of an order for organizing native co-operatives.

Ruanda and Urundi.—The putting under trusteeship of the two territories, which since 1925 had been administered by Belgium, was approved by the Belgian parliament by the act of April 25, 1949. On April 11 the Mwamis (native rulers) of both Ruanda and Urundi had been appointed by decree of the regent ex officio members of the vice-governor general's council.

In order to encourage greater participation by the natives in the government of their country, the administrative authorities examined the question of creating an elected council which would have a legislative function.

Steps were taken towards the opening at Kisantu (Belgian Congo) in 1953 of a university accessible to the inhabitants of the protected territories; moreover, starting in 1955, university training was to be made available at Astrida, in the heart of Ruanda-Urundi.

Education.—(1948) State schools: elementary 5, pupils 3,464; technical 3, pupils 355; secondary 4, pupils 313. Subsidized schools: elementary 8,001, pupils 406,652; technical 36, pupils 1,328; teachers' training schools 39, pupils 2,471; secondary 12, pupils 959. Free (Catholic) schools: elementary 19,072, pupils 513,049; secondary 58, pupils 1,928.

FILMS OF 1949.—*African Fauna; African Tribes* (Paul Hoefler Productions); *A Journey to African Lakes; Wild Life in Africa* (Africa Films). (G-H. D.)

Belgian Congo: *see* BELGIAN COLONIAL EMPIRE.

Belgium.

A kingdom in western Europe, Belgium is bounded by France on the southwest, the Netherlands on the north and Germany and Luxembourg on the east. Area: 11,783 sq.mi. (this includes some small German frontier areas north of Aachen annexed on April 15, 1949. The six-power agreement of March 26, 1949, authorized Belgium to take over an area of about 10½ sq.mi. with a population of about 6,000 but it renounced its claim to three townships and incorporated only an area of 7½ sq.mi. with a population of barely 500). Pop. (Dec. 31, 1948, est.): 8,602,611. Chief towns (pop., Dec. 31, 1948, est.; first figure including suburbs, second figure commune only): Brussels (cap. 1,296,687; 185,112); Antwerp (chief port, 794,280; 266,636); Liége (573,176; 156,664); Charleroi (445,229; 26,262); Ghent (442,792; 166,797); Namur (215,069; 31,637); Bruges (200,850; 52,984). Languages (1930): Dutch, French and German. Religion: mainly Roman Catholic. Ruler: King Leopold III (*q.v.*); Prince Charles, regent; prime ministers in 1949: Paul-Henri Spaak (*q.v.*) and, from Aug. 10, Gaston Eyskens (*q.v.*).

History.—Increasing unemployment was the chief political and economic preoccupation at the beginning of 1949. On March 12 the number of unemployed totalled 261,000 against 122,000 in Sept. 1948. Production, however, continued at a high level and on the stock exchange prices showed no tendency to fall. Some proportion of the unemployment, therefore, apparently was attributable to a general regrouping of manpower necessitated by a return to normal industrial activity dominated by competition. Though the two parties in power—the Social Christian party and the Belgian Labour Socialist party—agreed on measures for dealing with the problem, they were unable to agree over the question of unemployment insurance payments. The Socialists insisted on new taxes; the finance minister, Gaston Eyskens (Social Christian), opposed this, considering that a policy of economy was the only possible course. The conflict remained latent for several weeks.

The Royal Question.—On April 25 the king and the Prince Regent Charles met at Berne, Switz., in the presence of Paul-Henri Spaak, the premier, and Henry Moreau de Melen, minister of justice, to discuss the political situation and the royal question. On May 3 Leopold sent his brother a letter insisting on the need to find a way out of the impasse, by a popular vote or some other constitutional means. "The country," he wrote, "must return to constitutionalism; the present abnormal situation cannot continue indefinitely." This was also the view of the Social Christian party. The party was still unable to persuade the Socialists to relinquish the idea of new taxation to pay for unemployment insurance, and a crisis was inevitable; on May 18 the regent signed a decree dissolving the parliament. In uneventful conditions parliamentary and provincial elections took place on June 26, when for the first time women went to the polls. In the chamber of representatives the Social Christian party out of 212 seats gained 105, the Liberals 29, the Socialists 66 and the Communist party 12.

In the senate the Social Christians secured an absolute majority with 92 seats.

On June 28 Spaak presented the resignation of his cabinet to the regent. First to be charged with the task of forming a new cabinet was Paul van Zeeland (Social Christian), who suggested a vote by the two houses in joint session to end the regency, in accordance with the act of July 19, 1945; but neither the Socialists nor the Liberals were prepared to support him in this. On July 6 the regent next entrusted Frans van Cauwelwaert (Social Christian), speaker of the chamber of representatives, with a mission of inquiry. Though this lasted a fortnight, it produced no concrete result. Finally, on July 23, the regent called on Gaston Eyskens (Social Christian), finance minister in the outgoing cabinet.

As the crisis threatened to continue, King Leopold on July 31 and Aug. 1 received a delegation from the Socialist party and on Aug. 2 and 3 from the Liberal and Social Christian parties. At the close of these conversations the king sent a message affirming his determination to comply with the will of the nation. "It is my express purpose," he declared, "to interpret the result of a possible referendum only in terms of the higher interests of the country. If I were led to believe that in reassuming my constitutional prerogatives I could not serve my country, I would abdicate in favour of my son, the crown prince."

UNEMPLOYED BELGIAN applying for relief during 1949 (*Stempellokaal*—on the dole). International Labour organization figures showed Belgian unemployment to have risen 153% during 1948–49

The political atmosphere having been thus clarified, the Liberal party agreed to take part in the government. Formed on Aug. 10, with nine Social Christians and eight Liberals, the Eyskens cabinet on Aug. 17 received a vote of confidence in the chamber of representatives by 125 votes to 64 with 1 abstention, and in the senate on Aug. 18 by 99 votes to 51 with 1 abstention. On Oct. 27, by 100 votes to 65, the senate approved a bill introduced by Paul Struye (Social Christian) for a national referendum on King Leopold's return. In the chamber of representatives the bill was approved on Dec. 13 by a special committee. The vote was 12 to 8, with 11 Social Christians and 1 Liberal in favour and 6 Socialists and 2 Liberals against.

The Economic Situation.—The economic position of Belgium was strengthened during the first nine months of 1949. This was evident from a rise of about 10% in stock exchange quotations and especially from the balance of foreign trade. Imports for the first seven months amounted to 46,900,000,000 fr. and exports to 49,000,000,000 fr.; that is, there was a balance of 2,100,000,000 fr. Industrial production, however, was affected by the unfavourable economic conditions in Europe, as shown by the index of industrial production (1936–38 = 100): from 123 in Jan. 1949 it rose to 132 in March but it fell to 105 in July. The coal-mining and metallurgical industries were those chiefly affected.

Tax revenues conformed with the estimates. Returns for the first seven months of the year were 28,400,000,000 fr. against an estimate of 28,500,000,000 fr. Compensation for this slight discrepancy was afforded by special taxes which exceeded the estimates, producing 2,700,000,000 fr. against an estimated 2,400,000,000 fr.

The Belgian franc was monetarily sound when there came devaluation of the pound sterling, followed by the devaluation of other western currencies. However, the Belgian government was obliged to bring the franc into line and raise the official exchange rate from 43.83 fr. to 50 fr. to the dollar, effective Sept. 22.

Foreign Policy.—The replacement of Paul-Henri Spaak by Paul van Zeeland in no way modified the broad lines of Belgian foreign policy which continued within the framework of the North Atlantic treaty and the Organization for European Economic Cooperation. Some check, however, to the realization of Benelux was given by the new minister of foreign affairs. At the conference of the three interested powers held at Luxembourg in October, Zeeland refused to ratify several paragraphs which had been initialled at The Hague by delegates appointed by Spaak and which were concerned with the unlimited acceptance of Dutch florins by Belgium and the country's withdrawal of the gold clause. The negotiations ended, however, with the signature on Oct. 15 of a protocol which, although not achieving the union contemplated, nevertheless extended the list of articles freed from licence and granted additional credits to the Netherlands.

Education.—(1947-48) Elementary: infant schools 4,175, pupils 249,023; primary schools 8,697, pupils 788,514; adult schools 211. Teachers' colleges: elementary 120, students 9,443; secondary 39, students 1,055. Secondary education, state: lower grade (*athénées*) 121, pupils 52,153; higher grade (*écoles moyennes*) 129, pupils 36,545; "free" (Catholic, 1945-46) 440, pupils 65,918. Technical schools (1947): pupils 226,290. Universities (1947-48): 4, institutions of higher education 16, students 17,933.

Finance and Banking.—Budget (1949 est.): revenue 69,472,000,000 fr., expenditure 71,584,000,000 fr. (at the end of 1949 the est. deficit approached 17,500,000,000 fr.). National debt (March 31, 1947) 258,200,000,000, fr. Currency circulation (Oct. 21, 1948) 81,555,000,000 fr., (Nov. 3, 1949) 87,361,000,000 fr. Gold reserve (Oct. 21, 1948) 28,326,000,000 fr., (Nov. 3, 1949) 31,551,000,000 fr. Savings and bank deposits (Dec. 1948) 65,900,000,000 fr., (Aug. 1, 1949) 69,800,000,000 fr. Monetary unit: Belgian franc with an exchange rate beginning Sept. 22, 1949, of 50 fr. to the U.S. dollar.

Foreign Trade.—(Belgo-Luxembourg Economic union) imports: (1948) 24,324,000 metric tons, value 72,931,000,000 fr.; exports: (1948) 12,583,000 metric tons valued at 61,767,000,000 fr.

Transport and Communications.—Roads (1948): 10,717 km. Licensed motor vehicles (1948): cars 179,230, trucks 125,739, motorcycles 108,641. Railways (1948): 4,956 km.; passenger traffic (1948 monthly average): 599,000,000 passenger-km.; freight traffic (1948 monthly average): 513,000,000 ton-km. Shipping (Jan. 1948): merchant vessels 78, total tonnage 248,298. Port of Antwerp (freight traffic in metric tons, 1948): imports 15,857,000; exports 10,912,000. Telephones (1948): subscribers 420,929. Wireless licences (1946): 798,023.

Agriculture and Fisheries.—Main crops (in metric tons, 1948): wheat 344,000, (1949) 450,000; barley 172,000; oats 385,000; rye 184,000, (1949) 192,000; potatoes 2,133,000. Production: sugar (raw value) 263,000; meat 220,800; milk 2,250,000; butter (1947) 25,000. Livestock (mid-1949): cattle 1,876,876; sheep 155,173; pigs 1,074,228; horses 267,373; poultry 8,609,135. Fisheries: total catch (1948): weight 64,440 metric tons; value 462,000,000 fr.

Industry.—Industrial establishments (Jan. 1948): 248,128; persons employed 1,000,010. Fuel and power (1948): coal 26,678,900 metric tons; gas 1,698,257,000 cu.m.; electricity 7,903,000,000 kw.hr. Raw materials (in metric tons, 1948): pig iron and ferroalloys 3,948,000; steel ingots and castings 3,912,000; copper 132,000; zinc 154,000; lead 66,000; tin 12,300; aluminum 2,300. Manufactured goods (in metric tons, 1948): cotton and rayon fabrics 62,659; woollen fabrics 19,386; linen fabrics 5,014; rayon fabrics 5,166. (G-H. D.)

Ben-Gurion, David (1886–), Israeli prime minister, was born at Płońsk, Poland, Oct. 16. He went to Palestine at the age of 20, worked as a winepresser, and was instrumental in organizing the Jewish *shomer*, or watchmen, guarding Jewish farms against Arab marauders. In 1912 he left for Istanbul, Turkey, where he matriculated in law. He returned to Palestine in 1918 as a member of the Jewish legion. After demobilization, he devoted himself to organizing the Histadruth, or General Federation of Jewish Labour, of which from 1921 he was secretary general. In 1930 he also became general secretary of the Jewish Labour party, and in 1935 was elected chairman of the Jewish agency. He became prime minister and minister of defense when the state of Israel was proclaimed in Tel Aviv on May 14, 1948.

After the adoption of the constitution and the formal election of Chaim Weizmann as president of the republic on Feb. 16, 1949, Ben-Gurion submitted the cabinet's resignation to the president, who charged him with the task of forming a new administration. In his policy statement Ben-Gurion declared that Israel would seek friendship with all peace-loving nations, particularly the U.S. and the U.S.S.R. In a speech on Oct. 29 he accused the Communists of causing labour unrest in Israel and of organizing anti-Zionist activities abroad. A struggle, he said, was being waged between the Socialist Zionists and the Communist anti-Zionist Jews: there could be no compromise. Israel must be built as a Jewish state or act as a foreign agency.

Benton, William (1900–), U.S. senator, was born on April 1 in Minneapolis, Minn. He was graduated from Yale university in 1921. In 1929, in partnership with Chester Bowles, he founded the advertising agency of Benton and Bowles.

Benton retired from the agency in 1936, and in 1937 became vice-president of the University of Chicago, on a part time basis. At his instance the university acquired Encyclopædia Britannica, Inc., in 1943. He financed the company, became chairman of its board and shared its ownership with the university. He launched Britannica into the classroom motion-picture field and served as chairman of Encyclopædia Britannica Films Inc.

During this period, in collaboration with Paul Hoffman, he helped to found the Committee for Economic Development, and he was active in inter-American affairs.

Benton was appointed U.S. assistant secretary of state by Pres. Harry S. Truman on Aug. 31, 1945, and served until Sept. 30, 1947. He developed the country's first peacetime program of international information and educational exchange and took responsibility for U.S. participation in the United Nations Educational, Scientific and Cultural organization. He resumed his duties at Britannica in Oct. 1947 and also became chairman of the Muzak corporation, which he had owned for some years, but continued his interest in international affairs and was chairman of the U.S. delegation at two international conferences thereafter.

In Dec. 1949 Benton was appointed U.S. senator from Connecticut, where he had lived for 17 yr., by Governor Bowles, to succeed Raymond E. Baldwin, who resigned from the senate effective Dec. 17, 1949.

Bequests, Philanthropic: *see* Donations and Bequests.

Beran, Josef (1888–), Czech ecclesiastic, was born at Plzeň, Dec. 29. He was educated at the pontifical university in Rome. He was rector of Prague Roman Catholic seminary, 1933–46, and was appointed professor of pastoral theology at the University of Prague in 1939. Arrested by the Germans in June 1942, he was sent to Dachau concentration camp, where he was liberated by the U.S. army in April 1945. In Nov. 1946 he was appointed archbishop of Prague and primate of Czechoslovakia. He was awarded the war cross first class, the highest Czechoslovak military decoration, by Pres. Eduard Beneš, and his prestige was such that when, on June 14, 1948, the Communist Klement Gottwald became president of the republic, he attended a solemn *Te Deum* in Monsignor Beran's St. Vitus cathedral. The archbishop recognized, however, that conflict between the church and the Communist regime was unavoidable, and the crisis came in June 1949, with the appointment by the government of a "supervisor" to occupy the consistorial office and administer church affairs. On June 18, preaching at Strahov monastery, the archbishop said: "If one day you learn of the conclusion of an agreement between the church and the state, you should know that I would never conclude an agreement which would infringe the rights of the church and of the bishops." On June 19 Communists created a disturbance during his Corpus Christi sermon at St. Vitus cathedral. From that day Archbishop Beran was virtually interned in his palace of Hradčany; visitors were not admitted and all correspondence, whether personal or official, was withheld or scrutinized.

Berlin. Capital of the German reich from 1871 to 1945, Berlin remained in 1949 the largest city of Germany. Area: 341 sq.mi. Pop.: (May 17, 1939, census) 4,332,242, (Oct. 29, 1946, census) 3,180,383 or 24.4% less. From June 6, 1945, to June 24, 1948, Berlin was administered by an inter-Allied governing authority (in Russian, *Kommandatura*) consisting of the commandants of the four sectors of Berlin. After June 24, 1948, when the soviet commandant proclaimed the dissolution of the *Kommandatura*, Berlin was in fact divided into two opposing administrations. The three western sectors (pop., mid-1949 est., *c.* 2,500,000) were under the authority of the three following Allied commandants: United States, Major General Maxwell D. Taylor (who on Aug. 6, 1949, was named to succeed Colonel Frank L. Howley); Great Britain, Major General G. K. Bourne (who on Jan. 22, 1949, succeeded Major General E. O. Herbert); France, General Jean Ganeval. In the soviet sector (pop., mid-1949 est., 900,000) the commandant was Major General Alexander G. Kotikov. There were also two rival German city governments and two lord mayors: Professor Ernst Reuter, appointed on Dec. 7, 1948, *Oberbürgermeister* by a city assembly elected by the population of the three western sectors; Friedrich Ebert, appointed on Nov. 30, 1948, provisional *Oberbürgermeister* of the soviet sector by a meeting summoned by the Communist S.E.D. (*Sozialistiche Einheitspartei Deutschlands*) party.

History.—After talks between the soviet and the U.S. representatives on the Security council of the U.N. the soviet government agreed on May 4, 1949, to reopen land traffic between the western zones and Berlin on condition that a four-power conference be held to discuss the problems of Germany and Austria as a whole. Thus the soviet blockade aimed at wresting the western sectors of Berlin from the control of the three western powers was abandoned after being maintained for 10½ months. During the whole period the 2,500,000 inhabitants of the western sectors had been supplied by the Anglo-American air lift which had flown 1,583,686 tons of supplies into Berlin by May 12, the date when the land blockade officially came to an end; 1,214,339 tons had been flown in by U.S. aircraft and 369,347 tons by British aircraft. The air lift did not cease immediately after the blockade was lifted, but was allowed to run down gradually over a period of 4½ months. By the time it ceased altogether (on Sept. 30) 2,323,738 tons of food, coal, machinery and other commodities had been flown into Berlin over a period of 15 months. The cost of the operation up to May 12 was $170,000,000.

BERLINER drinking wine out of a hat as the populace rejoiced over the lifting of the eleven-month blockade between east-west sectors of the city, May 12, 1949

With the lifting of the blockade living conditions in western Berlin became once more relatively normal. The shops filled with commodities of all sorts which flowed in chiefly from the western zones. Rationing of textiles and many other goods was abolished. Prices of vegetables dropped by as much as half. The supply of gas and electricity from the soviet zone was resumed.

And yet it soon became evident that western Berlin was faced—despite the lifting of the blockade—with a major economic crisis: a crisis of its producing industries.

West Berlin's industries suffered from a chronic lack of capital and of markets. The wholesale soviet dismantling in 1945 had left the factories with a high proportion of damaged or out-of-date plants; the confiscation of Rm. 5,000,000,000 in the Berlin banks had practically deprived the industries of capital; stocks of raw materials were almost used up during the blockade in the effort to keep the factories producing; and the lower value of the eastern mark, after the currency reform in 1948, gave soviet-sector and soviet-zone industries a big competitive advantage.

The result of this industrial crisis was twofold: the administration of west Berlin, the *Magistrat,* was faced with virtual bankruptcy in the shape of a budget deficit of Dm. 80,000,000 monthly. Unemployment rose from 40,000 at the beginning of the blockade (June 1948) to 100,000 in Oct. 1948 and 250,000 in Oct. 1949.

The western Allies and western Germany had sent much help to sustain western Berlin during and after the blockade, amounting by Oct. 1949 to Dm. 680,000,000 from G.A.R.I.O.A. (Government Appropriation and Releases in Aid of Occupied Areas) and Dm. 530,000,000 from the west German states. Nevertheless it was clear that a catastrophic situation would soon arise unless a great effort was made by the west German republic to put western Berlin industrially on its feet again. Leading west German politicians advocated the incorporation of west Berlin in the West German Federal republic as a twelfth state; but this proposal already embodied in article 23 of the west German constitution had been vetoed by the western Allied powers because it would have entailed widening the breach with the Soviet Union.

On Oct. 21, 1949, Fritz Schäffer, the minister of finance of the newly formed west German republic, announced a program of help for western Berlin: substantial credits and government contracts were promised including the payment of the budget deficit until the end of the financial year; private firms in the western zones, likely to place orders in Berlin, were to be encouraged by federal government guarantees; goods manufactured in Berlin and sold to western-zones buyers were to be exempted from certain indirect taxes; the supposedly lost banking accounts, the so-called *uralt Konten,* were to be revalued at 5%; a common west Berlin and western-zones banking system was to be introduced; and Berlin was to be an equal, if not favoured, partner with western Germany in receiving Marshall aid. Details in implementation of these proposals were to be worked out in Frankfurt and Bonn.

The so-called *modus vivendi* between east and west in Berlin, which had been agreed upon by the Council of Foreign Ministers (*q.v.*) in Paris in May and June, was complicated by a strike of the western-sector railwaymen who demanded to receive their wages in westmarks (May 21). The Berlin railways were administered by the eastern-sector authorities who paid the railwaymen in eastmarks which had only about one-sixth of the value of the western currency. The strike developed into a struggle between the Independent Trade Unions (U.G.O.) of the western sectors and the Communist-dominated Free German Trade Union federation (F.D.G.B.), in the course of which there was shooting and casualties. After intervention by the three western commandants the strike was brought to an end on the understanding that the east-sector railway authorities would pay 60% of the west-sector railwaymen's wages in westmarks and the west Berlin *Magistrat* would exchange the remaining 40% into eastmarks (June 26).

During 1949 the soviet sector of Berlin remained under the administration of the Communist-controlled east-sector *Magistrat.* Its industries were geared up to the soviet zone and enjoyed also a certain market in west Berlin at the expense of western-sector industries. When the so-called German Democratic republic was set up on Oct. 12 no attempt was made to incorporate into it the eastern sector of Berlin which—like the western sectors—remained outside the newly formed republics.

Bermuda.

Bermuda is a British colony of about 300 small islands in the western Atlantic. Area: 19 sq.mi. Pop. (1947 est.): 35,560 including 13,026 white. Chief towns: Hamilton (cap., pop. *c.* 3,000); St. George (*c.* 1,300). Governor in 1949: Lieut. Gen. Sir Alexander Hood.

History.—The Defense (Local Forces) act, which introduced peacetime conscription for the first time in the colony's history, was passed in 1949 by both houses of the legislature. Currency smuggling and a possible dollar "black market" aroused concern. Plans for an agricultural production and marketing scheme were introduced and approved. The return of the luxury liner "Queen of Bermuda" to its prewar role of tourist carrier provided a fillip to the tourist industry.

Finance and Trade.—Currency: based on sterling. Budget (1948): revenue £1,531,970; expenditure £1,531,762. Foreign trade (1948): imports £7,121,039; exports (visible) £955,406. Lilies form the only important domestic export and the economy of the colony is primarily dependent on the tourist industry, estimated to have been worth about £4,254,780 in trade to the colony in 1948. Betting and Gambling.

U.S. gambling in 1949 was marked by fads and crazes. Ten-cent chain letters, one-dollar "pyramid clubs," hundred-thousand-dollar puzzle contests, thousand-dollar merchandise lotteries—all caused brief sensations.

The post office had ruled the chain-letter scheme illegal, and the pyramid clubs were an effort to circumvent government disapproval by using the telephone instead. Each participant paid $1 and was promised an income of $2,048 when he reached the head of the list. Collections were made at a party to be given by the person at the head of the list. The craze spread throughout the country. State gambling laws were invoked without success, but the pyramid clubs soon collapsed under their own weight. There were not enough people to go around; if only one pyramid club had remained intact, at the end of 24 days it would have had to involve 268,000,000 persons.

The merchandise lotteries were an effort to promote sales through puzzle contests based on those legitimately conducted, and approved by the post office, to secure contributions to charitable organizations. Prizes up to $25,000 were offered. The postal authorities stopped most of the disreputable "contest" lotteries through fraud actions that led to consent decrees.

Among card games the principal craze was the game canasta (*q.v.*) but though it was by far the most popular new game of the year it was not widely used for gambling. Gin rummy remained the game played for the biggest stakes.

Betting on race horses fell more than 10% from the 1948 levels, so far as betting at the track was concerned. The 20 states permitting pari-mutuel betting on running races recorded a mutuel handle of $1,395,731,778, the sixth straight year that the figure had exceeded $1,000,000,000. An expert estimate made toward the end of the year set the total amount bet on running races at $8,000,000,000, the majority of which was bet by 2,000,000 regular bettors, though there were six times as many occasional bettors. The drop in pari-mutuel action might have been due to the fact that there were only 2,167 racing days in 1949 as against 2,457 in 1948. Pari-mutuel betting on harness racing increased to $205,216,832 in 1949 from $194,166,569 in 1948; this was legal in 12 states.

Despite efforts of the Thoroughbred Racing Protective bureau (T.R.P.B.), there was proof of skulduggery at race tracks. The practice of running "ringers" (fast horses entered under names of relatively slow ones) had been thought eliminated by the practice of tattooing each horse, but a series of articles by Michael MacDougall, a professional gambling investigator, exposed the continuance of such cases and the T.R.P.B. prosecuted and obtained confessions in three such cases; insiders, however, had already made a fortune by betting on the substituted horses. Milt Sosin, a reporter for the *Miami News* (Fla.), secured photographic evidence that a spectator at the Gulfstream track was signalling race results to confederates who then bet with bookmakers who had not yet received the results by telegraph; the spectator was not prosecuted but was merely barred from the track. In another case Detroit, Mich., police arrested a man using a radio telephone for the same purpose, and he paid a small fine.

The numbers racket, a form of lottery prevalent in large cities, flourished despite periodic clean-ups (as in Chicago in April and in New York in July), and despite widespread publicity that it was not honestly conducted.

The play in slot machines fell off. Louisiana, collecting a tax of $100 per machine, reported a decline in taxes from $1,041,429 in 1948 to $877,512 in 1949. An investigation by a commission for Gov. Earl Warren of California estimated a gross slot machine "take" of $4,000,000,000 throughout the United States, but other observers considered the figure high and thought that the actual loss of Americans to slot machines might run from one-tenth to one-quarter of that amount.

(A. H. Md.; M. Ml.)

Great Britain.—On Feb. 10, 1949, the prime minister announced the appointment of a Royal Commission on Betting, Lotteries and Gaming, under the chairmanship of H. U. Willink. The first public meeting was held in July. The outstanding fact revealed by evidence heard by the commission was that so little statistical information could be obtained or verified. The owners of the totalizators on racecourses and dog tracks were obliged by law to disclose their turnover, and it was possible to assess the amount spent on football pools. But nothing was known of the business carried on by the bookmakers. They operated in competition with the pools and totalizators, off and on the course, legally and illegally, and they were not obliged to publish accounts. The 1949 estimated figures for the three main spheres of betting were: totalizator at racecourses, £25,800,000; totalizator at dog tracks, £94,000,000; football pools, £64,000,000.

A voluntary organization called Everyman's Leisure, after two years of investigating, estimated a total of £300,000,000 as the annual turnover of the bookmakers. It is important to remember that a large part of this turnover goes back to the public. What proportion stays with the bookmakers is impossible to say. A figure of between 15% and 20% is usually deducted to cover expenses and to give a reasonable profit. The actual cost of the betting industry to the public was estimated at between £95,000,000–£100,000,000 a year. Everyman's Leisure also estimated the total labour force directly and indirectly connected with the betting industry in Great Britain as not less than 180,000 men and women.

Films of 1949.—*Card Shark* (Contemporary Films Inc.).

(H. C. La.)

Bevin, Ernest

(1881–), British foreign secretary, was born at Winsford, Somerset, Eng., March 9. He became national organizer of the Dockers' union in 1920, and the following year general secretary of the newly formed Transport and General Workers union. From 1925 to 1940 he was a member of the general council of the Trades Union congress and in 1937 was chairman. In May 1940 he became minister of labour in Winston Churchill's coalition government and entered the house of commons for central Wandsworth. He became secretary of state for foreign affairs in the Labour government in July 1945.

During 1949 Ernest Bevin travelled twice to the United States: for the signing on April 4 of the North Atlantic treaty and for the first meeting of the council set up under the treaty which met in Washington, D.C., on Sept. 17. After the signing in April he attended the adjourned United Nations general assembly at Lake Success, N.Y., and his visit in September began with Anglo-American-Canadian financial discussions in which he and Sir Stafford Cripps (*q.v.*) led the British delegation. On May 5 he signed the statute of the Council of Europe and in August attended the meetings of its committee of ministers at Strasbourg, France. He was present at the Council of Foreign Ministers which met in Paris from May 23 to June 20. He also attended meetings of the consultative council of the Brussels treaty powers—the meetings being held in each of the capitals of Great Britain, Belgium, France, Luxembourg and the Netherlands in turn—and in November again visited Paris for the committee of ministers of the Council of Europe and for a two-day conference on international affairs with Robert Schuman (France) and Dean Acheson (U.S.).

Bhutan.

A semi-independent state in the eastern Himalayas, Bhutan lies between Tibet and India. Area: *c.* 18,000 sq.mi. Pop. (est. 1948): 300,000. Language: a dialect of Tibetan. Religion: mainly Buddhist. Capital: Punakha. Ruler: Maharaja Jigme Wangchuk.

History.—The state of Bhutan acquired during 1949 some importance as a barrier against Chinese communism. As a result of negotiations started at New Delhi in April 1948 between K. P. S. Menon, secretary to the Indian minister of external affairs, and Debzunpon S. T. Dorji, head of the Bhutanese delegation, the Indian government concluded a new treaty with Bhutan which confirmed the old relationship, India agreeing to increase the annual subsidy from Rs. 200,000 to Rs. 500,000 (£37,500). The Bhutanese delegation had asked for Rs. 800,000.

(W. Bn.)

Foreign Trade.—Total trade with India (1948) was estimated at more than £65,000. Monetary unit: rupee.

Bicycling: *see* Cycling.

Bidault, Georges

(1899–), French prime minister, was born Oct. 5 at Moulins, France. He served in the French army during World War I from 1917 to 1919. After the war he resumed his studies at the Sorbonne university, graduating with high honours, and later taught history in secondary schools. In 1932 he and members of the Parti Démocrate Populaire, a new French version of the Christian Social movement, founded the newspaper *L'Aube*, with himself as foreign editor. Joining the army with the rank of sergeant at the outbreak of World War II, he was taken prisoner and held in Germany until 1941. On returning to France, he joined the underground movement and in 1943 became president of the Conseil National de Résistance. A fortnight after the liberation of Paris he was appointed foreign minister, Sept. 9, 1944, in Gen. Charles de Gaulle's provisional government. He retained this portfolio in all successive governments until July 19, 1948. He was also prime minister from June 19 to Nov. 28, 1946.

On Oct. 28, 1949, he was invested by the national assembly as prime minister by 367 votes to 183. Immediately afterward, he announced the formation of his coalition cabinet (the 6th of the fourth republic and the 11th since the liberation), thus bringing to an end the longest cabinet crisis that postwar France had known (*see* France).

Billiards.

Willie Hoppe captured his fifth world three-cushion championship in 1949. Hoppe, 61 years of age, defended his title in Chicago, Ill., in a round-robin tournament and reeled off six victories without a setback.

The other major billiards title, the world pocket championship, was taken by Jimmy Caras of Upper Darby, Pa. Caras, who held the title in 1936 and 1938, found the round-robin competition much keener than Hoppe did. He scored four victories and lost twice, while the runners-up, Willie Mosconi of Barrington, N.J., the defending titleholder, and Irving Crane of Binghamton, N.Y., finished with identical 3 to 3 records.

Before the world tourneys, national championships in both events were held at Chicago, with the top three qualifying for the world competition against the current titleholder. Joe

Chamaco of Mexico City captured the three-cushion crown and was joined in the world test against Hoppe by Dan McGoorty of Los Angeles, Calif., and Juan Navarra of Buenos Aires, Argentina, second and third, respectively.

The United States pocket billiards title went to Caras, with Crane second and Andrew Ponzi, of Philadelphia, third.

In the amateur field, Edward Lee of the New York Athletic club retained his national three-cushion title. In the national intercollegiate invitation tournament, Victor Brodsky of California captured the three-cushion championship while Leroy Kinman of Eastern Kentucky State Teachers college won the pocket billiards crown and Tom Hines of Wisconsin won the straight-rail diadem. (P. Br.)

Biochemistry.

Chemical Intermediates in Photosynthesis.—Notable progress was reported in 1949 in determining the intermediates in the chemical reactions by which the green plant under the influence of sunlight converts CO_2 and H_2O into O_2, sugar and other reduced carbon compounds. By growing plants in water which contained the O^{18} isotope biochemists showed that the primary conversion of energy brought about by light involves the photolysis of water with the production of O_2. The subsequent reduction of CO_2 takes place in the dark as well as in the light.

In order to elucidate the path of carbon, growing algae were allowed to photosynthesize in the presence of radioactive $C^{14}O_2$ for a limited time (five seconds to five minutes) and the reaction was stopped by dropping the plants into hot alcohol. The radioactive organic compounds which are progressively formed in increasing time intervals were identified by the newly developed methods of paper chromatography and radioautography. In these techniques substances are identified in terms of the distance which they migrate on a sheet of absorbent paper under the influence of a spreading solvent, and the positions of radioactive substances are determined by the darkened locations of an X-ray film subsequently placed in contact with the absorbent paper.

The first compound into which the radioactive CO_2 is fixed was found to be 2-phosphoglycerate; after five seconds at room temperature, four more compounds were found, 3-phosphoglycerate, malate, aspartate and phosphopyruvate. After 30 to 90 sec. there were many additional compounds of which 15 were identified including sucrose, the first free sugar, several amino acids, alanine, serine and glycine, glycolate and the phosphates of fructose and glucose. These compounds all contain 2, 3, 4 or 6 carbons in a chain. By selective degradation, the position of the radioactive carbons in several compounds was determined, and detailed mechanisms were worked out for the progressive entrance of CO_2 into increasing fractions of several molecules. Thus in sucrose, the radioactivity is found first in the middle carbons 3 and 4 of the hexose chain, later in carbons 2 and 5 and finally also in carbons 1 and 6.

The first photosynthetic reaction is thought to be the condensation of CO_2 with some reactive 2-carbon phosphorus-containing intermediate, probably vinyl-phosphate, to form 2-phosphoglyceric acid. After conversion to phosphopyruvic acid, another molecule of CO_2 is added to form the 4-carbon oxalacetic acid, from which other 4-carbon compounds are formed, malic, aspartic, succinic and fumaric acids. One of these is thought to be split to form two 2-carbon intermediates, from which the 2-carbon vinyl-phosphate is regenerated to start the cycle over again. The hexose chain is thought to be formed by a reversal of the well-defined glycolytic cycle, the condensation of two triose-phosphates to form fructose-diphosphate.

Efficiency of Photosynthesis.—Experiments were reported which show that no more than four quanta (possibly only three) of red light, or a maximum of $4 \times 44{,}000 = 176{,}000$ calories of light energy, are required to produce 1 mole of oxygen gas equivalent to about 112,000 calories. This makes the efficiency of energy transformation at least 65%. (For 3 quanta the efficiency would be 85%.) This refuted a prevailing view based on numerous experiments, that at least 10 quanta are required for each mole of O_2, which would mean an efficiency of less than 25%, and confirmed a claim originally made for the higher efficiency by Otto Warburg in 1923. The high efficiencies were realized by illuminating a *Chlorella* suspension with white light of such intensity that photosynthesis just balanced respiration, and no net oxygen was evolved. While this state was maintained a measured amount of red light was admitted, and the increased oxygen corresponding to this red light was precisely measured.

Vitamin B_{12}.—A beginning was made toward the elucidation of the structure of vitamin B_{12}. Elementary analysis showed about 4.5% cobalt, and the approximate empirical formula $C_{63}H_{90}N_{14}O_{13}PCo$. Boiling point of methyl alcohol solutions showed a molecular weight of about 1,400. Identification of some of the products of degradation by acid hydrolysis revealed the presence of 5,6-dimethylbenzamidazol $C_9H_{10}N_2$, and 2-aminopropanol C_3H_9ON. Thus about one-fifth of the molecule was accounted for. The compound does not yield amino acids on hydrolysis.

The observation that thymidine and other desoxyribosides can replace vitamin B_{12} in the nutrition of several micro-organisms, led to study of the therapeutic value of thymidine in Addisonian pernicious anaemia. Thymidine caused increases in reticulocyte count but not a rise in red cell count. Thymidine was found also to be without significant enhancing effect on the small increases in red cell count observed with inadequate doses (0.25 mg. daily instead of the 1 mg. usually required) of vitamin B_{12}.

Inhibition of Tumour Growth by a Purine Analogue.—Following the observation that the micro-organism *Tetrahymena geleii* requires purines, and especially guanine, it was found that a modified purine, in which the NCN sequence of the five-membered ring of guanine is replaced by NNN, is a powerful competitive inhibitor for guanine in the growth of this micro-organism. The name triazole is used to designate this type of compound and the guanine derivative is called guanazolo. The inhibition index was 0.075, which means that 13 to 14 molecules of guanine are required to overcome the inhibition of 1 molecule of guanazolo. Normal mammalian cells have the capacity to synthesize their own guanine requirement. It was thought that if tumour cells are deficient in this capacity, then the administration of guanazolo, which emphasizes a guanine deficiency, might have a selective action in inhibiting the growth of tumour tissue, without interfering with normal growth. Repeated administration of guanazolo to mice over a three-day period did not have toxic effect. When 0.5 mg. of guanazolo was injected subcutaneously twice daily into mice with adenocarcinoma, a definite inhibition of the tumour growth was observed. Tumour size was reduced from 11 ml. size in the controls which received injections of saline, to 1 ml. size in the guanazolo treated animals, where it remained stationary for 20 days while the guanazolo was continued. When the guanazolo injections were stopped, the tumours promptly resumed growth. Similar observations were made on spontaneous mammary cancer in mice, and in mouse lymphoid leukemia. In the latter condition, guanazolo caused a definite decrease in white blood cell count, in the percentage of lymphoblasts and in the number of palpable tumour masses, as compared with control untreated mice. (*See* also PHYSIOLOGY; VITAMINS.)

Birth Control.

At a national conference in New York on population trends and the family sponsored by the National Research council's Committee on Human Reproduction, two major problems were considered: (1) the urgent need to develop through research a simple, inexpensive and universally acceptable contraceptive and (2) the equally urgent need to build world-wide public acceptance of the necessity for family limitation and for use of contraceptive measures to reach this objective. Scientists themselves needed to be alerted to the need for research in the field of human reproduction; few of them in 1949 were qualified to carry on such research. The conference also discussed the problems of infertility; increased knowledge in this area might lead to discovery of new factors involved in fertility control.

Birth control was officially adopted in Japan during the year. The new law was passed unanimously in the house of representatives and backed by a large house of councillors majority. According to a statement issued by the Japanese Welfare ministry "an overwhelming majority of the Japanese people favour birth control as a solution of health and overpopulation."

The first meeting of the committee established by the 1948 International Congress on Population and World Resources in Relation to the Family was held in London. It was attended by delegates from the Planned Parenthood organizations from the United States, Great Britain, Sweden and the Netherlands. They adopted as their name the International Committee on Planned Parenthood.

Awards.—The fifth annual Albert D. and Mary Lasker Foundation Awards in Planned Parenthood went to George M. Cooper, head of the Division of Preventive Medicine, North Carolina State Board of Health, and to Carl G. Hartman, zoologist, formerly with The Johns Hopkins Medical school. Cooper was honoured for his leadership in establishing birth control in 1937 in the public health service of North Carolina, the first state to give this service through its public health departments. By 1949 the example had been followed by six other states. Hartman received his award for scientific research in the physiology and time of ovulation in women and the survival time of egg and sperm which brought nearer the solution of basic problems in the field of fertility and infertility.

U.S. Goals.—The Planned Parenthood federation's annual meeting devoted a major part of its discussion to program goals. The membership expressed its aim "to further universal acceptance of family planning as an essential element of responsible parenthood and stable family life," this program to be accomplished through three main lines of activity—service, education and research. The inclusion of birth control services in public health clinics, hospitals and as an integral part of national health planning was considered a service goal with continued maintenance of the federation's own services until availability of complete coverage for U.S. families. The provision of general and professional education by the federation was recognized as the method for achieving this end.

The Planned Parenthood federation was in 1949 the national agency and clearinghouse for 15 state leagues and 131 local committees. Birth control clinics numbered 537. These services were in 229 public health departments, 48 hospitals, 227 extramural clinics and there were 33 referral services. Of the 92 infertility clinics reported to the federation, 25 were under Planned Parenthood auspices. (M. Sr.)

Birth Statistics.

The indications provided by records for the first nine months show that the birth rate in the United States during 1949 remained practically at the level for 1948, when it was 24.2 per 1,000 total population. The number of recorded births for 1948 was 3,535,068; an allowance for unrecorded births raises this total to an estimate of 3,702,000. Canada, likewise, had about the same birth rate in 1949 as in 1948 according to provisional data for the first eight months of each year. There were, altogether, 347,222 births recorded in Canada during 1948 with a birth rate of 27.0 per 1,000 population. Data for the great towns of England and Wales for the first nine months of 1949 point to a decrease of about 5% in the birth rate of that country from the year before, 1948, namely 17.9 per 1,000. In the latter year, Australia had a birth rate of 23.1 per 1,000 and New Zealand (excluding the Maoris) a rate of 25.5 per 1,000. Each of the foregoing countries had their postwar peak in the birth rate in 1947. Many other countries had a similar experience in that their birth rate for 1948 fell below the peak for 1947. Among them were: Austria, Belgium, Czechoslovakia, Denmark, France, Ireland, Italy, Mexico, Netherlands, Norway, Sweden and Switzerland.

In the United States, the birth rate during 1947 (the latest year with complete data) was 25.5 per 1,000 among white persons and 28.2 per 1,000 among nonwhites. These rates, which are compared in Table I with corresponding rates for 1940, show that over this seven-year period, the white population experienced an increase of 45.7% while the nonwhite population had a gain of only 30%. The greatest rise in the birth rate from 1940 to 1947 occurred among the urban white population (56.8%), while the rural white and both the urban and rural nonwhite segments showed increases near 35%. As a result of these changes, for the white population of 1947, the urban birth rate was higher than the rural rate, a situation not usual in the United States.

The data in Table I also point to a sharp increase in the proportion of births occurring in hospitals in the United States, from 55.8% in 1940 to 84.8% in 1947. The rural area, starting from a much lower level in 1940, had only 71.3% of its births hospitalized in 1947, as compared with 93.8% for urban centers. The situation in 1947 still was rather poor among the nonwhite population, with only 49.7% of its births hospitalized, compared with 89.3% for the white population.

Birth rates by age of mother and order of child at birth, separately for the white and nonwhite populations of the United States in 1947, are shown in Table II, together with comparable figures for both whites and nonwhites combined in 1940. At ages 15 to 19, nonwhite females experienced, in 1947, a birth rate

Table I.—***Birth Rates per 1,000 Population and Per Cent of Live Births Occurring in Hospitals; United States, 1947, Urban and Rural by Race***

Race and residence	Birth rate per 1,000			Per cent of live births occurring in hospitals		
	1947	1940	Per cent increase since 1940	1947	1940	Increase since 1940
Total	25.8	17.9	44.1	84.8	55.8	29.0
Urban	26.4	17.1	54.4	93.8	76.0	17.8
Rural	25.5	19.1	33.5	71.3	32.3	39.0
White	25.5	17.5	45.7	89.3	59.9	29.4
Urban	26.5	16.9	56.8	96.1	—	—
Rural	24.7	18.4	34.2	78.8	—	—
Nonwhite	28.2	21.7	30.0	49.7	26.7	23.0
Urban	25.4	19.2	32.3	73.7	—	—
Rural	32.7	24.1	35.7	21.9	—	—

Table II.—*Births per 1,000 Females of Stated Ages According to Race and Order at Birth, 1947, Compared with 1940*

	1947		Both Races		
Age and order at birth	White	Nonwhite	1947	1940	Per cent change since 1940
		Births per 1,000 females of stated age			
10–14	0.3	4.1	0.8	0.6	+33.3
15–19	68.6	134.2	76.7	48.9	+56.9
20–24	200.0	201.6	200.1	125.0	+60.1
25–29	176.6	137.9	172.3	114.1	+51.0
30–34	110.2	85.8	107.5	77.1	+39.4
35–39	57.0	59.7	57.3	41.8	+37.1
40–44	15.7	17.8	15.9	13.9	+14.4
45–49	1.1	2.0	1.2	1.3	− 7.7
		Births of stated order per 1,000 females of ages 15–44			
First	46.5	34.3	45.1	27.0	+67.0
Second	29.8	23.1	29.0	18.4	+57.6
Third	14.8	15.0	14.8	10.1	+46.5
Fourth.	7.1	10.4	7.5	5.8	+29.3
Fifth	3.8	7.5	4.2	3.7	+13.5
Sixth and seventh . .	3.6	9.6	4.3	4.2	+ 2.4
Eighth and over. . .	2.6	9.6	3.3	3.7	−10.8

practically double that for white females, but at ages 20 to 24 the two groups had almost identical rates, namely 200 per 1,000. Although white females had substantially higher rates than nonwhite females at ages 25 to 34, the situation was reversed beginning with age 35. These age differences are reflected in the birth rates according to order of the child, shown at the bottom of Table II. Here the rates for the first and second child were greater for white women than for nonwhite women; for third children, the two groups were at almost the same level; while for fourth and higher orders, the nonwhites had the greater rates.

It is evident, from the right side of Table II, that the rise in the birth rate since 1940 was concentrated among young women under 30 having their first or second child. Thus, at ages 15 to 19, the birth rate rose by 57%, at ages 20 to 24 by 60% and at ages 25 to 29 by 51%; the higher ages showed increases of less than 40%. Likewise, the birth rates for first and second children rose by about 60% from 1940 to 1947, while the higher orders showed large, but not so great, relative increases.

A thorough analysis of the factors influencing the past trend of the birth rate in England and Wales is contained in the *Report by the Royal Commission on Population* (H.M. Stationery Office, London, Cmd. 7695, June 1949). It is stated there that the past fall in the birth rate is almost wholly a result of planned family limitation. An important finding was that the average size of a family remained fairly stable through the years 1929–49, which included a period of depression and a period of war prosperity and emotion. The future prospects, according to this report, would be influenced by the marriage rate and the average size of the family. The report is also noteworthy for its description of a new method for forecasting the population of a country. A detailed analysis of fertility in Canada, based principally upon the census of 1941, is contained in "The Changing Size of the Family in Canada," by Enid Charles (Dominion Bureau of Statistics, Ottawa, Ont., 1948). On the basis of trends of birth and death rates during 1921 to 1939, it was estimated that the population of Canada may reach a total of about 15,000,000 near the end of the 20th century. Blind, Education of the. Most European and Asiatic schools for the blind were still suffering in 1949 from the effects of World War II. The struggle for existence had postponed progress in re-establishing and expanding their programs.

Britain's National Institute for the Blind enlarged its highly successful system of education for the blind by establishing Condover hall, a school for blind children having additional handicaps.

During 1949, 5,340 children in the United States attended 52 residential schools for the blind, and 592 pupils were in 26 public-school braille classes. The United States congress again appropriated $125,000 to the American Printing House for the Blind at Louisville, Ky. These funds were to help provide braille books, talking books, reproducers and tangible apparatus for blind children in residential schools and classes for the blind.

There were approximately 9,000 children in the United States with vision so impaired that it was necessary for them to attend special sight-saving classes. Although 631 such classes helped conserve the remaining sight of these children, the National Society for the Prevention of Blindness estimated that there were still about 50,000 additional children with serious visual handicaps struggling along as best they could in regular classes for the sighted.

An international conference of workers for the blind, also attended by representatives of the United Nations and U.N.E.S.C.O., met at Merton college, Oxford, England, from Aug. 3 to 13, 1949. Its theme was "The Place of the Blind in the Modern World." This resolution was passed: "To enable blind persons to participate fully in the life of the community and to contribute to its strength, blind persons, whether children, young persons, or adults, should be given full opportunity for general and vocational education in schools adequately equipped for the education of the blind and with fully qualified teachers." A committee was formed having power to convene an international conference of educators of the blind in 1951.

Another significant event in the education of the blind was the U.N.E.S.C.O.-sponsored meeting of international authorities on braille. This conference, held at Paris, France, Dec. 15 to 21, was the initial step toward solving the complex problems of unifying world braille.

Just prior to 1949 there had been a decreasing number of blind children in residential schools. The lowering incidence of total blindness allowed many of the larger schools for the blind to enrol partially sighted children—particularly those from rural areas. In 1949 the American Printing House for the Blind further developed a large type printing program providing ink print books in 18 and 24 point type for the partially sighted.

Massachusetts, New York and New Jersey reported an increase of blindness in children resulting primarily from retrolental fibroplasia (a growth of fibrous tissue behind the crystalline lens of the eye), which occurs most often in infants born prematurely. Because of this, several schools saw a change from decreasing to increasing enrolments.

For many years the National Library for the Blind in England had held braille reading contests. On Jan. 29, 1949, the American Foundation for the Blind, Inc., New York city, held the first such contest in the United States. Fifty-seven blind people from 12 states participated. This competition was so successful that it was decided to have yearly regional and national competitions.

Braille reading does not permit "looking ahead"; therefore, to increase reading speed the code is contracted. During recent years this contracted form had been introduced to blind first graders in some schools. In 1949 approximately half of the residential schools were using the contracted braille system in the lower grades. Reading results were encouraging, but it was estimated that it would take five more years to evaluate this educational experiment.

The great need for trained teachers of the deaf-blind prompted the Perkins Institution and Massachusetts School for the Blind, Watertown, Mass., and the American Foundation for the Blind to sponsor the first specific course designed to meet the problems of the double handicap. This was begun in the summer of 1949 at the Horace H. Rackham School of Special Education, Michigan State Normal College, Ypsilanti, Mich.

The Radio Engineering institute of Omaha, Neb., a school that trains blind men to repair and service radios, started a new class in 1949 called "Electrical Appliance Repair and Motor Rewinding." This school had demonstrated that when blind people are properly trained and educated they can compete successfully in a sighted world.

The University of Chicago and the Hadley Correspondence School for the Blind completed the brailling of the university's introductory course in psychology. This marked the fourth college level course especially prepared and taught by the University of Chicago for the Hadley Correspondence School for the Blind of Winnetka, Ill. (D. C. N.)

Bolivia.

A land-locked republic in south central South America, Bolivia has an area of 416,040 sq.mi. and a population (1948 est.) of 3,922,000. The legal capital is Sucre (est. pop. 1946, 32,000); the actual seat of government is La Paz (est. pop., 301,000). Other major cities (with pop. estimates) include Cochabamba (80,000), Oruro (50,000), Potosí (40,000), Santa Cruz (32,800) and Tarija (27,000). Racial distribution is estimated to be 52.34% Indian, 27.5% mestizo, 13.08% white, 0.22% Negro and 6.85% unspecified. Religion is predominantly Roman Catholic. Presidents in 1949: Enrique Hertzog, until May 7; Mamerto Urriolagoitia, acting president May 7–Oct 19, thereafter constitutional president.

History.—Political tension and violence, intimately linked with mounting labour unrest at the tin mines, characterized the Bolivian scene during 1949. The government was bitterly opposed by the leftist Partido de la Izquierda Revolucionaria (P.I.R.) and the rightist Movimiento Nacionalista Revolucionario (M.N.R.), both organizations being engaged in rivalry for political leadership of the miners' unions. President Hertzog declared a state of siege on Feb. 20, when the government unearthed a revolutionary plot sponsored by the M.N.R. After the congressional election of May 1, which gave the administration's Republican Socialist Union party a majority of the seats in the national legislature, Hertzog, pleading reasons of health, requested a leave of absence. He was replaced on May 7 by Acting President Urriolagoitia.

Urriolagoitia decided in May to deport Sen. Juan Lechin and 19 other M.N.R. leaders because of M.N.R.-led agitation among workers at the Catavi and Siglo Viente tin mines. On May 28, unions at both mines staged a strike in protest against the deportation order. The stoppage was characterized by violent disorders at Catavi, where two U.S. mining engineers and about 50 Bolivian miners lost their lives. The government proclaimed a state of siege on May 31, issued a general mobilization call and outlawed the opposition parties M.N.R. and P.I.R. and also the Communist party. The strike became general on June 1, when an estimated 8,000 organized factory and railroad workers walked out in sympathy with the miners, and grew until it involved some 27,000 organized workers. At length, on June 8, representatives of the government and the unions agreed to terminate the stoppage, the settlement calling for a reduction in the military forces stationed at the tin mines and the repatriation of Lechin and other M.N.R. leaders.

An uneasy truce was broken on Aug. 27, when rebels led by the M.N.R. seized the cities of Cochabamba, Santa Cruz, Potosí, Oruro and Sucre. The revolt spread until the insurgents could claim on Sept. 1 that they controlled 2,000 troops and the western third of the country, embracing approximately 125,000 sq.mi. and a population of about 500,000. The bulk of the army remained loyal to the government, however, and by Sept. 3 loyalist forces had recaptured all major rebel strongholds except Sucre, Potosí and Santa Cruz. Sucre and Potosí fell to the loyalists on Sept. 4, and the insurgents abandoned Santa Cruz on Sept. 13. Acting President Urriolagoitia announced nine days later that the revolt had been crushed and that "the country has now returned to normality."

Hertzog, his health broken, submitted his formal resignation from the presidency to congress on Oct. 19. (G. I. B.)

Education.—Bolivia in 1944 had 1,513 rural schools with 110,000 pupils and 1,740 elementary schools with 144,056 pupils. Secondary education was furnished by 55 colleges (27 public and 28 private) with 17,496 students. There were universities with more than one faculty at Cochabamba, La Paz, Oruro, Potosí and Sucre.

Finance.—The monetary unit is the boliviano, valued at $0.0236 U.S. currency, controlled rate, and at $0.0089, curb rate, on Dec. 5, 1949. The 1949 budget estimated government revenue at 1,794,684,120 bolivianos and expenditure at 2,046,017,632 bolivianos. Actual revenue in 1947 was 1,012,000,000 bolivianos and actual expenditure 1,310,000,000 bolivianos. Revenue was derived chiefly from export duties on minerals. The internal debt of national, departmental and municipal governments and autonomous institutions totalled 1,925,572,661 bolivianos on Nov. 30, 1948 (Dec. 31, 1947: 1,346,854,252 bolivianos). The external debt was $60,280,923 on Dec. 31, 1947, plus arrears of interest totalling $74,244,100. Notes in circulation on Sept. 30, 1949, totalled 2,253,000,000 bolivianos; the gold reserve of the Central bank was $22,800,000.

Trade and Communications.—Exports in 1948 totalled $123,400,000; imports were $67,400,000. Exports, which consisted almost entirely of minerals, included tin (65%) and silver (4%). Principal customers were the U.S. (57%) and the United Kingdom (39%); principal suppliers were the U.S. (52%) and Peru (9%).

Railway lines in operation (1945) totalled 1,612 mi. Several lines were under construction in 1949. The highway system (1945) consisted of 8,938 mi. of road, of which 621 mi. were improved. About 7,300 motor vehicles were in operation in 1947. The national air line, Lloyd Aereo Boliviano, carried 45,426 passengers and 9,003 short tons of cargo in 1947. Service was also supplied by Panagra, Braniff Airways, Linea Aerea Nacional (Chile) and the Bolivian air force. There were 7,800 telephones and 75,000 radios in 1947.

Agriculture.—Bolivia continued to be dependent on imports of foodstuffs, pending the development of the isolated eastern lowlands. Important crops included maize, barley, wheat, rice and potatoes. Livestock (1946) included an estimated 3,039,000 cattle, 4,289,000 sheep and 1,809,000 goats. The principal exploited forest products were rubber (exports 1947 2,503 short tons) and cinchona bark.

Manufactures.—Production figures in 1947: cotton goods 11,535,000 yd.; shawls, blankets and cashmeres 1,020,000 yd.; cement 42,800 short tons; flour 38,000 short tons; and cigarettes 3,487,000 packages. The cost-of-living index for La Paz stood at 765 in May 1949 (1937=100).

Mineral Production.—Mining is Bolivia's chief industry and tin is the dominant factor in the nation's economy. Mineral exports in 1948 were reported as follows: tin 41,816 short tons; lead 28,230 short tons; silver 259 short tons; gold 4,050 troy oz.; zinc 23,285 short tons; antimony 13,514 short tons; and wolfram (WO_3 content) 1,644 short tons. Production of crude petroleum totalled about 450,000 bbl.

Book-Collecting and Book Sales.

Sales of book collections in Great Britain and the United States in 1949 were fairly pedestrian. A notable exception was the auction in New York, N.Y., of the Fritz Kreisler collection of early printed books and manuscripts which realized $120,272. The net proceeds were given to the Golden Rule foundation and the Lenox Hill hospital (New York) as a tribute to the musician's wife.

The highest auction price for a single piece was $54,000, paid (Parke-Bernet galleries, Inc., New York, April 27) for the Bliss copy of *Lincoln's Gettysburg Address*. Purchaser of the manuscript was Oscar B. Cintas of Havana, Cuba. Four other copies of the *Address* are known: two in the Library of Congress, one in the Illinois State Historical library, one in Cornell university library, Ithaca, N.Y. This last was presented to the library in

June by Nicholas H. Noyes of Indianapolis, Ind.

It was announced that Mark Twain's private papers, including unpublished manuscripts, would be given to the University of California as a legacy by the author's only surviving issue, Mrs. Jacques Samossoud. Another important collection, the papers of James Boswell, gathered by Col. Ralph H. Isham, was acquired by Yale university libraries, New Haven, Conn., as a partial gift and would serve as the basis for the definitive edition of Boswell's writings. The Olive Branch Petition, the appeal addressed to King George III by the American Colonies in an effort to resolve the differences that brought on the American Revolution, was presented to the New York Public library by Lucius Wilmerding.

On March 31 a group met in New York and established the Antiquarian Booksellers Association of America. Regional chapters were established or projected in Los Angeles, Calif., New York city, Philadelphia, Pa., Chicago, Ill., and Boston, Mass.

Devaluation of the pound seemed to have failed to increase trade between U.S. and British dealers. In the United States it was believed by many that since British prices were based on the dollar there could be small revisions in pricing. With devaluation, some British dealers revised prices upward.

Austrian dealers reported that, whereas formerly it had been possible to secure rare books in exchange for black-market staples, such trading had disappeared as a result of 1948 monetary reforms. Favoured by the newly decreed freedom of trade, the antiquarian book business in western Germany showed stability, although east-to-west trade continued difficult. Leipzig, traditional book centre of Germany, was considered lost by western Germans who set out to establish a new centre in the west. Switzerland, which had enjoyed an increase in business representing that portion formerly executed by German dealers, reported a falling off as the German trade was re-established. In general, European dealers discovered that as living conditions improved they were able to buy fewer rarities from private owners.

The Cambridge Bibliographical society (England) issued the first of its *Transactions.* In the United States the Bibliographical society of the University of Virginia, Charlottesville, Va., issued its first volume of *Papers;* a second volume was published in December. Other bibliographical publications: *Collecting First Editions of Franklin D. Roosevelt* by Ernest J. Halter; *The Voice of the Old Frontier* by R. W. G. Vail; *Bibliography of Booth Tarkington* by Dorothy R. Russo and Thelma L. Sullivan; *Seventeenth Century Maryland* by Elizabeth Baer; *Donn Byrne: A Bibliography* by Winthrop Wetherbee, Jr.; *Auction Record of the Limited Editions Club Publications* by Irving Lew. (J. Bk.)

Book Publishing. Title production by book publishers in the United States in 1949 showed the highest total since 1941. The largest net increase over the preceding year was in the category of sociology and economics, followed by books on science, business, biography and domestic economy. The only net decreases appeared in the fields of music, and domestic and military subjects. The number of fiction titles was virtually the same for 1949 as for 1948 (a net increase of one), but there were fewer new titles and more new editions in 1949. The five leading publishing houses of the year were: Macmillan (517); Doubleday (with Blue Ribbon Books, Garden City, Halcyon House, Permabooks, Sun Dial Press and Triangle Books) (404); McGraw-Hill (with Gregg Publishing Co. and Whittlesey House) (290); Harper (with Hoeber) (285); and Oxford University Press (272).

Best Sellers.—Based on trade sales alone, the list of fictional best sellers for 1949 was headed by *The Egyptian,* a novel laid in ancient Egypt and translated from the Finnish of Mika Waltari. This was followed by Lloyd C. Douglas' *The Big Fisherman,* which moved from first place in 1948 to second place in 1949. In third place came Sholem Asch's *Mary,* followed, in that order, by *A Rage to Live* by John O'Hara; *Point of No Return* by John P. Marquand; *Dinner at Antoine's* by Frances Parkinson Keyes; *High Towers* by Thomas B. Costain; *Cutlass Empire* by Van Wyck Mason; *Pride's Castle* by Frank Yerby; and *Father of the Bride* by Edward Streeter.

Fictional best sellers, arranged by total sales including those through the book clubs, were approximately as follows: *Dinner at Antoine's, Pride's Castle, High Towers, The Golden Fury* (Marian J. Castle), *Lord Johnnie* (Leslie T. White), *Bride of Fortune* (Harnett T. Kane), *Cutlass Empire, The Chain* (Paul I. Wellman), *Never Dies the Dream* (Margaret D. Landon), *Let Love Come Last* (Janet Taylor Caldwell), *Twilight on the Floods* (Marguerite Steen), *Point of No Return, The Egyptian* and *Father of the Bride.*

First on the list of nonfiction best sellers, rated by trade sales alone, was *White Collar Zoo* by Clare Barnes, Jr., a series of animal photos humorously captioned to relate them to familiar office types and office situations. Its immediate success brought a sequel in *Home Sweet Zoo* (by the same author), which appeared in Dec. 1949 and sold enough copies by the close of the year to place it fourth on the list of nonfiction best sellers. In second, seventh and eighth place came three books on canasta (*q.v.*), namely, *How to Win at Canasta* by Oswald Jacoby; *Canasta, The Argentine Rummy Game* by Ottilie H. Reilly and Alexander Rosa; and *Canasta* by Josefina Artayeta de Viel. In third place was Thomas Merton's *The Seven Storey Mountain;* fifth came *Cheaper by the Dozen* by Frank B. Gilbreth, Jr. and Ernestine Gilbreth Carey; sixth, *The Greatest Story Ever Told* by Fulton Oursler; ninth, *Peace of Soul* by Fulton J. Sheen; and tenth, *A Guide to Confident Living* by Norman Vincent Peale (this also ranked in tenth place in 1948).

Listed by total sales including book club sales, the best-selling nonfiction titles were approximately: *Cheaper by the Dozen, The Greatest Story Ever Told, White Collar Zoo, How to Win at Canasta, Their Finest Hour* (Winston S. Churchill), *The Seven Storey Mountain, Modern Arms and Free Men* (Vannevar Bush), *The Mature Mind* (H. A. Overstreet), *Home Sweet Zoo* and *This I Remember* (Eleanor Roosevelt).

Although nonfiction sales through the book stores were larger in 1949 than fiction sales, five of the ten nonfiction best sellers were nonreading books: *i.e., White Collar Zoo* and *Home Sweet Zoo,* which were picture books, and the three instruction books on how to play canasta. Continuing a trend noticeable in 1948, books with a religious or biblical turn accounted for two of the

THREE PHOTOGRAPHS from *White Collar Zoo* by Clare Barnes, Jr., a collection of zoological portraits selected for their "resemblance to office types" and office life, and published in 1949. Captions, left to right, read: (1) " 'Do you *really* like it? It was marked 'way down.' " (2) "An elderly clerk." (3) " 'You tell him *this* for him and his rush jobs!' "

fiction, and four of the nonfiction best sellers of the year. (X.)

Great Britain.—In Great Britain 1949 was the year in which book publishing was restored to its normal appearance. On March 6 the rationing of paper for books (introduced on March 3, 1940) came to an end. Paper rationing, however, had ceased to be a real problem for the vast majority of publishers, all of whom were more concerned with steadily mounting manufacturing costs. Publishers had to base the selling price of a book on the number of copies they could reasonably hope to sell in relation to the costs of manufacture. During the years of book shortages every publisher knew that he would sell practically every copy of every title he could manufacture. By 1949, however, there was no shortage of books, and the element of risk once again occupied its important place in publishers' calculations.

Despite all this, the publishing business continued quarter by quarter to beat all previous records. The amount of trade done by publishers in 1948 reached the unprecedented figure of £33,241,431. During the first six months of 1949, publishers' total sales amounted to £15,849,367, an increase by more than £400,000 on the turnover during the corresponding period of 1948. Since book trade business is invariably greater during the second half of the year than in the first, there was little doubt that the 1949 total would surpass the 1948 record.

The production of books in Great Britain during 1949 was 17,034 titles, of which 5,110 were reprints and new editions. The total was very little short of the figure for the record year 1937 (17,134 titles).

The amount of export business done by British publishers in 1948 was £8,739,236, or 26.3% of the total. The largest overseas market for British publishers, Australia, was worth considerably more than £1,500,000 in 1949.

Europe.—During the year official reports from eastern Europe claimed that book production was flourishing. The Czechoslovak Publishing act, passed in March 1949, invested in the ministry of information and public culture full powers to plan and direct book publishing and bookselling.

Tax barriers, import restrictions, etc., remained formidable in Europe. The removal of some of these barriers was one of the principal concerns of the United Nations Educational, Scientific and Cultural organization, and the Cultural conference of the European movement, held at Lausanne, Switz., in Dec. 1949, declared that it was "vital to the well-being of Europe that all such restrictions should be swept away." (*See* also AMERICAN LITERATURE; ENGLISH LITERATURE; etc.) (E. SE.)

Boston,

capital of Massachusetts and the ninth largest city in the United States, had a population of 770,816 by the 1940 federal census and a land area of 43.9 sq.mi.

Two major developments occurred at the municipal election on Nov. 8, 1949. Mayor James M. Curley, seeking re-election to a fifth term, was defeated by City Clerk John B. Hynes, who in 1947 had served as temporary mayor during the five months imprisonment of Curley. Hynes' plurality was 11,930 votes. By a vote of 146,162 to 73,882 (with 80,450 blanks) the city council was changed from a ward council of 22 members to a council of 9 elected at large, and run off primaries were provided at all subsequent elections for the offices of mayor, council and school committee. The first election under this revised setup was scheduled to be held in Nov. 1951.

By legislative action, title to the rapid transit subways and tunnels originally constructed by the city was transferred to the Metropolitan Transit authority, with the city receiving bonds of the Metropolitan Transit district (13 municipalities serviced by Metropolitan Transit authority) in an amount equivalent to the difference between the total subway debt outstanding and the total sinking funds in the possession of the city. This transaction resulted in a reduction of roughly $40,000,000 in the net debt of the city. Existing sinking funds were to be used in so far as possible to meet principal and interest payments on the outstanding subway debt; and, whenever necessary, the city would receive from the district the cash necessary to satisfy subway principal and interest requirements in full at the date of maturity.

The Boston Housing authority spent approximately $28,703,-

000 of state and city funds on public housing. This program involved 4,010 dwelling units, of which 1,044 were completed during 1949; 1,261 were under construction; and 1,705 had plans and specifications ready.

Boston's low sky line was altered during the year by the erection of two skyscrapers, the John Hancock Insurance building and the New England Telephone and Telegraph Exchange building.

The 1949 tax rate was $56.80 (1949—$53.40) on an assessed valuation (real and personal) of $1,601,431,500, an increase of $19,437,500 over the previous year. Budgets were as follows: city and county, $81,917,682.80, an increase of $11,000,000 over 1948; schools, $25,724,444.34, an increase of $3,200,000. A principal factor in budget increases was a general salary increase of $300 granted all employees as of July 1. (C. J. Fx.)

Botany. A number of meetings of interest to botanists were held during 1949. The seventh Pacific Science congress was held in New Zealand in February, and an international symposium on morphogenesis was held in Strasbourg, France, in July. The 112th annual meeting of the British Association for the Advancement of Science was held in northern England in September. In December the Botanical Society of America met in New York city in conjunction with the American Association for the Advancement of Science. During the year plans for the International Botanical congress to be held in Stockholm, Sweden, in July 1950 were made under the chairmanship of Carl Skottsberg of Göteborg, Sweden.

Important advances were made in many fields of botanical research during the year. The newer techniques, employing radiocarbon, the electron microscope and ultrasonic vibrations were widely used. E. H. Newcomer and R. Wallace reported that ultrasonic vibrations produce chromatid breaks and other nuclear aberrations, and that the use of such a technique gives promise of becoming a useful tool in the study of chromosome structure and cell mechanics. A preliminary investigation of chromosomes and genes with the electron microscope was made by D. C. Pease and R. F. Baker. Although plant materials were not employed in their studies, the conclusion of these investigators that certain definite particles seen with the electron microscope may be genes is of great interest to the botanist. W. F. Libby, E. C. Anderson and J. R. Arnold reported the use of radiocarbon in age determinations of plant remains. The new method affords an opportunity of actually dating carbon-bearing material less than 35,000 yr. old and would be of significant use to the botanist and anthropologist in dating plant remains associated with prehistoric cultures. The use of radioactive carbon continued to play an important role in studies of photosynthesis. M. Calvin and A. A. Benson, in tracing the path of carbon in photosynthesis, showed that the first free carbohydrate to appear in plants is sucrose.

Another important work on photosynthesis appeared during 1949. Dean Burk, S. Hendricks, M. Korzenovsky, V. Schocken and O. Warburg reported that under favourable conditions 65% of absorbed light energy can be transformed into chemical energy by green cells. Previous investigators had concluded that there was only a very low efficiency of energy transformation during photosynthesis.

Two important discoveries relating to the origin and early distribution of corn (*Zea mays*) were brought to light in 1949. A primitive type of maize discovered in central New Mexico in 1948 by C. E. Smith constituted another important link toward the solution of the puzzle of the origin of corn, according to P. C. Mangelsdorf. Mangelsdorf and Smith concluded that this find furnishes additional proof that corn is not derived from teosinte. C. R. Stonor and Edgar Anderson analyzed primitive types of corn from Assam, Asia, and pointed out that the corn of this remote region is similar to certain prehistoric types from South America. They suggested the possibility of transpacific transport by man in pre-Columbian times to explain the similarity.

An important contribution to mycology during the year was the work of L. S. Olive, who showed that in the Ascomycete, *Patella melaloma*, brachymeiosis (two reductional divisions) and double fertilization does not occur as had previously been reported for Ascomycetes by Helen Gwynne-Vaughan. Also during the year a new antibiotic with great potentialities was discovered. S. A. Waksman and H. A. Lechevalier announced the isolation of neomycin from *Streptomyces fradiae*. Neomycin is active against streptomycin-resistant bacteria including tuberculosis organisms.

Other important contributions published during the year include C. W. Wardlaw's experimental study of phyllotaxis and organogenesis in ferns; F. Galán's study of sex inheritance in *Ecballium;* F. W. Went's physiological and ecological studies on desert plants; the discovery of a new group of plant growth regulating chemicals, the N-aryl phthalamic acids, by O. L. Hoffman and A. E. Smith; and the demonstration of a new method to show differentiation between pentose and desoxypentose nucleic acid in sectioned material by the use of cold perchloric acid by R. O. Erickson, K. B. Sax and M. Ogur.

A number of honours befell to botanists in 1949. Carl Skottsberg was elected an honorary member of the Royal Society of Edinburgh. David Fairchild was elected as a foreign member of the Linnean society of London; R. L. Praeger and A. H. Uggla were elected as associates; and F. E. Fritsch was chosen president for 1949–50. P. R. Burkholder, Max Delbrück, and Kenneth Raper were elected to the National Academy of Sciences of the United States and Ö. Winge was elected as a foreign associate. (*See* also BIOCHEMISTRY; GENETICS; PALAEONTOLOGY.)

New journals in 1949: *Experimental Cell Research* (International Society for Cell Biology).

Arboretums and Botanical Gardens.—The Los Angeles State and County arboretum at Arcadia, Calif., was established in 1949. It is a 117-ac. tract, formerly known as Rancho Santa Anita. Temporary buildings were erected to house the library and administration offices.

A new arboretum was initiated by the park department of Spokane, Wash. A tract of nearly 100 ac. was set aside for this purpose.

Various organizations in Denver, Colo., were working to have an area of one of the city parks set aside for arboretum purposes. The tract under consideration included nearly 100 ac. of park land between the Museum of Natural History and the Zoological garden.

No major changes occurred in the larger arboretums and botanical gardens of North America during the year, but the Lexington Botanic garden at Lexington, Mass., was being discontinued because of lack of operating funds. (*See* also HORTICULTURE.) (D. WN.)

At the Royal Botanic gardens, Kew, England, J. Hutchinson retired from the keepership of the museums after 44 years' service at Kew. He was succeeded by Dr. F. N. Howes. Work in the herbarium returned to, or even exceeded, prewar quantity and quality and the *Kew Bulletin,* no. 1, 1949, reported that more than 35,000 specimens were received during 1948.

In South Africa continued efforts were made for the preservation of the rarer members of the native flora and a large collection of these were grown in the National Botanic gardens at Kirstenbosch, Cape Province.

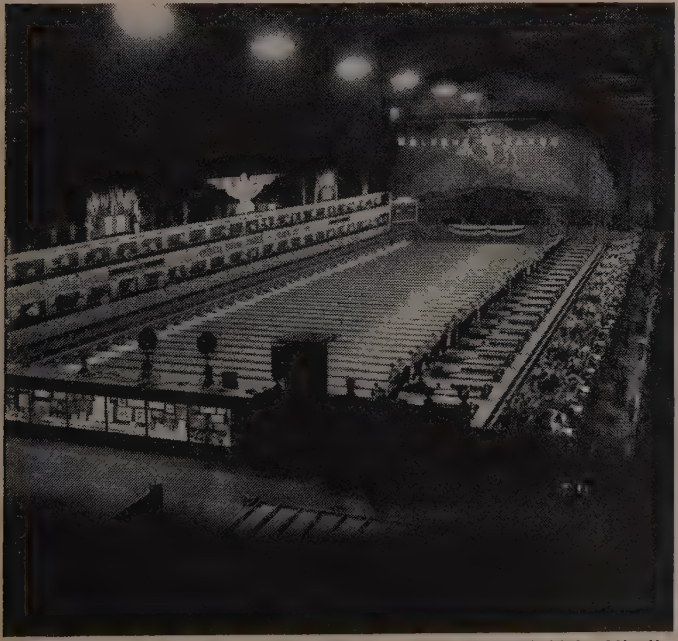
A number of notable plants flowered during 1949 in the Edinburgh Botanic garden, and a further part of the revision of the "Series of Rhododendron" was prepared by the assistant keeper, Dr. J. Macqueen Cowan, and H. H. Davidian and published in the *Rhododendron Year Book,* no. 3, 1949, of the Royal Horticultural society. This section dealt with the Campanulatum and Fulvum series.

In Berlin, progress was made in the reconstruction of the botanical garden and museum at Dahle under the directorship of R. Pilger. (P. M. SY.)

Bowling.

More than 30,000 persons competed for $375,000 in prizes in the annual tournament of the American Bowling congress at Convention hall, Atlantic City, N.J. The all-events title went to John Small of Chicago, Ill., who tallied 1,941. Bernard Rusche of St. Bernard, O., scored 716 for first place in the singles. Doubles honours were won by Donald Van Boxel, Green Bay, Wis., and Gene Bernhardt, Sturgeon Bay, Wis., with 1,332. Jimmie Smith's South Bend, Ind., quintet composed of John Nemeth, Harold Kelly, Harley Luckey, Joe Czigany and Pete Tatman bowled 3,027 for five-man team laurels.

Victors in the Women's International Bowling congress championships held at Columbus, O., were Cecilia Winandy, Chicago, all-events; Clara Mataya, St. Louis, Mo., singles; Ann Elyasevich and Estelle Svoboda, Chicago, doubles; and the Enterprise Gears of Detroit, Mich., team.



OPENING OF the 46th annual American Bowling congress held in Atlantic City, N.J., in the spring of 1949

James (Junie) McMahon, Chicago bowling instructor, succeeded Connie Schwoegler of Madison, Wis., as national match-game king at Chicago in December. McMahon took the big prize of $2,000 with a final standing of 44½ won, 19½ lost, 214.16 average and 318.37 points, under the Peterson scoring system. Ralph Smith, Los Angeles, Calif., was second in the 64-game round-robin grind with 307.17 tallies. Schwoegler finished seventh with 293.48 points.

Marion Ladewig, a bowling instructress from Grand Rapids, Mich., won the women's match-game championship with an average of 201. (T. V. H.)

Boxing.

The retirement of Joe Louis as undefeated world heavyweight champion; the decision of Mike Jacobs of the Twentieth Century Sporting club to retire himself and his organization because of his ill health, with the consequential launching of a greater monopoly than even Jacobs enjoyed; the growing strength of a Managers' guild in New York city; and a continued recession in box-office receipts—these were outstanding developments in boxing through the year 1949.

At the close of the year there were reports in circulation that Louis was considering a return to the ring in an attempt to lift the sport out of the dim financial strata to which it had sunk.

Louis retired on March 1 in a formal announcement to the National Boxing association issued from Miami, Fla. He gave up the title after the longest and busiest reign of any champion the ring had ever known, irrespective of division. For more than 12 yr. Louis was the ring's ruler. He defended the title 25 times.

Louis retired by agreement with the International Boxing Club, Inc., of which James D. Norris, Chicago, Ill., was president. With a monopoly on boxing arenas in New York, N.Y., Chicago, Ill., and Detroit, Mich., and working agreements with St. Louis, Mo., and other cities, this organization began its career early in May, wielding more influence than Jacobs and his Twentieth Century Sporting club. Part of the agreement was that Louis was to be made a director of the International Boxing Club, Inc.

Forthwith Louis associated himself with a boxing promotion which brought to Ezzard Charles, Cincinnati, O., Negro, partial recognition as successor to the heavyweight title. Charles won a 15-round decision over Jersey Joe Walcott, Camden, N.J., Negro, at Chicago, June 22, in a bout recognized by the National Boxing association as a championship affair. It was unrecognized either by the New York State Athletic commission or the British Boxing Board of Control.

This absence of unanimity created a situation which paralleled that existing when Gene Tunney surrendered the title, undefeated, in 1928. Nevertheless, Charles went seriously about the business of clearing title to his claim to the championship, by knocking out Gus Lesnevich in a bout in New York city (unrecognized as a championship contest) and knocking out Pat Valentino in a title match at San Francisco, Calif.

The greatest indication of the change in gate receipts was found in the fact that the year's top box-office total, registered at the Charles-Walcott June fight, was only $281,546. The high for 1948 was $841,739, when Louis knocked out Walcott in their second bout. Charles attracted a gate of $167,870, Oct. 14, when he knocked out Valentino in eight rounds. The gate for the bout in which Charles knocked out Lesnevich in seven rounds at the Yankee stadium, New York city, Aug. 10, was $75,832.

EZZARD CHARLES missing with a high-swinging left aimed at Jersey Joe Walcott (Arnold Raymond Cream, Jr.) during their 15-round title bout for the world heavyweight championship in Chicago, Ill., June 22, 1949. Charles won by a decision

Receipts fell off alarmingly in New York city, customarily the hub of the nation's boxing. No show in Madison Square Garden attracted a gate of $100,000, a situation encountered for the first time in eight years. The International Boxing Club, Inc., conducted three outdoor shows in New York city, and all three fell short of $150,000 in receipts. Indoor boxing in Madison Square Garden attracted receipts of $810,139 for 22 shows attracting 230,152 persons. The number of shows was reduced because of an undeclared "strike" by the Boxing Managers' guild of New York city, which was settled in late spring. The difficulty arose over the effect of television on boxing. The managers maintained that video reduced attendances, that their boxers' pay suffered accordingly and settled the "strike" only when a satisfactory financial cut of the video money was made.

During 1949, 12 championship bouts were held, including Charles' bout with Gus Lesnevich. There were 18 deaths, 9 of them in the U.S., which caused alarm and led to increased safety measures. A dearth of material contributed further to lack of interest.

Conspicuously missing from championship activity was a test for the world light-heavyweight title held by Freddie Mills of England. Middleweight title activity was attended with dramatic developments. Jake La Motta, the Bronx, New York city, dethroned Marcel Cerdan, Casablanca, Morocco, as champion, at Detroit, June 16, getting credit for a ten-round knockout victory when Cerdan was unable to come up for the tenth round, claiming an injured left shoulder. They were matched for a return title bout Sept. 28, but this was postponed until Dec. 2 when La Motta developed an arm injury in training. Flying to the U.S. for the Dec. 2 engagement, Cerdan perished in a plane crash in the Azores, Oct. 28.

Ray Robinson, world welterweight champion, retained his title in a single defense against Kid Gavilan, Cuban, in Philadelphia, Pa. Ike Williams defended his lightweight championship against Enrique Bolanos, Mexico City, Mexico, in Los Angeles, Calif., and Freddie Dawson, Chicago Negro, in Philadelphia.

Willie Pep regained his world featherweight title in a February encounter with Sandy Saddler, Harlem Negro, and defended the championship against Eddie Compo at Waterbury, Conn. Manuel Ortiz, El Centro, Calif., retained his world bantamweight title against Dado Marino, Hawaiian, in Honolulu, Hawaii, and in two defenses Rinty Monaghan, Belfast, Northern Ireland, held the world flyweight title by beating Maurice Sandeyron, France, and holding Terry Allen, London, England, to a draw.

Amateur Athletic union activity attained international scope in promotion, and college boxing experienced a stimulus which contrasted sharply with the decline in the professional sport. (J. P. D.)

Great Britain.—A remarkable feature of boxing at the end of 1949 was that Bruce Woodcock, the British heavyweight champion, despite a much chequered career and suspect nervous reflexes, was regarded by the authoritative New York State Athletic commission as one of three contenders for the vacant world championship. The New York body declared the title vacant after the retirement of Joe Louis and refused to alter their attitude although the American National Boxing association, to which all other states are affiliated, accepted the Negro, Ezzard Charles, as Louis' successor by virtue of his victory over Louis' old opponent, Jersey Joe Walcott, in a fight Louis himself promoted. The N.Y.S.A.C. would only recognize Charles as champion if he beat the winner of the contest Woodcock *v.* Lee Savold, arranged for May 1950. After knocking out the South African, Johnny Ralph, early in 1949, Woodcock successfully defended his British title against Freddie Mills in June 1949.

Mills, who was the world champion light heavyweight, had an inactive year in 1949. His only important fight was against Woodcock, to whom he conceded more than 14 lb. in weight and much in height and reach. Dick Turpin, verging on 30, withstood the challenge for the British middleweight championship but seemed unable to make further headway. The British welterweight championship changed hands when Eddie Thomas defeated Henry Hall in an uneven fight. Billy Thompson, who fought rather unevenly, remained the British lightweight champion but lost the European title and failed to regain the Empire title in 1949. Rinty Monaghan retained the world flyweight championship in his native Belfast by virtue of a draw with Terry Allen.

FILMS OF 1949.—*The Big Fight* (Columbia University). (L. WD.)

Boyd-Orr, John Boyd Orr, 1ST BARON, of Brechin Mearn, in the county of Angus (1880–), British scientist and authority on nutrition, was born at Kilmaurs, Ayrshire, Sept. 23. He became director of animal nutrition research at Aberdeen university in 1914 and in 1929 founded and directed the Imperial Bureau of Animal Nutrition. He was made rector of Glasgow university in 1945 and chancellor in 1946. On Oct. 27, 1945, he was unanimously elected director general of the Food and Agriculture organization of the United Nations for a two-year term ending Dec. 31, 1947. In 1949 he visited India at the invitation of the Indian government to advise on food problems. His proposals, which were accepted and implemented by the Indian government, were that the production and distribution of food should be organized on a war basis. In Oct. 1949 the Nobel committee of the Norwegian parliament announced that he was to receive the Nobel peace prize for 1949. Following the usual practice the reasons for the award of the peace prize were not made public, but it was believed that it was given both for his work as director general of the Food and Agriculture organization and also as president of the world movement for a world federal government. A barony was conferred on him on Jan. 1, 1949.

Boy Scouts.

Boy Scout anniversary week, which is observed annually in February in the United States, was an outstanding event in 1949. Twelve scouts representing all regions of the country visited Pres. Harry S. Truman and presented a "Report to the Nation" on scouting civic-service projects carried on during the previous year. These scouts later presented a report to the United Nations at Lake Success, N.Y., on service to scouts abroad.

Boy Scout week was further highlighted by the inauguration of a two-year crusade under the slogan "Strengthen the Arm of Liberty." This crusade was to extend through 1950. It was inaugurated at the Statue of Liberty on Bedloe's Island with ceremonies which included the lighting of 12 torches which the scouts took back to kindle other torches in the 543 local scout councils in America. The three goals of the crusade involve leadership, program and membership.

In May it was announced that the age levels in the three age groups of scouting were to be lowered by one year. Cub scouting would be for boys 8 through 10 years of age; boy scouting for boys 11 through 13; and exploring, which would combine all the features of the previous older scout program, involving air, sea and land activities, would be for young men 14 yr. and older.

At the same time, announcement was made of the second national jamboree of the Boy Scouts of America to be held in July 1950. It was to be held in Valley Forge park, Penn., on the site of Washington's encampment.

About 5,000 boy scouts and explorers went camping during the year. Scout councils conducted year-around camps in many communities as well as summer camps, and thousands of troops camped on their own sites.

The 12th international scout conference of world scout leaders was held in Norway in August, in which representatives of 41 scouting countries participated.

The Boy Scouts of America through their World Friendship fund extended aid to scouts in the Philippines and Japan, as well as to scouting countries in Europe. Books, equipment and badges, parcels of food and other materials were sent.

The membership on Oct. 31, 1949, was 2,322,094 persons organized in 69,185 scouting units. There were 1,709,950 boys and 612,144 leaders. (L. W. Ba.)

Great Britain and Commonwealth.—Scouting in Great Britain and the commonwealth continued to make steady progress during 1949. In Britain membership reached 473,216, the highest in the movement's history. An encouraging sign was an increase of 4,705 on the previous year in the number of adult leaders.

A "Bob-a-Job" week held in April, when every member of the movement was asked to earn at least one shilling toward administration costs by doing odd jobs, was a success both from the financial viewpoint and from the amount of good will that accrued to scouting.

In its role of encouraging international friendship, scouting was very active. At the beginning of the year a highly successful Pan-Pacific jamboree was held in Australia. From Aug. 17 to 25 nearly 3,000 Rover scouts from 30 countries camped together at Skjak in the mountains of Norway at the Fourth World Rover moot. A record number of British scouts camped abroad as guests of foreign scouts, and many scout visitors from other countries camped in Great Britain.

The council of the Boy Scouts association gave its sanction to a few minor changes in the scout uniform. Scouts over 15 and scout leaders could now wear berets on informal occasions such as camps and hikes, but the familiar wide-brimmed hat introduced by Lord Baden-Powell continued to be worn on all formal occasions. (Rn.)

Bradley, Omar Nelson

(1893–), U.S. army officer, was born on Feb. 12 in Clark, Mo., was graduated from the U.S. Military academy at West Point, N.Y., in 1915 and became a major of infantry in World War I. He was graduated from the Infantry school (1925), the Command and General Staff school (1929) and the Army War college (1934), taught at West Point until 1938, then had duty in Washington, D.C., on the general staff. During World War II, he commanded the 2nd corps in Africa and Sicily, and subsequently all U.S. ground troops for the invasion of Europe. As commander of the 12th U.S. army group, he commanded more than 1,300,000 combat troops—the largest body of U.S. soldiers ever to serve under a single field commander. By the end of the war he was a full general. From Aug. 15, 1945, to Dec. 1, 1947, he was administrator of veterans' affairs; on Feb. 7, 1948, he succeeded General of the Army Dwight D. Eisenhower as army chief of staff; and on Aug. 16, 1949, he became first permanent chairman of the U.S. joint chiefs of staff. During 1949, in testimony before congress and in public speeches, he urged passage of the North Atlantic treaty to prevent war by establishing, as he said, a common western frontier in the heart of Europe. On July 29 he told the house foreign affairs committee that in defending western Europe the U.S. would be primarily responsible for air operations; European nations, for ground forces. At the first meeting of the 12 Atlantic pact nations in Washington on Oct. 5, he was appointed head of a military committee to draw up common defense plans. In the dispute over the respective roles of the navy and air force in U.S. strategic plans, Bradley defended the air force B-36 as the world's best bomber in existence and declared in a speech in Akron, O., on Oct. 12 that the navy was getting its proportional share of military appropriations.

Brannan, Charles Franklin

(1903–), U.S. secretary of agriculture, was born on Aug. 23 in Denver, Colo., and was graduated from the University of Denver law school in 1929. He practised law in Denver until 1935, when he became assistant regional attorney of the Resettlement administration, and later regional attorney in the department of agriculture's office of the solicitor. From Nov. 1941 to April 1944, he was regional director of the Farm Security administration for Colorado, Wyoming and Montana. He was named assistant secretary of agriculture in June 1944; agricultural adviser to the U.S. delegation to the United Nations San Francisco conference in 1945; and secretary of agriculture in June 1948. During 1949 he sought congressional approval of a new agricultural plan to maintain farm incomes, and still give consumers the benefit of prices that would "seek their level," by supporting farm incomes by subsidies to make up any difference between market prices and incomes at the 1939–48 level. Testifying April 11–12 before the house agriculture committee, he said the plan would be cheaper than then current parity-payment plans; however, the new plan did not pass, though Pres. Harry S. Truman continued to advocate it as late as Labor day. Brannan also urged a house judiciary subcommittee investigation of food "monopolies," charging that reductions in retail food prices were hurting the farmer rather than the middleman.

Brannan Farm Plan: *see* Agriculture.

Brazil. A federal republic in eastern and central South America, Brazil is the largest of the Latin American nations. Language: Portuguese; religion: predominantly Roman Catholic. Capital: Rio de Janeiro (est. pop. 1949, 2,091,160); president (since Jan. 31, 1946): Gen. Eurico Gaspar Dutra.

Brazil's area of 3,286,170 sq.mi. is second only to that of Canada in the western hemisphere: it covers very nearly half of South America. The population (latest census, 1940: 41,236,315) was estimated at 48,900,000 as of Jan. 1, 1949. Three-fourths of this population is concentrated in an area along the coast, where the principal cities are located.

The population as shown by the 1940 census was: Brazilian born 39,822,487; foreign born, including naturalized Brazilians, 1,406,568; nationality unknown 7,260. The number of the foreign born, including naturalized Brazilians, and their countries of origin were: 380,294 Portugal, 325,305 Italy, 160,540 Spain, 144,523 Japan, 100,793 Germany, 54,405 Syria and Lebanon, 47,151 Poland and 30,413 U.S.S.R. Among the Brazilian born population, it was estimated that about one-half was of European stock; the remainder included 8,800,000 mulattoes, 6,000,000 Negroes, 5,500,000 Indians and mestizos and 250,000 Asiatics.

Political History.—Since early 1948, when an interparty agreement for co-operation with the legislative program of President Dutra's administration was signed by leaders of the National Democratic union (U.D.N.), the Social Democratic party (P.S.D.) and the Republican party (P.R.), the country's political life had been conditioned by the dickering between party leaders over the selection of candidates for the presidential elections. The superior electoral tribunal announced that these were to be held on Oct. 1, 1950. President Dutra declared publicly that he would not seek re-election. Aware of the fact that none of the existing parties was strong enough to expect to win alone at the polls, the president endeavoured to bring about a united front of the three principal parties (U.D.N., P.S.D., and P.R.) backing a common presidential candidate. Leaders of the three parties found it impossible, however, to agree on the same candidate. Numerous conferences, interviews, round tables and private talks took place in Rio de Janeiro and the various state capitals but to no avail. As the year 1949 drew to a close, the political situation in the country could be classified only as confused. The various political parties were to have their conventions sometime in early 1950 to decide on their respective candidates.

Area and Population of States and Territories of Brazil

(Latest estimates available as published by the Instituto Brasileiro de Geografia e Estatística)

State or territory	Area (sq. mi.)	Pop. (Jan. 1, 1949)	Capital
North			
Acre (terr.)	57,153	99,554	Rio Branco

*Area in dispute between the states of Minas Gerais and Espírito Santo.

Internationally, Brazil continued to pursue its traditional policy of friendship toward the United States, support for the United Nations and co-operation in the Pan-American movement through the Organization of the American States. In May 1949 President Dutra journeyed to the United States in response to an invitation of Pres. Harry S. Truman. His ten-day stay was marked by numerous expressions of friendship between the two peoples. While in Washington, D.C., President Dutra addressed a joint session of the U.S. congress.

On March 10 it was announced that the Joint Brazil-United States Technical commission had completed its task and had submitted its report to the governments of Brazil and the United States. The report presented by the commission pointed out that the need for a broad development program in Brazil was indicated by the low productivity and small income of the majority of its people and serious unbalance in its economic structure. The commission unanimously agreed that the economic development of the country should be accelerated by a carefully considered program of government expenditures, by policies favouring a balanced development of Brazil's resources by private enterprise and by policies directed specifically toward controlling inflation and meeting the balance of payments problem.

Education.—In 1947 there were 58,502 primary schools with 112,412 teachers and 4,336,437 students. Illiteracy was estimated at about 57% for the whole country. There were approximately 1,500 secondary schools with 300,000 students; 2,700 professional schools with 200,000 students; and 7 official universities. There were also three private universities maintained by the Catholic Church.

Finance.—The cruzeiro, the monetary unit of Brazil, divided into 100 centavos, sold in the free market at the rate of between 25 and 35 per U.S. dollar. The official rate established by the Banco do Brasil remained at 18.38 during 1949. At the end of the year the cruzeiro sold in the free market at the rate of 25 per U.S. dollar. Despite strong pressure from various quarters the government decided not to devalue the cruzeiro when Great Britain devalued the pound.

The federal government's budget for the year estimated expenditures at Cr$ 19,370,000,000 and revenues at Cr$ 18,229,000,000, with an anticipated deficit of about Cr$ 1,141,000,000. As of Jan. 1, 1949, the federal government debt was said to include £71,266,000 and U.S. $100,167,000. The cost of living had increased from an index of 100 in 1939 to 361 in 1948 and was still increasing in the middle of 1949 (362 in July).

Currency in circulation totalled Cr$ 18,400,000,000 as of July 1, 1949. Gold reserves were estimated at Cr$ 6,407,000,000 as of the same date.

Trade.—Exports during 1948 totalled Cr$ 21,696,874,000. Imports were valued at Cr$ 20,984,880,000. The principal export items were: coffee (Cr$ 9,018,600,000), raw cotton (Cr$ 3,385,000,000), cocoa beans (Cr$ 1,065,900,000), lumber (Cr$ 976,400,000), skins and hides (Cr$ 763,000,000), rice (Cr$ 740,800,000) and sugar (Cr$ 691,600,000). Coffee remained the principal export item, increasing from 14,800 tons valued at Cr$ 7,755,200,000 in 1947 to 17,500 tons valued at Cr$ 9,018,600,000 in 1948. In the first quarter of 1949 coffee sales brought U.S. $12,000,000 more than in the same period of 1948.

Brazilian exports to all countries during the first quarter of 1949 declined 6.6% as compared with the same period of 1948. On the other hand, imports increased 12% although U.S. exports to Brazil during the January-April period in 1949 were at the monthly rate of U.S. $43,800,000 as against an average of U.S. $50,200,000 during the January-April period of 1948.

On Nov. 10 a new commercial agreement was signed at Rio de Janeiro between Portugal and Brazil. This agreement, valid until Dec. 31, 1950, and subject to renewal, provided for certain facilities in the exchange of specified products between the two countries. Brazil also signed a commercial agreement with Great Britain (announced Aug. 5) for 1949, subject to renewal for periods of three months at a time thereafter, providing for certain facilities in the issuing of export and import licences for certain specified goods.

Communications.—There were about 36,000 km. of railroad track in operation and about 300,000 km. of surface roads in 1948. It was estimated that there were in the country approximately 300,000 automobiles at the end of 1948, including passenger cars and trucks.

In 1947 there were 124,000 km. of air routes in operation. At the end of 1948 there were 31 aviation companies (8 foreign and 23 domestic) serving 157 different points. There were 68,000 km. of telegraphic lines.

Agriculture.—Sugar production in 1948 was estimated at about 28,200,000 tons. The cotton production was about 240,000 tons and the cocoa bean harvest was estimated at 122,000 tons for the same year. The total value of the agricultural production was estimated at about Cr$ 27,500,000,000 in 1947. The total value of animal products in the same year was estimated at Cr$ 11,130,000,000. There were more than 46,000,000 cattle at the end of 1946.

Manufacturing.—The total value of textiles exported in 1948 was Cr$ 480,069 as against Cr$ 1,252,587 in 1947. Most of these exports went to Argentina, South Africa and Venezuela.

Other important industrial products in 1948 were: cement 1,111,503 tons; pig iron 532,394 tons; steel 481,114 tons; sheet iron 386,665 tons.

Mineral Production.—In 1948 the total mineral and metallurgic output was valued at about Cr$ 4,410,648,000, including iron, steel, arsenic, coal, cement, gold, silver, rock crystal and mineral ores of various kinds.

On July 29, 1949, the National Petroleum council signed contracts for the installation of an oil refinery in Brazil. A French firm was to furnish materials and equipment and a U.S. firm would plan its installation.

Work continued on a U.S. $43,000,000 hydroelectric project at Paulo Affonso falls, on the São Francisco river, designed to serve northeastern Brazil. The Companhia Hidro-Electrica do São Francisco, partially financed by the federal government, expected that by 1953 when the first generators were to be installed, the Paulo Affonso plant would produce 120,000 kw. for the five states of Pernambuco, Alagoas, Paraíba, Sergipe and Bahia, doubling their power supply. Altogether, nine generators were to be installed at the falls. The company was capitalized at U.S. $20,000,000, half of the stock having been underwritten by the federal government and the remainder by states, municipalities, private corporations and individuals. The company was expecting to secure a loan of U.S. $15,000,000 from the International Bank for Reconstruction and Development.

Coal production totalled 2,013,284 tons in 1948, mostly in the states of Santa Catarina and Rio Grande do Sul.

Bread and Bakery Products.

Since the end of World War II bakers in many countries had shown an increasing awareness of the need for industry-supported laboratories of baking technology. At North Sydney, Australia, a new building to house the Bread Research institute of New South Wales was formally dedicated in Oct. 1949. The newly established laboratories of the British Baking Industries' Research association, located just outside London, England, initiated ambitious programs of studies on bread, sweet goods, biscuits and matters of general interest to all segments of the industry. In the United States an attack on the unsolved problem of staling was begun at the American Institute of Baking, Chicago, with the financial support of the U.S. department of agriculture.

For the first time since 1939 statistics on the baking industry in the United States were reported by the department of commerce in their census of manufactures. The report, which covered data for the year 1947, showed that bread and other bakery products produced by 6,797 plants had a value of $2,416,891,000; there were 326 plants making biscuits, crackers and pretzels with a value of $540,222,000. The total value of all products was about $3,000,000,000, as compared with approximately $1,250,000,000 in 1939. The number of employees was 279,368 in all branches of the industry exclusive of 11,104 single-outlet retail bakeries which were not included. The data indicate that about 85% of all bread and breadlike rolls were made from white flour, the remainder being dark wheat or rye breads, raisin or other specialty breads. More than half of the wholesale bread production of the United States was concentrated in eight states—California, Illinois, Michigan, New Jersey, New York, Ohio, Pennsylvania and Texas.

Three states enacted compulsory enrichment legislation during 1949, making a total of 26 states where all family flour as well as commercial white bread and rolls were required to meet specified standards for thiamine, riboflavin, niacin and iron. A survey of the usage of milk products by the bread-baking industry, conducted under the joint auspices of the University of Wisconsin and the bureau of agricultural economics, showed that it was about the same as the prewar average. This had been a matter of interest because the use of milk products necessarily had been severely restricted during the war years. The data indicated any concern, that enrichment of bread with vitamins and minerals may have discouraged the use by bakers of milk products in bread production, to be without foundation.

Another reference booklet, *Bakery Products*, published by the U.S. department of commerce, was prepared by George L. Fischer. This booklet provides a bibliography, with brief descriptions of many of the articles cited, of government and other publications, names of trade journals, directories and lists of national organizations of the baking industry. It lists all the available publications of importance on bakery operations and statistics of the industry.

The U.S. Food and Drug administration of the Federal Security agency (FSA) completed a public hearing on Sept. 20 for the purpose of developing a definition and standard of identity of bread, rolls and related products. Much time at the hearing was devoted to testimony regarding numerous ingredients that are not used in home baking, and about many of which there admittedly was need for more experimental study. In particular, serious questions were raised about the propriety of bakers incorporating in their bread preparations called by the chemical name, polyoxyethylene monostearate, but more generally referred to in the industry as "bread softeners." (*See* also FLOUR.) (F. C. BG.)

Brewing and Beer.

Beer and ale sales in the United States for the fiscal year ending June 30, 1949, totalled 85,809,068 bbl., the second highest fiscal year figure on record. Highest figure was 86,992,795 bbl. in 1948. Total sales by years since 1934 are given in the table.

Sales of Malt Beverages in the U.S.

(Years ending June 30)

Year	Sales (bbl.)*	Year	Sales (bbl.)*
1934	32,266,039	1942	60,856,219
1935	42,228,831	1943	68,636,434
1936	48,759,840	1944	76,969,764
1937	55,391,960	1945	79,590,598
1938	53,926,018	1946	81,286,821
1939	51,816,874	1947	82,629,441
1940	53,014,230	1948	86,992,795
1941	52,799,181	1949	85,809,068

*A U.S. barrel is 31 U.S. gal.

Bottled and canned beer accounted for 70% of the 1949 fiscal year sales total. A comprehensive survey by a representative firm showed that 54% of the country's urban families were consumers of beer during 1949.

Consumption of malt beverages had increased by about 34,000,000 bbl. since 1939. The entire increase was accounted for by packaged sales, made largely in food stores for home consumption, although a considerable volume of packaged as well as nearly all of the draught beer was sold through taverns.

For the first eight months of the calendar year 1949, all indications pointed to a record year for beer and ale sales. Withdrawals at that point totalled 58,411,593 bbl., topping by more than 500,000 bbl. the previous record sales of 57,880,644 bbl. August registered the highest single month's sale of beer in the nation's history, with 8,901,000 bbl.

Wisconsin led in the fiscal year both in production, 12,192,295 bbl., and sales, 11,341,985 bbl. New York was second and Pennsylvania third in both categories.

A development of major interest to the industry during 1949 was the introduction of courses in brewing sciences in the University of Wisconsin, Madison, Wis., and the Illinois Institute of Technology, Chicago, Ill. These courses were similar to those which had been offered for many years by the University of Birmingham in England.

The industry's plans for expansion for 1950 called for an expenditure of more than $100,000,000 for plant and equipment by various breweries.

The U.S. bureau of the census of manufactures' figures for 1947, the latest available, showed that the industry in that year paid out $292,000,000 in wages and salaries, as compared with $122,300,000 in 1939, and expended $620,000,000 for materials, fuel, new plant and equipment, as compared with $182,300,000 in 1939.

By-Products.—Brewers' wet and dry grains, used extensively as high protein cattle feed, and brewers' yeast, richest known natural source of B vitamins, are important by-products of the brewing process. Since World War II there had been an increasing use of brewers' yeast as a human nutrient and as a vitamin supplementary feed for poultry, livestock and other domestic animals to provide a balanced ration. For example, a report by the Brewers Yeast council in 1949 stated that experiments had indicated that the incorporation of brewers' yeast in the daily feed of young fur-bearing animals had the effect of aiding survival and producing furs with a finer than normal lustre.

Debittered yeast is used in bread and crackers and in the enrichment of noodles and dehydrated soup. In addition to its use in baking products, the yeast also is added in small quantities to candy, meat loaves, gravies, peanut butter, syrup and casseroles.

Moderation and Enforcement.—Close co-operation between brewers, wholesalers and retailers continued to be an integral part of the industry's self-regulation program which had its inception in 1938. This program, sponsored by the United States Brewers foundation, whose members produce approximately 90% of the nation's beer and ale, is an educational one, designed to impress upon government agencies the necessity for strict enforcement of reasonable laws and regulations, and upon retail licensees the importance of strict observance of these laws.

The foundation maintains a large field staff to act as liaison with both groups in efforts to attain these results. This staff works constantly with retailers to educate them to the value of maintaining high standards of operation and to encourage them to keep their establishments acceptable to the public.

Taxes.—Federal excise and special taxes on malt beverages for the fiscal year 1949 totalled $690,797,422, bringing the cumulative total since relegalization (April 7, 1933) to $6,830,607,414. State and local taxes and licence fees in fiscal 1949 were estimated at $225,000,000, raising the cumulative figure for that revenue to about $2,300,000,000. Beer and ale were in 1949 taxed at $8 per barrel. (*See* also LIQUORS, ALCOHOLIC.)

(E. V. LH.)

Bridge, Contract: *see* CONTRACT BRIDGE.

Bridges.

The world's longest spans of the various types built up to 1950 are listed in the following table:

World's Longest Spans by Type of Bridge

Type	Bridge	Location	Year Completed	Span
Cable Suspension	Golden Gate	San Francisco	1937	4,200 ft.
Transporter Bridge	†Sky Ride	Chicago	1933	1,850
Cantilever	*Quebec	Canada	1917	1,800
Steel Arch	Kill van Kull	New York	1931	1,652
Eyebar Suspension	*Florianopolis	Brazil	1926	1,114
Concrete Arch	Sando	Sweden	1943	866
Continuous Truss	Dubuque	Mississippi river	1943	845
Simple Truss	*Metropolis	Ohio river	1917	720
Continuous Girder	Cologne	Rhine river	1948	605
Vertical Lift	*Cape Cod Canal	Massachusetts	1935	544
Wichert Truss	Homestead	Pittsburgh	1937	533½
Swing Span	*Fort Madison	Mississippi river	1927	525
Tubular Girder	*Britannia	Menai straits	1850	460
Timber Span	*McKenzie River	Coburg, Ore.	1926	380
Bascule	*Sault Ste. Marie	Michigan	1914	336
Masonry Arch	Plauen	Saxony	1903	295
Single Leaf Bascule	*16th Street	Chicago	1919	260
Concrete Girder	Villeneuve	Seine river	1939	256

*Railroad bridge. †Not standing.

United States.—Progress was recorded in 1949 in securing official authorization for the proposed Liberty bridge to span the Narrows at the entrance to New York harbour between Brooklyn and Staten Island with the unprecedented span length of 4,620 ft. and an underclearance height of 237 ft., at an estimated cost of $78,000,000. Public hearing on the application of the Triborough Bridge authority of New York city was held on Jan. 12 before a board of top-ranking officers of the U.S. army, navy and air force; and official war department approval of the plans was signed by the U.S. secretary of defense on May 24 (the birthday of the Brooklyn bridge).

Official approval by the governor and the state superintendent of public works in 1949 paved the way for the construction of a new suspension bridge of 1,700-ft. main span to be built by the New York State Bridge authority across the Hudson river between Kingston and Rhinecliff, estimated to cost $14,000,000, for which preliminary plans were completed in 1948.

Plans were completed in 1949 for the reconstruction and modernization of the famous old Brooklyn bridge (completed 1883), including the increase of traffic capacity from the original two lanes to six modern highway lanes. Including the widening and modernization of the approaches, the total estimated cost was $6,750,000. Construction was scheduled to commence early in 1950.

Construction progressed through 1949 on the new $13,000,000 Tacoma Narrows bridge, a four-lane suspension bridge replacing the two-lane structure which was completed on July 1, 1940, and which was destroyed by aerodynamic oscillations on Nov. 7, 1940. The new bridge utilizes the original piers, with a main span of 2,800 ft., the third longest in the world. Misfortune continued to attend this undertaking. On April 13, 1949, an earthquake hurled a 23-ton saddle casting from the top of one of the completed towers to the bottom of Puget sound, sinking a work barge en route; and on June 8 a fire at the base of the west tower buckled one of the steel plates and caused $300,000 damage.

Construction progressed through 1949 on the substructure for the Delaware Memorial bridge (suspension type) over the Dela-

STEEL FRAMEWORK of the South Capitol Street bridge spanning the Anacostia river in Washington, D.C. The new bridge was scheduled for opening in Jan. 1950 ware river near Wilmington, Del., to connect Delaware's du Pont highway with New Jersey's planned new turnpike. With a main span of 2,150 ft. (the sixth longest in the world), the estimated cost was $40,000,000. The project was 3½ mi. long, including the bridge length of 10,765 ft. between abutments.

The California Toll Bridge authority approved in 1949 the plans for a new bridge over San Francisco bay, to parallel the existing Transbay bridge about 300 ft. to the north of that structure.

Contracts were let by the Maryland State Road commission in 1949 for the construction of the Chesapeake Bay bridge. The 1948 estimate of $36,370,000 for the structure was increased to $47,000,000. The crossing included a suspension bridge of 1,600 ft. main span and a cantilever bridge of 780 ft. main span.

Chicago's State Street bridge, under construction since 1941, was completed in 1949. Work on the $3,000,000 double-leaf bascule over the Chicago river was suspended during the war. The structure, to be known as the Bataan-Corregidor Memorial bridge, accommodates six lanes of traffic.

The new four-lane highway cantilever bridge over the Mississippi river at Memphis, Tenn. (main span 790 ft.) was completed in Dec. 1949, at a cost of $13,500,000.

The $5,400,000 Victory bridge, at Washington, D.C., extending South Capitol street over the Anacostia river, was scheduled for opening in Jan. 1950. The structure, 3,250 ft. long, consists of continuous steel girders and a girder swing span.

The Pennsylvania legislature appropriated $5,500,000 in 1949 for the construction of a toll-free bridge across the Susquehanna river at Harrisburg.

A significant event in 1949 was the casting and testing of the first precast concrete girder in the United States. This 160-ft. girder was for Philadelphia's new $700,000 Walnut Lane bridge, the first application in America of this new type of bridge construction. The available 400 tons of steel ingots, added to the 150-ton dead weight of the girder, proved insufficient to produce failure. The reinforcing wires, prestressed to 125,000 lb. per square inch, had an ultimate strength of 242,000 lb. per square inch and a yield strength of 213,000 lb. per square inch (compared with 160,000 lb. per square inch specified), and the concrete had a 28-day strength of 7,200 lb. per square inch (compared with 5,400 lb. per square inch specified). The bridge, scheduled for completion early in 1950, would have 13 prestressed concrete girders 160 ft. long in the main span and 7 girders 74 ft. long in each side span.

The $27,000,000 Mystic River bridge, in the Charlestown section of Boston, Mass., under construction 1947–50, is a high-level cantilever bridge, with 800 ft. main span. It contains 50,000 tons of steel and 50,000 cu.yd. of concrete.

The Lake Washington Floating bridge at Seattle, Wash., completed in 1940 at a cost of $9,860,000, was made toll-free after nine years of collections. The removal of tolls increased traffic to a point where construction of a second bridge across the lake was being considered. The Washington State Bridge authority also approved the proposal of Wasco county, Ore., to build a $2,511,000 interstate toll bridge across the Columbia river at The Dalles.

A new $4,000,000 high-level bridge over the Chesapeake and Delaware canal at Chesapeake City, Md., was completed in 1949 to replace a lift bridge which was destroyed in 1942 when a tanker crashed into the south pier. The new bridge is a steel tied-arch of 540 ft. span, identical in span and design with the bridge at St. Georges, Del., built in 1942 over the same canal following a similar accident in 1939.

Construction progressed through 1949 on the high-level Penrose Avenue bridge, crossing the Schuylkill river between Philadelphia and Chester, Pa. The project is 12,378 ft. long, including approach viaduct spans on high concrete piers and a cantilever bridge of 680 ft. main span.

The famous Pecos viaduct of the Southern Pacific railroad near Comstock, Tex., for many years the highest railroad bridge in the United States, was dismantled in 1949 after replacement by a new cantilever bridge in 1944. The old structure, built of wrought iron in 1891, was 2,180 ft. long, with 48 girder spans and a central cantilever truss span of 185 ft., at a height of 321 ft. above low water level of the Pecos River canyon. The new bridge is a deck cantilever truss with central span of 374½ ft.

A new cantilever bridge for the Mississippi state highway over the Yazoo river near Vicksburg, Miss., was completed in 1949 at a cost of $1,362,000.

The High Level bridge, connecting Akron and Cuyahoga Falls, O., arching 185 ft. above the Cuyahoga river, completed in 1949, is a decktype cantilever bridge, 900 ft. long, with a centre span of 480 ft.

A reinforced concrete highway bridge 1,000 ft. long was built by the California highway department in 1949 across the Santa Ana river near Anaheim, Calif.

A 930-ft. bridge of three truss spans, built in 1899, supporting a single-track line of the Southern Pacific railroad near Herndon, Calif., was replaced in 1948–49 while traffic continued without interruption.

Plans were announced in 1949 by the Northern Pacific railroad for the construction of a new bridge across the Mississippi River near Bismarck, N.D., to replace the existing triple-span 1,514-ft. structure completed in 1882 as a wooden bridge and rebuilt as a steel structure in 1902.

At East Fredericktown, Pa., a suspension bridge of 1,000 ft. span was built over the Monongahela river in 1949 to carry a belt conveyor for bringing coal across the river from mine to processing plant.

In South Carolina, a three-span steel highway bridge (put out of service when the Santee dam was completed in 1941) was moved 20 mi. downstream in 1949, from Lake Marion on the Santee river to a new crossing over the Santee-Cooper diversion channel. The three truss spans (150, 168, 150 ft.) were lifted from their original piers, towed downstream on a wooden barge and placed on newly constructed piers at the new site, to carry another highway.

During the cantilever erection of the new Bluestone River highway bridge near Hinton, W.Va., a sudden collapse of the first 231 ft. of the 278-ft. centre span on March 31, 1949, plunged five men to their death in the stream 150 ft. below, and four others were injured. The cause of the collapse was not discovered.

The 6,000-ton, 320-ft. span, double-leaf bascule bridge (constructed in 1924) at Terminal Island, in the Long Beach and Los Angeles, Calif., harbour, was raised 7½ ft. in five days in 1949 to correct conditions caused by land subsidence.

Reconstruction of 3,383 ft. of the Illinois Central railroad bridge over the Ohio river at Cairo, Ill., to take three years and cost $6,000,000, was commenced in 1949. When built in 1889, the 7,683 ft. structure was the longest all-steel river crossing in the world.

A huge ice jam on the Des Moines river in 1949 knocked out a three-span steel truss crossing at Chillicothe, Ia. The centre span was completely washed away, the south span was pushed from its piers, while the north span buckled but remained in place.

The oldest suspension bridge in the United States, spanning the Ohio river on U.S. 40 at Wheeling, W.Va., completed 100 years of service in 1949. Built originally in 1849 by Charles

Ellet with a then unprecedented span of 1,010 ft., the structure was wrecked by aerodynamic oscillations in 1854 and was then rebuilt and stiffened by John A. Roebling.

Canada.—In Vancouver, B.C., an $8,000,000, eight-lane bridge, 90 ft. wide, with 90 ft. clearance over the water, was planned in 1949 to replace the Granville Street bridge. The latter, a low-level structure with swing span, caused traffic tie-ups when the bridge was opened in rush hours. Construction of the new bridge was planned to start in 1950.

Construction of a $13,500,000 low-level bridge, 3,000 ft. long, over the Strait of Canso, which separates Cape Breton Island from the mainland of Nova Scotia, was authorized in 1949 by the Canadian government. Difficult foundation problems were presented by the strong tidal currents and the 200-ft. depth of water.

Brazil.—The Galeao bridge in the harbour of Rio de Janeiro, a 15-span prestressed concrete girder bridge 1,215 ft. long, was opened to traffic in 1949 with only three of the final six highway lanes completed. The longest span is 142½ ft.

Belgium.—A contract was let in 1949 in Belgium for the world's first prestressed concrete bridge incorporating continuous spans. Spanning the Meuse river at Sclayn, the bridge was to consist of two 206-ft. hollow girder spans continuous over a central pier. A lower bid, for a concrete bow-string arch, was rejected because it required three piers in the river.

Hungary.—All of the bridges over the Danube at Budapest (five highway and two railway) were wrecked during World War II; six were blown up by the German troops and one (the uncompleted Arpad bridge) was damaged by artillery. Until 1946, when the Franz Joseph suspension bridge was reconstructed, the city was served only by a pontoon bridge, which replaced the famous Elizabeth suspension bridge, and by a temporary trestle bridge, which replaced the Margaret bridge. Plans were made to rebuild or replace the famous Clark chain suspension bridge in 1949 and the Nicholas Horthy bridge (now renamed the Boraros bridge) in 1950. In the meantime, as steel became available, the continuous steel girder Arpad bridge, with a longest span of 340 ft., was carried to completion in 1949. The deck area of this bridge is 90 ft. wide and 3,000 ft. long.

The famous Margaret bridge, built in 1876, consisted of wrought iron deck arches crossing the two channels of the Danube river, with three spans of 302, 285 and 254 ft. on each side of Margaret Island. The reconstruction of this bridge with new steel arch spans on the old piers, completed late in 1948, involved difficult problems, because the old wrought-iron arches, broken in the centre by demolition charges, had pulled the upper part of the piers away from the lower part as they collapsed. Some 5,000 tons of structural steelwork were required for the new bridge.

Germany.—The reinforced concrete arch bridge carrying the important Mittelland canal across the Weser valley near the town of Minden, destroyed by the retreating German army in 1945, was rebuilt in 1947–49 at a cost of $2,000,000.

The reconstructed Autobahn bridge across the Lahn River valley at Limburg, on the Frankfurt-Ruhr route, has spans of 207, 311 and 207 ft. German military K-type trusses were used as the bridge was cantilevered across the river.

Greece.—The Brallo bridge, steel deck-truss type, on the Athens-Salonika line of the Greek State railroad, was completed in 1949 as one of the reconstruction projects carried out by the American Mission for Aid to Greece.

India.—Construction was commenced in 1949 on a new bridge across the Mahanadi river, near Sambalpur. The bridge, estimated to cost $3,000,000, would form an important link on the national highway between Bombay and Calcutta.

Japan.—A 1,600-ft. reinforced concrete bridge over the Tama river, on the modern highway from Tokyo to Yokohama, was completed in 1949. It was under construction for two years at a cost of 130,000,000 yen ($400,000 U.S.).

(*See* also ROADS AND HIGHWAYS.) (D. B. S.)

British Borneo.

British territories in Borneo consist of the colonies of North Borneo including the island of Labuan (area, 29,417 sq.mi.; pop. [1948 est.] 332,000); Sarawak (area, *c.* 50,000 sq.mi.; pop. [1948 est.] 550,000) and the protected state of Brunei (area, 2,226 sq.mi.; pop. [1948 est.] 41,000). Chief towns: North Borneo: Jesselton (cap., 26,158) and Sandakan (33,131); Sarawak: Kuching (cap., 37,949). Governors, 1949: North Borneo, Sir Ralph Hone; Sarawak (also high commissioner for Brunei), Duncan G. Stewart (assassinated in December).

History.—Proposals for the establishment of executive and legislative councils in North Borneo were approved and the necessary instruments to give them effect were in process of drafting and were expected to be ready before the end of 1949. Under arbitration an award of £1,400,000 was fixed as the sum to be paid by the British crown to the British North Borneo company in respect of the transfer to the crown of the company's sovereign rights and assets in North Borneo under the terms of the agreement entered into in June 1946.

The governor, D. G. Stewart, was stabbed on Dec. 3, at Sibu, by a member of the Malay Youth association, which opposed the cession of Sarawak to the crown. He died at Singapore on Dec. 10.

Finance and Trade.—Currency: Straits dollar, valued Nov. 14, 1949, at 8.57 to the pound, or at 32.67 cents U.S.

	North Borneo	Sarawak	Brunei
Revenue (1948)	Str. $13,780,929	Str. $14,055,045*	Str. $6,586,299
Expenditure "	$10,727,063	$19,186,932*	$3,740,254
Imports "	c. $25,419,000	$98,769,885	c. $35,000,305
Exports "	c. $29,742,000	$171,250,887	c. $49,000,000

*1949 estimates.

Principal exports: North Borneo, rubber and timber; Sarawak, diesel oil, crude oil, rubber and sago flour; Brunei, crude oil. In assessing Sarawak's import and export figures note should be taken that all Brunei's crude oil (to the value of Str.$47,140,683 in 1948) is pumped to the refinery at Miri and later re-exported. (*See* also BRITISH EMPIRE; NETHERLANDS OVERSEAS TERRITORIES.) (JO. A. HN.)

British Columbia.

British Columbia, Canada's Pacific coast province, has an area of 366,255 sq.mi., of which 359,279 sq.mi. are land and 6,976 sq.mi. are water, ranking third in area among the ten provinces of Canada. In 1849 and 1858, Vancouver Island and British Columbia were constituted crown colonies, respectively. In 1866 they united, and on July 20, 1871, became the sixth province to join the Canadian confederation.

The population on June 1, 1949, was estimated to be 1,114,000 (1941 census, 817,861). The population is predominately of British origin, 70% at the time of the 1941 census. At the 1941 census, urban dwellers numbered 443,394 and rural dwellers 374,467. The principal ports and chief urban centres are Greater Vancouver (1941 pop., 351,491), Greater Victoria (75,218), the capital, and New Westminster (21,967), which are all located in the southwestern corner of the province. It was estimated in 1949 that the population of Greater Vancouver was 504,925, Greater Victoria, 115,450, Greater New Westminster, 52,749.

History.—In the fifth session of the 21st parliament of British Columbia, Feb. 8, 1949–March 24, 1949, the following measures were passed: an act to provide for the development of the central interior of British Columbia authorizing the expenditure of $5,500,000 for the development of hydroelectric power; an act to promote industrial development of the province; an act to borrow $38,500,000 for purposes of construction of roads, bridges and buildings; an amendment creating a branch of the department of health and welfare to be known as the hospital insurance service; an act permitting the sale of oleomargarine within the province under certain regulated conditions; an amendment to the Provincial Elections act allowing Indians and Japanese-Canadians to vote.

In February, Premier Byron I. Johnson announced a comprehensive development program, embracing extension of the Pacific Great Eastern railway; a $30,000,000 public highway program; acceleration of power development, industrial development, irrigation development and construction of government buildings.

On June 15, 1949, a provincial election was held with the Liberal-Progressive Conservative Coalitionists having 39 seats; the Co-operative Commonwealth Federationists 7; Labour 1; and independent 1.

In August it was announced that the government of Canada would recommend to parliament the granting of a subsidy of $15,000 per mile to the government of British Columbia for the purpose of extending the Pacific Great Eastern railway from Quesnel to Prince George.

Preliminary investigations were underway for the possible establishment of a $350,000,000 aluminum industry in British Columbia.

Members of the provincial executive council, or cabinet, and their portfolios at the close of 1949 were: Byron I. Johnson, premier and president of the council; G. S. Pearson, provincial secretary and minister of health and welfare; G. S. Wismer, attorney general; E. T. Kenney, lands and forests; H. Anscomb, finance; H. R. Bowman, agriculture; R. C. MacDonald, mines and municipal affairs; E. C. Carson, public works; L. H. Eyres, railways, trade and industry and fisheries; J. H. Cates, labour; W. T. Straith, education.

Education.—During the school year ending June 30, 1948, 146,708 students were enrolled, in the elementary (91,122), elementary-senior-junior high (12,309), superior (2,751), junior, junior-senior and senior high (40,526) schools of the province. Teaching staffs comprised 5,116 teachers, in the elementary 2,850, elementary-senior-junior high 439, superior 102, junior, junior-senior and senior high 1,659 and 66 unclassified. Higher education is provided by the University of British Columbia, a provincially endowed institution, and two teacher training schools located in Vancouver and Victoria.

Finance.—Herbert Anscomb, minister of finance, reported that revenue collected during the fiscal year ended March 31, 1948, amounted to $67,077,739; expenditures had been $63,475,697; the net debt at Dec. 31, 1948, was $127,625,937, an increase of $5,219,750 over Dec. 31, 1947. Anticipated revenues and expenditures for the fiscal year 1949–50 were $92,980,590 and $92,308,019, respectively.

Communications.—The total highway mileage as of March 31, 1948, excluding the Alaska highway, amounted to 22,277 mi., of which 9,872 mi. were surfaced, 9,779 mi. were improved earth, 2,626 mi. were unimproved earth roads. Railway mileage as at Dec. 31, 1948, was 4,868 mi. of main line track and 1,160 mi. of sidings. During 1948 approximately 4,311,539 tons of cargo were loaded at British Columbia ports for foreign countries, while 2,485,594 tons of cargo from foreign countries were unloaded at local ports. In 1947 the total number of telephones, 215,691, included 76,921 on automatic switchboards.

Manufacturing.—Preliminary statistics relating to the manufacturing industries indicated that the 1948 gross value of production would be well in excess of the previous all-time high established during 1947. The high levels established during 1948 were fairly well maintained during 1949.

Table I.—*Principal Manufacturing Industries of British Columbia*

Industry	Gross value of Products 1947	Gross value of Products 1946
Sawmills	$218,235,191	$130,433,625
Pulp and paper	61,346,715	42,030,596
Fish curing and packing	56,618,563	43,256,957
Slaughtering and meat packing	30,378,352	28,087,775
Shipbuilding and repairs	28,489,231	31,680,612
Fruit and vegetable preparations	26,424,577	21,269,911
Fertilizers	23,441,939	20,623,774
Veneer and plywood	22,499,208	14,677,940
Total all manufacturing industries	858,284,592	644,527,898

Table II.—*Economic Activity in British Columbia*

	Unit	1947	1948	1949 Preliminary Estimates
AGRICULTURE:				
Total value of production	$	134,508,400	142,108,000	143,250,000
Livestock	$	18,531,000	19,991,000	21,000,000
Poultry products	$	19,890,000	20,118,000	21,500,000
Dairy products	$	25,588,000	28,812,000	30,000,000
Fruits and vegetables	$	33,652,900	34,750,000	31,250,000
Field crops	$	30,488,000	33,293,000	34,500,000
Miscellaneous	$	6,358,500	5,144,000	5,000,000
FISHERIES:				
Total value of production	$	58,764,950	58,605,619	63,000,000
Pack of canned salmon	cases	1,527,135	1,313,909	1,435,000
FORESTRY:				
Total value of production	$	282,288,388	363,786,000	360,000,000
Timber scaled	M.B.M.	4,187,816	4,293,465	4,000,000
Paper production	ton	410,994	407,210	
MINING:				
Total value of production	$	113,221,254	152,524,752	142,000,000
Lead	$	41,884,977	60,072,542	
Zinc	$	30,147,039	41,234,603	
Coal	$	8,587,380	10,854,108	
Gold	$	8,715,455	10,603,250	
INTERNAL TRADE:				
Index of wholesale sales	1935–39 = 100	314.6	333.8	340.0
Total value of retail sales	$000	664,470	731,520	780,000
Value of retail department store sales	$000	87,020	102,378	108,000
Railway freight loaded	ton	9,904,060	10,325,427	10,400,000
Consumption of electric power	000 kw.hr.	3,011,763	3,436,778	3,640,000
Construction, building permits	$000	61,228	96,953	98,000
Bank debits	$000	6,564,000	7,043,620	7,600,000
Index of employment	1926 = 100	193.7	202.6	200.0
Salaries and wages paid	$000	557,076	650,000	690,000

Agriculture, Fisheries, Mining, Forestry.—Preliminary provincial departmental estimates for 1949 indicated that the net value of production in the agriculture and fisheries industries was higher, the mining industry lower, with the forestry industry remaining at about the same level as in 1948.

FILMS OF 1949.—*Skeena River Trapline* (National Film Board of Canada).

(G. T. H.)

British East Africa.

The term is used to cover Kenya (colony and protectorate), Uganda (protectorate), Tanganyika (under United Kingdom trusteeship), Zanzibar (protectorate) and British Somaliland (protectorate). Kenya: area 224,960 sq.mi.; pop. (1948 census) 5,373,231; capital, Nairobi. Uganda: area 93,981 sq.mi.; pop. (1948 census) 4,993,965; capital, Entebbe. Tanganyika: area 362,688 sq.mi.; pop. (1948 census) 7,074,160; capital, Dar es Salaam. Zanzibar (which includes the islands both of Zanzibar and Pemba): area 1,020 sq.mi.; pop. (1948 census) 265,872; capital, Zanzibar (town). Somaliland: area *c.* 68,000 sq.mi.; pop. (1947 est.) *c.* 700,000; capital, Berbera. Many different languages are spoken, but the dialect commonly known as Swahili (a mixture of Arabic, Persian and various African tongues) is used to some extent as a *lingua franca* throughout the whole region.

In 1948 the East African high commission, consisting of the officers for the time being administering the governments of Kenya, Uganda and Tanganyika, with a central assembly (consisting of official and unofficial members with an unofficial majority) and an executive organization, was established to coordinate and control the technical services of the three territories.

Governors, 1949: Kenya, Sir Philip Mitchell; Uganda, Sir John Hathorn Hall; Tanganyika, Sir Edward Twining; Somaliland, Gerald Reece; Zanzibar, British resident, Sir Vincent Glenday.

History.—Constitutionally there were no changes in 1949 but it was a year of great development in the sphere of local government. Kampala was raised to municipal status with a municipal council exercising considerable local autonomy, consisting of European, Asian and African members and presided over by a nonofficial (Asian) chairman. In Dar es Salaam a new municipal council was established with equal numbers of nonofficial European, African and Indian members. The raising by Nairobi of a £1,500,000 loan on the open market on its own assets and responsibility opened a new stage in the development of colonial municipalities. In Uganda the African local government ordinance of January gave constitutional support to developments of recent years. In Kenya the text of a bill to provide for local government in native areas and re-establishment of district councils was submitted to the country for criticism and later was laid before the legislative council. In Tanganyika the first provincial council (comprised of officials and unofficial members of the European, Asiatic and African communities) was formed in the Lake province and held its first meeting in June.

Considerable progress was made toward easing the transport bottleneck. About 350 mi. of railway were under construction in Tanganyika; in Kenya realignment between Nairobi and Nakuru reduced the distance and produced an easier gradient. At a conference in London in January on East African transport problems, attended by East African governors and by representatives of both the British government departments concerned and of the East African railways, congestion at Dar es Salaam was the main subject of discussion; immediate steps decided on were the extension of the existing quay by 500 ft., a large increase in the lighter fleet, an addition of three cranes and a steady increase in railway rolling stock. A technical committee of the East African railways reported later in the year that it estimated Dar es Salaam could be developed into a major port with 18 deep-water berths and that with certain limited improvements, either in hand or suggested, it should by 1951–52 be able to handle nearly twice the total tonnage of 1948.

It was announced that to carry out these and other improvements the East African Railways and Harbours administration was preparing to borrow £23,000,000 in instalments.

In May agreement with the Egyptian government was announced with regard to the building of a dam and hydroelectric power station at Owen falls, Uganda. The Egyptian government offered to pay £4,500,000 toward the cost of the scheme (estimated to cost a total of £12,00,000). The contract for the construction of the dam was placed with an Anglo-Dutch firm and the work was expected to be completed in four years. Meanwhile, work forged ahead on certain preliminary installations—the construction of a temporary electrical power plant (diesel-driven), railway sidings and camps for the labour force.

The United Nation's Trusteeship committee mission, which visited Tanganyika in 1948, made a number of criticisms of the administration to which the British government published a vigorous reply.

The peanuts scheme in Tanganyika produced more controversy than oil. A report—*Overseas Food Corporation: Report and Accounts for 1948–49* (H.C.252)—showed that the original plan had been badly overoptimistic both as to costs and possible rate of progress. Not the least disturbing feature of the report was the comment of the auditors. Nevertheless, the scheme moved forward and brought with it many indirect benefits to the territory as a whole.

Fairly general rioting broke out in Uganda on April 25 and lasted two to three days with sporadic incidents occurring until May 4. The riots followed on an expression by the kabaka of his inability to agree to certain demands put forward by a delegation representing the so-called Bataka party and the African Farmers' union. Five Africans were reported to have been shot and more than 1,300 people were arrested; numerous cases of arson, looting and theft of vehicles occurred. The governor brought into operation the Emergency Powers Order-in-Council of 1939, and called in military assistance from Kenya. On May 4 he announced the appointment of a commissioner to inquire into and report upon the origin, cause, purposes and development of the disturbances and the steps taken to deal with them and to make recommendations.

Finance and Trade.—Currency throughout British East Africa is controlled by the East African Currency board in London; the standard coin is the East African shilling, divided into 100 cents; as of Nov. 15, 1949, it was valued at 14 cents U.S.; circulation (Dec. 31, 1948): notes £16,857,840, coinage £8,655,646.

	Revenue	Expenditure	Imports 1948	Exports 1948
Kenya	£8,956,500*	£8,946,740*	£27,136,338§	£19,972,227
Somaliland	£525,495†	£545,357†	—	—
Tanganyika	£6,965,058‡	£6,381,964‡	£22,608,564	£16,923,394
Uganda	£6,842,071*	£6,348,304*	£9,271,287§	£17,197,716
Zanzibar	£901,208‡	£937,673‡	£2,699,717	£2,116,858

* 1949 estimate. † Actual, for the year ended June 30, 1948. ‡ 1948 actual.
§ "Retained" imports only.

Principal exports: Kenya—sisal, coffee, radium carbonate, hides and skins, tea; Somaliland—hides and skins; Tanganyika—sisal (£8,930,461 in 1948), cotton, diamonds, coffee; Uganda—raw cotton (£7,457,674 in 1948), coffee, cigarettes, sugar; Zanzibar—cloves (£1,000,404 in 1948), coconut oil.

*1948 est. if not otherwise stated. †1948 census. ‡1949 est. §1947 census.

British Guiana. British Guiana is a British colony on the northeast coast of the continent of South America. Area: 89,480 sq.mi. Pop. (1948 est.): 390,000. Chief towns (1946 census): Georgetown (cap., 73,541); New Amsterdam (9,578). Governor in 1949: Sir Charles Woolley.

History.—The legislative council approved during 1949 the colony's ten-year development plan, which called for an expenditure of 26,000,000 British West Indian dollars. Remarkable progress was announced in a campaign to rid the colony of malaria and it was claimed that 95% of the population was now free of its ravages. In July two United States experts arrived to study rice production methods and to advise the local government on its proposed program for large-scale expansion of the industry. Food subsidies were abolished in the spring when the only two remaining subsidies—on flour and salted fish—which had cost nearly B.W.I. $2,000,000 in 1948, were withdrawn: but following devaluation in September it was found necessary to reintroduce certain subsidies. The second goodwill meeting of the governors of the British, French and Dutch Guianas was held in Georgetown in February. The U.S. air force handed over Atkinson Field Air base (one of its wartime Caribbean bases) to the local government, which agreed to purchase 300 buildings and a large quantity of equipment for approximately B.W.I. $1,000,000; certain buildings remained U.S. property, but on loan to the local government. The governor announced that the secretary of state had promised to appoint a commission on constitutional reform in 1950.

Finance and Trade.—Currency: British West Indian dollar set at 4.8 to the £. On Nov. 14, 1949, the West Indian dollar was valued at 58.33 cents U.S. (Budget 1948 provisional figures): revenue B.W.I. $20,601,599; expenditure B.W.I. $19,616,692. Foreign trade (1948): imports B.W.I. $48,181,000; exports B.W.I. $36,993,859. Principal exports: sugar, bauxite, rum, rice, diamonds and timber. (Jo. A. Hn.)

British Honduras. A British colony in Central America bounded by Mexico and Guatemala. Area: 8,598 sq.mi. Pop. (1948 est.): 62,000. Chief towns (1946 census): Belize (cap., 21,886); Stann Creek (3,414).

History.—The claims of Guatemala to the territory continued during 1949 to give rise to some uncertainty as to its future status; a resolution in the legislative council stressed the people's loyalty to the British connection but at the same time urged upon the British government the imperative necessity of taking all proper steps to bring about the speedy determination of the claim made by the government of Guatemala. In a reply to this resolution the British government stated *inter alia* that, while remaining willing to submit the legal claim to the International Court of Justice for adjudication, "it remained inflexibly determined that, in the absence of a legal decision by the International Court that His Majesty has no legal claim to sovereignty over British Honduras, it will not countenance any change in the international status of the colony or any part of it."

The Hawkesworth bridge, a new suspension bridge 480 ft. long with a centre span of 280 ft., over the lower Belize river was opened, thus completing the all-weather road from the capital to the Guatemalan frontier. In general, the achievements in the development program were overshadowed by widespread unemployment due to the collapse of the mahogany and chicle industries.

Finance and Trade.—Currency: dollar, linked in value to the U.S. dollar and, as a consequence, not devalued with the remainder of the sterling area. Budget (1948): revenue $3,208,623; expenditure $3,394,916. Foreign trade (1948): imports $8,075,460; exports $6,152,010. Principal exports: timber, chicle and grapefruit juice. (Jo. A. Hn.)

British Malaya: *see* Malaya (Federation of) and Singapore.

British Political Parties: *see* Political Parties, British.

British Somaliland: *see* British East Africa.

British South African Protectorates.

Under this heading are grouped the three British protectorates of Basutoland, Bechuanaland and Swaziland, of which certain essential statistics are given in the table. High Commissioner in 1949: Sir Evelyn Baring.

History.—The year 1949 was one of continued progress with schemes financed under the Colonial Development and Welfare acts and, in Swaziland, of growing political activity of the native authority. The economic future of Swaziland was also brightened by the announcement of an 100,000 ac. afforestation scheme to be started by the Colonial Development corporation.

The territories attracted interest during 1949 because of the incidence of ritual murder in Basutoland, a crime of which 121 Basutos had been convicted during the past seven years, and announcement of the marriage between Seretse Khama, heir to the chieftainship of the Bamangwato tribe in Bechuanaland, and an English woman named Ruth Williams. This latter question, which was the subject of a special government inquiry, had repercussions in the Union of South Africa where, it was announced, the chief designate and his white wife had been declared "prohibited immigrants."

In October, D. F. Malan, the Union prime minister, said in a speech at Bloemfontein that he was preparing to make representations to the British government for the incorporation of the protectorates into the Union of South Africa. (*See* also South Africa, Union of.)

Basutoland.—Progress in the political sphere was marked by the increase to 24 of the number of the elected representatives in the Basutoland council. An endeavour was made to encourage an agricultural co-operative movement by the appointment of an official as registrar of co-operative societies. This step was expected to help a territory largely dependent upon pastoral and agricultural resources.

Education was popular with the Basutos and 75% of the children attended school. Expenditure on education was about one-fifth of revenue. Construction was started on the sixth government hospital. The number of patients attending all hospitals was double that of ten years before. Welfare societies, with community halls, were formed in each district. During 1949 the first of these, with a library, was opened.

Bechuanaland.—Schemes for surface-water conservation were approved. These aimed at constructing small stock dams and minor permanent works in existing waterways. Boring for water was also continued. A teacher training institute was planned to improve the standard of education in the villages. A secondary school, initiated by the Bamangwato tribe, under Chief Tshekedi Khama, was opened in its reserve.

Swaziland.—Under a native land settlement scheme valuable work was done, not only in settling landless families, but also in proper methods of land utilization and animal husbandry. More than 500 families were settled during 1947–49 and settlement for another 1,000 was planned. By voluntary contribution the Swazi nation raised funds to purchase 73,900 ac. from European owners.

A company, named Peak Timbers, Ltd., began commercial afforestation of an area of 57,000 ac. purchased by them in 1946 in the Pigg's Peak district. Production at the Havelock asbestos mine reached 218,608 tons for the year ending March 1948. The campaign against Nagana (animal trypanosomiasis) met with considerable success through the help of bulldozers for bush clearing and through aerial spraying.

British West Africa.

The term British West Africa includes the four British colonial territories on the west coast of Africa, viz.: Nigeria, colony and protectorate with which are administered the Cameroons under United Kingdom trusteeship; the Gold Coast, including the colony of that name, Ashanti, the Northern Territories and Togoland under United Kingdom trusteeship; Sierra Leone, colony and protectorate; and Gambia, likewise a colony and protectorate. Areas and populations were as follows:

	Area (in sq.mi.)	Population	
		1931 census	1948 census
Nigeria	372,674	20,702,756	24,000,000*
Gold Coast	91,843	3,163,568	4,118,450
Sierra Leone	27,925	1,768,480	1,857,275
Gambia	4,074	199,520	251,000*

*Estimate.

Governors (Dec. 31, 1949): Nigeria, Sir John Macpherson; Gold Coast, Sir Charles Arden Clarke; Sierra Leone, Sir G. Beresford Stooke; Gambia, P. Wyn Harris.

History.—Public interest in West Africa in 1949 centred almost exclusively in the discussion of constitutional changes. In Nigeria in March the legislative council unanimously approved the proposals of a select committee of its members (set up on a suggestion made by the governor the previous year and including all the unofficial members) that the review of the present constitution should consist of conferences at three levels: the provincial, the regional and the centre. Discussions began immediately and were continued throughout the year. Provincial conferences considered the views of village and divisional meetings and of representative organizations; the views formulated at provincial conferences were then, in turn, considered at regional conferences, at which level conferences for Lagos and the colony were included. The views of these regional conferences were incorporated in a series of resolutions, published in October, and were then submitted to a drafting committee to prepare a statement for consideration by a general conference consisting of all unofficial members of the legislative council and representatives of the regional, Lagos and colony conferences. Meanwhile, in September the governor announced that, pending a decision on constitutional changes, it had been agreed that African representation on the executive council should immediately be resumed and strengthened and he had accordingly appointed four Nigerians.

In the Gold Coast in January the governor set up an all-African committee of 39 members under the chairmanship of Justice J. H. Coussey to examine proposals for constitutional and political reform. Its report, unanimous on the majority of its principal recommendations, was published in October. After declaring that the whole institution of chieftaincy was so closely bound up with the life of the communities that its disappearance would spell disaster, the committee recommended (1) a complex system of local government, in part utilizing the existing native authorities but superimposing a democratic framework by means of popular elections; (2) the establishment of four regional councils with wide powers; (3) that the executive council should be entirely remodelled as the chief instrument of policy, responsible to the proposed house of assembly and not to the governor, and should consist of the governor as chairman, not more than three official members, and upward of eight unofficial members (one to be styled "leader" and the others "ministers"); and it expressed a slight preference for a bicameral legislature. In a statement published simultaneously with the report the British government both welcomed and accepted its recommendations in general; but it favoured a unicameral legislature and stated its inability at this stage to accept the suggestion, in the form proposed, that the executive council should be collectively responsible to the legislative assembly and not to the governor.

Meanwhile, on opening the Gold Coast legislative council on Oct. 11 the governor announced that he had appointed E. C. Quist, an unofficial member, to be president for the remainder of the life of the council.

In Sierra Leone the constitutional changes approved in 1948 were not in fact proceeded with, a motion in the legislative council in Dec. 1948 having called for a further review of the proposals. In June the governor published new proposals recommending an executive council of four official and four unofficial members, the latter drawn from, and appointed by the governor after consultation with, the legislative council; the executive council to be responsible, as a body, for advising the governor on all major matters of policy and the four unofficial members each to take a special interest in a group of departments with a view to holding portfolios; the proposals also covered the development of local government, regarding which the governor stressed the need for a substantial measure of decentralization. It was suggested that a committee (presided over by an independent chairman and representative of the colony, the protectorate and the executive) should consider these new proposals.

The report of three scientists, nominated by the United Nations, who visited the Gold Coast in Nov.–Dec. 1948 was published in January and confirmed that swollen shoot threatened the very existence of the cocoa industry of the Gold Coast and that the cutting out of diseased trees was the only measure known for its control. In February the publication of new regulations for immigration procedure into the Gold Coast raised an outcry in Great Britain; and following protests in the British parliament and the local legislative council, they were withdrawn and redrafted.

It was announced in July that the Gold Coast government had placed a contract for certain improvements and extensions to Takoradi harbour at an expected cost of £2,250,000. Work continued on the construction of Freetown's deep-water quay. A panel of experts arrived in the Gold Coast in October to survey the industrial and transport potentialities of the Volta river.

A WEST AFRICAN CHIEFTAIN arriving at Accra, capital of the Gold Coast, for the durbar at which the newly elected Ga chieftain was presented by the Ga state council to British governor Sir Gerald Creasy in Feb. 1949. Ga is a tribe in the territory near Accra

In Nigeria in August the unsatisfactory labour situation on the railways led to the appointment of a commission of inquiry, which was boycotted by the trade unions. In November a strike at the government colliery at Enugu gave rise to serious disturbances in which a number of Africans were killed.

Finance and Trade.—The unit of currency throughout British West Africa is the pound, maintained at par with sterling.

	Gambia	Gold Coast	Nigeria	Sierra Leone
Revenue	£866,900*	£11,639,324†	£27,940,940‡	£4,260,145§
Expenditure	£1,014,097*	£10,178,802†	£27,230,290‡	£2,666,444§
Imports (1948) . .	c. £1,938,000	£29,158,749	£41,777,239	£4,979,350
Exports (1948) . .	c. £1,706,000	£31,615,712‖	£38,327,220‖	£4,164,566¶

*1948 †1948–49 ‡1949–50 est. §1949 est.

‖The values of cocoa recorded in the export statistics are the f.o.b. cost prices to the Gold Coast and Nigerian Cocoa Marketing boards and thus exclude the profits realized by the boards on sale to overseas purchasers. In 1948 these profits amounted in the Gold Coast alone to £20,013,017.

¶The value of the diamond exports (461,685 carats) was not quoted. Palm kernels and palm oil are quoted at f.o.b. cost prices.

The principal exports were: Gambia: peanuts (£1,628,002 in 1948); Gold Coast: cocoa, gold, manganese and timber; Nigeria: cocoa, peanuts, palm oil and kernels, tin, and hides and skins; Sierra Leone: palm kernels, diamonds and iron ore. (Jo. A. Hn.)

Budget, National.

United States.—The U.S. budget submitted to the congress by President Harry S. Truman on Jan. 9, 1950, recommended expenditures of $42,439,000,000 for the fiscal year ending June 30, 1951. This total was $858,000,000 less than estimated expenditures for fiscal 1950. On the basis of existing tax laws and continuing high levels of economic activity, revenues amounting to $37,306,000,000 were expected for fiscal 1951—$457,000,000 less than in the previous year.

" 'TOO MANY BYRDS,' " a reference to policy differences between Pres. Truman and Sen. H. F. Byrd of Virginia. The senator was strongly critical of government expenditures in 1949, while the president was quoted as saying there were "too many Byrds in congress." Cartoon by Seibel of the *Richmond Times-Dispatch*

Expenditures and revenues for the fiscal year 1951 as presented in the budget would result in a deficit of $5,133,000,000 compared with an anticipated deficit of $5,534,000,000 for fiscal 1950. The president stated that he would shortly recommend to the congress certain adjustments in tax laws that would produce a moderate increase in revenue, not reflected in the budget.

The 1951 budget, the president noted, was "dominated by financial requirements to pay the costs of past wars and to achieve a peaceful world." Expenditures for these purposes—national defense, international affairs and finance, veterans' services and benefits and interest on the public debt—were estimated at a total of about $30,000,000,000, or 71% of the total budget. This represented a reduction of about $1,800,000,000 from the estimated total outlay for these four categories in fiscal year 1950.

The federal government's two largest sources of revenue—income taxes on individuals and on corporations—were expected under existing law to provide revenues of $28,704,000,000 in fiscal year 1951, comprising three-fourths of the estimated total of all budget receipts. Individual income taxes were estimated at $18,246,000,000 for fiscal 1951, as compared with $17,971,000,000 in the preceding year. As a reflection of the reduction in corporate profits from the calendar year 1948 peak, collections from corporate income taxes were expected to decline from $11,075,000,000 to $10,458,000,000 over the two fiscal years. Excise taxes and miscellaneous receipts, the other major sources of federal revenue, amounted to $8,798,000,000 in the 1951 budget. This total was about $125,000,000 less than in the previous year because of a further drop in sales of surplus war property, included in the category of miscellaneous receipts.

National Defense.—The estimate of $13,545,000,000 presented for outlays on national defense comprised one-third of all federal budget expenditures. This was about $400,000,000 higher than national defense expenditures in fiscal 1950. The increase stemmed almost entirely from commitments made under authorizations previously approved by the congress, and the president noted that expenditures in subsequent years would reflect the sizable reduction in new obligational authority requested for 1951.

Veterans' Services and Benefits.—Veterans' programs were expected to require expenditures of $6,080,000,000 in fiscal 1951, a drop of $825,000,000 from the level of the preceding year. The budget expenditures for fiscal years 1950 and 1951 did not reflect the initial dividend, estimated at about $2,800,000,000, to be paid from the national service life insurance fund. About $2,200,000,000 was scheduled for disbursement in fiscal 1950 and the balance in 1951 or later.

International Affairs and Finance.—Expenditures for international activities were placed at $4,711,000,000 in the 1951 budget. This was about $1,300,000,000, or one-fifth, less than estimated expenditures in fiscal 1950. The reduction reflected chiefly the declining costs of the European Recovery and other recovery and relief programs. The budget included, as proposed legislation, an initial outlay of $25,000,000 for furnishing technical assistance to economically undeveloped areas (the Point Four program). Expenditures under the Mutual Defense Assistance pact of 1949 for supplying arms to the North Atlantic treaty nations and for rendering military assistance to Greece, Turkey and certain other areas in the middle and far east were estimated to require $645,000,000 in fiscal year 1951. Expenditures for foreign military aid amounted to $355,000,000 in the previous year.

Social Welfare, Health and Security.—In his budget message the president made broad recommendations under the general category of social welfare, health and security. He urged the congress to enact legislation to expand and improve the old-age and survivors' insurance system in accordance with his previous recommendations. Nearly all gainfully employed people, including farmers and the self-employed, would be covered; the scale of benefits would be increased sharply; and disability would be added to the risks covered. To finance the additional costs, the statutory increase from 1½% to 2% in the old-age and survivors' insurance tax rate on employers and employees, scheduled for Jan. 1, 1952, would be moved up to Jan. 1, 1951. The base of tax levy—the first $3,000 of earnings of each employee in any year—would be raised to $4,800.

In addition to this expansion of the old-age and survivors' insurance program, the president recommended (1) an extension and improvement in the program of federal grants to states for public assistance; (2) increased federal assistance to local health services and to medical and related schools to encourage the training of additional medical personnel; and (3) the adoption of legislation providing for a comprehensive system of prepaid medical care insurance, to be geared in with the other social insurance programs and financed mainly by employer and employee contributions.

The president's proposals would for the most part be financed through special taxes, with receipts and payments being handled through government trust funds. The proposals added $271,000,000 to budget expenditures in 1951, of which amount $200,000,000 was for grants to states for public assistance and $67,000,000 for health programs. These increases in the fields of public assistance and public health, together with the larger outlays required in these two fields under existing legislation, were expected to cause budget expenditures for social welfare, health and security to rise $417,000,000 in the fiscal year 1951, to a total of $2,714,000,000.

Housing and Community Development.—Budget outlays for housing and community development were estimated at $1,329,000,000 for fiscal 1951, as compared with $1,006,000,000 in the previous year. A large part of the increase was accounted for by the requirements of the public housing and urban redevelopment programs enacted into law during fiscal 1950. The major impact of these programs on budget expenditures, however, would not be reflected until succeeding years.

The only new federal aid to private housing recommended in the budget was for assistance to co-operatives and nonprofit corporations in building and managing housing projects for middle-income families. Expenditures of $50,000,000 were recommended for this purpose in fiscal 1951, when the program would be in an experimental stage.

Education and General Research.—Under the category of education and general research it was recommended that expenditures be increased from $125,000,000 to $434,000,000. By far the largest part of the increase was accounted for by proposed grants of $290,000,000 to the states "in support of the maintenance and operation costs of a basic minimum program of elementary and secondary education." Another legislative proposal by the president called for an outlay of $22,000,000 for grants to states for surveying their need for school facilities and for the construction of school buildings in areas where federal activities had been responsible for increased enrolments.

Agriculture and Agricultural Resources.—Expenditures for operating government programs relating to agriculture and agricultural resources were estimated at $2,206,000,000 for fiscal 1951. The decline from the 1950 figure of $2,671,000,000 reflected the anticipation that price support outlays by the Commodity Credit corporation could be reduced. Apart from price support outlays, agricultural expenditures in 1951 were expected to be larger because of the higher level of loan disbursements for rural electrification and the increased outlays scheduled for the conservation and use program (including the administering of acreage allotments and marketing quotas) and for the removal of surplus agricultural commodities.

Natural Resources.—The government's programs to conserve natural resources were estimated to require expenditures of $2,218,000,000 in fiscal year 1951, an increase of $373,000,000 over the 1950 total. More than one-third of the increase was attributable to atomic energy, for which $817,000,000 was budgeted for fiscal 1951. The balance of the increase stemmed mainly from the requirements of projects under way in the fields of flood control and reclamation.

Transportation and Communication.—Federal expenditures for transportation and communication were expected to decline from $1,894,000,000 in fiscal 1950 to $1,682,000,000 in fiscal 1951. The decline assumed a reduction of nearly $400,000,000 in the postal deficit, in line with the president's recommendation for an upward revision in postal rates.

Finance, Commerce and Industry.—Total federal expenditures for finance, commerce and industry programs were estimated at $212,000,000 in fiscal 1951, as compared with $225,000,000 in 1950. The major part of the reduction was in outlays for rent and export controls. Business loans and guarantees by the Reconstruction Finance corporation accounted for about three-fourths of the 1951 expenditures total.

Labour.—For the fiscal year 1951 expenditures required for administering the government's labour programs were placed at $243,000,000. About 70% of this total consisted of grants to states for administration of the federal-state employment service and unemployment compensation system.

General Government.—Expenditures for general government functions in fiscal 1951 were included in the budget at $1,267,000,000. The increase over the 1950 total of $1,223,000,000 was mainly for further strengthening of the system of federal tax collection, for the government's payment to its civilian employees' retirement system and for acquiring sites and drawing plans for public buildings.

Interest on the Public Debt.—Payment of interest on the public debt was expected to amount to $5,625,000,000 in fiscal

Table I.—*Summary of Budget Receipts and Expenditures, United States Fiscal Years 1949 through 1951*

Based on existing and proposed legislation

Description	Actual, 1949	Estimate, 1950	Estimate, 1951
Budget receipts:			
Direct taxes on individuals:			
Individual income taxes	$17,929,000,000	$17,971,000,000	$18,246,000,000
Estate and gift taxes	797,000,000	697,000,000	692,000,000
Direct taxes on corporations:			
Corporations income taxes	11,343,000,000	11,075,000,000	10,458,000,000
Excess profits taxes	211,000,000	100,000,000	60,000,000
Excise taxes	7,551,000,000	7,631,000,000	7,642,000,000
Employment taxes:			
Existing legislation	2,487,000,000	3,048,000,000	3,343,000,000
Proposed legislation:			
Medical care insurance	—	—	−250,000,000
Improvement of old age and survivors insurance	—	—	−1,200,000,000
Customs	384,000,000	375,000,000	375,000,000
Miscellaneous receipts:			
Existing legislation	2,072,000,000	1,288,000,000	1,096,000,000
Proposed legislation	—	—	60,000,000
Deduct:			
Appropriation to trust funds:			
Existing legislation	−1,690,000,000	−2,245,000,000	−2,515,000,000
Proposed legislation	—	—	1,450,000,000
Refunds of receipts	−2,838,000,000	−2,177,000,000	−2,151,000,000
Total budget receipts	38,246,000,000	37,763,000,000	37,306,000,000
Budget expenditures:			
National defense	11,914,000,000	13,148,000,000	13,545,000,000
Veterans' services and benefits	6,669,000,000	6,905,000,000	6,080,000,000
International affairs and finance	6,462,000,000	5,964,000,000	4,711,000,000
Social welfare, health and security	1,907,000,000	2,297,000,000	2,714,000,000
Housing and community development	282,000,000	1,006,000,000	1,329,000,000
Education and general research	70,000,000	125,000,000	434,000,000
Agriculture and agricultural resources	2,512,000,000	2,671,000,000	2,206,000,000
Natural resources not primarily agricultural	1,512,000,000	1,845,000,000	2,218,000,000
Transportation and communication	1,622,000,000	1,894,000,000	1,682,000,000
Finance, commerce and industry	120,000,000	225,000,000	212,000,000
Labour	193,000,000	219,000,000	243,000,000
General government	1,170,000,000	1,223,000,000	1,267,000,000
Interest on the public debt	5,352,000,000	5,725,000,000	5,625,000,000
Reserve for contingencies	—	50,000,000	175,000,000
Adjustment to daily treasury statement basis	272,000,000	—	—
Total budget expenditures	40,057,000,000	43,297,000,000	42,439,000,000
Excess of budget expenditures	1,811,000,000	5,534,000,000	5,133,000,000

Detail will not necessarily add to totals because of rounding.

Miscellaneous	181	50			
Total ordinary revenue	4,007	3,778			

1951. This was lower than the total of $5,725,000,000 in fiscal 1950 because of a change in reporting methods that caused a nonrecurring addition of more than $200,000,000 in 1950. The new method, effective in fiscal 1950, requires the reporting of all interest payments when they become payable rather than when actually paid. Apart from this nonrecurring item, total interest payments showed a further increase. This was attributable to higher accrual rates on savings bonds outstanding; an increase in the amount of special issues, which bear relatively high rates, held by government trust funds; and a rise in the volume of interest-bearing debt because of the 1950 and 1951 budget deficits. (*See* also DEBT, NATIONAL; INCOME AND PRODUCT, U.S.; TAXATION; UNITED STATES.)

Great Britain.—The 1949–50 budget of Great Britain, presented in April 1949, showed total receipts amounting to £3,778,000,000, as compared with £4,007,000,000 in fiscal year 1948–49. The anticipated decline in total receipts was concentrated in nontax revenues.

Total budget expenditures were estimated to rise from £3,176,000,000 in fiscal 1948–49 to £3,308,000,000 in 1949–50. The increase was attributable mainly to the provision of larger outlays for social services.

A surplus of ordinary receipts over ordinary expenditures amounting to £470,000,000 was shown by the budget for 1949–50. In the preceding year there was a surplus of £831,000,000.

Devaluation of the pound, which occurred some months after the 1949–50 budget had been submitted, led to economy measures designed to lessen domestic inflationary pressures generated by devaluation. The British government in late Oct. 1949 announced planned expenditure reductions totalling £80,000,000 for the rest of the fiscal year and the imposition of a higher tax on distributed profits that was expected to yield additional revenue of £10,000,000. The previously anticipated budget surplus of £470,000,000 thus would be increased to £560,000,000. (For other national budgets, *see* under specific country.)

Building and Construction Industry.

The postwar construction boom in the United States continued unabated during 1949, establishing new records for dollar expenditures and for the number of new homes on which work was started. Total expenditures for new construction reached the all-time high of $19,329,000,000, which exceeded by more than $500,000,000 the 1948 record of $18,775,000,000. Building of new homes passed the 1,000,000 mark for the first time in the nation's history. The physical volume of new 1949 construction probably was even greater than the $500,000,000 increase in expenditures would indicate since unit costs were somewhat lower than in the previous year.

That new building reached record levels in 1949 was the result of a $1,000,000,000 increase in public construction of all types by federal, state and local governments. Private construction amounted to $14,000,000,000, which was $500,000,000 lower than in the preceding year. The drop was more than offset by the increase in public building to $5,300,000,000, which was 25% higher than had been expended during the previous year. More than half of this increase resulted from expanded programs of school and hospital construction.

Although 1949 home building achieved a record in number of new units, total expenditures amounted to $7,000,000,000, approximately 3% below the 1948 figure. This fact was accounted for by somewhat lower construction costs, the building of a larger proportion of less expensive dwellings and completion work remaining to be done at the year's end on the large volume of late home building starts. Expenditures for public housing (homes for low-income families, financed and subsidized by federal, state or local government agencies) more than doubled in the year although the volume of such construction was still relatively small. The large-scale public housing program authorized by congressional enactment of the Housing Act of 1949 did not begin to make itself felt in 1949.

Increased construction was also marked in the field of institutional building such as churches, privately supported hospitals, recreational buildings and private (including parochial) schools. Privately owned electric and gas companies also substantially increased their construction activities.

The drop in privately financed building was most marked in commercial and industrial construction. Possibly this was a reflection of some uncertainty as to the business outlook which prevailed in the early months of the year. A more optimistic tone at the end of 1949 was accompanied by the negotiation of a large volume of construction contracts in this category.

The growing importance of government building in the nation's total construction was evident in the early months of the year. Over-all activity was maintained at 1948 figures for the first five months, but only as a result of substantially increased expenditures for construction by the several levels of government. Road building, reclamation, flood control, schools and hospitals accounted for most of it with state and local governments supplying more than half.

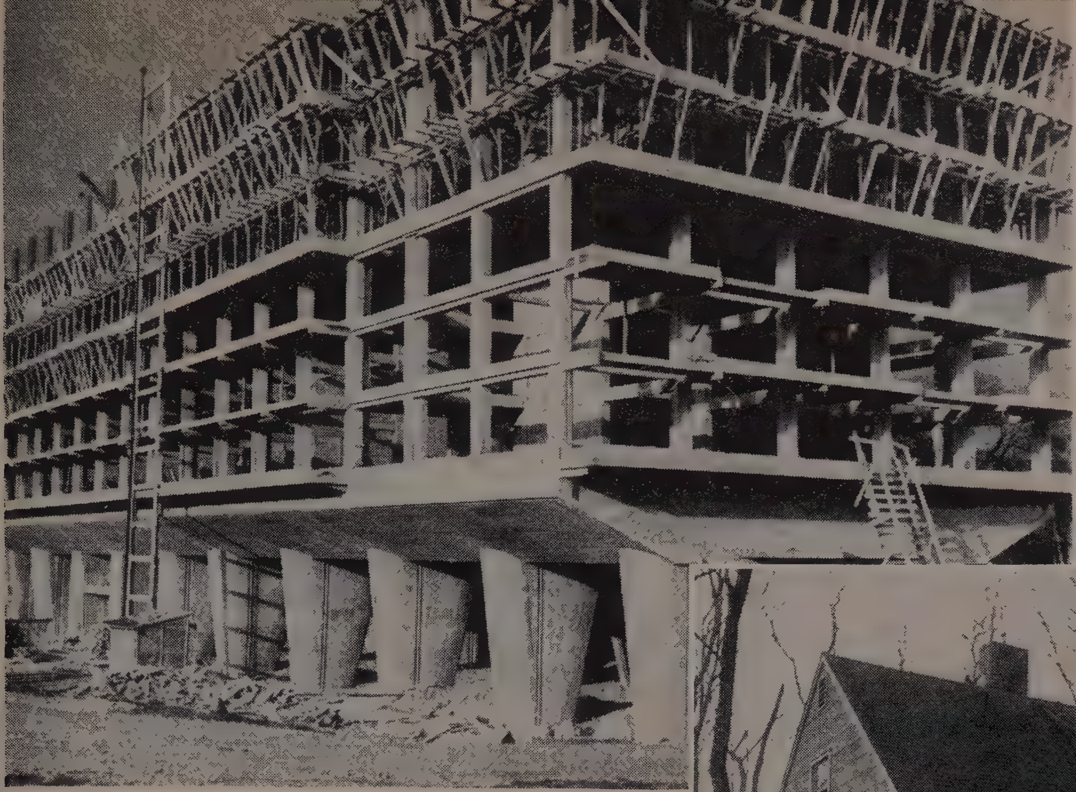
At mid-year, house building began to assume record breaking proportions. For six successive months the number of new dwelling units put under construction eclipsed all previous figures. Slightly lower costs, easing of mortgage financing, greater emphasis on lower-price homes and an expanded rental-housing program all contributed to this result.

Growing belief that construction costs were levelling off probably played a part also in stimulating the contraseasonal rush of building. Material costs had begun to drop in Nov. 1948 and continued easing downward through the first half of 1949. Actual price reductions for major components, except lumber, were modest. Lumber, which had shown the biggest postwar increase, was freely available at substantially lower prices. In the bureau of labour statistics index of wholesale prices, lumber, which in Aug. 1948 reached a high of 319.9 (1926=100), had dropped to 277.4 by July 1949, hovered there for two months and then moved up to 279.6 in September.

Equally as important as price reductions for materials were the return of competitive bidding for construction contracts on a fixed price basis, an ample supply and ready flow of materials which made for more efficient and speedier construction, and increased labour productivity with fewer premium payments above the union wage scale.

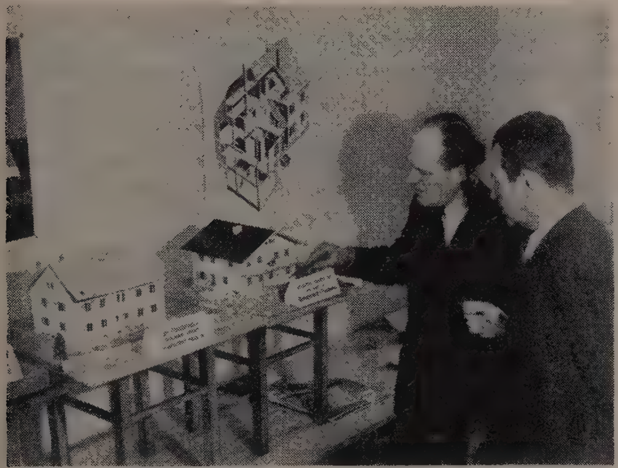
The part each of these factors played is difficult to determine, but there was ample evidence that the cost peak had been passed. Residential construction costs were down 10%, according to Melvin J. Baker, chairman of the Construction Industry Information committee, and industrial building 5%. Other estimates ranged from 8% to 15%. In July the Detroit (Mich.) board of education, taking a second set of bids on a school addition, found a drop of 30% from the preceding year when the work was first contemplated. The state commissioner of housing in New York, in passing on bids for a state-aided housing project, found a reduction of 18% as compared with bids on a similar project authorized ten months before.

Building's slow start in 1949 was reflected in employment figures. In May construction contractors had 2,010,000 employees at work which represented a gain of 75,000 over the preceding month but was still 42,000 less than the figure for



Left: THE "VERTICAL COMMUNITY," a 27-story block of apartments under construction in Marseilles, France, in 1949. Designed by Le Corbusier, it stood on 36 great pylons (to give lightness) and was to house 1,600 persons, as well as community centres, shops, playgrounds, a post office, etc.

Above: RUSH OF BUYERS waiting to inspect a model of a popular-priced ($7,990) two-bedroom house being mass-produced in Long Island, N.Y., early in 1949. More than 700 of these houses were sold the first week they were on the market



Above: WILLI MESSERSCHMITT (left), former designer of German aircraft, shown here with house models he designed in 1949 for prefabrication in Germany; supports were to be made of corrosion-proof steel, with wall and floor plates of gas concrete *(schaumbeton)*

Below: BLOCK OF APARTMENTS built to government specifications at Hornsey in the London area. Almost 1,000,000 new homes had been completed in Britain by 1949 to replace the more than 4,000,000 dwellings damaged or destroyed during World War II

May 1948. It was the first time in four years that contract construction employment failed to show a gain when compared with the same month of the preceding year. June's total was likewise below the same month in 1948 as were the comparable figures for July, August and September. By December, however, employment was 2,109,000, the highest level for that month in the ten years for which bureau of labour statistics records were available.

Union wage rates appeared to reach a plateau. The bureau of labour statistics reported in October that wage scales rose 1% between July 1 and Oct. 1, in the seven major building crafts, according to a survey of 85 cities. In the same period in 1948 the increase was 2%. During the first nine months of 1949 wage scales rose 3% as compared with an increase of 8% in the first nine months of 1948. As of Oct. 1, the bureau of labour statistics estimated the average basic wage scale of all union construction workers at $2.20 an hour.

The problem of jurisdictional disputes among the building trades, long the cause of costly work stoppages, seemed a step nearer solution. In May 1948 the Building Trades department of the American Federation of Labor joined with the Associated General Contractors in setting up the National Joint Board for the Settlement of Jurisdictional Disputes, clothing it with sufficient authority to handle such problems independently of the National Labor Relations board (NLRB). In 1949 this joint board was given additional power to keep union members on the job while it was determining just which craft should perform a disputed piece of work. The joint board was authorized likewise to make "job decisions" which would allocate the work in question insofar as a specific construction job was concerned without thereby establishing a precedent for other jobs.

Late in November trade unions and employers joined in another move of major importance directed at untangling the legal snarl into which their relationships had been thrown by the enactment of the Taft-Hartley labour law. The A.F. of L.'s Building and Construction Trades council, speaking for 19 major unions, and a group of employer organizations, headed by the Associated General Contractors, who collectively did about 80% of the nation's construction work, appealed to the National Labor Relations board for a blanket exemption for their industry from the Taft-Hartley law's bargaining election requirements. Strict application of these requirements, they urged, would destroy long-established collective bargaining practices in the industry and interfere with construction. Under the law unions could not engage in collective bargaining for their members or make union shop agreements until such elections had taken place.

Table II.—*Estimated Increases in Union Wage Rates, and Rate Levels in 85 U.S. Cities*

Trade	Average amount of increase July 1, 1949 to Oct. 1, 1949 (Per cent)	Average amount of increase July 1, 1949 to Oct. 1, 1949 (Cents per hour)	Rate levels Oct. 1, 1949 Low	Rate levels Oct. 1, 1949 Average	Rate levels Oct. 1, 1949 High
Bricklayers	0.4	1.2	$2.13	$2.75	$3.25
Carpenters	1.2	2.8	1.63	2.28	3.00
Electricians	.6	1.6	1.75	2.50	3.00
Painters	.4	.9	1.38	2.20	2.50
Plasterers	.3	.8	2.00	2.68	3.25
Plumbers	.5	1.2	1.90	2.53	3.00
Building labourers	1.5	2.2	.75	1.49	2.13

The difficulty of holding elections in this industry was at the root of the problem. Construction workers moved constantly from job to job and often followed their work from city to city. The jobs were of relatively short duration and the group of individuals employed varied with each job. Elections therefore, meant little in comparison with an election in a factory having normal labour turnover. In fact, NLRB recognized these difficulties and gave up trying to hold the elections. The building trades unions continued, of course, to bargain collectively and to enforce the closed shop. They wanted to make it legal and so did the employers.

Whether NLRB could resolve the question without further guidance from congress was the question. The Wagner act which preceded the Taft-Hartley law, specifically exempted the construction industry but the temper of congress when passing the superseding legislation made it quite clear that the industry was to be included.

Rebuilding worn-out and decayed older sections of cities (urban redevelopment) which had long been counted on to provide a very substantial market for the construction industry, made important headway during the year but was still some distance from actual rebuilding operations on a large scale. Individual states, beginning with New York in 1941, enacted redevelopment laws until, in 1949, 26 could extend some form of assistance to such projects. Nevertheless, redevelopment made little headway. The principal reasons assigned in a poll of 86 experts representing government, investors, city planners and authorities on housing, were high building costs and the belief that they would come down, insufficient subsidies or tax-exemption inducements and uncertainty over general economic conditions.

The urban redevelopment program included in the Housing Act of 1949 was designed to supply the needed stimulus. Under its provisions the federal government set up a loan fund of $1,000,000,000 to enable municipalities to acquire blighted areas so that they might be replanned and rebuilt. More important still was the accompanying authorization of a fund of $500,000,000 to be expended over a period of five years for outright grants to localities to help absorb the excess cost of such sites in comparison with open land on the outskirts. Under this formula the federal government would provide two-thirds of the excess cost of acquiring and clearing a site for rebuilding and the local government would pay the remaining one-third, which might be contributed in the form of public improvements. The cleared sites would then be sold or leased for rebuilding in accordance with an approved plan.

A division was set up in the Housing and Home Finance agency to handle the program, but the need for extensive planning studies and other preparatory work would delay the start of actual operations.

Without waiting for the federal program to get under way, the city of Pittsburgh, Pa., entered into an arrangement with the Equitable Life Assurance society for the rebuilding of 23 blighted acres in its "golden triangle" with nine office buildings built in a parklike setting, at an estimated cost of $100,000,000.

Although building and construction ended 1949 on a far stronger note than it did the preceding year, forecasts for 1950 were still on the cautious side. The joint estimate of the department of commerce and the department of labour's bureau of labour statistics foresaw another $19,000,000,000 construction year ahead but with private building down $925,000,000 from 1949 and a further increase in public construction to make up the difference. Private home building was expected to slacken, and likewise most other types of private construction. Employment, it was thought, would equal 1949 levels and there would be no substantial change in construction costs. (*See* also ARCHITECTURE; BUSINESS REVIEW; HOUSING; UNITED STATES.)

(H. M. PR.)

Great Britain.—The principal subjects under discussion during 1949 in the building industry of Great Britain were the introduction of schemes of incentive payments and the continuation of the system of licences.

Operatives' output, which was considerably less than the 1939 level, was one of the chief causes of the rising cost of building and it was suggested that it could be raised only by incentive payments. The wage arbitration of 1947 gave half the additional sixpence an hour that had been claimed but included provision for incentive schemes in order to allow the earning of wages above the basic rates. Employers were slow to operate such schemes on an extensive scale in spite of official encouragement from the National Federation of Building Trades Employers and the ministry of works, both of which published booklets giving guidance on their running. Some progress, however, was made in 1949 though there were many kinds of work which did not lend themselves to organization in this way. Trade union leaders complained that far too few men were being given the chance to supplement their wages and that basic wages must be raised if employers were not prepared to operate bonus schemes more widely.

Official control of the licensing of work and of the supply of certain materials was continued throughout 1949 though there had been considerable relaxation of these controls in Nov. 1948. The changes did not affect housing work or the supply of steel or timber, and builders complained that such hand-to-mouth procedures made it impossible to balance future programs of work satisfactorily and thus increased operating costs.

The working party set up by the ministry of works in 1948 to inquire into the operation of the building industry continued to take evidence from a wide variety of sources. A productivity team also visited the United States for six weeks during July and August to study building methods. Although representing a variety of interests the members of the team agreed that production per man-hour in the United States was half as great again as in Great Britain though opinions differed as to the extent to which this was the result of higher wages, better diet, the spur of unemployment, or of there being no shortages to upset planning and cause frustration.

Because of the shortage of steel and timber, reinforced concrete construction was used a great deal for large buildings in place of structural steelwork and new British standards and codes of practice permitted more economy in both techniques. An outstanding result of the steel shortage was the widespread interest in design and construction of prestressed concrete structures. During 1949 both bridges and buildings were completed using this method of construction and small section floor joists were being mass produced to take the place of timber. Hardwood was freed from control in April but supplies of softwood were further threatened by import cuts and devaluation.

(D. A. G. R.)

Bulgaria. A people's republic in the eastern part of the Balkan peninsula, Bulgaria is bounded on the north by Rumania, on the west by Yugoslavia, on the south by Greece and on the east by Turkey and the Black sea. Area (including southern Dobruja): 42,796 sq.mi. Pop. (Dec. 31, 1946, census): 7,022,206, of whom 1,662,255 were urban and the remainder rural; 1948 est.: 7,100,000. Languages (1947 est.): Bulgarian 88%, Turkish, 9.8%. Religions (1947 est.): Greek Orthodox 84%, Moslem 11.5%. Chief towns (pop., 1947 est.): Sofia (cap., 434,888); Plovdiv (125,440); Varna (77,792); Ruuse (53,420). Chairman of the presidium of the national assembly (*sobranjé*): Mincho Neychev; prime ministers in 1949: Georgi Dimitrov and (from July 20) Vasil Kolarov.

History.—There was no significant change during 1949 in the political structure of Bulgaria, which had been politically sovietized already in 1948. In Feb. it was announced that two small parties belonging to the governmental Fatherland (Otechestven) front, Zveno and the Radicals, had decided to dissolve themselves and to merge into the front. Zveno was originally a moderate republican party, based on the middle class and appealing especially to army reserve officers, which had taken part in the 1944 revolution but had lost its most active members by purges in 1946–48. The Radical party, founded at the beginning of the century, was a weak middle-class party. With their disappearance, the Fatherland front consisted only of Communists and rump Agrarians, the latter having in fact no independent influence. But in practice the front had been rigidly controlled by Communists since the summer of 1945.

In July the leader of the Communist party, Georgi Dimitrov, died in the Soviet Union. Having lain in state in Moscow, his corpse was brought back to Sofia, where a state funeral was staged, closely modelled on that of Nicolai Lenin. Like Lenin, Dimitrov's corpse was embalmed and placed on view in Sofia. As in the case of Lenin, Dimitrov's successor as party leader, his brother-in-law, Vulko Chervenkov, made an oration over his body consisting of a series of "commandments" and "oaths," exactly copied from the oration of Josef Stalin over Lenin's body in 1924 and imitating even the litanical style of the former seminarist.

The new prime minister was Vasil Kolarov, like Dimitrov a former secretary of the Comintern. Under him were five deputy prime ministers forming, as in the government of the U.S.S.R., an inner cabinet. The five men chosen were Chervenkov himself, Dobri Terpeshev, Anton Yugov (all three Communists), Gheorgi Traikov (rump Agrarian) and Kimon Gheorgiev (former Zveno). Chervenkov, most of whose political life had been spent in exile in Moscow, was the most powerful man in the country. The new minister of foreign affairs, Vladimir Poptomov, was also a "Muscovite." Yugov and Terpeshev on the other hand had spent their time either in prisons or in underground activity in Bulgaria.

The biggest political event of 1949 in Bulgaria was the "unmasking" of Traicho Kostov, second secretary of the Communist party under Dimitrov. On March 26–27 a special session of the party's central committee decided to remove him from the Politburo. His crime was an "insincere attitude" to the Soviet Union, and "insincerity in self-criticism" after his error had been pointed out to him by his comrades. As one of the chief organizers of the Bulgarian economic plan, he had applied the existing rules about commercial and industrial secrets to soviet citizens as to citizens of other foreign states. By so doing he had proved guilty, in the words of Dimitrov, of "the shameful assumption" that the state interests of the Soviet Union could ever be contrary to those of Bulgaria. Kostov was later expelled from the party itself, was arrested on June 25, and in July his parliamentary immunity was cancelled. On Nov. 29 it was announced that he would be tried for conspiracy, espionage and high treason. The trial opened Dec. 7 and ended Dec. 14, when he was found guilty by the court of all charges placed against him, and was sentenced to death. He was hanged in Sofia on Dec. 16.

"Kostovism" proved a useful label for economic failures. In the five-year plan which began in 1949, Bulgaria was to convert 60% of agricultural output to collective ownership. In practice it seemed that party officials pressed too fast ahead with collectivization. In June a party statement denounced "left-wing sectarianism" in agriculture, and attributed the wrongful use of force against peasants to the influence of the disgraced Kostov. In October the ministers of finance and railways, Petko Kunin and Stefan Tonchev, were dismissed. Throughout the year there were complaints of low productivity and swift changes of employment among the workers.

A new church law was adopted on Feb. 24. Under article 12 of this law, any minister or religious officer who "offends against public order or morality" or "works against the democratic institutions of the state" might be temporarily suspended or dismissed from his office by the ministry of foreign affairs. In this case, the minister of foreign affairs would inform the leaders of the religious community concerned. If they did not take action against the guilty person, he would be "suspended by administrative order." These phrases were capable of wide interpretation by the Bulgarian secret police and Communist party officials, whose views the minister of foreign affairs was certain to carry out.

From Feb. 25 to March 6, 15 Bulgarian Protestant pastors were tried for espionage and subversive activities against the government in the interest of the "western imperialists." It was clear from the proceedings of the trial that their crime was that they had had U.S. or British friends, with whom they had spoken freely and critically of Bulgarian politics. Protestantism had few followers in Bulgaria, but as one of the communities which had long established connections with the Anglo-Saxon world, it was an inevitable target of official repression. (*See* also YUGOSLAVIA.) (H. S-W.)

Education.—(1947-48) Elementary schools 9,238, pupils 889,854, teachers 28,957; secondary schools 258, pupils 152,661, teachers 5,229; technical schools 207, pupils 32,968, teachers 1,051; universities and colleges 9, students 49,800, professors and lecturers 1,283.

Finance and Banking.—(Budget 1949 est.): revenue 151,980,000,000 leva: expenditure 151,980,000,000 leva. National debt (June 1942) 33,708,000,000 leva. Currency circulation (March 1947) 35,000,000,000 leva. Monetary unit: lev (pl. leva) with an exchange rate (Dec. 1949) of $1 U.S.=288 leva.

Foreign Trade.—(1947) Imports 21,420,000,000 leva; exports 24,530,000,000 leva. Main imports: metal and metal products, machinery, textiles, rolling stock and vehicles. Main exports: tobacco, wines and attar.

Transport and Communications.—Roads (1945) 13,870 mi. Licensed motor vehicles (Dec. 1948): cars 4,350, commercial vehicles 4,230. Railways: (1946) 2,072 mi.; passengers carried (1946) 34,000,000; goods traffic (1948) 10,000,000 tons. Telephones (1948) 54,300.

Agriculture.—Main crops (1948, in metric tons) wheat 1,470,000; maize 890,000; barley 250,000; oats 105,000; tobacco 68,000. Livestock: cattle (July 1947) 1,711,000; sheep (Dec. 1947) 9,000,000; pigs (July 1947) 1,028,000; horses (Dec. 1946) 549,000; poultry (Sept. 1947) 10,293,000.

Industry.—Fuel and power: lignite (1947, in metric tons) 4,044,000; electricity (1948) 553,000,000 kw.hr.

Bunche, Ralph Johnson

(1904–), U.S. political scientist and government official, was born on Aug. 7 in Detroit, Mich. He was graduated from the University of California, Los Angeles, Calif., in 1927 received a master's degree in government at Harvard university in 1928 and a Ph.D. in 1934. He taught political science at Howard university, Washington, D.C., becoming a full professor in 1938. Meantime, he travelled through French West Africa on a Rosenwald field fellowship studying and comparing the administration of French Togoland, a mandated area, and Dahomey, a colony. He was later awarded a postdoctoral fellowship from the Social Science Research council and studied at Northwestern university, Evanston, Ill., and the London School of Economics in 1936 and 1937 before returning to Africa for further studies of colonial policy. During World War II he served variously with the joint chiefs of staff, the Office of Strategic Services and the U.S. state department, principally as technical advisor on the African area. He joined the United Nations secretariat as director of the division of trusteeship in 1946. He was assisting Count Folke Bernadotte of Sweden in mediating the Jewish-Arab warfare in Palestine when Bernadotte was assassinated, and he became acting mediator and supervised the truce and armistice agreements there. In May 1949 he rejected an offer for an appointment as U.S. assistant secretary of state. In August Bunche was relieved of his mission as acting U.N. mediator in Palestine to resume his post as director of the U.N. division of trusteeship.

Burma, Union of.

An independent federal republic lying on the eastern side of the Bay of Bengal, between Pakistan and India on the northwest, Tibet on the north and China, Indo-China and Thailand (Siam) on the east The republic comprises Burma proper, the Shan state, the Kachin state, the Chin special division and the Karen state[1]—this last to include, as well as the hill Karens, the Karens of the plains, who had yet to resolve their internal differences Area: 261,749 sq.mi.; pop. (1948 estimate): 17,000,000 Racially, the peoples of Burma are Mongoloid. About 90% are Buddhist by religion, and about 70% use the Burmese language Chief towns: Rangoon, capital and main port (pop. 1941, 501 291); Mandalay (pop. 1941, 163,537); Moulmein (pop. 1931 65,506); Bassein (pop. 1941, *c.* 50,000); and Akyab (pop. 1931 38,094). President of the republic: Sao Shwe Thaik; prime minister: Thakin Nu.

History.—The year 1949 opened disastrously for Burma Negotiations with the Karens broke down and Karen bands overran more and more areas, even to Insein, at the very gates of Rangoon. The "White Band" section of the People's Volunteer organization (P.Y.A. in Burmese) continued to defy the government, and Communist hostility remained as implacable as ever. Essential goods fell into short supply, and prices rose steeply. Timber, rubber and mineral production was interrupted, with great loss to the national income and the state revenue. The budget for 1948–49, introduced in Sept. 1948 was already falsified by Jan. 1949.

The government, however, still had some degree of control The administration, though damaged, was substantially intact communications, though often cut, were generally open. The 1948 rice crop was successfully garnered.

At this stage, the government made a serious miscalculation

---

[1] The Karen state had not been set up by the end of 1949. The old Karenni states, however, were understood to have adhered to the union.

An attempt to disarm the Karens was resisted, and sent the 3rd Karen Rifles at Prome into revolt. On Jan. 31 an attack launched on the Karens at Insein was repulsed, and settled down to a long siege. A rifle attack on the same day against the Karen settlement in west Rangoon caused much damage by fire, and some loss of life. The rift between the two communities was almost complete.

The Karens now took the offensive. By April they controlled the railway area from north of Pegu to Mandalay and Maymyo, and westward to Myingyan on the Irrawaddy. South of Rangoon, they held Thaton, dominated Moulmein and threatened Tavoy and Mergui. Karen and government control alternated in Bassein and some other delta areas, and Karens held the Twante canal.

Other insurgent forces were in the field. White P.Y.A. held Dala (opposite Rangoon), Pegu and some delta towns. Allied in an uneasy democratic front with the Communists, they also controlled most of the riverine districts from Prome to just south of Magwe. They were strong enough to threaten Tavoy in the south. Communists held Pyapon and some other delta towns and had centres in many other areas. Arakan was almost completely out of control.

In fact, the government's writ ran only in Rangoon, a few headquarter towns and in the backward areas comprising the Shan states and the northern districts, where control was at all times of the lightest. Communications were completely disrupted and the administration was thoroughly disorganized. Timber extraction ceased and reconstruction in the Yenangyaung oilfield ended. This point marked the peak of the rebels' success. With the rains in the offing, their men began to melt away to their homes; and by June the government had reoccupied Meiktila, Mandalay, Maymyo, Yenangyaung and Kyaukse in upper Burma, and Moulmein, Thaton, Insein and Twante in lower Burma.

Thus, by the middle of the rains, the government faction was still the strongest in the field, except in Arakan, the Toungoo-Karenni area and parts of the southern Shan states, where the Karens made an incursion and firmly held Taunggyi. The country, however, was exhausted, devastated and terrorized by rival gangs and was in no mood to hold elections or plant wide areas for the next year's export market. The district administration, of fundamental importance in Burma, was broken down, and the treasury was bankrupt.

In the political field, 12 months had seen a great change. On Sept. 14, 1948, enlargement of the cabinet to 21 members was approved, as a bid, doubtless, for wider support. This, however, was not forthcoming, and splinter groups and new parties began to form. The Anti-Fascist People's Freedom league began to disintegrate rapidly, and soon the Socialists were left as the dominant party. In the country, however, they were unpopular and Thakin Nu, as the one man who could steer a middle course, was indispensable to all parties as premier. Early in 1949 he was able to force the resignation of the Socialist ministers; the cabinet was cut down to 12 and most of the seats were filled with non-Socialist supporters of government. The Socialists, however, still controlled the Assembly, and so could cause the government much embarrassment.

These events and the Communist success in China turned the thoughts of Burma increasingly toward the west. India called an informal conference in February at Delhi of Pakistan, Ceylon, Australia and the United Kingdom to suggest mediation in Burma, but this was precipitate and mediation was rejected. Discussions continued, however, between Burma and the British Commonwealth, and with the United States and the international monetary authorities, but led to no definite result.

BUDDHIST TEMPLE at Bassein destroyed in Jan. 1949 during the fighting between Karen nationalists and Burmese government troops. In June, the anti-Communist Karens, most of them Christians, were reported to be trying to set up an autonomous Karen state in central Burma

The widespread disorders further impaired the country's finances, already precarious. The first accounts figures for 1948–49 showed a deficit of Rs. 74,000,000 and even this figure was of doubtful validity. The budget for 1949–50 envisaged a deficit of Rs. 17,000,000 but this was based on an unrealistic revenue figure, and included transfers from the development fund which were not revenue at all. A new factor was the government's revised economic policy. This divided industry into three groups: (1) national industries, (2) private enterprise industries to be nationalized later and (3) industries open to private enterprise without restriction. It was too early to say if this would attract much-needed foreign capital. As, however, there was no provision for paying for industries already nationalized, the outlook in this respect was not hopeful.

(R. M. MacD.)

Education.—(1945–46) schools: state and recognized 2,781, pupils 229,300; private 2,153, pupils 70,180. University (Rangoon, 1948): students 2,742.

Finance and Banking.—Budget: (1947–48 est.) revenue Rs. 674,190,000, expenditure Rs. 723,711,000; (1948–49 est.) Rs. revenue 520,784,000, expenditure Rs. 621,698,000. External debt (Sept. 30, 1949): Rs. 867,000,000. Note issue (Dec. 1948): Rs. 400,000,000. Monetary unit: rupee with an exchange rate Dec. 1949 of 21 cents U.S.

Foreign Trade.—Imports (1948): Rs. 797,000,000; exports (1948): Rs. 593,000,000.

Transport and Communications.—Roads (1949) 12,472 mi. Licensed motor vehicles (Dec. 1948): cars 10,706, commercial vehicles 19,399. Railways (Aug. 1948): 1,786 miles; passenger-miles (1946–47) 205,000,000; net ton freight-mi. 298,000,000.

Agriculture.—Main crops (in metric tons, 1948): rice 5,287,000; peanuts 142,000; cottonseed 14,000; sesame (1947) 43,600: cotton 3,000; tobacco (1945–46) 32,700. Livestock (1948): cattle 5,207,000; sheep 21,000; pigs 402,000; oxen 5,207,000; buffaloes 721,000; horses 12,000; hogs 394,000; goats 172,000. Fisheries: total catch estimated at 500,000 tons annually.

Industry.—(1947): Factories 473; persons employed 46,480. Raw materials (metric tons, 1948): natural rubber (net exports) 9,204; timber, teak round log (target production 1948–49) 230,000; tin concentrate 1,181; lead on smelter basis 7,568; zinc ore 5,586; silver (fine ounces) 450,000.

Business Review.

The year 1949 in the United States was characterized by some downward adjustment from the record business activity and the near-capacity utilization of plants and facilities of 1948. Business developments during the first half of the year reflected a shift from the situation in which a large portion of current production went into inventories to a situation in which part of current demand was met by drawing down inventories. The buyers' strike, chiefly by business men, which struck a whole series of industries in the last quarter of 1948 as prices dropped, spread during the first half of 1949. Business buyers, fearful that prices would drop drastically, reduced orders and scrambled to get rid of inventories. This cautious policy was reflected during the first six months in a substantial drop in industrial production and employment, which in turn contributed to the continued decline in wholesale and retail prices. By mid-1949, production was down by 30% to 50% in some plants. Heavy unemployment appeared in mill towns of New England and the south and in shoe, furniture and metal products centres.

Reduction in spending by business firms and other producers resulted in lower sales and output of heavy equipment. Many producers had completed postwar expansion programs during the early part of 1949 and slowed down on further improvements. Heavy industries in 1949, however, did almost twice the prewar volume of business.

In response to the impact of the deflationary forces and the general business uncertainty which prevailed during the first half of the year, the board of governors of the federal reserve system reduced reserve requirements of member banks twice—early in May and again at the end of June. Also, regulation W, controlling instalment credit, was relaxed in April and terminated at the end of June.

While business buying dropped substantially, the general public continued to buy as prices dropped and as total personal income remained relatively unchanged and at a higher level than in the same period in 1948. On the whole, consumer demand through the first half of 1949 continued high, not far below the peak level of the postwar period. The dollar volume of retail sales during the first three months was greater than in 1948 and was only slightly below 1948 during the second quarter. Steady consumer buying ended the hesitant business buying by early fall. Industrial activity expanded despite coal and steel strikes. Production of soft goods and even of metal products continued to rise. By the middle of the fourth quarter the production upswing was quite general throughout industry, and the business setback of early 1949 had proved to be short and rather mild.

Personal Income and Expenditures.—The changes in U.S. business policy during the year affected industrial production, factory employment and basic commodity prices more than total personal income or the volume of consumer expenditures. Total personal income in 1949 of $211,700,000,000 was only 0.3 of 1% below that of 1948, according to estimates of the U.S. department of commerce; salaries and wages income of $134,900,000,000 was 1.5% greater than in 1948. Thus, the 7.2% drop in manufacturing pay rolls was more than offset by increases in the distribution and service industries and in government payments. According to estimates of the department of commerce, the increase in total nonagricultural income just about offset the drop in agricultural income resulting from the sharp decline (about 12.2% from 1948) in prices of farm products. Personal consumption expenditures during the first half of the year dropped only slightly from the high level of $180,900,000,000 reached in the fourth quarter of 1948, and at the annual rate of around $178,700,000,000 during the first half of the year were slightly greater than during the first half of 1948. Personal consumption expenditures during the third quarter of the year were at an annual rate of $178,500,000,000, only slightly below the same period in 1948. (*See* also INCOME AND PRODUCT, U.S.)

Employment.—Although employment dropped in some industries and in some areas at various times during the year, total civilian employment for the first ten months of the year, as estimated by the bureau of labour statistics, averaged 58,600,000 out of a total estimated labour force of 63,500,000—only 1.1% below employment during the same period of 1948. Unemployment for this ten-month period averaged 3,400,000, only slightly above the normal frictional unemployent of around 3,000,000. Civilian nonagricultural employment veraged 50,700,000 for the year, compared with 51,400,000 in 948, a drop of only 1.4%. Manufacturing employment, on the ther hand, was 8.5% below 1948; but increases in employment other sectors of the economy were sufficient almost to offset is drop. (*See* also EMPLOYMENT.)

Production.—U.S. industrial production, as measured by the ederal reserve board index, dropped steadily from 191 in Janu ry to 161 in July. After July, the index rose fairly steadily to n estimated 174 for December. Total industrial production for he year was almost 9% (8.9%) below that for 1948. The de line during the first half of 1949 was fairly widespread, occur ing in both durable- and nondurable-goods industries. The in ex of durable-goods production dropped from 227 in January o 185 in July, a decline 18.5% that of nondurable-goods, from 75 in January to 154 in July, a decline of 12%.

Steel production continued to expand through the first quar er of the year, dropped rapidly from April through July, rose ubstantially in August and September and dropped again to a ow point for the year in October when the steel strike closed nany of the major plants. Total production for the year, how ver, was only 8.7% below 1948, and only 7.8% below the war ime rate in 1944.

Retail Sales.—Consumer demand, as noted above, continued t a high level in 1949. Total retail sales during the first quarter f the year were slightly above the first quarter of 1948, but, vith the exception of May, fell slightly below the corresponding nonth of 1948 after April. Department store sales were off lightly more than chain store sales, dropping in July and Oc ober about 11% below the same months in 1948. The largest lrop in chain store sales (5.7%) occurred also in July, but hereafter the decline from the same month of 1948 was pro ressively less through October, when sales were only 1.4% elow Oct. 1948. For the year 1949, compared with 1948, the lepartment of commerce estimated that total retail sales were lown only 1.2%; department store sales, 5.3%; and chain store ales, 1.8%.

Prices.—The continued decline in prices during the first half f 1949 was more responsible than any other single factor for he changes in business policy with respect to production and nventories. Although price movements varied greatly by com nodity and by market, in the primary markets and on the com nodity exchanges, the general movement was clearly downward. At retail, food prices moved higher during the second quarter, ut prices of apparel, house furnishings and domestic fuels noved steadily lower. Primary market prices weakened further luring the second quarter. Prices of nonferrous metals broke lrastically in May and June. In less than 90 days, zinc prices lropped 47%; lead, 44%; and copper, 33% from their peaks. Prices of scrap steel dropped from $31.50 a ton at the end of March to $19.50 at the end of June. Textile prices declined nore than 3% during the second quarter. As of June 30, the rices of 28 commodities traded on organized exchanges and pot markets averaged 31% below the level of June 1948, and 7% below the wartime peak in 1947.

For the year 1949, wholesale prices of commodities, other han farm and food, dropped 2.5% below 1948. Prices re eived by farmers in 1949 on the average were 12.2% lower than n 1948. Wholesale prices, in general, for the year were 6.1% elow 1948. Retail food prices for the year were down 3.8% rom 1948, and the cost of living, 1.2%.

During the last half of the year, prices stabilized somewhat, vholesale farm prices drifting lower, and prices of commodities ther than farm and food products, remaining substantially un hanged from the July level. (*See* also PRICES.)

New Plant and Equipment.—There was a substantial drop from 1948 in the amount expended by business for the expansion of plants and equipment. This was to be expected, since about $35,500,000,000 had gone into expansion during 1947 and 1948. However, the decrease contributed to the decline in demand for products of the heavy industries and of other suppliers. Nonagricultural business expenditures on plant and equipment in 1949 were estimated at $17,920,000,000, compared with $19,230,000,000 in 1948. Of the 1949 total, about $7,100,000,000 was for manufacturing, $5,080,000,000 for commercial businesses, $3,100,000,000 for electric and gas utilities and $1,360,000,000 for railroads and other transportation facilities.

Construction.—Construction activity in 1949, as measured by the F. W. Dodge Corp., was up 7.8% from 1948, with all types of construction contributing to the increase. Residential, public works and utilities building contracts were each up slightly more than 12% from 1948. Nonresidential contracts were up slightly less than 1%, reflecting the decline in the expansion of industrial and commercial building, although expenditures for such construction were still at a high level.

During the first five months of the year the number of new nonfarm housing starts each month was substantially above the corresponding month in 1947 and only slightly below the same month in 1948, and in June, July and August they were substantially greater in number than in the same months of 1948. There were 98,000 housing starts in August—12% above Aug. 1948, according to reports of the department of labour. (*See* also BUILDING AND CONSTRUCTION INDUSTRY; HOUSING.)

Profits.—Business profits after taxes dropped substantially

DEPARTMENT STORE SALE in Boston, Mass., where 7,500 men's suits and topcoats were sold less than half an hour after the store opened. Numerous markdown sales in clothing during 1949 represented a distinct change from conditions prevailing in the U.S. immediately after World War II

during the first three quarters of 1949 from the high level of 1948, but were still considerably higher than in any previous year except 1947 and 1948. For the first quarter of the year, profits were at an annual rate of $17,300,000,000, according to estimates of the department of commerce, but dropped to an annual rate of $15,100,000,000 in the second quarter, and to $14,700,000,000 in the third quarter. Dividend payments, however, were substantially greater in each of the first three quarters of 1949 than in the corresponding quarters of 1948, reflecting a more liberal dividend policy on the part of business men as the need for reinvestment funds for expansion tapered off. Undistributed profits were reduced about 50%, compared with 1948. Corporate tax liability dropped with the decline in profits, being at an annual rate of about $9,500,000,000 during the second and third quarters of 1949, compared with annual rates of $13,700,000,000 and $14,400,000,000 during the first and second quarters of 1948, respectively, as estimated by the Council of Economic Advisers. For the year 1949, corporate profits after taxes were 23.6% below 1948, according to reports of the federal reserve board.

Banking.—Of importance to the U.S. economy in 1949 was the continued large amount of deposits and currency held by individuals. In January, the amount was $168,200,000,000, only $2,000,000,000 below Jan. 1948. By August, it had dropped to $166,900,000,000—$200,000,000 more than in Aug. 1948, according to reports of the board of governors of the federal reserve system. During the first seven months of the year, currency outside banks remained substantially unchanged at about $25,000,000,000; adjusted demand deposits fluctuated between $81,000,000,000 and $85,000,000,000; and time deposits, between $57,600,000,000 and $58,400,000,000. A major factor underlying the sustained large volume of deposits and currency was the large volume of bank loans outstanding. Loans of all banks as of March 30, 1949, had risen to $48,220,000,000, an increase of $50,000,000 from the amount outstanding on Dec. 31, 1948. There were minor downward fluctuations during the April-August period, but the amount on Sept. 28 was $48,050,000,000. Commercial bank loans reached $42,370,000,000 as of March 30, and stood at $41,780,000,000 on Sept. 28. (*See* also BANKING.)

Exports and Imports.—U.S. merchandise exports, including re-exports and civilian supplies for occupied areas, increased during April and May after a drop in February, but dropped again in July and eased further in August. Imports during the first eight months decreased continuously with the exception of a slight rise in March. For the year 1949, exports were down 6.1% from 1948, and imports, 7.5%. (*See* INTERNATIONAL TRADE.)

Labour Relations.—During the first half of 1949, approximately 2,000 work stoppages resulted from labour-management disputes, a 10% increase in number over the January-June 1948 period. In terms of idleness, however, the estimated total for the first six months of 1949 was only about two-thirds as great as in the comparable periods of the two preceding years, according to reports of the U.S. labour department. Only 13 stoppages during this six-month period involved 10,000 or more workers.

The fourth round of wage increases tended to be smaller than in previous years. A number of important companies rejected union wage demands, and in many industries wages were not subject to negotiation until July and August. However, wage increases of five cents to ten cents an hour were granted in some public utilities and in many manufacturing industries, and the trend toward health and welfare and other "fringe benefits" continued strong.

The labour news was dominated during 1949 by strikes in the steel and coal industries and by agreement on a pension plan for employees of the Ford Motor Co. (*See* LABOUR UNIONS STRIKES.) On the wage front, negotiations during the year resulted in an increase of 1.4% in the weekly earning of production workers, in spite of a drop of 2.2% in hours worke per week. The increase in weekly earning accompanying th reduction in hours was made possible by a 3.7% increase i earnings per hour. (*See* also LAW; UNITED STATES.) (V. B. B.)

"SPLIT IMAGE MIRROR," a cartoon by Bishop which appeared in the S *Louis Star-Times* in 1949

Europe and Commonwealth.—During 1949 business conditions continued to be affected by the deferred effects of war time abnormalities. The two principal disturbing factors wer the trade recession in the United States during the first half o the year and the devaluation of sterling and a number of othe currencies in Sept. 1949.

Industrial production continued to increase in Europe an also in the countries of the British Commonwealth of Nations with the exception of Canada, where it declined during the firs half of 1949 in sympathy with the trend in the United States Among European countries, those which had been affected mos by World War II showed the greatest recoveries. In particula the index of the industrial production of western German showed a gratifying progress toward prewar level.

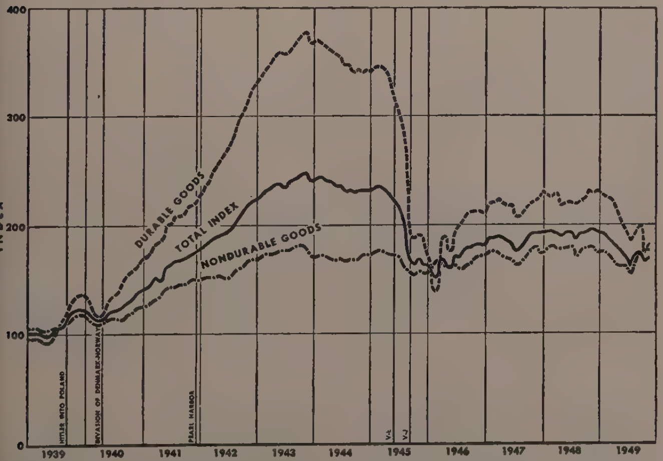
With the disappearance of the sellers' market in most kinds of consumers' goods, the possibility of difficulties through industrial overproduction was continually being considered by governments and business firms. The difficulty of exchanging the manufacture surpluses of western Europe for the food and raw material surpluses of eastern Europe became more evident as a result of the spectacular recovery of industrial production in western Germany, but fears that a revival of German competition might lead to unemployment or a fall in wages in Great Britain and the industrial countries did not yet materialize.

The setback in business in the United States affected Europe and the British Commonwealth of Nations partly through a decline in U.S. prices of raw materials and manufactures and partly through a decline in U.S. imports. So far from trying to compete with lower U.S. prices, the prices in most European countries continued to increase during the second half of 1948 and showed no material fall during the first three quarters of 1949.

Great Britain and most other western European countries continued to pursue their policies of full employment, and, as a result, the purchasing power of consumers was fully maintained. Business, however, suffered from the disadvantages caused by over-employment.

The devaluation of sterling and many other European and British Commonwealth of Nations currencies toward the end of the third quarter of 1949 constituted an important landmark in the business history of the year and of the postwar period. Anticipation of this step during the preceding months influenced business conditions to no slight extent. There was a decline in the demand for British and sterling area goods, in the hope of being able to buy them cheaper after devaluation. When on Sept. 18 sterling was devalued by 30%, an example followed by the entire sterling area (with the exception of Pakistan) and by many other countries besides, the fear of large-scale deflation was removed.



INDUSTRIAL PRODUCTION of U.S. durable and nondurable goods, 1939-49, adjusted for seasonal variation (1935-39=100) (Source: Board of Governors of the Federal Reserve System)

During 1949 business activity in Great Britain, France, Italy, Australia and other countries was often disturbed by strikes over wages or working conditions. A large proportion of these disputes were believed to have been engineered by Communists for political purposes, by stimulating and exploiting discontent among dock labourers, miners and other workers.

In eastern European countries the process of postwar consolidation continued. The currency reforms carried out in various eastern European countries during the previous two years consolidated monetary conditions, and the nonstop inflation in Hungary and Rumania gave way to a period of comparative stability.

In western Europe the setback in business profits recorded in 1948 continued in 1949, although in many lines the postwar boom continued unabated. There were signs of greater selectivity, because of the disappearance of the virtual certainty that prevailed during earlier postwar years that it was possible to sell at a profit anything produced, regardless of cost or quality. With the increase of competition at home and abroad the industries concerned had to make an effort to cut down superfluous expenditure. The strong political and economic position occupied by labour, especially in Great Britain and France, made this process often difficult, for dismissals for redundancy might be accompanied by strikes.

Mechanization and modernization continued to make progress but were handicapped by lack of exchange to import the necessary equipment or by the need for exporting much of the equipment produced within the countries, in order to obtain the means to pay for essential imports. The increase in output was the result of mechanization rather than of an increased exertion on the part of the manpower employed. In Great Britain and other industrial countries the limited supply of electric power set a limit to further mechanization. India and other agricultural countries made efforts to secure the capital equipment needed for their industrialization.

During the first half of 1949 there was a reduction of government controls but the scarcity of dollars that developed during the summer made it sometimes necessary to arrest and even reverse this tendency. In Great Britain the policy of nationalization continued.

Dominions producing raw materials continued to enjoy prosperity because of the demand for their products. The temporary setback in the prices of their staple exports through the business recession in the United States during the first half of

the year became reversed as a result of the devaluation of the pound, which resulted in a sharp recovery in the prices of these raw materials. Disturbances in southeastern Asia handicapped economic activity, though order was largely restored in Malaya, Indonesia and French Indo-China. War fears in Europe were generally less acute than in 1948 and consequently this source of uncertainty was no longer such a strong handicap to business expansion on the continent.

At the end of 1949 business conditions in Europe presented a totally different picture from that of a year earlier. The abnormal postwar buying of consumers' goods to replace those used up or destroyed during World War II came to an end. On the other hand, normal current purchases were running at a sufficiently high level to keep industry fully engaged. During 1949 demand for consumers' goods became increasingly selective. The quality of consumers' goods on sale improved materially, even in western Germany where progress toward normal conditions was particularly striking. Cabinet Members.

The following members of President Harry S. Truman's cabinet held office on Jan. 1, 1950.

Post	*Name*	*State*
Secretary of State	Dean G. Acheson	Maryland
Secretary of the Treasury	John W. Snyder	Missouri
Attorney General	J. Howard McGrath	Rhode Island
Postmaster General	Jesse M. Donaldson	Illinois
Secretary of the Interior	Oscar L. Chapman	Colorado
Secretary of Agriculture	Charles F. Brannan	Colorado
Secretary of Commerce	Charles Sawyer	Ohio
Secretary of Labor	Maurice J. Tobin	Massachusetts
Secretary of Defense	Louis A. Johnson	West Virginia

Great Britain.—The following is a list of cabinet members of Great Britain, on Jan. 1, 1950.

Post	*Name*
Prime Minister and First Lord of the Treasury	Clement Richard Attlee
Lord President of the Council	Herbert Stanley Morrison
Secretary of State for Foreign Affairs	Ernest Bevin
Chancellor of the Exchequer	Sir Stafford Cripps
Minister of Defence	Albert Victor Alexander
Chancellor of the Duchy of Lancaster	Hugh Dalton
Lord Privy Seal and Paymaster General	Viscount Addison
Lord Chancellor	Viscount Jowitt
Secretary of State for the Home Department	James Chuter Ede
Secretary of State for the Colonies	Arthur Creech Jones
Secretary of State for Commonwealth Relations	Philip John Noel-Baker
Secretary of State for Scotland	Arthur Woodburn
Minister of Labour and National Service	George Alfred Isaacs
Minister of Health	Aneurin Bevan
Minister of Agriculture and Fisheries	Tom Williams
Minister of Education	George Tomlinson
President of the Board of Trade	James Harold Wilson

California.

The most southerly Pacific coast state of the United States, California achieved statehood on Sept. 9, 1850. The "Golden state," as it is nicknamed, has a land area of 156,803 sq.mi. and a water area of 1,890 sq.mi. The U.S. bureau of the census population estimate of July 1, 1949, placed the population at 10,665,000, an increase of 54.4% from the 1940 census. The ten chief cities (with 1948 population estimates, and with 1940 populations in parentheses) were: Los Angeles 1,805,687 (1,504,277); San Francisco 807,700 (634,536); Oakland 425,000 (302,163); San Diego 380,000 (203,341); Long Beach 266,806 (164,271); Sacramento (the state capital) 131,000 (105,958); Pasadena 110,000 (81,864); Berkeley 107,000 (85,547); Glendale 100,000 (82,582); Richmond 100,000 (23,642).

History.—A special state election was held Nov. 8, 1949. The electorate of the state voted to reinstate the plan of old age security and of aid to the blind effective prior to 1948, with the exception that the maximum benefit provisions of $75 per month for aged persons and $85 per month for the blind be retained. As a result the extensive powers of the state director of social welfare were curtailed. The new bill also provided for increases and decreases in benefit payments by legislative amendment. At the same time the voters approved the Daylight Saving Time act, providing for the advance of time 1 hr. from the last Sunday of April until the last Sunday of September. The state officers remained: governor, Earl Warren; lieutenant governor, Goodwin J. Knight; secretary of state, Frank M. Jordan; treasurer, Charles G. Johnson; controller, Thomas H. Kuchel; attorney general, Fred N. Howser; superintendent of public instruction, Roy E. Simpson.

Forward steps were taken in the solution of the state's primary problem, water, with the continued progress of the Central Valley project. Work was also commenced on the dredging of a canal in the Sacramento river to provide the state capital with an inland port.

The year 1949 was celebrated throughout the state as the centennial of the California gold rush. Historic documents of general interest were displayed throughout the state.

Education.—Average daily attendance for budgetary purposes for 1947–48 in elementary school districts was calculated at 1,057,071, in high school districts at 383,715 and in junior college districts at 80,245. Enrolment for the fall semester of 1949 in the nine state colleges was reported at 22,631. California again ranked first in the nation in the number of rehabilitations of disabled persons.

Social Insurance and Assistance, Public Welfare and Related Programs.—As of Oct. 1949, the average monthly assistance payment to the 264,67 needy aged of the state was $70.74 (Oct. 1948—193,717 at an average of $61.25). The security for the blind program paid an average of $82.46 monthly to 9,049 persons. The monthly assistance payment average for 71,223 needy children, both in boarding homes and institutions and in families, was $50.72. For the same month unemployment insurance, veterans' allowances and disability insurance paid an average of 195,000 beneficiaries each week a total of $4,380,220.

Total expenditures for the state department of corrections for 1948–49 were estimated at $14,568,791. Inmates of its six adult institutions (as of Oct. 31, 1949) numbered 10,741. The population of its youth authority institutions was 2,247, of which 267 were in its two schools for girls, 280 in its four work camps for boys, 979 in its four schools for boys and the remainder in other institutions.

Communications.—Final automobile registrations for 1948 were 4,175,867. According to the director of public works, there were 13,970 mi. of highway in the state system as of June 1948. State expenditures by the division of highways in 1948–49 were estimated at $52,029,460 for major construction and improvement (1947–48, $47,442,401). There were no federal aid contributions. In 1940 California had 16,856 mi. of railroad, of which 2,768 were electrically operated. In 1948 there were 406 airports, including 111 municipal and 61 military airports. There were 2,356 mi. of federal airways. As of Dec. 31, 1947, there were 3,001,000 telephone stations in the state.

Banking and Finance.—Total assets of the 117 state-supervised banks (with 193 branch offices) as of June 30, 1949, were $3,595,312,000 (1948, $3,616,136,000). At the end of 1948 there were 115 banks (with 873 branches and offices) that were members of the federal reserve system. Total banks debits in 1948 were $88,332,000,000 (1947, $80,966,000,000). The aggregate assets of the 107 state-licensed savings and loan associations (as of Sept. 30, 1949) were $521,641,787.52.

For the fiscal year 1948–49 tax collections in the state amounted to $4,528,799,430 (1947–48, $4,524,914,628), of which $2,955,909,546 were in federal taxes (1947–48, $3,103,679,127).

Estimated total state revenue was $794,393,448 for 1948–49 ($772,718,609 for 1947–48). Estimated total expenditures for the year were $998,030,569 (1947–48, $657,725,532). The estimated budget deficit was $203,637,121, and the net bonded debt of the state (as of Nov. 30, 1948) was $133,563,793.

Agriculture.—Cash farm income in 1948 for California farmers was $2,220,643,000 (2% more than in 1947). Livestock and livestock products returns were 5.7% higher than in 1947, totalling $794,743,000, while crop returns remained almost identical with 1947, totalling $1,412,896,000. Government payments remained almost unchanged at $13,000,000 (1947, $13,004,000). The total acreage of truck crops in California for the year 1948 was 679,020 with production valued at $276,459,000, showing a 9.5% decline in value from the previous year. Field crop acreage was 6,575,200 with a value of $641,777,000 (an increase of 1.7% in value). Fruit and nut crop acreage was 1,621,339, value of production being $401,351,000 (a decline of 5.1%).

Table I.—*Leading Agricultural Products of California*

Wheat, bu.	11,470,000	10,535,000	11,429,000
Beans, dry, bags (100 lb.)	4,696,000	4,960,000	4,162,000
Peaches, bu.	34,461,000	30,127,000	28,273,000
Rice, bu.	21,462,000	15,183,000	12,667,000
Pears, bu.	16,293,000	10,668,000	11,530,000
Apples, bu.	9,520,000	5,870,000	7,959,000
Grapes, tons	2,526,000	2,857,000	2,547,600
Apricots, tons	164,000	219,000	202,100

Manufacturing.—Employment and production of California manufacturing industries rose to new high peacetime levels in 1948. Retail sales increased to $11,672,038,000 (1947, $10,672,038,000). The volume of wholesale trade in California was estimated at $12,335,313,000 during 1948. New construction within the state amounted to $2,450,000,000 during 1948 according to U.S. department of commerce estimates, marking an increase of 33.6% over 1947. The fish pack by canners for 1947 was valued at $132,721,000.

Table II.—*Annual Average Employment and Wages in California Manufacturing Industries*

Industry	1948 No. employed	1948 Wages (000's omitted)	1947 No. employed	1947 Wages (000's omitted)
Food and kindred products	91,700	$235,700	89,400	$224,100
Transportation equipment	69,400	201,700	76,900	214,800
Iron, steel and products	51,600	155,700	50,200	139,600
Apparel	36,200	84,300	32,400	72,100
Machinery (except elect.)	34,000	104,600	36,100	103,400
Lumber and timber	29,700	105,800	24,800	81,000
Stone, clay and glass products	28,900	82,000	26,800	72,800
Printing and publishing	21,300	73,800	20,000	61,900
Furniture and finished lumber	19,800	49,700	20,800	49,800
Chemicals and allied products	17,100	50,100	17,500	47,800
Automobiles and equipment	14,400	43,400	12,800	35,400
Petroleum products	14,300	48,800	15,300	48,200

During 1948 an average of 730,600 wage and salary earners were employed in California industry. Total wage and salary pay rolls of manufacturing industries were approximately $2,498,300,000 (1947, $2,348,200,000).

Mineral Production.—Mineral production in California in 1948 reached a total value of $1,199,703,000.

Table III.—*Value of Principal Minerals Produced in California*

Product	Value 1948	Value 1947
Petroleum	$792,521,000	$564,531,000
Natural gas	74,000,000	45,143,000
Cement	49,670,000	...
Natural gas—gasoline	47,000,000	...
Miscellaneous stone	38,500,000	...
Salines	29,000,000	22,500,000

Camp Fire Girls.

In 1949 the more than 360,000 Camp Fire Girls in the United States chose the slogan "Make Mine Democracy!" as a national project to celebrate their organization's 39th anniversary. All members from the youngest to the most grown-up were to make it their task to see, do and tell democracy in different ways during the entire year. In putting this program into effect, they observed democracy in action by visiting local courts, city councils, state legislatures, newspaper plants and other media through which democracy functions; they practised democracy at home by taking part in community activities, by visiting shut-ins and by baby-sitting for busy parents; they practised democracy abroad by sending collections of clothing, food and toys to needy children; they told of democracy in letters to "pen pals" overseas.

For the second successive year, Camp Fire Girls "Sent Santa Overseas" by means of thousands of red Christmas stockings, packed with toys, school supplies, candies, gum and many other things for children in other lands. Earlier in the year they had packed party kits for distribution to children abroad.

Membership in the Camp Fire Girls, Inc., which was founded in 1910, is open to all girls between the ages of 7 and 18. There are three groups: Blue Birds, 7 to 10 years old; Camp Fire Girls, 10 to 15 years old, and Horizon club members, who are senior high school students. Enjoyable and worthwhile leisure-time activities, to develop their best potentialities as alert citizens and homemakers or professional women, are suggested by the Camp Fire's seven crafts: home, outdoors, creative arts, frontiers (science), business, sports and games, and citizenship. The Camp Fire Law bids them to "Worship God, Seek Beauty, Give Service, Pursue Knowledge, Be Trustworthy, Hold on to Health, Glorify Work, Be Happy."

Publications of 1949 included *Frontiers—Fun with Science for Camp Fire Girls* and *Our Land—Conservation Activities for Camp Fire Girls. The Camp Fire Girl* is the official magazine published monthly from September through June.

In 1949 there were 270 Camp Fire Girls councils in the United States. Groups also met in the Philippines, El Salvador, Austria, Alaska, Great Britain and Germany.

Adult volunteer and professional leaders met in Portland, Ore., during Oct. 1949 for the organization's triennial national conference, the theme of which was "Youth—Outpost of Democracy." Camp Fire Girls took part in demonstration and discussion groups, and in a grand pageant depicting the founding and development of Camp Fire.

National officers in 1949 were Mrs. James C. Parker, president; Earle W. Brailey, chairman of the board; Mrs. Richard W. Blalock, vice-president; Clifton J. Finch, treasurer; Mrs. Frank C. Love, secretary, and Miss Martha F. Allen, national director. National headquarters: 16 East 48th St., New York, N.Y. (LE. C.)

Canada, Dominion of.

A member of the British Commonwealth of Nations, Canada is a federal union under the terms of the British North America act (1867). Provinces: Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, British Columbia, Prince Edward Island, Alberta, Saskatchewan and Newfoundland. Outside the provincial boundaries are the Yukon and the Northwest Territories, under federal jurisdiction.

Area, 3,847,597 sq.mi. Capital: Ottawa (*q.v.*). Largest city:

Montreal, pop. (Feb. 1948 est.) 1,096,060. Governor-general: Viscount Alexander of Tunis.

The population was estimated by the dominion bureau of statistics at 13,636,000 in Sept. 1949, compared with 11,506,655 in 1941.

History.—Immigration during 1949 was estimated at 125,000, but toward the end of year the flow dropped sharply and the federal government considered some sort of subsidy for British migrants who were barred from taking more than $770 per year out of Great Britain. By the end of Oct. 1949 Canada had accepted a total of 73,982 displaced persons and was considering ways and means of admitting another 26,000 to reach the desired 100,000 ceiling.

Politics.—In the June 27, 1949, federal election the Liberals were returned to power with the biggest majority of any Canadian party in history. Seats and popular votes won by parties (with number of seats held at dissolution, and number of votes won in the 1945 general election, in parentheses) were: Liberals 193 (125) seats, 2,926,029 (2,170,625) votes; Progressive-Conservatives 42 (69) seats, 1,742,235 (1,455,453) votes; Co-operative Commonwealth federation (socialist) 12 (32) seats, 790,321 (822,661) votes; Social Credit 10 (12) seats, 139,801 (214,998) votes; others 5 (7) seats, 257,921 (582,393) votes. In 1949 there were 7,893,425 voters, 900,000 more than in 1945.

Government and Constitution.—The government called the 5th session of the 20th parliament in January and dissolved it in April for the general election, and then called the 1st session of the 21st parliament in September and prorogued it in December. A $10,000,000 program was authorized to assist coal mining in the maritime provinces; the federal departments of mines and resources, and of reconstruction, were reorganized into the departments of mines and technical surveys, and of resources and development; a new department of citizenship and immigration was created.

There were several constitutional developments during the year. The government won approval in both the Canadian and British parliaments for its British North America act no. 2, in which the Canadian parliament was given power to amend the constitution in matters lying solely within federal jurisdiction. In addition, appeals to the British privy council were abolished, and the supreme court of Canada was enlarged and made the nation's highest tribunal. The word "dominion" was dropped from governmental terminology in an effort to emphasize independent nationhood. The national flag issue was revived in the commons, without decision.

Dominion-Provincial Relations.—The biggest dominion-provincial event of 1949 was the formal entry of Newfoundland (*q.v.*) on March 31 into the union as the tenth province. Early in Nov. 1949 Prime Minister Louis St. Laurent (*q.v.*) announced a Jan. 10, 1950, federal-provincial conference to deal entirely with constitutional matters, the first of its kind since 1935. The agenda included subjects wholly within provincial jurisdiction, and those of joint federal-provincial authority.

Defense.—Canada signed the North Atlantic treaty and was the first signatory to ratify the pact. Parliament passed legislation to unify the national defense department and agreed to boost defense estimates from $349,384,800 for 1948–49 to $586,315,300 for 1949–50; the government announced speed-up of recruiting in all three services. U.S. and Canadian forces co-operated in air, naval and amphibious manoeuvres during the year, and exchanged scientists during arctic researches. The Canadian army held a number of exercises by itself, including its biggest peacetime air-ground manoeuvre, along the Alaska highway. The royal Canadian air force formed a second fighter squadron and an operational training unit, the latter to do coastal reconnaissance; began a $2,500,000 building program to bring stations up to operational requirements; and created a coast-to-coast organization of 500 volunteer radio vigilantes for

CANADIAN ARTILLERYMEN firing a 19-gun salute outside the parliamentary buildings at Ottawa, Ont., to mark the entry of Newfoundland as the tenth Canadian province on March 31, 1949 use in case of national emergency. The Canadian navy reopened the wartime naval training base near Halifax, cut the recruiting age to 17 years and took "Canadianization" steps after a royal commission investigated naval conditions and found the navy too British in attitude.

Economic Controls.—Although in March parliament extended the continuation of the Transitional Measures act of 1947 to 1950, its application was limited to domestic rentals, certain food prices, building priorities, lumber and steel. In March the government lifted price ceilings on butter, bread, sugar and flour; and before the year's end the prices board lifted controls on fruits and vegetables; the timber control lifted export restrictions on softwoods and millwork and hardwood flooring; and the department of finance authorized rent increases up to 22% effective Feb. 1, 1950. Steel, foreign exchange and most of the import controls created in 1948 were maintained.

Finance.—National revenues for the period March 31 to November 1, 1949, were $1,442,300,000 and expenditures were $1,137,000,000, compared with $1,530,000,000 and $996,000,000, respectively, for the same period of 1948. The 1948–49 fiscal year ended with a $575,000,000 surplus, and at March 31, 1949, Canada's U.S. dollar holdings totalled $1,065,000,000. At Sept. 30, 1949, Canada's net debt was $11,495,881,920, compared with $17,100,000,000 in Sept. 1946. The dominion bureau of statistics reported in May 1949 that in 1948 $2,700,000,000 of U.S. capital moved into Canada, $156,000,000 more than in 1947 and $252,000,000 more than in 1946.

Taxation.—The 1949 budget gave considerable tax relief. Income tax exemptions were raised to $1,000 for single and $2,000 for married persons (which took about 750,000 persons off the tax rolls), and rates were lowered (giving an average cut of 15% in tax). Excise taxes were repealed on soft drinks, candy, chewing gum, long distance telephone calls and telegrams and transportation tickets, and other excise taxes were lowered. Corporation taxes were cut from 30% to 10% on the first $10,000, but the rate above $10,000 was increased from 30% to 33%. The tax reductions for 1949–50 meant about $369,000,000 savings to the taxpayers. Corporation and individual income tax collections for the fiscal year ending March 31, 1949, totalled $1,297,999,404, compared with the wartime peak in 1944 of $1,151,757,035.

Economic Conditions.—The biggest economic event of the year was the devaluation move in which the Canadian dollar dropped to a value of 91 cents in U.S. currency. This raised the price of all U.S. imports into Canada, but at the same time raised the dollar-value of all Canadian exports to the U.S. The cost-of-living index hit an all-time high in Aug. 1949 of 162.8, having risen from 159.6 in January, but by November declined to 161.7. Business continued at a high level: retail sales in Sept. 1949 totalled $685,000,000, or about 7% above Sept. 1948; department store sales for the first half of 1949 were $382,744,000, up $34,000,000 over the same 1948 period. The royal commission on prices, called in 1948, submitted a 400,000-word report in April 1949, and recommended government brakes when inflation threatened and government stimulus when slumps impended. By the end of the year some regional economic soft spots appeared and the federal government took steps to provide regional public works aid.

Employment.—In Feb. 1949, there were 212,000 men and 53,000 women registered for work at the government employment service. The total was 64,000 more than the highest 1948 unemployment peak. Despite the fact that at the end of Aug. 1949 approximately 5,155,000 Canadians were employed, compared with 5,042,000 in Aug. 1948, the number of jobs in relation to the employable population decreased, and in mid-December there were 261,000 unemployed, or 5.2% of the total labour force. The total labour pay-roll for the January–August period was $5,002,000,000, a gain of 9% over 1948. Personal incomes for Canadians in 1948 totalled $11,900,000,000.

LOUIS ST. LAURENT, Canadian prime minister and Liberal party leader, addressing well-wishers on parliamentary election night, June 27, 1949. Final returns gave his party a wide majority in the house of commons

Industry.—Production continued, on the whole, at record levels. Latest 1949 monthly statistics (with 1948 monthly average in parentheses): refined petroleum products, July, 8,763,000 (6,747,000) bbl.; refined copper, September, 36,300,000 (36,900,000) lb.; nickel, September, 19,100,000 (22,000,000) lb.; refined lead, September, 29,100,000 (26,700,000) lb.; iron ore, September, 460,700,000 (108,700,000) tons; synthetic rubber, September, 8,150,000 (7,550,000) lb.; boots and shoes, September, 3,377,000 (2,701,000) pairs; newsprint, October, 433,000 (382,600) tons; automobiles, October, 28,130 (21,980); refrigerators, September, 16,730 (11,570); radios, September, 45,900 (51,000). There was a flurry when the federal combines commissioner issued reports of monopoly practices in the flour milling, flat glass and match industries. The government plugged visible loopholes in the combines act by parliamentary amendments.

Co-operatives.—The Canadian Co-operative congress celebrated its 40th birthday in 1949. For the first time membership reached the 1,000,000 mark. A total of 2,249 co-operatives of all kinds did $780,084,955 worth of business in the 1947–48 fiscal year. Prior to 1948 marketing co-operatives were predominant, but thereafter purchasing co-operatives were organized more frequently than marketing ones. Credit unions—co-operative savings and lending institutions—continued to expand. Figures for 1948 (with 1939 in parentheses) were: 2,608 (844) unions with 850,608 (151,554) members and assets over $250,000,000 ($20,000,000).

Natural Resources.—Eastern and northern Ontario and western Quebec were surveyed by low-flying aeroplanes carrying magnetometers in an effort to locate additional bodies of iron ore and nickel. Steep Rock iron ore production was increased to where it would almost meet Canada's domestic needs. The federal government extended its 1948 aid to gold mines to promote production. Mineral discoveries included lead at Coronation gulf, manganese in Labrador, tin and asbestos in Ontario and uranium-bearing ore at Marion Lake, N.W.Terr., Goldfields, Sask., and Thunder Bay, Ont. The Hudson's Bay company held its first fur auction sale in Canada. Production of 7,952,146 raw fur pelts in the 12 months ending June 30, 1948, was valued at $32,233,000, an increase of $5,883,000 over the preceding year.

Agriculture.—Despite reverses in the British market, 1949 was busy and profitable for Canadian farmers. Preliminary statistics revealed that cash income from sale of farm products amounted to $1,056,500,000 for the first six months of 1949, a 14.7% increase over the similar 1948 period. Wheat production was estimated at 342,000,000 bu., compared with 363,000,000 bu. for 1948; coarse grain production at 320,000,000 bu., compared with 388,000,000 bu. Cattle marketings increased while marketings for other kinds of livestock declined sharply during the first five months of 1949, compared with the same 1948 period, but prices in all lines were higher. In Dec. 1949 the British government announced no 1950 food contracts for eggs, beef, poultry and apples, and the domestic market took a quick decline for most of those products. The federal government set a price floor of 32½ cents a pound for bacon, and during the year continued price supports for potatoes, butter, skim milk and honey. Canada signed the 1949 international wheat agreement, and agreed to supply 200,000,000 bu. annually to the wheat-importing signatories. On Aug. 1, 1949, the Canadian wheat board increased the price of wheat to farmers from $1.55 to $1.75 per bushel and took over marketing of coarse grains. The Federal Prairie Farm Assistance act allotted $17,000,000 in assistance payments to 70,000 drought-stricken farmers in Saskatchewan and Alberta. Early in 1949 the supreme court of Canada ruled that the manufacture and sale of oleomargarine were legal in Canada, and production and distribution began at once. A rash of anti-margarine laws broke out in the provinces.

Trade.—Canada's export trade ran to $2,181,000,000 for the first nine months of 1949, against $2,212,000,000 for the same 1948 period. The drop accelerated somewhat during the final three months of the year because of the British trade crisis, but the year-end total was not far from the 1948 export total of about $3,000,000,000. By August European countries had spent $785,000,000 of their Marshall aid grants in Canada, which meant that Canada was supplying about 13% of all Economic Cooperation administration goods. Despite the import walls which restricted Canadian trade with the United States, more than $1,312,600,000 worth of U.S. goods crossed the line in the first eight months of 1949. Canada reduced its export controls to 137 items from a 1944 peak of 1,109 items. The government announced it had set up machinery for Canadian exporters, upon application, to engage in barter deals. Under the Annecy agreements Canadian exports received new tariff concessions in ten countries in return for similar Canadian concessions for the goods of those countries.

Transportation.—Trans-Canada Air Lines reported a combined deficit of $2,932,240 on its North American and overseas services during 1948. Expanding its services, T.C.A. was granted the right to pick up trans-Atlantic passengers at Iceland, Ireland and the Azores. Canadian Pacific Air Lines gained full traffic rights at Hong Kong and Fiji Islands, and thus inaugurated a regular two-flights-per-month service between Vancouver and Sydney, Austr. The operation of the Australian service added about 8,400 mi. to C.P.A.'s 9,000-mi. network in northern Canada.

The board of transport commissioners, which in 1948 boosted railway freight rates by 21%, announced in Sept. 1949 a further 8% interim increase. The Canadian Pacific Railway, wanting a further 12% increase, appealed to the supreme court of Canada which late in December ruled that the commissioners review the 8% decision. During 1949 the C.P.R. undertook a $310,000,000 program to improve service. New railroad construction was started in the Romaine valley, Que., to tap titanium ore bodies, from the north shore of the St. Lawrence river to the Quebec-Labrador iron ore beds, and from Quesnel to Prince George, B.C.

The biggest 1949 highway development was the Trans-Canada Highway Assistance bill passed by parliament in Dec. 1949. In a right-about-face from previous stands, the federal government offered to pay half the $300,000,000 estimated needed to hard-surface approximately 5,000 mi. of road between St. John's, Nfd. to Victoria, B.C. (with a diversion to Prince Edward Island).

The Canadian maritime commission blamed the summer-long, Communist-inspired Canadian Seamen's union strike disturbance, which cut into shipping, for the near-bankruptcy of Canadian shipping. Another cause was the lower-cost operation of competing foreign shipping which forced freight rates below Canadian profit levels. To offset the latter, the Canadian government granted a $3,000,000 subsidy to deep-sea vessels of Canadian registry, transferred up to 130 Canadian vessels to British registry where they could continue to earn dollars but could be recalled in an emergency, and passed an act to encourage through tax reduction the construction and conversion of vessels in Canada. To further encourage shipbuilding, the government announced contracts totalling $9,000,000 for new warships.

(C. Cy.)

Canadian Literature.

Fiction.—Contemporaneous themes predominated in the 1949 crop of Canadian novels. Constance Beresford-Howe's *The Invisible Gate* portrayed family life in Montreal; Isabelle Hughes' *Time in Ambush* did the same for Toronto. Len Peterson's *Chipmunk,* a study of maladjustment, and Sol Allen's *Toronto Doctor* also used Toronto settings. Leo P. Walsh discussed current Canadian attitudes toward illegitimacy in *The Sinful Town.* In *Perilous Passage* Arthur Mayse described the thrills of smuggling off Canada's west coast. Jessie McEwen's *Taltrees* portrayed the modern era of an Ontario timber baron's heritage. World War II echoed in two 1949 novels: Earle Birney sharply satirized the Canadian army in *Turvey* and Hugh Garner painstakingly probed navy discipline in *Below Decks.* Three new novelists chose non-Canadian themes and scenes: Robert Christie, *Inherit the Night,* tragedy in the Andes; Susan Alice Kerby (pseudonym Elizabeth Burton), *Mr. Kronion,* comedy in an English village; David Walker, *The Storm and the Silence,* adventure in the Scottish Highlands.

The other 1949 English-Canadian novels went into the past for their themes and settings. Ethel Wilson's chief character in

Innocent Traveller spanned 100 years, from Victorian England to modern Vancouver; Kathleen Coburn's *The Grandmothers* covered nearly the same period, with one lively grandmother in Ontario and the other in Czechoslovakia; Mazo de la Roche's sentimental *Mary Wakefield* filled in the '90s in her famous Jalna saga. Even more remote history appealed to other authors: Will R. Bird went to Nova Scotia in 1755 for his robust *Passionate Pilgrim;* Harry Symons to the voyage of Columbus for his realistic *Three Ships West;* Bertram Brooker to Jerusalem for his vigorous portrait of Barrabbas, *The Robber.*

Nonfiction.—Biography continued to draw writers: *Tom Cullen of Baltimore,* Judith Robinson; *Brûlé, Immortal Scoundrel,* J. H. Cranston; *Link to the North* (Mickey Ryan of arctic fame), G. J. Tranter; *Mackenzie King of Canada,* H. Reginald Hardy. Personal memoirs prompted three: Nancy Jones, preacher's wife, reported her life in *For Goodness' Sake;* W. T. Allison recalled a professor's life in *This for Rembrance;* Ruth Harvey reminisced about the old-time theatre in *Curtain Time.*

The rest of the 1949 nonfiction was extremely varied. A number of personal commentaries were compelling: Robertson Davies was by turns witty and caustic with *The Table Talk of Samuel Marchbanks;* Hugh MacLennan searchingly examined the Canadian personality in *Cross Country;* Arthur Meighen restated his political and other speeches *Unrevised and Unrepented;* radio was the springboard for *John Fisher Reports* and *Andy Clark and His Neighborly News,* the material in both having been previously broadcast as 15-min. talks.

Poetry and Plays.—Few poets reached print; included were Doris Hedges' *Words on a Page,* John Murray Gibbon's *Canadian Cadences,* Hyman Edelstein's *Last Mathematician,* T. B. Windross' *Gates of Glory,* Marjorie Freeman Campbell's *High on a Hill* and Thomas Saunders' *Scrub Oak.* Playwright Robertson Davies presented a tragedy, *Fortune, My Foe,* and a comedy, *Eros at Breakfast.*

French-Canadian.—Critics hailed Ringuet's (pseudonym of Phillips Panneton) *Le poids du jour* as his best novel and the leading book of 1949. It covered 50 yr. of small-town and Montreal city life before and after World War I with lively fidelity. Jean Simard's *Hôtel de la reine* was a psychological story with divertingly humorous overtones. Germaine Guèvremont's *Marie-Didace* was a poetic treatment of typical French-Canadian rural life. Claude Véla portrayed family conflicts solved by faith in *Dérive* and Claude Surlands went to an old chateau in the Carpathian mountains for love and adventure in *La campanule des Karpathes.* Other outstanding novels of the year included: André Giroux's *Au delà des visages* and G. Moberley's *Diana.*

Most significant works of nonfiction were Robert Rumilly's *L'autonomie provinciale,* a well-documented study of provincial rights and autonomy, and Dostaler O'Leary's *Introduction à l'histoire de l'Amérique latine,* a monumental treatment of South American history. (*See* also Literary Prizes.)

Films of 1949.—*The Loon's Necklace* (Encyclopædia Britannica Films Inc.). (C. Cy.)

Canals and Inland Waterways.

Of the estimated 65,000 mi. of potential inland waterways in the United States, approximately 30,000 mi. had been improved for navigation by commercial and pleasure craft by the end of 1949. All operations and maintenance of the system, which included 185 harbours and 400 locks, re-

OFFICIAL OPENING of the partially completed Friant-Kern canal, July 9, 1949. Eventually the canal was to irrigate about 600,000 acres of arid land in the central valley region of southern California mained the responsibility of the corps of engineers, department of the army, under the direction of the congress.

Principal components of the over-all, interrelated system of rivers, lakes, bays and canals include the Great Lakes, the Mississippi river system, the Illinois waterway, the New York state canal system, the Cape Cod canal, the Chesapeake and Delaware canal, the Atlantic Intra-Coastal waterway, the Gulf Intra-Coastal waterway, the Sacramento river system and the Columbia river system.

The River and Harbor act approved by the 81st congress, Oct. 13, 1949, public law 355, provided $1,114,145,690 for the construction of 92 authorized projects in 37 states, including about $995,000,000 for flood control and about $119,000,000 for river and harbour projects. An additional $75,000,000 was appropriated for maintenance, operation and care of the nation's vast network of ports and inland waterways, and $3,200,000 for planning, preliminary examinations and surveys of new projects. In addition, the lower Mississippi river and the Sacramento river in California received separate appropriations of $67,000,000 and $3,600,000 respectively for construction, maintenance and operations.

Among the principal projects on which construction was begun or continued during the year were the McNary lock and dam and the Chief Joseph dam on the Columbia river in the interest of navigation, power development and irrigation; the New York and New Jersey channels; Demopolis lock and dam on the Warrior river, Ala.; Houston ship channel, Tex.; the Neches and Angelina rivers and the Sabine-Neches waterway, in Texas; lateral canal and lock project on the Mississippi river at Chain of Rocks, near St. Louis, Mo.; Morgantown dam and lock No. 2 on the Monongahela river; Cleveland harbour; the Missouri river between its mouth and Sioux City, Ia.; Pearl River, Miss. and La.; San Diego river and Mission bay, Calif.; New Haven harbour, Conn.; Jim Woodruff lock and dam, Apalachicola river, Fla. (*See* also FLOODS AND FLOOD CONTROL; RIVERS AND HARBOURS.)

According to preliminary estimates, the total net water-borne commerce of the United States, eliminating all known duplications of traffic between rivers and ports, reached the record high of 794,772,987 short tons in the calendar year 1948. Ocean traffic, foreign and coastwise, aggregated 335,253,737 tons.

Also according to preliminary estimates, United States water-borne commerce on the Great Lakes aggregated 118,000,000,000 ton-miles in 1948. This exceeded the previous all-time high of 113,639,000,000 ton-miles in 1941, and compared with 112,165,321,000 ton-miles in 1947.

Inland waterway commerce, excluding the Great Lakes, totalled 40,276,403,000 ton-miles, including the deep sea traffic on the Mississippi river below Baton Rouge, La. Of this total, the Mississippi river system accounted for 27,859,246,000 ton-miles, while the Gulf Intracoastal waterway proved to be the second most important segment, with 5,903,341,811 ton-miles.

Preliminary figures indicated that the following ten were the leading U.S. ocean ports in 1948: New York, N.Y., 135,373,128 net tons; Baltimore, Md., 41,468,955; Philadelphia, Pa., 34,966,083; Houston, Tex., 34,323,833; New Orleans, La., 29,889,400; Norfolk, Va., 27,073,681; Beaumont, Tex., 23,919,540; Port Arthur, Tex., 23,392,655; Boston, Mass., 18,502,902; Newport News, Va., 17,465,180.

FILMS OF 1949.—*Mississippi River—Lower River; Mississippi River —Upper River* (Academy Films); *Inside Passage; Valley of the Giants; Deep Waters* (U.S. Army). (G. HB.)

Canada.—At the 1949 sessions, parliament voted $8,150,000 for the maintenance of locks and dams and $3,891,000 for the operation and maintenance of canals. In addition, it voted $3,827,000 for construction and improvement to canals. There was some talk during 1949 of constructing a canal through the Chignecto isthmus to join the Bay of Fundy with the Strait of Northumberland, so as to shorten the haul of Labrador iron ore to New England markets, but no specific action was taken.

Canal traffic during the year was at record figures. Tonnages for the April-Oct. 1949 period (with similar 1948 tonnages in parentheses) were as follows: Sault Ste. Marie (Canadian-U.S.) 91,420,487 (102,456,000); Sault Ste. Marie (Canadian only) 1,979,080 (1,845,270); Welland 11,699,335 (11,541,000); St. Lawrence 6,993,058 (6,534,000). The Rideau canal, running between Ottawa, Ont., and Kingston, Ont., and used chiefly by pleasure cruisers, had 20,461 lockages in 1949, compared with 16,382 in 1946. (C. CY.)

Great Britain.—During 1949 the Transport commission published its first report and accounts covering the year 1948. Results were better than anticipated; but operations of the Docks and Inland Waterways executive showed deficits for canal tolls and carrying receipts, although the total traffic was higher than in 1947. Acquisition of the remaining railway-owned canals was continued. Improvements, including the modernization of carrying craft, were carried out. Dredging plant was transferred to deepen canals at shallow points and banks and towpaths were restored to enable full loads to be carried. The pooling of resources speeded up the turn-round of craft.

The commission owned or controlled 1,149 carrying craft (about one-sixth of the total operating on British canals) and 2,050 mi. of waterways, 1,000 mi. of which were broad gauge canals and canalized rivers. Through tolls were introduced, but only for each waterway division. Negotiation machinery was reviewed with trades unions and the constitution of the Joint Industrial council was revised.

The Port of London authority, concerned at rising dredging costs, set up a pilot model of the Thames estuary. The model was to be used experimentally to discover conditions likely to arise in a larger model to be built later embodying the knowledge gained. The larger model, it was hoped, would yield reliable data for practical application.

Belgium.—Plans were drawn up to enable large Rhine-going lighters to proceed in the northern and eastern districts above Ghent, near Antwerp, and in the Brussels district to Clabecq and Liége, financed by the European Recovery program. Mons, Charleroi, Tournai and La Louvière could only take craft up to 300 tons.

Danube.—The first meeting of the International Danube commission, which was set up at the conference in Belgrade, Aug. 1948, was held in Galați, Rumania, in Nov. 1949. F. Rudenćo, Rumania, was elected chairman. The Rumanian government announced its decision to dissolve the Rumanian Danube Steamship company and to transfer its fleet and property to the joint Russian-Rumanian transport undertaking. Great Britain, France and the United States did not attend the meeting. On Nov. 15, they sent notes to the participating nations stating that they did not recognize the commission. The Lanchid, a new chain bridge over the Danube to replace one destroyed in World War II, at Budapest, was reopened on Nov. 20

Ireland.—The Milne report recommended reorganization of Irish transport with immediate acquisition of the public transport systems including the Grand Canal company. Coras Iompair Eireann would be reconstituted and would bear administrative responsibility. A bill to give effect to these recommendations was published in October.

Netherlands.—The Dutch inland water fleet numbered 17,100 vessels totalling 5,000,000 tons—its prewar level. Work proceeded on the Amsterdam-Rhine canal for 2,000-ton ships.

Rhine.—Navigation was greatly improved during 1949. Craft were able to pass in a two-way direction except in the Cologne area, where only one direction at a time was permitted. The normal channel depth of 8 ft. between Emmerich and Ruhrort was re-established as was the buoyage to enable night navigation. The harbours at Duisburg-Ruhrort were cleared almost to their prewar capacity and much new equipment, including four 200-ton lift floating cranes and nine heavy lift portal cranes of 200–600 tons capacity, was provided. Work on the Rhine-Main-Danube was continued. The Mitelland viaduct over the river Weser was reopened on Feb. 18.

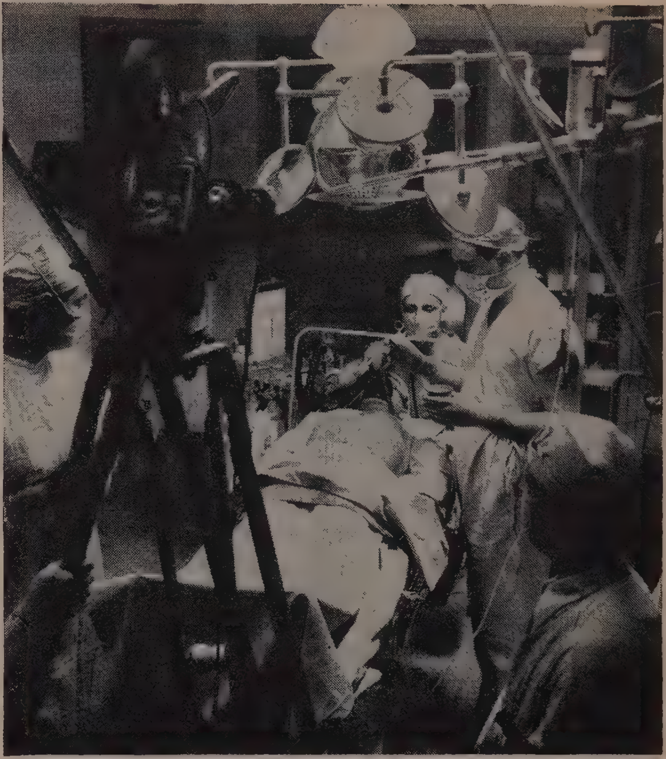
Sweden.—The Roads and Waterways administration reported on the peacetime need of the Falsterbo Ship canal, which had been cut across the peninsula of that name during World War II, to pass ships into and out of the Baltic without crossing German minefields. (*See* also AQUEDUCTS.) (W. A. F.)

Canary Islands: *see* SPAIN.

Canasta. A card game based on rummy, canasta suddenly became popular in the United States during 1949, spreading with a rapidity equalled only by mah-jongg in 1923–24 and contract bridge in 1930–32. The game was first played in Uruguay and Argentina several years before; it was introduced in the United States by Mrs. Ottilie Reilly, a bridge teacher, of New York city. Almost unknown in the country at the beginning of 1949, it was said to have had 10,000,000 players by the end of the year; 24 books on canasta had been published; more than 1,000 newspapers published instruction series on the game, special equipment for playing it enjoyed large sales.

The first canasta rules followed in the United States were those imported from Argentina, codified by Senora Josefina Artayeta de Viel; but while those rules still had some following, most U.S. writers and players adopted somewhat different rules prepared by the Regency club in New York city and adopted by a National Canasta Laws commission. (A. H. MD.)

Cancer. The cause of cancer continued under intensive study in 1949. As far as could be judged, it arises from an alteration in the cell, a so-called mutation, which may take place under a variety of conditions, including exposure of the cells to injury or infection which causes them to grow. W. R. Earle showed that if the cells of normal tissue are cultivated for a long time in an artificial culture medium their biological qualities may be altered so that they can on inoculation produce a malignant growth. His experiments were done with animal tissues, obviously, and with standard methods of tissue culture. Slight irritations produced by exposure to physical agents, such as X-ray or radium, will set up a course of events in the individual cells which represent a mutation, that is, a change into a new type of cell which is more or less permanent, and ultimately is recognizable as what is called a malignant growth. In other words, the cancer cell is simply a normal cell which under various conditions is so altered in the course of time that it is capable of extending into normal structures and ultimately causing the death of the host. In animals there are certain types of tumours which differ somewhat from those in human beings, particularly those in human beings which are apparently caused by a mutation occurring in the tissues of the breast. John J. Bittner studied cancer of the breast in a strain of mice which in all probability was due to the presence of a virus in the tissues. The virus was apparently transmitted by nursing and gave rise to a large number of malignant breast tumours if healthy animals were permitted to nurse from an infected strain. The breast tumour tissue contains minute particles which may be demonstrated only under special conditions. These small particles were believed to be a type of virus, as they could be obtained in quantity only by centrifuging at a high speed the fluid obtained from extracts of these breast cancers. The demonstration of these particles was first made by R. D. Passy and his colleagues in the department of experimental pathology, University of Leeds, Eng. The suggestion that human breast cancer may be caused by the same organism was discussed to a considerable extent in popular magazines during 1949, but there was no evidence of any such transmission of human tumours.



A STILL from the 1949 medical training film *Cancer: The Problem of Early Diagnosis*, sponsored jointly, for professional audiences, by the American Cancer society and the National Cancer institute

Treatment.—The treatment of cancer with isotopes produced by the cyclotron was being carried out on a large scale in 1949, chiefly with iodine (I^{103}) and phosphorus (P^{32}) with or without radiation as an adjuvant. The radioactive iodine was used largely in the treatment of thyroid conditions, either without the application of surgery or as a combination of treatment; some clinics gave thiouracil at first, followed by radioactive iodine, to reduce the activity of the gland, followed by excision. Others simply gave the radioactive iodine to be followed by surgery. Mild cases might be sufficiently benefited by the radioactive iodine alone.

Of the blood diseases the only one which seemed to be effectively treated is polycythaemia. In the leucaemias, reduction of the cells by the administration of radioactive substances was accomplished, but the limitations of dosage had to be carefully followed because of the destruction of the normal cells of the bone marrow as well as the pathological types. As a rule X-ray was a safer method of treatment of the leucaemias, though in expert hands a combination of radioactive material and X-ray seemed to be of benefit.

The use of high voltage X-ray was being studied in 1949, using radiation of 1,000,000 v. or more, but as might be expected, no great biological differences could be detected between the high voltages and the ordinary 200 or 300 kv. X-ray which had become fairly standardized. This was to be expected from the results published by Charles Packard, who showed by using a biological object and measuring the output of the machine in an ionization chamber that there were no differences in the lethal effect of radiation from 160 kv. to 1,000,000 kv. The only advantage of the higher voltage is that the penetration is somewhat greater and hence can influence deeper tissues, but there was always the danger with such high voltage treatment of excessive damage unless measurements were carefully made. The cost of such high energy also put it entirely outside of all but a few research institutes, and the tendency was to use radium or one of the radioactive isotopes for local treatment and moderate voltages of X-ray for general therapy, especially of internal cancer. (*See* also BIOCHEMISTRY; CHEMOTHERAPY; MEDICINE; NUTRITION, EXPERIMENTAL; SURGERY; X-RAY AND RADIOLOGY.)

Candy.

Sales of candy in the United States in 1949 amounted to approximately $960,000,000 on the wholesale level or about 5% less than the record $1,001,000,000 reported in 1948. The retail volume was just under $2,000,000,000. Expressed in tonnage, the 1949 confectionery business matched the 1948 output of 2,673,000,000 lb., but fell short of the all-time record production of 2,804,000,000 lb. in 1944. The average value at wholesale per pound was 35.5 cents in 1949, compared with 37.5 cents in 1948 and 23.5 cents in 1944.

The major development in the candy industry during 1949 was the return of the strong competitive situation that was in existence before World War II, but which had not been in evidence since 1941. Other important developments were: (1) the decision reached at the international cocoa conference held in London, Eng., in August, to work toward the goal of maintaining cocoa prices at existing levels; (2) increased emphasis on the mass selling of candy by syndicates and supermarkets; (3) the success enjoyed by 10-cent bars, with one 10-cent bar outselling all 5-cent candy bar leaders; (4) the impetus recorded in the candy-as-a-career program, as evidenced by the launching of a number of candy training centres; (5) the introduction of new processes and machines, the most notable of which were a new chocolate making process, a new way to make marshmallow candy and tank car delivery of chocolate coatings (liquor) in a manner similar to the delivery of corn syrup, liquid sugar, milk, oil and other liquid products; and (6) the increased flow of candy from England and other parts of Europe into the United States. (*See* COCOA.)

Chocolate coated candies continued to dominate the consumer demand. Moulded (solid) chocolate goods were also in particularly good demand. The dollar per pound box of candy was most popular in the fancy packaged goods field and an increase was noted in the "less than a dollar per pound" package.

For the first time in six years, bar type candies did not represent more than one-half of the industry's tonnage, this business showing a decline from 51% in 1948 to 47% in 1949. Packaged goods accounted for 21%, bulk goods 18%, 5- and 10-cent specialties 8%, and penny goods just under 6%.

As in previous years, the United States continued to be the greatest candy-producing country in the world, although Great Britain still led the world in per capita consumption. The per capita consumption in the United States in 1949 was about 18 lb., compared with 20.5 lb. in 1944 and 13 lb. in 1933. The per capita consumption of candy in Great Britain was 22 lb.

Imports of candy showed an increase in 1949 as against 1948 but exports continued to surpass imports. It was estimated that between 3,000,000 and 4,000,000 lb. of candy, valued at about $1,500,000, were imported into the United States in 1949. About two-thirds came from England, with some from Italy, the Netherlands and Denmark. More than 8,000,000 lb. of candy of various types, mostly nonchocolate, were exported from the United States during 1949.

(H. D. G.)

Cane Sugar: *see* SUGAR.

Canning Industry.

The United States and territorial pack of canned fruits, juices, vegetables, fish, milk and fruit and vegetable specialties in 1949 totalled approximately 533,000,000 standard cases (preliminary estimate) compared with 552,000,000 standard cases in 1948. These figures do not include poultry and other unclassified specialty products packed by the canning industry. Preliminary statistics for the 1949 pack compared with that for 1948, in terms of millions of standard cases, were shown as follows:

	1949	1948
Fruits	79.0	80.0
Fruit juices	62.0	65.0
Vegetables	178.0	185.0
Fruits and vegetable specialties	100.0	93.0
Milk	65.6	81.1
Fish	25.0	23.7
Meat*	23.2	24.2

*Total pounds divided by factor of 45.

With the exception of canned fish the canned food groups listed showed moderate to substantial reductions for 1949, as compared with 1948. On the basis of year-end estimates, the total pack reduction for these commodities was slightly less than 3.5%.

Supplies of canned foods generally for 1949 were about the same as they were for the previous season. There was a moderate increase in canned vegetables carried over from the previous year which, coupled with the slightly reduced over-all pack, was expected to make for an even supply in the 1949–50 distribution.

As in 1948, retail prices of canned fruits and vegetables, according to statistics from the U.S. bureau of labour statistics, remained closer to prewar levels than other foods, showing an increase from the 1935–39 base years of about 54% as against more than 100% for all foods. The bureau of agricultural economics of the U.S. department of agriculture estimated the per capita consumption of canned fruits and vegetables in 1949 at 122% of the 1935–39 prewar average.

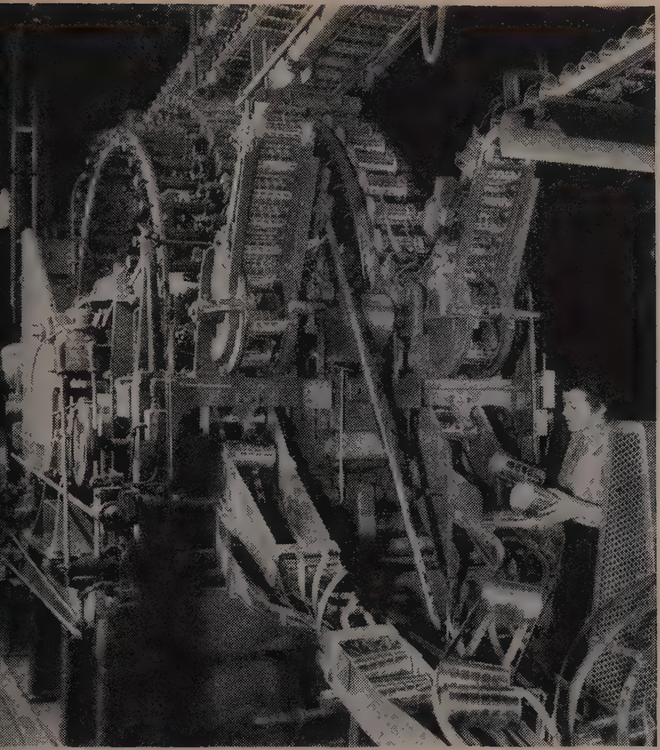
Special publicity was given to the results of the $250,000 nutrition research program, supported by the National Canners association and the Can Manufacturers institute, which in 1949 was in its seventh year. In 1949, publication was made of the results of special protein studies of canned meat and fish products which showed them to be outstanding in their contribution of complete proteins to the diet.

The government conservation order M-81 was revoked on Dec. 1, 1949, thus ending the limitation of the use of tin in can manufacture which had existed since Feb. 1942. Specification requirements for tin plate which were covered in order M-43 ended in Aug. 1949.

The International Tin Study group estimated the world production of metallic tin for Jan.–Aug. 1949 at 112,100 long tons with consumption at 80,100 tons during this period. Production and consumption for the year 1948 were 157,500 and 138,900 tons, respectively. An unofficial estimate placed the size of the U.S. tin stock pile at 85,000 tons in Dec. 1949.

(E. J. C.)

Other Countries.—Several leading British canners established new factories abroad. A former automobile factory at Port Elizabeth, South Africa, converted into a modern cannery for fruits, vegetables, soups, etc., came into operation. Another new cannery was erected in the Paarl area. A meat cannery—



MPROVED TESTING MACHINERY installed at the American Can Co. plant n Tampa, Fla., in 1949. The new equipment checked some 15,000 cans per hour and automatically discarded any that were defective

he largest in East Africa—was established in Tanganyika by a famous meat extract firm, which also obtained approval of the Anglo-Egyptian Sudan government for the erection of a cannery at Kosti to handle, when completed, 100,000 cattle annually.

There was a continued expansion of fish canning, notably in Australia and South Africa. Moves were made in South Africa to bring the fish canning concerns under unified control in order that the industry could develop along economic lines. A new cannery was built on the lonely island of Tristan da Cunha to pack crawfish tails for export to America.

Production began at the first fruit cannery to be set up in the Dominican Republic, West Indies. Several canneries in Norway started to pack chickens for export.

With regard to technical developments during 1949, it was announced that the New South Wales department of agriculture and the Commonwealth Scientific and Industrial Research organization had canned cantaloupes for the first time. The committee of direction of fruit marketing in Queensland developed a process for canning bananas and made an experimental pack to test public reaction. A development in the United States was a special can containing cream and gas under pressure, to deliver whipped cream as required on pressing a knob.

Several countries sent factory ships and floating canneries to the antarctic for the whaling season, which started in December.

Cartography.

The pace in cartography in 1949 was slower than in previous years. Emphasis shifted from spectacular production to more basic and enduring works. Bibliographies, histories and similar scholarly studies appeared. National atlases of prewar quality were under way or in the process of publication. From an over-all viewpoint the wartime acceleration disappeared and a more mature aspect was beginning to show in cartography.

International.—The first truly international conference of an official nature on cartography was held by the United Nations Economic and Social council at Lake Success, N.Y., March 21 to April 1, 1949. The proceedings leading up to the meeting originated during the sixth session of the Economic and Social council in Feb. 1948 when the representative from Brazil introduced a resolution calling for the member governments to stimulate mapping, promote exchange of technical data, promote close co-operation of national cartographic services and coordinate the cartographic work of the United Nations. During debate the proposal was made that the secretary-general convene a committee of five cartographic experts and representatives of specialized or international organizations for the purpose of preparing a plan for carrying out the resolution.

In March 1948 the secretary-general transmitted the resolution to all member governments for comment and suggestions concerning its implementation. Shortly afterward the specialized and international organizations were contacted for comment. From June 2 to June 4, 1948, a round-table discussion concerning the resolution was held in Washington, D.C., by several international cartographic organizations that had meetings scheduled for the latter part of 1948. As a result of the discussions the meeting of experts was put off until 1949 so that the subject could be examined at the meetings of these organizations. In Feb. 1949 the secretary-general convoked the meeting of experts on cartography for March 21 to April 1, 1949.

The committee of experts was composed of one representative each from the United States, Brazil, the Netherlands, Belgium and the United Kingdom. Ten additional representatives from international or specialized agencies completed the committee. The comments received from member governments included 19 questions to be considered by the committee. After considering all the suggestions and questions the committee promulgated four recommendations involving international meetings of governmental cartographic agencies on a regional basis; the establishment in the secretariat of the United Nations of a cartographic office capable of serving the U.N. or other specialized agencies; the establishment of a panel of consultants on whom the U.N. could call for counsel on specific problems; the holding of periodic meetings for the purpose of reviewing progress and problems of world mapping.

The full report of the committee went far beyond reviewing the resolution and presenting recommendations. It included a review of the status of world mapping with an index to topographic maps and an index of geodetic control; a study of modern cartographic methods; and a study of the need for maps. The second volume of the report contained the text of communications received from member governments and specialized agencies. In addition to comments on the resolution the governments were requested to summarize their cartographic activities. The summaries varied in detail but in general they contained much information not previously made public. China, for the first time, issued detailed information on its mapping activities, as did Thailand and Pakistan.

United States.—Private publishers dominated the cartographic field in the United States in 1949. The Automobile Club of Southern California completed an outstanding job in survey and mapping with the publication of its road map of San Bernardino county, Calif. The mapping covered a period of five years during which crews, using trucks and trailers, covered many areas that had not been previously surveyed.

During the past few years there had been a rising demand for place name indexes and gazetteers. Several important works in this field were published during 1949. The University of

California published a volume on *California Place Names* by Erwin G. Gudde. The work was started in 1935 as a WPA project and issued in an abridged form in 1947. The final publication of 431 pages contained more than 6,000 place names with appropriate descriptions. It was one of the most comprehensive publications of its type.

Webster's Geographical Dictionary, published in 1949, was a unique publication in the field of gazetteers. This work, with more than 40,000 names, abandoned the use of latitude and longitude to locate features and designated all positions relative to well-known cities or natural features. In addition to the place name designations, this volume had a comprehensive guide to pronunciation, generics and an outline of the principles of toponymy. This was the first time these features had been published in complete form for popular use in the United States.

Lloyd A. Brown's book, *The Story of Maps,* published in 1949, was the first popular, comprehensive history of cartography to be published in the United States.

The United States geological survey issued two new sheets of the International Map 1:1,000,000. These sheets, N. K-10 Mt. Shasta and N. K-17 Lake Erie, plus seven which were in work, were all that had been planned for the United States.

Europe.—At least five countries in Europe were preparing national atlases during 1949. The Institut Royal Colonial Belge issued the first sections of its *Atlas général du Congo,* consisting of maps on phytogeography, national parks, routes of exploration and a general map. The maps were on a scale of 1:3,000,000 or 1:5,000,000 and were accompanied by explanatory texts and bibliographies in both Flemish and French. The sections were issued separately and additional parts on geology, administration, ethnology, transportation, boundaries, economics, population, linguistics, hydrology and telecommunications were in the course of preparation or projected.

The *Bibliographie cartographique internationale 1946–1947* was published in 1949 by the Comité National Français de Géographie et de l'Union Géographique Internationale. The bibliography, prepared by experts from seven countries under the direction of M. Foncin and P. Sommer, was an annotated listing of maps published in 1946. While titled "International" it concentrated on France, the Netherlands, Finland, Denmark, Portugal, Switzerland, Sweden and Belgium, which were the countries represented by the experts. The publication succeeded the *Bibliographie cartographique de la France* of which three volumes dating back to 1936 were published. The 1949 publication was the first attempt at international coverage.

International Meetings.—Cartography played an important role in the 16th International Geographical congress held at Lisbon, Port., April 8 to 15, 1949. This meeting, originally scheduled for Sept. 1948, was the first held since 1938 when the congress met in Amsterdam, Neth. The section on cartography interested itself in four major phases that included problems of representation of relief, especially on small-scale maps; mapping of heavily wooded areas; recording of reliability according to international standards; and the standardization of conventional signs and symbols. As a result of the discussions committees were appointed or continued to investigate the adaptation of the International Map 1:1,000,000 as a standard base for plotting geographical, economical or similar information; the preparation of a bibliography of ancient maps; and the mapping of populations at a scale of 1:1,000,000. Fourteen countries reported on new cartographic work that in part was amplified by an exhibit of maps and other cartographic material assembled by private individuals, institutions or government agencies from the United States, Canada, France, Belgium, Switzerland, Brazil, Italy and Portugal. (*See* also COAST AND GEODETIC SURVEY; ELECTRONICS; GEOGRAPHY; NATIONAL GEOGRAPHIC SOCIETY.)

Cement.

Postwar construction had caused the world production of cement to advance from 55,800,000 short tons in 1945 to 93,200,000 tons in 1947 and 107,100,000 tons in 1948, as compared with 102,500,000 tons in 1939.

United States.—The salient features of the cement industry in the United States during the past several years were reported as follows by the U.S. bureau of mines:

New record highs were made in 1948 in both production and shipments, and for the first year since 1943 production was able to keep up with demand.

In the first three quarters of 1949 production advanced 4% and shipments 2% over the corresponding 1948 levels, to 155,792,000 bbl. and 156,032,000 bbl.

Canada.—Cement production in Canada was 12,219,363 bbl. in 1947, rising to 14,007,449 bbl. in 1948, and 11,952,485 bbl. in the first three quarters of 1949. Shipments in the same periods were 11,930,318 bbl., 14,098,632 bbl., and 12,295,02 bbl., respectively, while the domestic output was supplemented by 1,248,625 bbl., 1,120,671 bbl. and 767,476 bbl. (G. A. Ro.)

Census Data, U. S.

The population of the U.S. on July 1, 1949, including persons in military service overseas, according to preliminary estimates, was 149,215,366—an increase of 2,644,327 over the population estimated for July 1, 1948. The sources of the increase between 1948 and 1949 may be analyzed as follows: there were during the year ending June 30, 1949, 3,723,027 births, from which may be subtracted 1,442,070 deaths, leaving a natural increase of 2,280,957, which represents the major part of the population increase. The remainder was made up of the net civilian immi-

*Estimated total, including adjustment for underregistration. †Preliminary figures.

gration, which amounted to 363,370. The rate of increase during the year ending June 30, 1949, was 1.80%, or slightly more than the increase during the preceding fiscal year (1.77%) and only a little less than the record increase of 1.98% attained in fiscal year 1947. The number of immigrants in 1949 was somewhat larger than in 1948 (363,370 net, as compared with 312,162, both figures including considerable numbers from Puerto Rico).

The natural increase was a little larger than in the preceding year by reason of a slight increase in the number of births and a slight decrease in the number of deaths. The increase in the number of births ran counter to the expectation of many statisticians working in this field—some of whom had anticipated a sharp decline from the record figures of 1947.

A preliminary estimate for Oct. 1, 1949, gave the U.S. a total population of 149,947,000, or 732,000 more than on July 1.

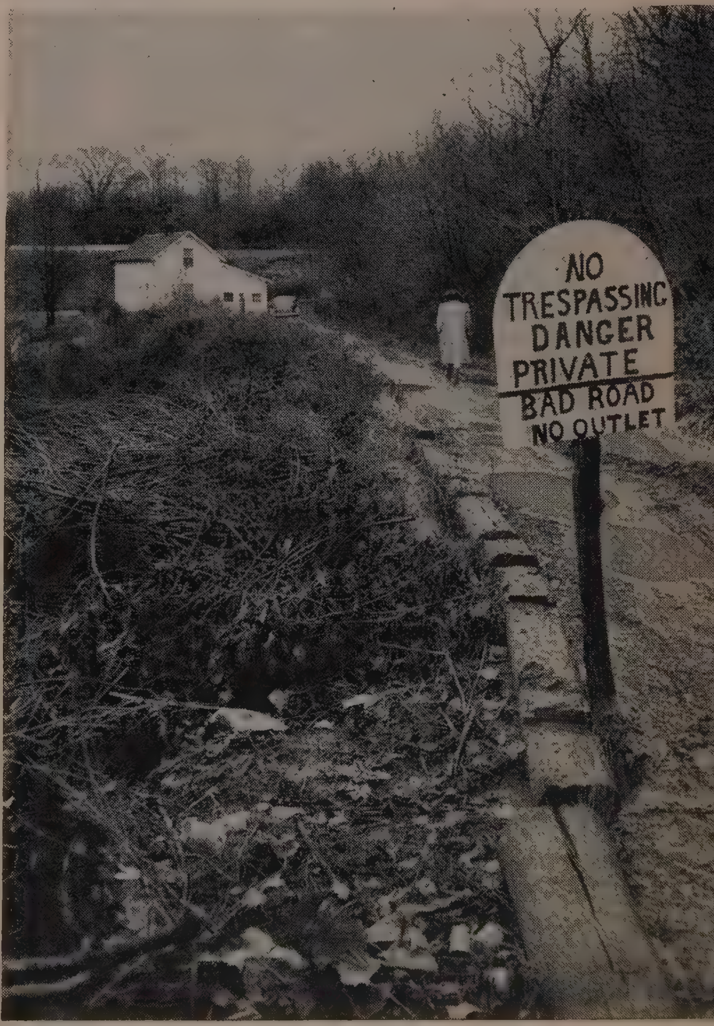
The population estimated for July 1 of each year from 1940 to 1949 is presented in Table I, which shows also the various elements used in computing the estimates; namely, births, deaths and immigration from outside continental U.S. The estimates are presented in this table to the last digit as computed instead of being rounded, not because they are assumed to be accurate to the last digit, but for convenience in summation.

Two other types of estimates were made—one series representing the population actually living in the U.S., excluding the armed forces overseas (sometimes referred to as the *de facto* population), and the second, the civilian population, excluding practically all persons in military service. In 1945 there were more than 12,000,000 persons in military service, so that the total population far exceeded the civilian population. In July 1949 the estimated civilian population of the U.S. was 147,752,000, differing from the total population by less than 1,500,000. For the same date the *de facto* population, including all military personnel in continental U.S., but excluding that overseas, was 148,720,000, and as of Oct. 1, 1949, 149,460,000. Assuming that current rates of increase would continue for the six months between Oct. 1949 and April 1950, a 1950 census total of around 151,000,000 was indicated.

Population Forecasts.—Because the birth rate and the consequent rate of population increase were maintained through fiscal year 1949 at a level almost as high as in the record year 1947, and far above expectations based on general trends in population growth, there was wide interest in forecasts of the probable size of the population in future years. All of the official forecasts issued by the bureau of the census were based on assumptions established before it became evident that the high birth rates of the second postwar year would be so well maintained, and therefore fell short of representing the future population which conditions in Nov. 1949 indicated as likely. It seemed evident at that time that the population on July 1, 1950, including military personnel outside continental U.S. would be around 152,000,000; and assuming only moderate declines in the birth rate and a continued increase in immigration, it seemed likely that the total population in 1955 might approximate 162,000,000 or 163,000,000.

Age Distribution.—Important changes in the age distribution of the population of the U.S. took place between 1940 and 1949, as indicated in Table II. The most striking changes were those which resulted from the greatly increased number of births which took place in the years following 1940. The proportion of the population under 5 yr. of age in 1949 was 10.6%, as compared with 8.0% in 1940, while the proportion 5 to 9 yr. of age increased from 8.1% to 9.0%. The proportion of the population 10 to 14 yr. old, however, decreased from 8.9% in 1940 to 7.5% in 1949, and the proportion 15 to 19 years old decreased even more, from 9.4% to 7.2%. Persons in these two age groups represented roughly the survivors of those born during the low-birth-rate depression years. At the upper end of the age scale, on the other hand, there were appreciable increases in the 1949 percentages as compared with 1940.

The importance of the high birth rates which had prevailed since 1940, and especially since 1946, as a factor affecting the age distribution may be indicated in another way by noting that while the total population of the U.S. increased 13.3%



TRIAL CENSUS TAKER at work in 1949, visiting residents of Union county, Ind., to test new questions and techniques before the real count scheduled to be taken in 1950

Median age . . .	29.8	—	29.0	—	—	—

*A minus sign (—) denotes decrease.

between 1940 and 1949, the population under 5 yr. of age increased 49.9%, and that from 5 to 9 yr. of age increased 25.9%, as against actual decreases of 5.0% and 12.8%, respectively, in the age groups 10 to 14 and 15 to 19. The fact that the fundamental increase in the older groups of the population was going on at a rather rapid rate, in spite of the fact that their percentages of the total increased but little, was brought out by such figures as the rates of increase for persons 70 to 74 yr. of age and 75 and over, which were, respectively, 25.0% and 35.8%.

In spite of the very heavy increase in the number of persons under 10 yr. of age, however, the median age of the entire population increased from 29.0 in 1940 to 29.8 in 1949.

The population 14 yr. old and over, from which is drawn the labour force of the nation, increased only 9,842,830, or 9.7% (from 101,102,924 in 1940 to 110,945,754 in 1949), while the much smaller population under 14 yr. of age increased 7,703,261, or 25.2%.

Internal Migration.—In a sample survey made by the bureau of the census in April 1949, persons who had moved from one county to another during the preceding year were classified as migrants and certain other data were obtained with regard to the extent of the movement. The results of this survey, in common with other data based on sample inquiries, are subject to a moderate sampling variability. With respect to these sample-based statistics it may be said in general that the totals and the larger items in any given table are subject to a fairly small error from this source, but that the smaller subtotals, and in particular the differences between one figure and another, are subject to a possibility of error which increases with the decrease in the size of the figures in question. The migration data are summarized in Table III.

Of the 144,101,000 persons one year old and over in the civilian population in April 1949, 27,603,000, or 19.2%, were living in a different house from the one they occupied on April 1, 1948. Of these, 18,792,000 had moved from one house to another within the same county, while 8,335,000 had moved at least from one county to another and were therefore classified as migrants. And in addition, nearly 500,000 had returned from abroad.

Of the migrants, 3,992,000, representing 2.8% of the total population one year old and over, had moved simply from one county to another within the same state, while 1,782,000 had moved between contiguous states, and 2,562,000 had moved between noncontiguous states, these latter moves representing, on the average, much longer distances.

The percentage of migrants was materially lower in the population living in urban areas in 1949 than in the population living in rural-nonfarm or rural-farm areas, the figures being 5.1% for urban areas, and 6.9% and 6.7%, respectively, for the two types of rural areas. With respect to the several types of migration, it may be noted that the proportion of the whole number of migrants who had moved between noncontiguous states (that is, for longer distances) was materially higher in the urban and rural-nonfarm areas than in the rural-farm, though among the nonmigrants the proportion moving from one house to another in the same county was materially higher in rural-nonfarm areas than in either the urban or the rural-farm.

The classification of the migrant and nonmigrant populations by age, as shown in Table IV, indicates that in general persons under 35 yr. of age were more likely to be migrants than those 35 yr. old and over and that the tendency toward movement of this type decreased with further increase in age. The median age of the migrants was only 25.2 yr., as compared with 31.3 for the nonmigrants.

Of the total male population, 6.05% were classified as migrants, as compared with 5.53% of the female population. For some of the specific ages shown in Table IV, however, there were considerably greater differences. Thus, 10.28% of the females 18 to 19 yr. old had moved from one county to another in the year preceding the survey, as compared with 8.43% of the males, while in the age group 20 to 24, 11.30% of the males were classified as migrants, as compared with 9.96% of the females.

The number of migrants returned in April 1949 was considerably smaller than the number returned in a similar survey made in April 1948, but the pattern of the internal relations of the data was substantially the same as in the earlier year.

Marital Status.—The proportion of the adult population that was reported as married in the 1949 survey was decidedly higher than that shown in the 1940 census. In fact, the proportion married had been steadily rising, decade by decade, since 1890, the earliest date for which the census reports gave information on marital status. The data for 1949 and 1940 are summarized in Table V.

Table III.—*Migration between April 1948 and April 1949, by Sex and by Urban-Rural Residence*

(Data relate to the civilian population one year old or over in April 1949. A migrant is defined as a person who had moved at least from one county to another in the 12 months preceding the survey. Figures based on a small sample survey made in April 1949)

Migration status	Total		By sex				By residence					
			Male		Female		Urban		Rural—nonfarm		Rural—farm

18 and 19 yr. . . .	2,217,000	1,977,000	228,000	10.28	12,000
20 to 24 yr.	5,952,000	5,343,000	593,000	9.96	15,000
25 to 34 yr.	11,982,000	11,001,000	933,000	7.79	48,000
35 to 44 yr.	10,498,000	10,040,000	432,000	4.12	26,000
45 to 64 yr.	15,307,000	14,867,000	428,000	2.80	12,000
65 yr. and over. . .	5,879,000	5,704,000	170,000	2.89	5,000
Median age	31.0	31.6	24.5	—	24.7

Of the 56,001,000 females 14 yr. old and over in the civilian population of the U.S. on April 1, 1949, 37,013,000, or 66.1%, were married, whereas in 1940 only 59.5% were married, and in 1890 less than 55%. Of the civilian male population 14 yr. old and over in 1949, 68.2% were married, as compared with 59.7% in the population covered by the census of 1940 and a little more than 52% in 1890. It should be noted, however, that slightly more than 1,000,000 males, for the most part single, were omitted from the count of the civilian population in 1949 because they were in military service. If the percentage married had been computed for the entire population, including those in military service, the figure would have been somewhat lower.

Separate figures were obtained both in the 1949 survey and in the 1940 census for married persons where both husband and wife were living in the household at the time of the inquiry, and for "married, spouse absent." Thus, of the 36,474,000 married men returned in 1949, 35,323,000, or 96.8%, were classified as with "wife present." The remaining 1,151,000 represented in part cases of separation which might eventually result in divorce, but probably more often cases where the husband was living apart from his wife (or vice versa) in order to obtain employment or for some other temporary economic reason.

Table V.—*Marital Status of Persons 14 Yr. Old and Over, by Sex, 1949 and 1940*

(Figures for 1949 based on a small sample)

Marital status	1949 Number	1949 Per cent	1940 Number	1940 Per cent
Male				
Total 14 and over* . . .	53,448,000	100.0	50,553,748	100.0
Single	13,952,000	26.1	17,593,379	34.8
Married	36,474,000	68.2	30,192,334	59.7
Wife present	35,323,000	66.1	28,657,820	56.7
Wife absent	1,151,000	2.2	1,534,514	3.0
Widowed.	2,181,000	4.1	2,143,612	4.2
Divorced	842,000	1.6	624,423	1.2
Female				
Total 14 and over* . . .	56,001,000	100.0	50,549,176	100.0
Single	11,174,000	20.0	13,935,866	27.6
Married	37,013,000	66.1	30,090,488	59.5
Husband present.	35,323,000	63.1	28,516,937	56.4
Husband absent	1,690,000	3.0	1,573,551	3.1
Widowed.	6,582,000	11.8	5,700,202	11.3
Divorced	1,233,000	2.2	822,620	1.6

*For 1949, civilian population; for 1940, total population (which at that time did not differ materially from the civilian population).

Married Couples.—There was considerable interest, largely from the point of view of housing, in the number and proportion of married couples who had not set up their own separate households but were living as parts of other households—rather largely in the households of the parents of either husband or wife. Specific figures on this relationship are presented in Table VI.

Table VI.—*Married Couples by Household Relationship, 1940 and 1947–49*

(Figures for 1947–49 based on a small sample)

Date	Total	With husband as head of household	With husband not as head of household Number	With husband not as head of household Per cent of total
April 1940	28,516,937	26,570,502	1,946,435	6.83
April 1947	33,406,000	30,545,000	2,861,000	8.56
April 1948	34,289,000	31,834,000	2,455,000	7.16
April 1949	35,323,000	33,167,000	2,156,000	6.10

Of the 35,323,000 married couples returned in the survey of April 1949, 2,156,000, or 6.10% were living in households of which the husband was not the head. This second figure represents, as already indicated, couples who were sharing the living quarters of other persons or were living in hotels, rooming houses, etc. The percentage of married couples who had not established their own households had decreased from 8.56 in 1947 to 7.16 in 1948, and finally to 6.10 in 1949, which figure was appreciably less than the corresponding figure for April 1940, which was 6.83. These figures may be taken as an indication that the amount of "doubling up" of families, which formed such a disturbing problem in the war years and immediately thereafter, was well on the way toward a solution in the spring of 1949.

Employment and Unemployment.—The civilian labour force, which includes both the employed and the unemployed, was estimated at 62,576,000 in Oct. 1949, as compared with 61,775,000 in Oct. 1948. Of the increase of 801,000, or 1.3%, 664,000 were women. The total population 14 yr. old and over increased in this same 12-month period by about 1,100,000.

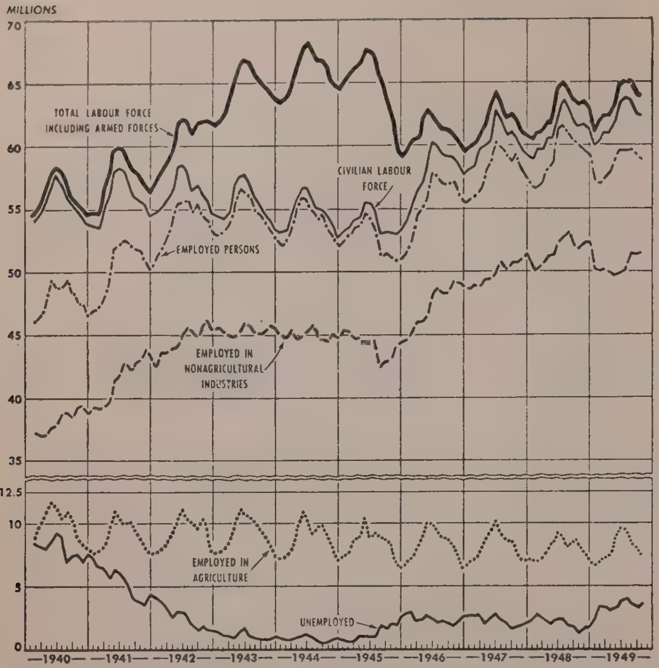
The data on employment status for Oct. 1949 and Oct. 1948 are summarized in Table VII, which shows also the amount of change during the year preceding Oct. 1949.

Table VII.—*Population by Employment Status, Oct. 1949 and Oct. 1948*

(Employment figures based on a small sample)

Employment status	Oct. 1949	Oct. 1948	Net change
Total noninstitutional population 14 years old and over .	109,975,000	108,853,000	+1,122,000
Total labour force including armed forces	64,021,000	63,166,000	+855,000
Armed forces	1,445,000	1,391,000	+54,000
Civilian labour force	62,576,000	61,775,000	+801,000
Employed	59,001,000	60,134,000	−1,133,000
Unemployed	3,576,000	1,642,000	+1,934,000
Not in the labour force	45,953,000	45,685,000	+268,000

The total labour force, including the armed forces, was estimated at 64,021,000 in Oct. 1949, being 855,000 higher than a year earlier, and about 6,500,000 higher than in Nov. 1941, just prior to the entry of the U.S. into World War II. The increase in the number of women in the labour force since 1941 represented slightly more than half of the total increase. Since the labour force participation rate for women is much lower than that for men, this approximately equal division of the increase connotes an appreciable increase in the percentage of women in the labour force. While the percentage of the male population 14 yr. old and over in the total labour force was about the same in 1949 (83.6 in October) as in 1941, the percentage of the female population in the labour force had increased from 29.9 in Oct. 1941 to 33.2 in Oct. 1949. Even within the year between 1948 and 1949 this percentage increased from 32.4 to 33.2. The estimated number of employed persons in Oct. 1949 was 59,001,000, or 1,133,000 less than in Oct. 1948. During the



TRENDS in the labour force, 1940 to 1949 (Source: U.S. Bureau of the Census)

same period there was an increase of 1,934,000 in the number of unemployed persons (from 1,642,000 to 3,576,000), while the number of persons not in the labour force increased by 268,000.

The number of unemployed, which had been maintained at figures around 2,000,000 for many months, first passed the 3,000,000 mark in Feb. 1949, and attained a maximum (for recent years) of 4,095,000 in July 1949. Lower figures were reported for subsequent months through November. The unemployment rate in Oct. 1949 (that is, the proportion of those in the civilian labour force who were unemployed) was 5.7%, as compared with 2.7% a year earlier. The average duration of unemployment for both men and women unemployed in Oct. 1949 had been about 11 weeks.

Table VIII.—*Civilian Employment and Unemployment in the United States: July 1945 to Oct. 1949*

(Figures are exclusive of institutional population as well as persons in the armed forces. Employment data based on a small sample)

The data from the reports on the labour force are presente for selected dates from July 1945 to Oct. 1948 in Table VIII while the chart on this page shows the principal items in graphi form for the entire period from April 1940 to Oct. 1949.

Industry.—Of the total number of male workers employed i Oct. 1949, 6,302,000, or 15.2%, were employed in agricultur and 35,123,000 in nonagricultural industries. Of the femal workers, only 1,408,000, or 8.0%, were employed in agriculture as compared with 16,167,000 in nonagricultural industries. Th percentages of employment in agriculture were considerabl higher in July, at the peak of farming operations and somewhat lower in January, when agricultural activity was approximately at its lowest point.

These figures are summarized on a quarterly basis in Tabl IX, which distributes the workers also by number of hour worked during the survey week.

Table IX.—*Persons Employed in Nonagricultural Industries and in Agricultur by Hours Worked during Survey Week: Oct. 1948 to Oct. 1949*

(Thousands of civilians 14 yr. old and over. Data based on a small sample)

Class, sex and date	Total employed	Worked 35 hr. or more	Worked 15–34 hr.	Worked 1–14 hr.	With job bu not a work
Employed in nonagricultural industries

July 1949	2,024	970	955	77	2
Oct. 1949	1,408	566	694	118	3

Hours of Work.—The average hours of work during th week of Oct. 2–8, 1949, for all persons at work was 42.2 wit 47.9 for workers in agriculture, and 41.3 for those in nonagricultural industries. There were also considerable number of persons classified as employed because they had a job o business from which they were absent during the survey wee for some temporary reason such as sickness or vacation but t which they expected to return shortly so that they were not i the market for other employment. The maximum number o persons in this status was reported for July, which is a popula vacation month.

The numbers of these persons are shown in the last colum of Table IX.

Part-time Workers.—Of the 59,947,000 persons returned a employed in the second week of Aug. 1949, as indicated by th figures in Table X, 8,293,000, or 13.8%, worked only part time that is, less than 35 hr. Of this number, 3,218,000 usuall worked full time at the jobs they then had, and 5,075,00 usually worked part time. Of the part-time workers on full time jobs, 1,474,000 worked part time during the survey wee because of such economic factors as slack work, layoffs, jo turnover, etc. The remainder, 1,744,000, worked part time because of illness, vacation, bad weather and various persona and miscellaneous reasons.

As between male and female workers, it may be noted tha 21.7% of the employed women worked part time and onl

Table X.—*Employed Persons in the Civilian Population Working Full Time and Part Time, by Sex: Aug. 1949*

(Data based on a small sample. Numbers in thousands)

Employment status	Both sexes Number	Both sexes Per cent	Male Number	Male Per cent	Female Number	Female Per cent
Total employed persons (14 yr. old and over)	59,947	100.0	42,664	100.0	17,303	100.0
Worked full time during survey week	47,131	78.6	35,297	82.8	11,835	68.4
Worked part time during survey week	8,293	13.8	4,539	10.6	3,754	21.7
Usually work full time at present job	3,218	5.4	2,403	5.6	815	4.7
Worked part time because of economic factors	1,474	2.5	1,020	2.4	454	2.6
Worked part time for other reasons	1,744	2.9	1,383	3.2	361	2.1
Usually work part time at present job	5,075	8.5	2,136	5.0	2,939	17.0
Prefer and could accept full-time work	1,081	1.8	688	1.6	393	2.3
Do not prefer or could not accept full-time work	3,994	6.7	1,448	3.4	2,546	14.7
With a job but not at work	4,522	7.5	2,808	6.6	1,714	9.9
Usually work full time at present job	4,190	7.0	2,677	6.3	1,513	8.7
Usually work part time at present job	332	0.5	131	0.3	201	1.2

10.6% of the employed men.

Of those who usually worked part time on the jobs which they held in Aug. 1949, by far the larger portion, 3,994,000, either preferred part-time work or were not in a position to accept full-time employment. This was the situation with 67.8% of the males on part-time jobs, and 86.6% of the females, a large fraction of the latter being housewives whose home duties would not permit them to accept full-time employment.

Of the whole number of unemployed persons returned in Aug. 1949 (3,689,000), 91.9% were looking for full-time work and 8.1% were looking only for part-time work. The percentage of the female unemployed who were looking for part-time work only was 10.9, as compared with 6.8 for the male unemployed.

Family Income.—Families in the U.S. had an average (median) income of $3,187 in the calendar year 1948, counting money income only, according to a sample survey made in April 1949. This figure may be compared with $3,033 in 1947, $2,621 in 1945 and $2,533 in 1944. A family was defined as a group of two or more related persons living together in the same household; the family income was the sum of the money incomes of all the members of the family. The distribution of the whole number of families in 1948 in accordance with income is shown in Table XI.

Table XI.—*Distribution of Families (of Two or More Persons) by Total Money Income, for the United States, Urban and Rural: 1948*

(Figures based on a small sample)

Total money income level	Total	Urban	Rural—nonfarm	Rural—farm
Number of families (thousands)	38,537	23,287	8,531	6,720
Per cent	100.0	100.0	100.0	100.0
Less than $500	4.8	2.6	4.4	12.2
$500 to $999	5.8	3.6	5.9	13.0
$1,000 to $1,499	7.1	5.0	8.0	13.1
$1,500 to $1,999	7.4	5.9	8.8	10.9
$2,000 to $2,499	10.4	9.4	12.5	10.8
$2,500 to $2,999	10.2	10.0	11.5	9.1
$3,000 to $3,499	11.6	12.5	11.7	8.6
$3,500 to $3,999	9.1	10.3	8.8	5.4
$4,000 to $4,499	7.6	8.9	7.3	3.6
$4,500 to $4,999	5.3	6.4	4.8	2.5
$5,000 to $5,999	8.1	9.9	6.8	3.7
$6,000 to $9,999	9.8	12.2	7.5	4.7
$10,000 and more	2.9	3.3	2.1	2.4
Median income	$3,187	$3,551	$2,954	$2,036

Although 8,000,000 families (more than one out of every five) had incomes of $5,000 or more in 1948, there were still many families (4,100,000) with incomes less than $1,000, and 5,600,000 more with incomes between $1,000 and $1,999.

There were wide differences in the incomes of urban and rural families in 1948, as in the earlier years for which data were available. The median income of urban families in 1948 was $3,551, and of rural-nonfarm, $2,954, while the money income of rural-farm families was only $2,036. It must be noted, however, that the farm families obtained from their farms many consumption items for which the urban families had to expend money. The effective total income of the rural-farm families was therefore considerably higher than the money income.

Households.—The number of households in the U.S. had increased from 16,187,185 in 1900 to 34,948,666 in 1940, thus more than doubling in number during a period in which the population increased only 73.7%. By 1949 the number had increased to 42,107,000, the actual addition to the number of families during this nine-year period being nearly one-half the addition of the preceding 30 yr. The figures are shown for selected years in Table XII.

The explanation of the situation in which the number of households increased so much more rapidly than the population lies, of course, in the fact that the average size of the families was steadily decreasing. The average in 1900 was 4.69, in 1940, 3.78, and in 1949, 3.54. (*See* also ALIENS; BIRTH STATISTICS; EMPLOYMENT; HOUSING; IMMIGRATION AND EMIGRATION; MARRIAGE AND DIVORCE; WAGES AND HOURS; WEALTH AND INCOME, DISTRIBUTION OF.) (L. E. T.)

1947 Census of Manufactures.—The census of manufactures for the United States provides comprehensive statistics on the output of manufacturing industries, the manpower and materials resources used, the inventories held and the expenditures made for new plant and equipment. The 1947 census was the first to be taken since 1939. Figures were released in 1949.

Scope and Content.—The 1947 census of manufactures covered the 48 states and the District of Columbia. Manufacturing activities in Alaska, Hawaii and Puerto Rico, which had been included in the decennial censuses of 1929 and 1939, were not covered in this census.

All establishments primarily engaged in manufacturing, as defined by the standard industrial classification system used by all U.S. government agencies, and employing one or more persons were covered in the census. According to this definition, establishments are classified as manufacturing if they are engaged in the mechanical or chemical transformation of inorganic or organic substances into new products. These activities are usually carried on in plants, factories or mills, which characteristically use power-driven machines and materials-handling equipment. Manufacturing production is usually carried on for the wholesale market, for transfer to other manufacturing establishments of the same company or to order of industrial users rather than for direct sale to the household consumer. A manufacturing industry consists of a group of establishments primarily engaged in the production of similar commodities or utilizing the same manufacturing processes. Establishments reporting in the 1947 census were classified into 453 such industries.

In order to collect figures on the many different products manufactured, it was necessary to use more than 200 different report forms. With a few exceptions, the general information requested was the same for all forms; but, in addition, each form contained inquiries adapted to the production of commodities in particular industries, and for some industries to the

Table XII.—*Number of Households and Population per Household: 1900–49*

(Figures for 1947, 1948 and 1949 are based on a small sample)

Date	Households	Population	Population per household
1900	16,187,185	75,994,575	4.69
1910	20,255,555	91,972,266	4.54
1920	24,351,676	105,710,620	4.34
1930	29,979,841	122,775,046	4.10
1940	34,948,666	131,970,224	3.78
1947	39,138,000	144,023,901	3.68
1948	40,720,000	146,571,039	3.60
1949	42,107,000	149,215,366	3.54

particular materials consumed and equipment in use. The product and materials section of each form was the result of intensive study of the 1939 census reports and extensive consultation with other federal agencies, manufacturers and trade associations in an effort to provide the most useful information consistent with the ability of manufacturers to report the desired data.

The 1947 census report forms were distributed and, for the most part, returned by mail; however, manufacturers who did not send in a report or whose reports were incomplete or otherwise inadequate were reached by telephone or personal visit from the field offices of the census bureau. An important exception to this procedure was made in the case of the highly mobile eastern lumber mills, which were enumerated entirely by field agents.

In conducting the census of manufactures, reports are collected from individual manufacturing establishments. A company operating establishments at more than one location is required to submit separate reports for each establishment. Census figures, therefore, differ from those prepared on a company basis; *e.g.*, from consolidated reports which not only combine activities at different locations but also include the nonmanufacturing activities of companies primarily engaged in manufacturing. Census figures also differ to some extent from other tabulations based on establishment reports, where the definition of an establishment is not so rigidly applied. A reconciliation of the differences between census figures and those compiled by other government agencies was undertaken. Statistics on number of establishments and employees compiled in the census of manufactures for 1947 differed, in some cases rather markedly, as to region and industry from those published by other federal agencies. Preliminary results indicated that these differences arose chiefly from the more precise classification of establishments made possible by the detailed reports submitted to the census bureau.

The 1947 census of manufactures reports were published in three volumes. The industry volume provides statistics for each manufacturing industry. These statistics include the value of products shipped, value added by manufacture (the amount by which the value of products shipped exceeds the cost of materials and supplies) and the quantity and value of about 6,000 individual products. Manpower resources are measured by the labour employed, the man-hours worked and employee earnings. Material resources include materials put into production, fuel and electricity consumed, containers and other supplies used, metal-working facilities in operation and trucks and trailers operated. In addition, the statistics include the quantity and cost of about 150 selected materials consumed. The state volume shows for each state its important metropolitan areas and industrial counties, selected statistics for each industry of consequence in that state or its geographic subdivisions. Totals for all industries are shown for all counties and for cities of more than 10,000 population. The summary volume shows U.S. totals by industry and geographic area totals on the following subjects: employment and pay rolls, size distribution of establishments, inventories, capital expenditures, fuel consumption, highway motor vehicles, consumption of important materials and metal-working operations.

The different chapters of these volumes were also published as separate reports. Thus, a person who is especially interested in a particular group of industries, say rubber products, or in a particular area of the country, say the state of New Jersey, can obtain statistics for these alone.

In addition to these volumes, a special product supplement was published. This volume assembles in convenient reference form 1947 and 1939 statistics for the more than 6,000 products shown in more than 100 different tables of the industry reports.

Test of Coverage.—In the 1947 census of manufactures for the first time a test was made of the completeness of coverage. After the regular census-taking period, enumerators made a field canvass of a representative sample of manufacturing establishments as a check on the coverage of the original mail canvass. Preliminary results of this check indicated that for the country as a whole the census covered all but about 2% (or approximately 250,000) of all manufacturing employees, and that many of the omitted establishments were on the border line between manufacturing and other types of activity.

Expansion of Information on Individual Products, Materials and Equipment.—In the 1947 census of manufactures, statistics were published for more than 6,000 individual products as compared with approximately 4,500 in 1939 and about 850 in 1899. The 1947 expansion in product detail was accomplished despite the fact that products of relatively small value, published in the 1939 reports, were not shown separately on the 1947 forms. The number of individual materials for which consumption statistics were published in the 1947 census was only 150 as compared with 275 in 1939. For the 1947 census, however, the materials were selected in such a way as to provide more comprehensive over-all coverage. First, all unimportant materials were omitted from the 1939 list. And second, statistics for the important materials were collected in 1947, to a much greater extent than in 1939, from all industries consuming appreciable quantities of these materials. As a result more significant statistics on individual materials were published in the 1947 than in any previous census. Also on the forms sent to 110 industries, the 1947 census contained a new question to provide a measure of metal-working facilities in manufacturing. The number of establishments performing metal-working operations, classified by size of the specified operation, were published by industry and state.

Classes of Products.—In addition to the individual products ordinarily published in the census of manufactures, value figures for classes of these products were published. The approximately 6,000 individual products were grouped into about 1,000 classes. State data were published for all product classes instead of selected products. For the first time, each establishment was classified according to the extent to which it specialized in production of one of these classes of products.

Industry Statistics for Geographic Divisions.—Selected industry statistics were provided for the nine census geographic divisions. Industry group statistics were provided for the 127 largest counties in terms of manufacturing employment, but no industry statistics were provided for incorporated cities. The number of metropolitan areas for which individual industry statistics were presented was expanded from the 33 areas of earlier years to 53 areas in 1947. A special table shows for each county in the United States the number of establishments in

Table XIII.—*General Statistics for All Manufacturing Establishments in the United States: 1899–1947**

Item	1947	1939	1929	1919	1909	1899
Number of establishments	240,881	173,802	206,663	270,231	264,810	204,750
Average number of employees (thousands)	14,294	9,527	9,660	9,837	7,012	4,850
Total salaries and wages (millions)	$ 39,690	$ 12,706	$ 14,284	$ 12,427	$ 4,105	$ 2,259
Average number of production workers (thousands)	11,916	7,808	8,370	8,465	6,262	4,502
Wages of production workers (millions)	$ 30,242	$ 8,998	$ 10,885	$ 9,664	$ 3,205	$ 1,893
Value added by manufacture (millions)	$ 74,426	$ 24,487	$ 30,591	$ 23,842	$ 8,160	$ 4,647

*The figures for 1947 include all establishments employing one or more persons at any time during the year; for 1929 and 1939 those having products valued at $5,000 or more; and for 1899–1919 those having products valued at $500 or more. The figures for 1939, but not for earlier years, have been revised to exclude data for establishments classified as manufacturing in 1939 and prior years but classified as nonmanufacturing in 1947. The effect of this revision was to reduce value added by manufacture and number of production workers by 1%.

each major industry group, classified according to three employment size classes.

Discontinuation of Publication of Cost of Materials and Value of Products for Industry Groups and Some Individual Industries.—Duplication is present in the value of products totals for industry groups, whether for the United States, for states or for other geographic areas. Thus, when figures for flour mills are added to those for bakeries, the value of flour mill production is counted twice. The amount of this duplication varies from one grouping to another and is always difficult and, in some cases, impossible to measure. The same kind of duplication exists in the cost of materials figures. In the 1947 census all value of products and cost of materials totals which contain a substantial amount of duplication were withheld from publication; that is, value of products and cost of materials statistics were published for the large majority of individual industries, but not for a few important industries such as steelworks and motor vehicles, where establishments classified in one of these industries make products which are used as materials by other establishments also classified in the same industry. For the same reason these measures were not published for the United States as a whole, for industry groups or for geographic areas.

Statistical Findings.—The 1947 census of manufactures statistics, compared with those for 1939, measure the tremendous changes that took place in manufacturing over this period of U.S. industry.

For the United States as a whole value added by manufacture increased approximately 205%, from $24,000,000,000 in 1939 to $74,000,000,000 in 1947. Average employment of production workers increased more than 50% over 1939, from 7,800,000 to 11,900,000. Wages paid to production workers increased 235%, from $9,000,000,000 to $30,000,000,000. The number of factories counted in the 1947 census approximated 241,000, as compared with the 174,000 in the preceding census year.

In 1947 the ten most important states in terms of value added by manufacture were ranked as follows: New York, Pennsylvania, Illinois, Ohio, Michigan, New Jersey, California, Massachusetts, Indiana and Wisconsin. This ranking differed from that for 1939 only in that over the period California advanced ahead of Massachusetts, rising from eighth to seventh among the states, and Wisconsin displaced Connecticut from tenth place.

Among the major industry groups the machinery industries (electrical and nonelectrical) showed the greatest per-cent increase. For these industries, value added increased approximately 295%, production-worker employment by 140%, with electrical machinery showing somewhat greater increases in both measures. Value added by manufacture in the transportation equipment industries increased about 230%; production-worker employment by 80%. Substantially greater-than-average increases in both measures were also reported for fabricated metals (250% and 80%, respectively); instruments (225% and 115%); and rubber products (220% and 80%). In the lumber, furniture and paper industries the increase in value added averaged about 230%, substantially greater than the average for all industries, though the 45% increase in employment was somewhat lower than the national average. Even more striking was the 220% increase in value added in the apparel industries as compared with an increase of only about 30% in employment. Comparatively small increases in both value added and employment were reported in foods, tobacco products, leather products and the printing and publishing groups of industries. The per-cent increase in value added for these industry groups ranged from 83 to 163, employment from 7% to 37%.

Table XIV.—*Principal Statistics for Major Industry Groups*

Major Industry Group	Value added by manufacture 1947	Total employees, 1947		Number of production workers (average for the year)	
		Number (average for the year)	Salaries and wages	1947	1939
	(millions)	(thousands)	(millions)	(thousands)	(thousands)

New Jersey	4,177	738	2,214	602	432
New Mexico	55	8	18	6	3
New York	9,667	1,776	5,280	1,425	949
North Carolina	1,647	382	759	350	269
North Dakota	29	5	12	4	3
Ohio	6,359	1,195	3,560	988	596
Oklahoma	341	55	144	44	28
Oregon	675	106	318	92	58
Pennsylvania	6,947	1,440	3,919	1,219	853
Rhode Island	658	147	375	128	106
South Carolina	794	188	377	176	126
South Dakota	51	10	26	8	5
Tennessee	958	221	473	192	131
Texas	1,727	297	755	242	125
Utah	128	25	64	20	12
Vermont	150	35	83	30	21
Virginia	1,052	217	484	190	132
Washington	874	144	438	123	82
West Virginia	664	127	338	109	74
Wisconsin	2,261	416	1,184	343	199
Wyoming	35	6	17	4	3

California led these states in rate of growth, with a 256% increase in value added by manufacture and a 96% increase in production-worker employment. Wisconsin was second with a 230% increase in value added and a 70% increase in employment. The smallest per-cent increases in both value added and employment were shown by the New England and Middle Atlantic states, generally.

The geographic concentration of industrial activity is strikingly shown by figures for the 127 counties with 20,000 or more manufacturing employees in 1947. Together they accounted for 65% of production workers in the United States and 69% of the value added in 1947, as compared with 65% and 71%, respectively, in 1939. These counties included only 42% of the population of the United States in 1940 and occupied only 2.6% of the land area.

There was a large concentration of production in a relatively few establishments. Thus, 29% of the 241,000 establishments covered in the census had less than five employees, but these establishments accounted for only 1.1% of the employment and 1.2% of the value added by manufacture. Similarly, almost half of the establishments had less than ten employees, but these establishments accounted for only 3.3% of the employment and 3.2% of the value added by manufacture. On the other hand, the approximately 2,000 establishments with 1,000 or more employees, less than 1% of the total number, accounted for approximately one-third of the employment and value added by manufacture. These figures stress the fact that for most purposes an establishment count is of little significance in manufacturing industries without a measure of the size of the establishments included. (Ju. Sn.; M. R. C.)

Ceylon, Dominion of.

A self-governing member of the British Commonwealth of Nations, lying off the southern extremity of India and approaching to within 6° of the equator, Ceylon has an area of 25,332 sq.mi. Pop.: (March 19, 1946 census) 6,693,945, (mid-1948 est.) 7,177,000 (including Maldive Islands). Languages: mainly Sinhalese (69%) and Tamil (21%). Religions: Buddhist (61%); Hindu (22%); Moslem (9%); and Christian, mainly Roman Catholic (7%). Chief towns (1946 census): Colombo (cap., 362,000); Jaffna (63,000); Dehiwala-Mount Lavinia (56,000); Kandy (52,000). Governor general (1949): Sir Henry Monck-Mason Moore and, from July 6, Lord Soulbury; prime minister and minister of defense: Don Stephan Senanayake.

History.—Feb. 4, 1949, marked the first anniversary of Ceylon's independence. Internationally Ceylon was set back by the soviet veto of its claim to membership of the United Nations. Its government on Dec. 22, 1948, announced its refusal of harbour or airport facilities to Dutch ships or aircraft carrying troops or war materials to Indonesia; the ban was lifted on July 19. Early in the year Minister of External Affairs S. W. R. D. Bandaranaike, on a visit to New Delhi, suggested that India, Pakistan, Burma and Malaya should make regional arrangements for mutual defense under the United Nations charter. In April D. S. Senanayake attended a meeting of commonwealth prime ministers in London. On his return he revealed that the British government agreed to help in the organization of Ceylon's defense forces. Lord Soulbury assumed the governor-generalship on July 6 in succession to Sir Henry Monck-Mason Moore.

Ceylon kept in step with India in devaluing its rupee so as to maintain the sterling parity of 1*s*. 6*d*. (After Sept. 20 the value of the rupee in U.S. currency was 20.85 cents.) The relationship between the Ceylon and the Indian rupee, however, was severed by the parliament at Colombo on Sept. 20. A new agreement was made between the British government and the government of Ceylon on the use of Ceylon's sterling balances for a further year to June 30, 1950. The agreement sanctioned the release of sterling to the extent of £7,000,000 and at the same time Ceylon was able to retain, from its surplus dollar earnings, an independent reserve to be held by the Reserve Bank of Ceylon when created. In order to control Ceylon's foreign expenditure and increase home production, a cabinet committee was appointed on Aug. 22 to draw up a program to keep imports within available exchange resources and implement the decisions to save dollars taken at the conference of commonwealth finance ministers in London.

The budget presented on July 14 provided for reduced customs duties on a wide variety of articles and reduced income tax in the lower group of incomes. The minister of finance, J. R. Jayawardene, forecast an adverse balance of Rs. 190,000,000 (£14,250,000) and consequently measures of control to reduce the gap. A local loan of Rs. 400,000,000 was to be raised; but considerable foreign capital would be required for productive development. There was no intention of placing restrictions on the withdrawal of foreign capital investments; and profits earned by such investments could be remitted to the country of origin.

The contract for the construction of an irrigation project in the Galoya area designed to irrigate about 100,000 ac. of land in the eastern province was given to a U.S. firm by the government.

During the year Ceylon expanded its diplomatic relations with neighbouring countries, particularly Burma with which an interchange of ambassadors took place in acknowledgment of the close religious ties existing between the two countries as staunch adherents of Buddhism. Ceylon established relationships also with India, Pakistan and Japan.

After an interval of 11 yr., pearl fishing was resumed in Tambelegam bay, Trincomalee. A sugar expert was lent to the government of Ceylon by the government of India to advise on the proposed establishment of a sugar factory at Galoya, where about 36,000 ac. had been earmarked to grow sugar cane. An ilmenite factory was to be set up at Pulmoddai, 40 mi. N. of Trincomalee, at a site said to be one of the best in the world for ilmenite sands.

Work was begun on the restoration of the historic 2,000-yr.-old stupa, built on the spot from which Buddha is said to have preached on his visit to Ceylon 2,500 yr. ago. A new protective shelter for the colossal image of the Buddha at Avukana, among the finest of its kind in Asia, was to be provided by the archaeological department. (E. Hd.)

Education.—(1947) Schools: government and assisted 5,436, pupils 843,037; English 461, pupils 182,872; industrial 666. Institutions of higher education 2, students 2,969. Illiteracy (1948) 35%.

Finance and Banking.—Budget (1948–49 est.): revenue Rs. 565,000,000; expenditure Rs. 532,600,000; (1949–50 est.): revenue Rs. 563,700,000; expenditure Rs. 563,500,000. National debt (Sept. 30, 1947) Rs. 469,000,000. Note circulation (July 1949): gross Rs. 301,500,000, active Rs. 220,200,000; (July 1948): gross Rs. 376,200,000, active Rs. 217,600,000. Bank deposits (June 1949) Rs. 581,200,000; (June 1948) Rs. 612,100,000. Monetary unit: rupee with an exchange rate of 20.85 cents U.S. in Nov. 1949.

Trade and Communication.—Imports (1948) Rs. 994,000,000. Exports (1948) Rs. 1,011,000,000. Roads (1948): 10,242 mi. Licensed motor vehicles (Dec. 1948): cars 27,594; commercial vehicles 11,887. Railways (1948): 912 mi.; freight tons carried 1,270,800. Air transport (1948): passenger-mi. 2,670,000; cargo, including mail, net ton-mi. 12,130. Radio receiving set licences (1948) 24,616.

Agriculture.—Main crops (metric tons, 1948): tea 136,000; rubber 96,000; rice 251,000. Fresh coconuts (exports, 1948) 9,387,000. Livestock (1946–47): cattle 1,116,000; sheep 55,000; pigs 85,000; goats 326,000; buffaloes 624,000. Fisheries: total catch (1946) 22,000 tons.

Industry.—Chief mineral product is graphite; exports (1948) 14,000,000 metric tons. Salt production amounts to about 30,000 tons a year.

Chambers of Commerce.

United States.—At the end of 1948, member organizations of the Chambers of Commerce of the United States totalled 3,088, with an underlying membership of 1,328,260 businessmen. In addition, the chamber had more than 19,000 firms and individuals on its rolls as business members.

During 1949, the chamber's activities were grouped, in part, under the following departments: agriculture; commercial organizations; construction and civic development; domestic distribution; economic research; education; employer-employee relations; finance; foreign commerce; governmental affairs; insurance; manufacture; natural resources; social security; and transportation and communication.

Policies and action were directed to all phases of the national economy: better labour-management relations; closer understanding between farmer and businessman; more practical city planning; dissipation of housing bottlenecks; husbanding of natural resources; furtherance of foreign trade and economic co-operation; improvement of transportation and communications; curtailment of public expenditures; and expansion of private investment and development.

The chamber's drive against Communist infiltration continued. The chamber's American Opportunity program to promote the U.S. system of free enterprise was also expanded to broaden the dissemination of factual data on the benefits of the system.

"Let Freedom Ring," a network radio program, was continued as an inspiration to individual responsibility at grassroot levels for a better and more secure America.

The challenge of the 1949 annual meeting was expressed in a general sessions theme: "Dare We Face Freedom?" The member response was epitomized in a postmeeting message to the membership by the chamber's Executive Vice-President Bradford which included the following:

"Freedom is not 'benefits.' Freedom is not special privilege, whether for businessmen, for farmers, for laborers, or for anybody. Government hand-outs are not the answer. Freedom is not what we get, but what we give. Freedom is sacrifice!"

At its 37th annual meeting in May 1949, the chamber's board of directors elected Herman W. Steinkraus as president for the ensuing 12 months. Ralph Bradford was executive vice-president, and Arch N. Booth, chamber manager. Headquarters were at 1615 H St. N.W., Washington, D.C. (H. W. St.)

Junior Chambers of Commerce.—With organizations in more than 1,800 communities in the United States, Alaska and Hawaii, this is the largest young men's civic group in the world. The 200,000 members are concerned with improving the communities in which they live. They emphasize leadership training and the preservation of the free, competitive enterprise system. The organization is affiliated with Junior Chamber International, which is composed of similar groups in 44 nations.

The 29th annual convention was held in Colorado Springs, Colo., where Clifford D. Cooper, 33-year-old Alhambra, Calif., industrialist, was elected president. The U.S. Junior Chamber of Commerce voted to support the Hoover commission recommendations for reorganization of the executive branch of the government, adopting this as its number one external program.

An annual program to select the ten outstanding young men of the year was conducted by the organization and its national magazine, *Future*. As the year ended, plans were made to honour these men at a banquet in Peoria, Ill., on the 30th anniversary of the founding of the organization in St. Louis, Mo., on Jan. 21, 1920.

Construction was started on a memorial building in Tulsa, Okla., which would house the offices of the national and international junior chambers of commerce. The building design was selected from more than 200 entries submitted by young architects from all over the world. Headquarters in 1949 were in the Akdar building, Tulsa, Okla. (W. D. Me.)

Canada.—Active membership campaigning put the Canadian chamber of commerce into 640 cities, towns and villages by Oct. 1949, with a total individual membership of more than 100,000, both an all-time high for the 21-year-old organization. During the year emphasis was laid on employer-employee relations in an effort to publicize the advantages of the free enterprise system. About 200 member chambers had national affairs committees to study pressing national problems. Under the sponsorship of the chamber's Foreign Trade committee, a special delegation went to England to set up an Anglo-Canadian Trade committee. There were 20 resolutions of policy passed at the chamber's annual meeting, which were later presented to the federal government.

The junior chamber of commerce membership increased to 225 (145 in 1948) through a formal union of the English and French junior chambers, giving a total individual membership of 20,000. At the June 1949 annual meeting special youth development and forestry committees were added to the active committees on international relations, agriculture, national affairs, leadership training, tourist development, public relations and civic beautification. (C. Cy.)

Great Britain.—The vital problem of balancing the external trade account of the United Kingdom, and of closing its dollar deficit in particular, caused considerable attention to be given by chambers of commerce to export trade problems in 1949. The Association of British Chambers of Commerce and its constituent chambers assisted in meeting the problems of overseas trade; in so doing they dealt with subjects involving national policy; *e.g.*, the liberalization of intra-European trade, the European Recovery program and the international tariff negotiations conducted at Annecy, France, as well as with the difficulties of individual exporters and would-be exporters. The problem of trade with North America gave birth to two new organizations of businessmen, in both of which the Association of British Chambers of Commerce played a leading part. Discussions with the Canadian Chamber of Commerce led to the formation of the United Kingdom-Canada Trade committee. This body, sponsored by the Canadian chamber and by the A.B.C.C., Federation of British Industries, National Union of Manufacturers and National Farmers' union, arranged to meet twice each year to review trade problems at the business level, concerning itself with United Kingdom imports from Canada as well as exports to that dominion. The second new body, the Dollar Exports board, was formed in May; the problem of increasing sales to dollar markets represented its broad terms of reference.

During 1949 the A.B.C.C. again advised the board of trade on the problem of frustrated exports. By the end of the year advice had been given on more than 4,000 applications, mostly concerning textiles.

The association considered that the chamber of commerce organization ought to issue its views on Britain's economic position and policy. Its statement dealt with the salient features in national policy; *e.g.*, high government expenditure and taxation and the need for incentives, and was submitted to the government.

The association convened a conference of representatives from many blitzed cities and towns with reconstruction problems; this led to representations to the government on several important points. The association and its 100 chambers examined carefully all new parliamentary bills and took steps to secure desirable changes. The Iron and Steel bill received meticulous examination from the point of view of manufacturers using steel. In this work the A.B.C.C. joined with the F.B.I. and the N.U.M.

The membership of chambers of commerce affiliated to the A.B.C.C. rose appreciably. Membership of home chambers passed the 60,000 mark and that of affiliated chambers in foreign countries exceeded 8,000. These figures were the highest recorded. (A. R. K.)

International.—The International Chamber of Commerce held its biennial congress, attended by more than 500 delegates, in June 1949 in Quebec, Can. The Quebec congress reviewed work done during the preceding two years by national committees working in conjunction with working committees of the chamber. Among the subjects to which the chamber had given special attention was the formation of a code of fair treatment for foreign investments. The problem of foreign investments received special attention after World War II and early in 1949 was emphasized in President Truman's Point Four program, which was to encourage the investment of U.S. capital in other countries. On the basis that the first essential for the encouragement of foreign investments was to build assurances for security, for the unrestricted repatriation of dividends, for reasonable scope for development of the project and for the ultimate return of the capital in the currency of the lender, the international chamber's code of fair treatment was drawn up, and received much attention in the United Nations Economic and Social council and in the treasuries of leading governments.

A part of the chamber's activity which attracted much attention was its work for the removal of barriers to trade and travel. Special study was given to this subject, which had great, though indirect, influence on the development of foreign trade. (C. G. Fr.)

Channel Islands: *see* British Empire; Great Britain & Northern Ireland, United Kingdom of.

Chapman, Oscar Littleton (1896–), U.S. secretary of the interior, was born Oct. 22 in Omega, Va., and graduated from Randolph-Macon academy in Bedford, Va. He served in the navy in World War I and studied at the University of Denver, Denver, Colo., University of New Mexico, Albuquerque, and at Westminster Law school, Denver, where he received a law degree in 1929. He was chairman of the Colorado state Child Welfare committee, and later president of the Colorado state board of control. In May 1933 he was appointed assistant secretary of the interior. He was a member of Pres. F. D. Roosevelt's so-called "little cabinet," and for a dozen years supervised at one time or another virtually all the interior department activities. Chapman managed the Roosevelt-Wallace campaign in 1940, and served as western campaign manager for the Roosevelt-Truman ticket in 1944. In 1948 he travelled 26,000 mi. as advance agent for Pres. Harry S. Truman on the latter's pre-election tour of the U.S. When Sec. Julius A. Krug resigned Nov. 11, effective Dec. 1, 1949, Chapman was appointed to succeed him, and was sworn into office Dec. 1.

Chemistry. **Names of Elements.**—The International Union of Pure and Applied Chemistry, at its meeting in Amsterdam, Neth., in Sept. 1949, recommended these names of elements.

Name	Symbol	Atomic Number
Beryllium	Be	4
Niobium	Nb	41
Technetium	Tc	43
Promethium	Pm	61
Lutetium	Lu	71
Hafnium	Hf	72
Wolfram	W	74
Astatine	At	85
Francium	Fr	87
Protactinium	Pa	91
Neptunium	Np	93
Plutonium	Pu	94
Americum	Am	95
Curium	Cm	96

Astatine is the halogen beyond iodine, francium the alkali metal beyond caesium, and promethium is the element in the group of rare earths which was originally called illinium. The recommendation of niobium to replace columbium and wolfram to replace tungsten represented the widest divergence from American usage, although the symbol W for tungsten had always been used.

Uranium.—During 1949, work by Kurt Kraus, Frederick Nelson and Gordon Johnson, of Oak Ridge National laboratory, Tenn., dealt with the chemistry of pentavalent uranium (or uranium [V]) solutions. I. M. Kolthoff showed in 1945 that solutions of ordinary uranium (VI) compounds could be reduced to uranium (V) at the dropping mercury electrode but he regarded the latter as a transient species which rapidly underwent disproportionation into the +4 and +6 oxidation states.

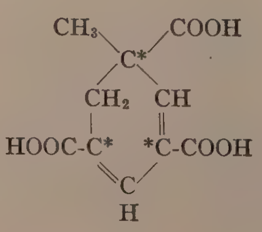
The Oak Ridge investigators found that solutions of uranium (V) compounds could be preserved without appreciable decomposition for considerable periods of time if maintained in the optimum stability range between pH 2 to 4 (mild acidic conditions). Electrolytic reduction of uranium (VI) solutions was one method of obtaining uranium (V): $UO_2^{++}+e^{-}\rightarrow UO_2^{+}$. Chemical reducing agents were successful also. Zinc amalgam, for example, was found to effect a rapid conversion of dilute uranyl chloride solution (UO_2Cl_2) into uranium (V), or UO_2Cl, in better than 50% yield. It was noted that with all methods of preparation, solutions of uranium (V) were frequently prepared which resisted disproportionation (into U[VI]+U[IV]) for a long time, then suddenly began to disproportionate rapidly. No conditions were found for the direct oxidation from the tetra- to the pentavalent state. Oxidation of the penta- to the hexavalent state, however, occurred readily with a number of oxidizing agents, including atmospheric oxygen, ferric salts and ceric salts.

Instead of giving rise to uranium (V) on hydrolysis, uranium pentachloride initially yielded the IV and VI oxidation states; but at an acidity near pH 2 uranium (IV) and uranium (VI) reacted rapidly to yield appreciable concentrations of uranium (V).

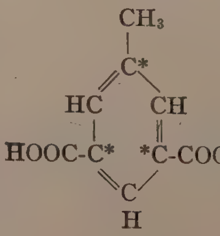
Radioactive Carbon Compounds.—Ordinary carbon is of atomic weight 12. Of the two isotopes C^{13} and C^{14}, the latter is radioactive. Its availability in recent years stimulated studies on the preparation of organic compounds containing it because tracer techniques enable one to follow the fate of radioactive compounds in chemical or metabolic processes.

In reporting a few syntheses involving radioactive carbon, radioactive barium carbonate, $BaC^{14}O_3$, is a convenient starting compound. Richard Abrams of the University of Chicago, developed a method of converting it into hydrogen cyanide, $HC^{14}N$. The carbonate was mixed with lead chloride, from which carbon dioxide, $C^{14}O_2$, was readily liberated by direct heating, since the intermediate lead carbonate, $PbC^{14}O_3$, decomposes at the low temperature of 315°C. The carbon dioxide was reduced to carbon (C^{14}) by reaction with red-hot magnesium powder. After separation of magnesium compounds by means of hydrochloric acid, the carbon was then heated to 1,000°C. in a quartz tube in a stream of ammonia gas, thereby producing radioactive hydrogen cyanide, which was collected in alkaline solution.

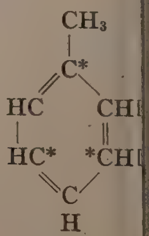
Toluene, with C^{14} atoms in positions 1,3,5 of the benzene



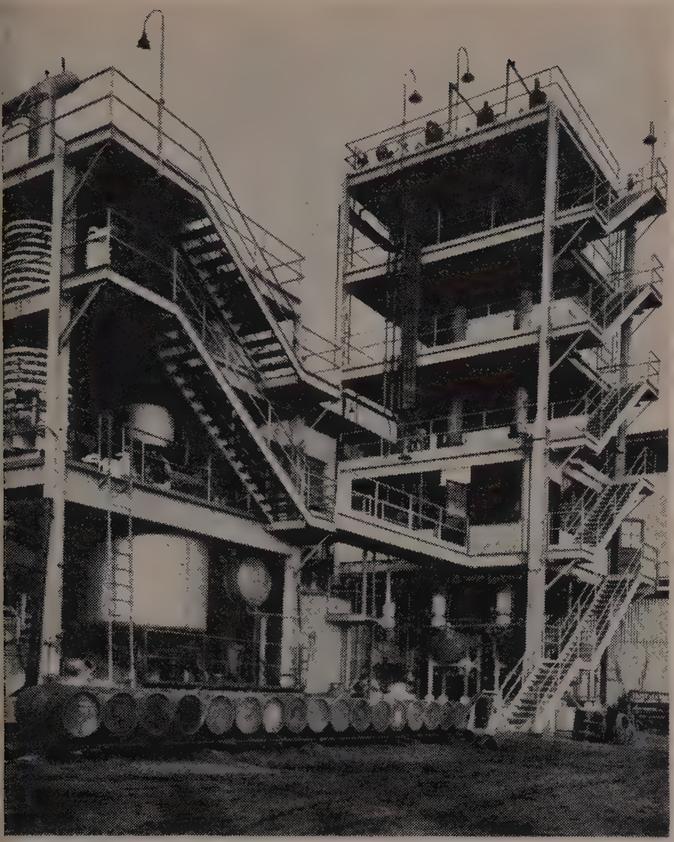
I



II



III



FIRST U.S. PILOT PLANT for the utilization of acetylene at high pressures opened by the General Aniline & Film Corp., at Grasselli, N.J., in March 1949

ring (*i.e.*, toluene-1,3,5-C_3^{14}), was synthesized in 62% yield by Dorothy Hughes and James Reid of the University of California, Berkeley, starting with radioactive pyruvic acid, $CH_3C^{14}OCOOH$, which was available. This acid was condensed, in the presence of alkali, to the tricarboxylic acid (I), and it in turn was dehydrogenated to toluenetricarboxylic acid (uvitic acid), II, by hot sulphuric acid. Decarboxylation of II into the radioactive toluene (III) was accomplished by heating with copper oxide in the presence of quinoline. In formulas I–III C^{14} atoms are designated with asterisks.

Radioactive carbon has a half-life of 5,673 to 5,767 years and by measuring the disintegrations per minute per gram (the specific activity) of carbon obtained from very old samples of wood, W. F. Libby and co-workers of the University of Chicago showed that the method was capable of establishing the age of such samples. Libby experimented with redwood whose tree rings dated it at 1031 to 928 B.C. and with wood from the tomb of Zoser at Sakkara, Egypt, which was of the age 2575–2725 B.C. The observed specific activities of the carbon obtained from these and other samples of wood of known age were remarkably close to the values obtained from the half-life curve for radioactive carbon.

Cracking Catalysts.—Catalytic cracking of petroleum hydrocarbons had assumed major industrial importance in recent years. Charles L. Thomas of Universal Oil Products company, Chicago, presented the existing knowledge regarding this process, especially as regards silica-alumina catalysts.

Silica alone is either inactive or only faintly catalytic. Alumina by itself is better than silica but is a poor cracking catalyst. The proper combination of silica and alumina gives rise to a superior cracking catalyst, but to make such a catalyst, it is necessary to start with the hydrogels or hydrous oxides of both silica and alumina. Mixtures of the anhydrous oxides are not catalytic nor are mixtures of one anhydrous oxide with one hydrous oxide. The silica-alumina catalyst apparently has certain acidic properties, and Thomas believed that it was this acidity that was responsible in large measure for the effective catalytic activity.

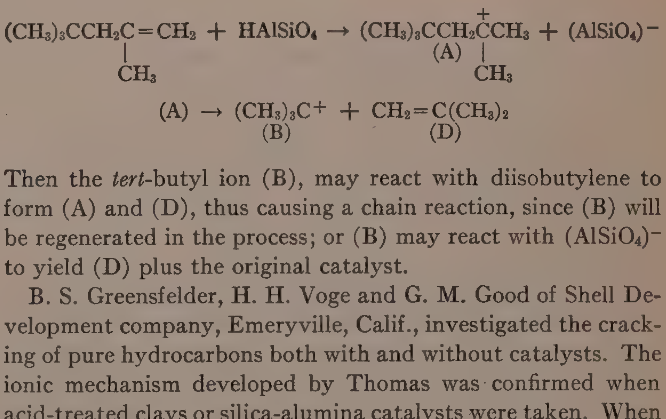
To assure the absence of inorganic materials other than silicon and aluminum, Thomas used ethyl orthosilicate and aluminum isopropoxide as sources of silica and alumina, respectively. Mixtures of these two substances in varying ratios were hydrolyzed by use of distilled water and alcohol. Acidity of the silica-alumina catalyst was determined by leaching it with an excess of dilute potassium hydroxide solution for one half-hour, then back-titrating the unused hydroxide with hydrochloric acid to a phenolphthalein end point. The maximum acidity was found for catalysts wherein the ratio of aluminum to silicon was 1, but high acidities persisted at a ratio of 2.

The maximum catalytic activity, as determined by passing Pennsylvania gas oil over the catalyst at 500°C. to obtain both gas and gasoline, was also at an Al to Si ratio of 1:2, but closer to 2. This proved that catalyst activity, acidity and composition were related in the silica-alumina catalysts, especially since they were prepared in such a way as to exclude the use of mineral acids.

It was suggested that the active constituent of this catalyst is $(HAlSiO_4)_x$. Since maximum activity was obtained at an Al:Si ratio of 2 whereas maximum acidity was reached at a ratio of 1, Thomas suggested that the catalyst mass behaved as if it were made up of an active part having an Al:Si ratio of 1 plus an inert silica support.

Silica-magnesia, silica-zirconia, alumina-boria and titania-boria catalysts were considered from the same viewpoint with the conclusions that $(H_2MgSiO_4)_x$, $(H_4ZrSi_2O_8)_x$, $(H_3AlB_2O_6)_x$ and $(H_2TiB_2O_6)$ should represent the formulas, respectively, for the catalytic parts of these combinations.

To illustrate the mechanism of catalytic cracking, one set of equations will be presented making use of diisobutylene and the silica-alumina catalyst.



$$(CH_3)_3CCH_2\underset{\underset{CH_3}{|}}{C}{=}CH_2 + HAlSiO_4 \rightarrow \underset{(A)}{(CH_3)_3CCH_2}\underset{\underset{CH_3}{|}}{\overset{+}{C}}CH_3 + (AlSiO_4)^-$$

$$(A) \rightarrow \underset{(B)}{(CH_3)_3C^+} + \underset{(D)}{CH_2{=}C(CH_3)_2}$$

Then the *tert*-butyl ion (B), may react with diisobutylene to form (A) and (D), thus causing a chain reaction, since (B) will be regenerated in the process; or (B) may react with $(AlSiO_4)^-$ to yield (D) plus the original catalyst.

B. S. Greensfelder, H. H. Voge and G. M. Good of Shell Development company, Emeryville, Calif., investigated the cracking of pure hydrocarbons both with and without catalysts. The ionic mechanism developed by Thomas was confirmed when acid-treated clays or silica-alumina catalysts were taken. When no catalysts were present, or when neutral substances were present, a free radical mechanism was called for to explain the results. Activated carbon, a nonacidic catalyst, gave a unique product distribution which was explained as a quenched free radical type of pyrolysis. Activated pure alumina, with only weakly acidic properties, was found to induce primary pyrolysis corresponding to the free radical mechanism and secondary cracking in conformity with an ionic mechanism.

Oxidation of Hydrocarbons.—Attention was given in 1949 also to the homogeneous, gas phase oxidation of lower hydrocarbons such as ethane, propane and isobutane by oxygen gas. This was the work of Frederick Rust, William Vaughn and others of Shell Development company. The reaction at 160°C.

was found to be greatly modified by the presence of hydrogen bromide. Ethane chiefly gave rise to acetic acid, propane to acetone, and isobutane or other branched alkanes to stable peroxides.

Oxygen was believed to react first with the hydrogen bromide present to liberate a bromine atom, which then reacted with the hydrocarbon to form a radical: $R_3CH + Br \rightarrow R_3C + HBr$. Oxygen then attached itself to the radical to form R_3COO-, and this in turn reacted with hydrogen bromide to form the peroxide and bromine atom which perpetuated the operation: $R_3COO- + HBr \rightarrow R_3COO-H + Br$. The peroxide radical combines simultaneously with the alkyl radical, R_3C, to yield the symmetrical alkyl peroxide, $R_3COO-CR_3$. The yields of organic peroxides in these experiments were high. Thus for every 100 moles of isobutane consumed, there were formed 14 moles of *t*-butyl hydrogen peroxide, 20 moles of di-*t*-butyl peroxide, and 31 moles of *t*-butyl alcohol. Between 64 and 73 moles of acetic acid were formed per 100 moles of ethane consumed in similar experiments with ethane conducted at 210–220°C.

Aldehydes.—Only one heterocyclic aldehyde, namely, furfural, has a convenient source. Methods to prepare other aldehydes were the objects of a continuing search, since from aldehydes a great variety of other compounds could be prepared.

Studies on the conversion of thiophene into its aldehyde, 2-thenoic aldehyde, were carried on by two groups, namely, W. J. King and F. F. Nord of Fordham university, New York city, and W. S. Emerson and T. M. Patrick, Jr., of Monsanto Chemical company, Dayton, O. It will be recalled that thiophene became available by way of the high temperature reaction of butane and sulphur. One approach to the aldehyde was the reaction of thiophene, N-methylformanilide and phosphorus oxychloride. In another method, thiophene was first converted into 2-thenyl chloride by reaction with formaldehyde and hydrogen chloride. Hydrolysis to thenyl alcohol and oxidation with chromic acid at ice temperature completed the synthesis. The reactions of thenoic aldehyde greatly resemble those of benzaldehyde.

A related study was made by H. D. Hartough and J. J. Dickert, Jr., of Socony-Vacuum laboratories, Paulsboro, N. J., who used aminomethylation (with formaldehyde and ammonia) of thiophene as the approach to 2-thenoic aldehyde. The first substance formed is N-thenylformaldimine $(C_4H_3S)-CH_2-N=CH_2$, or its dimer. It tautomerizes and hydrolyzes under conditions of mild acidity giving rise to 2-thenoic aldehyde in high yield.

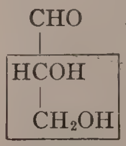
An investigation using 2-pyrrolecarbonal, the aldehyde related to pyrrole, was carried out by Werner Herz of the University of Illinois, Urbana. Herz condensed this aldehyde with hippuric acid and acetic anhydride. Instead of obtaining one product (an azlactone) as expected, Herz found two isomeric azlactones and offered evidence in support of the belief that they were geometric (cis-trans) isomers.

V. Deulofeu and A. E. A. Mitta of Buenos Aires, Arg., prepared 4-imidazolecarbonal by direct oxidation of imidazolylcarbinol, the latter being made from fructose in the presence of ammoniacal cupric acetate and formaldehyde. Perhaps the most interesting reaction studied by these investigators was the condensation with hydantoin leading, after hydrolysis, to histidine, one of the essential amino acids in nutrition, formed on hydrolysis of proteins.

An ingenious synthesis of cyclopentenecarbonal was reported by James English, Jr., and G. W. Barber of Yale university. Catechol (or homologs of catechol) was hydrogenated to 1,2-cyclohexanediol. Being a glycol, the latter was cleaved by lead tetraacetate to yield adipaldehyde. The best conditions found for the self-condensation of this dialdehyde were heating at 110°C. with water in a sealed tube for five hours. A 60% yield of 1-cyclopentenecarbonal was obtained.

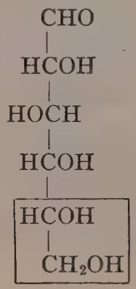
Stereochemistry.—Most naturally occurring carbohydrates and alpha amino acids are capable of turning the plane of polarized light when such light is passed through a solution of the substance. This is caused by the presence of one or more asymmetric atoms in the molecule. A carbon atom is asymmetric if it holds four different atoms or groups. Obviously, if one of the four groups is fixed for reference, the other three groups are arranged either in clockwise or counterclockwise fashion. Both of these arrangements are realizable in practice. One of the isomers is called D and the other L.

It was not a simple matter to relate the clockwiseness of different compounds but through the years precise information was accumulated regarding most of the carbohydrates. Thus in D-glycerose (IV), D-glucose (V), D-glucosamine (VI), all showing (+) rotation of polarized light, and D-fructose (VII),



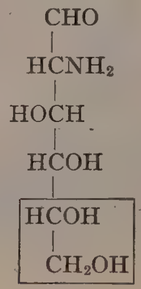
$$\begin{array}{c} CHO \\ | \\ \boxed{\begin{array}{c} HCOH \\ | \\ CH_2OH \end{array}} \end{array}$$

IV



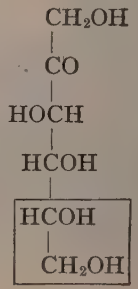
$$\begin{array}{c} CHO \\ | \\ HCOH \\ | \\ HOCH \\ | \\ HCOH \\ | \\ \boxed{\begin{array}{c} HCOH \\ | \\ CH_2OH \end{array}} \end{array}$$

V



$$\begin{array}{c} CHO \\ | \\ HCNH_2 \\ | \\ HOCH \\ | \\ HCOH \\ | \\ \boxed{\begin{array}{c} HCOH \\ | \\ CH_2OH \end{array}} \end{array}$$

VI

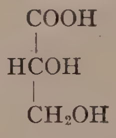


$$\begin{array}{c} CH_2OH \\ | \\ CO \\ | \\ HOCH \\ | \\ HCOH \\ | \\ \boxed{\begin{array}{c} HCOH \\ | \\ CH_2OH \end{array}} \end{array}$$

VII

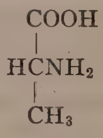
of (—) rotation, the atoms set off in a rectangle all show the same clockwise arrangement of H to OH to CH_2OH (if viewed from below). The term D refers to this structural feature.

D-Glycerose is readily converted into D-glyceric acid of known structure (VIII). Natural (+)-rotatory alanine, being



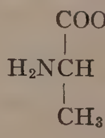
$$\begin{array}{c} COOH \\ | \\ HCOH \\ | \\ CH_2OH \end{array}$$

VIII



$$\begin{array}{c} COOH \\ | \\ HCNH_2 \\ | \\ CH_3 \end{array}$$

IX

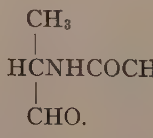


$$\begin{array}{c} COOH \\ | \\ H_2NCH \\ | \\ CH_3 \end{array}$$

X

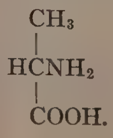
2-aminopropionic acid, could be either IX or X. M. L. Wolfrom, R. U. Lemieux and S. M. Olin of Ohio State university, Columbus, presented a series of reactions correlating the structures of the hydroxy acid (VIII) and the amino acid (X).

The starting point was natural D-glucosamine (VI), obtained from chitin (in oyster shells) by hydrolysis. The top CHO group was converted to CH_3 by mercaptalation, acetylation and reduction with Raney nickel. Then while the NH_2 group alone was acetylated (*i.e.*, $NHCOCH_3$), the bottom three carbons of the chain were cut off by means of lead tetraacetate. Thus, VI changed to



$$\begin{array}{c} CH_3 \\ | \\ HCNHCOCH_3 \\ | \\ CHO. \end{array}$$

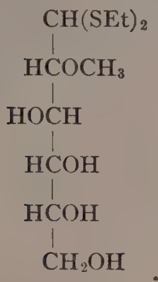
Oxidation of the aldehyde group to carboxyl and hydrolysis of the acetyl group yielded an alanine of structure



$$\begin{array}{c} CH_3 \\ | \\ HCNH_2 \\ | \\ COOH. \end{array}$$

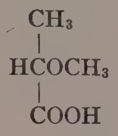
If this is turned through an angle of 180°, it is obvious that it is the same as X. The compound was (+) rotatory, the same as the L-alanine obtained from the hydrolysis of proteins.

Using a related experimental approach, the same authors started with the tetraacetate of 2-methyl-D-glucose diethyl mercaptal (XI), reduced the top CH(SEt)$_2$ with Raney nickel



$$\begin{array}{c} CH(SEt)_2 \\ | \\ HCOCH_3 \\ | \\ HOCH \\ | \\ HCOH \\ | \\ HCOH \\ | \\ CH_2OH \end{array}$$

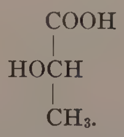
XI



$$\begin{array}{c} CH_3 \\ | \\ HCOCH_3 \\ | \\ COOH \end{array}$$

XII

to a CH$_3$ group, then removed the bottom three carbons with lead tetraacetate and oxidized the resulting aldehyde to acid, XII, which was the same compound as that produced by methylation of (+)–rotatory L-lactic acid,



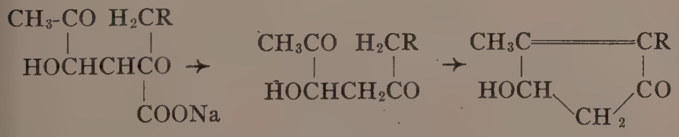
$$\begin{array}{c} COOH \\ | \\ HOCH \\ | \\ CH_3. \end{array}$$

It so happens that the configurations of both of these compounds (glucose and lactic acid) were already established, but this new chemical method provided an added confirmation.

Synthesis of a Pyrethrum Insecticide.—M. S. Schechter, N. Green and F. B. LaForge of the U.S. bureau of entomology and plant quarantine announced the successful synthesis of an active principle of pyrethrum. The natural source of this insecticide is the daisylike flower of pyrethrum (*Chrysanthemum cinerariaefolium*), mostly imported from Japan before 1940, but later chiefly from Kenya Colony and the Belgian Congo.

H. Staudinger and L. Ruzicka studied the active component pyrethrolone in 1924. Twenty years later LaForge and W. F. Barthel established the fact that this supposedly homogeneous material was a mixture of two related hydroxycyclopentenones. The name pyrethrolone was retained for the major component, and cinerolone was suggested as a name for the other. Pyrethrolone possesses a 2,4-pentadienyl side chain, and cinerolone has an analogous 2-butenyl group.

The 1949 contribution of Schechter *et al.* was the synthesis of cinerolone from pyruvic aldehyde, CH$_3$COCHO (A), and a beta keto salt, RCH$_2$COCH$_2$COONa (B), in such a way as to establish the structure as 4-hydroxy-3-methyl-2-β-butenyl-2-cyclopentenone. It had been assumed earlier that the hydroxy group was at position 5. This synthesis may be followed from A+B in these steps:



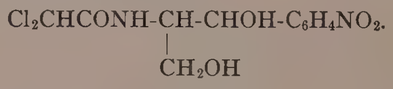
This condensation proceeds in the presence of sodium hydroxide, the group R being -CH$_2$CH=CHCH$_3$.

The toxicity of the synthetic compound proved to be equal to that of the natural product. Also, the knockdown action was the same. It was believed that the commercial synthesis of this material might be anticipated, in view of the availability of the starting materials, especially since the future of DDT for use on dairy cows was being questioned.

Chloromycetin.—This compound, also called chloramphenicol, was isolated in 1948 from a soil organism, *Streptomyces venezuelae*. It is an antibiotic which was shown to have a considerable spectrum of therapeutic activity against many pathogenic organisms.

Chemists at Parke, Davis and Company (Mildred Rebstock, Harry Crooks, Jr., John Controulis) were successful not only in elucidating many of its chemical properties but also in developing a method of synthesis.

The empirical formula of chloromycetin is $C_{11}H_{12}Cl_2N_2O_5$. It is relatively stable, neutral, optically active and melts at 150°C. It possesses a benzene ring, a nitro group, and an amide function. The nitro group is most unusual, since in no other known natural product does such a group occur. The complete structure proved to be

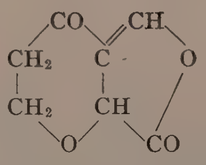


$$\begin{array}{l} Cl_2CHCONH\text{-}CH\text{-}CHOH\text{-}C_6H_4NO_2. \\ \qquad\qquad\quad | \\ \qquad\qquad\quad CH_2OH \end{array}$$

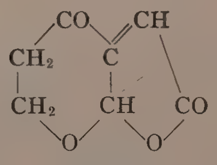
In conformity with this structure, the compound hydrolyzes to yield dichloroacetic acid and an amine, HOCH$_2$-CHNH$_2$-CHOH-C$_6$H$_4$NO$_2$. Periodic acid cleaves this amine (but not the original chloromycetin) to yield *p*-nitrobenzaldehyde, as would be predicted from the structure assigned.

To synthesize the compound, the investigators started with benzaldehyde and 2-nitro-1-ethanol. The nitro group of the 1-phenyl-2-nitro-1,3-propanediol, C$_6$H$_5$CHOH-CHNO$_2$-CH$_2$OH, thus produced, was hydrogenated to an amino group. By reaction with methyl dichloroacetate the amino group was converted to the desired amide. Then, after protecting the hydroxyl groups by acetylation, the benzene ring was nitrated. Deacetylation by mild alkaline conditions completed the synthesis. The compound was also synthesized differently, starting with *p*-nitroacetophenone.

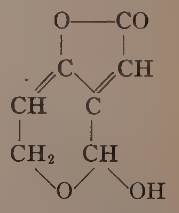
Patulin.—Patulin is a mould metabolite and antibiotic. Until recently, its structure was thought to be XIII. New evidence caused P. A. Plattner of Switzerland to reject this structure in favour of XIV. A still different structure, XV, however, was proposed by R. B. Woodward and G. Singh of Harvard university and by H. J. Dauben, Jr., and F. L. Weisenborn of the University of Washington, Seattle. Infra-red and ultraviolet spectra of patulin and its derivatives supported XV, as did the reaction of patulin with thionyl chloride. This is a reagent for the hydroxyl group, and the reaction did give rise to patulyl chloride wherein the OH group of XV was replaced by chlorine.



XIII



XIV

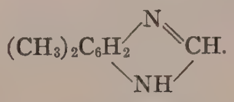


XV

Vitamin B$_{12}$.—The active principle in liver controlling pernicious anaemia was isolated in 1948 almost simultaneously by chemists working at Merck and Company in New Jersey and at Glaxo laboratories and the British Drug House, both in England. It is a red, crystalline compound of remarkably high physiological potency. The minimum effective daily dose was believed to be about one microgram, or one millionth of a gram. The usual single dose was 100 μg. In contrast, a dosage of 20,000 to 50,000 μg. of folic acid is required before it exhibits clinical activity.

A research team at Merck headed by Karl Folkers made considerable headway in elucidating the structure of this vitamin. A particularly unusual feature is the fact that the compound contains cobalt, 1 atom being present for every 60 or so carbon atoms. The empirical formula is given as $C_{61-64}H_{86-92}N_{14}O_{13}PCo$.

Degradation of vitamin B_{12} by acids yielded phosphoric acid and a fragment identified as 5,6-dimethylbenzimidazole,



$$(CH_3)_2C_6H_2\begin{matrix}\diagup N \diagdown \\ \diagdown NH \diagup\end{matrix}CH.$$

Polypeptide material is absent, since amino acids were not found as a result of the acid hydrolysis.

Arthritis Remedies.—Compound E or Cortisone, a steroid of known chemical structure separated from the adrenal cortex, and the adrenocorticotropic hormone known as ACTH, a complex protein isolated in tiny amounts from the pea-sized pituitary glands at the base of the brain of hogs, were major news items during 1949, limited clinical investigations indicating that they were helpful in the treatment of rheumatoid arthritis and rheumatic fever. The volume of publicity given seemed unfortunate, however, for three reasons: (1) the virtual unavailability of these materials; (2) the fact that unfavourable effects had also been noted in a number of reports, such as Cushing syndrome, paranoid mental conditions, congestive heart failure caused by serious water retention in patients with weak hearts, and increase in the amount of sugar in blood and excretions; (3) not all cases of arthritis responded to the treatments.

Cortisone was first isolated in 1936 by E. C. Kendall of Mayo clinic, Rochester, Minn., and was synthesized ten years later by L. H. Sarett of Merck and Company. Desoxycholic acid from ox bile was used originally in the synthesis, but the process held no immediate hope for large-scale production because of the large number of chemical reactions involved. During 1949 many groups of workers were engaged in the problem of a practical synthesis.

The ACTH picture was even less promising, since it requires 400,000 pig pituitaries to produce a pound of ACTH. Armour and Company led in this development. The chance of synthesis of ACTH seemed remote indeed, since this hormone is a protein.

Another chemical of a quite different nature, but spectacular also in the treatment of rheumatoid arthritis and rheumatic fever, was glucuronolactone. Synthesis of this derivative of glucose was developed by chemists at Corn Products Refining company and relatively large quantities of it were made. This represented a significant achievement, since the previous source of glucuronic acid or its lactone had been by processing urine of animals. (*See* also BIOCHEMISTRY; ELECTRONICS; PHYSICS; VITAMINS.)

Chemotherapy.

Among the more startling reports on medical advancements in 1949 were announcements that Compound E (cortisone), from the adrenal gland, and ACTH, from the pituitary gland, produced dramatic relief in some instances for people with rheumatoid arthritis. These substances also showed promise in the experimental control of rheumatic fever, allergies and even cancer. Only small amounts of the drugs could be obtained, however, and they had to be rationed to certain clinics where proper studies could be undertaken. This situation was not unlike that of penicillin when it first became available, and streptomycin when it was first offered in wholly inadequate amounts. Some idea of the reason for the scarcity of ACTH could be obtained from the knowledge that pituitary glands from 400,000 hogs were required to make one pound of ACTH. This was such an expensive process that the drug at one time, if sold, would have cost approximately $4,500,000 a pound. Until the end of 1949 only 60 lb. had been produced in one year by one manufacturer. It seemed unlikely that unlimited quantities would be available for a long time; newer methods of production and synthetic substitutes were needed to provide a solution to the problem.

DR. B. M. DUGGAR, discoverer of aureomycin, shown in the Lederle laboratories at Pearl River, N.Y. In 1949 it was announced that aureomycin, already known to be effective against a host of diseases, also brought apparent relief to patients with whooping cough

The drugs cannot be used carelessly. Undesirable reactions, for example mental changes, were produced at times even when the drug was carefully administered. Other unwanted effects included the development of growth of hair and masculine features in women who were being treated.

Another new "cure" was widely promoted for the common cold. This treatment consisted of the administration of antihistaminic substances—chemical compounds used for the control of certain allergic phenomena. While certain research findings offered sufficient promise to justify further trial of these drugs, the Council on Pharmacy and Chemistry of the American Medical association, in view of the flamboyant wave of advertising that followed the announcement of these reports, issued a warning against expecting too much from the use of the substances and against the harmful possibilities that could follow their use. The council warned that instances had been reported of users of these drugs becoming drowsy and even falling asleep while at work and, in occasional cases, while driving cars or operating machinery. The council also warned that experience with these substances so far was insufficient to permit knowledge of whether they are harmless when used over long periods of time, and that the amounts taken in persistent colds might exceed what had been established as normally safe.

A chemical related to the antihistaminics was dramamine, hich when tried as an antihistaminic for allergy was found to ave far more therapeutic effectiveness when administered for notion sickness. After extensive trials, particularly on the U.S. rmy transport "General C. C. Ballou" in Nov. and Dec. 1948, ramamine was shown to be effective for the control, in the maority of instances, of motion sickness on boats, in aircraft and n cars. Subsequent investigations during 1949 also revealed romise for the use of this drug in irradiation sickness, migraine eadaches and nausea and vomiting in prospective mothers.

The usefulness of chloramphenicol (chloromycetin) for virus, ickettsial and other diseases was extended. Of importance, howver, was its synthesis, which did not result in the development f a cheaper commercial method of production, but did conribute to the knowledge necessary for the synthetic developnent of antibiotics. Another antibiotic, aureomycin, was reorted effective against several diseases such as amoebic dysenery, shingles, whooping cough and, particularly, undulant fever.

The drug treatment of tuberculosis was advanced by further tudies on para-aminosalicylic acid (PAS) and a new chemical rom Germany known as tibione. Experimentally, a mould deived from hops was also shown to be active against typical erms in mice but, unfortunately, caused damage to the kidneys.

The results of an extensive survey by the Therapeutic Trials ommittee of the Council on Pharmacy and Chemistry revealed hat hormones in some instances may be used for the palliative reatment of patients with cancer, but these substances could ot be regarded as cures. In some patients cancer progresses so ar before it is detected that operation or irradiation with raium or X-rays is impractical. In such instances, administration f hormones, androgens or estrogens (the so-called male and emale sex hormones) resulted in prolonging the lives of many f the patients treated and lessening pain. Sooner or later, howver, the patients died; a drug cure for cancer still did not exist.

Of related interest were further explorations on aminopterin or lymphatic leukemia, urethane for myeloid leukemia and itrogen mustard for monocytic leukemia. These drugs also ailed as cures, but on the other hand when given to carefully elected patients they did effect relief from symptoms and ause general improvement.

Antabuse (tetraethylthiuram disulphide) was reported to be n aid in the treatment of alcoholics. This chemical, long used n the rubber industry, produces intense vomiting when admintered prior to the drinking of alcoholic beverages, but does ot seem to have any effect when alcohol is not taken. Aparently the vomiting is caused by the drug's interfering with n enzyme system which is concerned with the metabolism of lcohol. Use of this chemical for the treatment of alcoholics as first reported from Copenhagen, Denmark; it was being nvestigated in other countries during 1949. Its true role as a herapeutic agent awaited further evidence. It could produce angerous effects if given carelessly and should never be adinistered except under close medical supervision.

Vitamin B_{12}, a member of the B complex group, had been ound useful in combating certain anaemias. It was also reorted to influence favourably school children who appear to xhibit growth failure. When administered by mouth to these hildren, it was reported to effect such a favourable response hat one group of researchers suggested there might be a B_{12} unctional deficiency.

Methylene blue was used to overcome altitude sickness. The rug apparently in some way influences favourably the use of xygen in the tissues.

Glutamic acid was reported to aid some children with mental eficiency of a certain type; it was claimed to improve intellience.

Antihistaminics were used for bee stings, and calcium gluconate, for black widow spider bites.

Penicillin was found not to be a preventive for colds in an experiment in which a large group of individuals were given the drug at regular intervals. An interesting observation reported by several clinicians was the development of what looked like black hairs on the tongue following the administration of this drug. Actually, true hairs did not develop, but the papillae of the tongue became longer and blackened. When penicillin was discontinued, the hairy appearance disappeared.

Drug Production.—The monthly production of drugs in the United States remained at a high level in 1949. For example, in June seven producers of streptomycin made more than 7,000,000 g. of this drug; penicillin producers provided more than 11,000,000,000 units in May; also in May there were produced more than 78,000 lb. of ascorbic acid (vitamin C) and salts, 81,000 lb. of niacin and niacinamide (members of the vitamin B group), 17,000 lb. of thiamine (B_1), 577,000 lb. of sulfonamides, 22,000 lb. of phenobarbital and salts (sleeping tablets) and 900,000 lb. of aspirin. The medicinal and pharmaceutical preparations exported in May alone were valued at almost $15,000,000. In the same month almost 152,000 lb. of drugs of animal origin were imported, mostly from Argentina and Canada. The total exports of medicinal and pharmaceutical preparations from January to May amounted to $80,438,761.

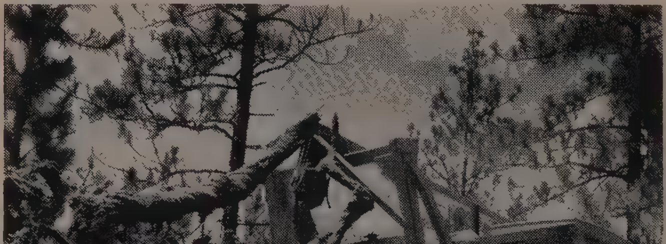
(A. E. SH.)

Chemurgy.

A compilation made during 1949 revealed that industrial utilization of agricultural materials in the United States had increased until the total value of farm products going into chemurgic uses considerably exceeded $1,000,000,000 annually. A study released early in the year indicated that the total for the last year for which complete figures were available, 1947, had reached $1,187,525,000, and it was believed that as a result of further expansion during the two subsequent years, the annual rate had probably exceeded $1,250,000,000.

Among the items included were oils and fats, $700,000,000; corn and other grains for wet milling and distillation, $219,600,-



UPROOTING PINE STUMPS from which naval stores (turpentine, rosin, pine oil) were to be extracted at a nearby Hercules Powder Co. plant in Brunswick, Ga. Research into new and wider applications of naval stores was being conducted by several major companies in 1949

000; wood pulp, $40,000,000, and cotton linters, $15,125,000, for making chemical grade cellulose; tobacco used for producing nicotine and salts, $2,500,000; dairy products for lactic acid, $15,000,000, for casein, $8,000,000, for lactose, $5,000,000, and other items; sugar-cane bagasse and molasses, $3,500,000; naval stores, $103,000,000. Other chemurgic products on the list were glycerol, $40,000,000; furfural, $4,500,000; lecithin (from soybeans), $1,000,000; sodium glutamate, $8,000,000; tanning extracts, $12,000,000; and about $10,000,000 worth of other materials such as products from flax straw, wheat straw, corncobs, biological materials and numerous agricultural residues.

The Corn Products Refining company completed and began operating a 135-ac. plant during 1949 at Corpus Christi, Tex. When operating at capacity the factory would produce annually 100,000,000 lb. of dextrose from milo, which is grown extensively in Texas, besides starch, oils and 50,000 tons of livestock feed. Demand for dextrose was substantially increased during the year as the tire manufacturers converted to the new cold rubber process, which utilizes the corn sugar in large volume.

A new market for casein opened during 1949, which it was thought might consume more than $2,000,000 worth annually. The casein was used in the production of curled casein, a synthetic fibre so treated as to possess the resiliency of horsehair. Since it sold at 94 cents a pound, in contrast to a price of $1.25 and more per pound for Argentine horsehair, curled casein started in a favourable economic position. The manufacturer, the Rubber-Set company, found an early market in an automotive air filter, a use involving a potential demand for 1,000,000 lb. a year. Mattress and furniture manufacturers were expected to adopt the product, especially since the casein fibre was dependably clean and uniform and was believed to be nonallergic.

Chemurgy is concerned with nonfood markets for agricultural materials, with profitable uses for farm residues such as stalks and straw and with the establishment of profitable new crops. Interest in the new crop field was greatly heightened during 1949 by the announcement that a cure for arthritis had been derived from an African plant of the *Strophanthus* species. The curative agent, known generally as cortisone, had first been extracted from ox bile. The process proved almost prohibitively expensive, while calculations indicated that all the cattle annually slaughtered could not provide enough of the raw material to treat the estimated 7,000,000 victims of rheumatic diseases. Discovery of the plant source resulted immediately in expeditions being dispatched, one by government and one by private interests, to obtain seeds and cuttings of *Strophanthus* for study and for reproduction. Following the announcement it was also revealed that closely similar compounds were obtainable from the Mexican yam and from the soybean.

The exceptional interest attracted by the cure for arthritis created rising curiosity as to the values which may be concealed in many other species of wild plants. It was pointed out that while the earth's flora includes about 300,000 species, only about 1,500 kinds had been put to human use. It was believed that vigorous plant exploration, coupled with the application of such new tools as organic chemistry, plant genetics and power equipment, might discover that many neglected species in the vegetable kingdom could be made valuable to man and could be made profitable agricultural commodities. Fewer than 200 species are cultivated commercially in the United States.

The department of agriculture expended $113,000 during the fiscal year ending in 1949 for plant exploration abroad, maintenance of introduction stations and distribution of new plant material to state experiment stations. This was contrasted with total appropriations of $54,000,000 for the department's scientific, statistical and market research.

Aromatic tobaccos of the Turkish types were grown extensively in the United States for the first time in 1949. More th
1,500 ac. were reported harvested in 16 mountainous counties
the western areas of the Carolinas and Virginia. This was a ne
crop, being a type of tobacco formerly imported, and bei
adapted only to areas which up to 1949 grew no other kinds
tobacco. The crop returned a gross of $750 to $1,000 per ac
to the farmer. The research was headed by F. R. Darkis
Duke university.

While chemurgic studies have usually been undertaken to i
crease the nonfood markets of agriculture, the research pr
grams have led to new discoveries in the food field. One ne
principle of food preservation resulted in frozen concentrat
orange juice, which during 1949 consumed about 10% of t
Florida orange crop. A process called dehydrofreezing, whi
partially dries and then freezes, promised to save space a
weight in the storage and transportation of several kinds
fruits and vegetables. (W. McM.)

Chess.

Albert Sandrin of Chicago, Ill., won the Sturg
trophy, symbolic of the open championship in t
title tournament of the United States Chess federation
Omaha, Neb., in July. He won his final game from Herbe
Hickman of Pittsburgh, Pa., with a Sicilian defense lasting
moves. The coveted award for brilliancy also fell to Sandr
for daring play in ending his tenth-round game with Phil
Lecornu of Detroit, Mich.

Sandrin completed play with a mark of 10 won and 2 los
A. E. Santasiere, New York city star, was runner-up with 9
2½ and Larry Evans, also of New York city, placed third wi
a score of 9–3. Mrs. Catherine Jones of Columbus, O., on
woman competitor in the open, was the recipient of a speci
prize.

Herman Steiner of Los Angeles, Calif., kept his nation
closed championship, and laurels in the junior event were r
tained by Arthur Bisguier of New York city. George Krame
another New Yorker, captured the championship in the nation

INTERNATIONAL CHESS MASTERS tournament, held at Southsea, Eng., April 1949. First prize went to Nicholas Rossolimo of France (second righ
wearing scarf), who won with a score of 9 to 1

speed tournament. No play was conducted to determine a U.S. woman champion and as a result N. May Karff of Boston, Mass., and Gisela Gresser of New York city, who tied the previous campaign, continued as cochampions.

The New York State Chess association speed tourney drew a field of 40. Samuel Reshevsky of Boston, Mass., four-time national ruler, triumphed with a sweep of 16 games. Kramer was runner-up.

Max Pavey of Brooklyn, N.Y., finished first in the New York State association closed championship.

FILMS OF 1949.—*Chess Fundamentals* (Young America Films Inc.).
(T. V. H.)

Chiang Kai-shek (1887–), leader of nationalist China for two decades, and a foe of the Chinese Communists since 1927, "retired" on Jan. 21, 1949, from active service as president of China with the hope of ending the civil war. However, the Communists named Chiang as the top war criminal and chief tool of "American imperialism," and regarded his move as a trick. Despite Chiang's retirement, his position as director-general of the Kuomintang and his personal influence over many of the nationalist generals made him the authority behind the scenes. Early in 1949 many newspapers in nationalist China regarded Chiang as a major obstacle to the government policy of either peace or war with the Communists and openly demanded his going abroad. After the Communists took Nanking, Chiang appeared in threatened Shanghai on April 27 and again took an active part in the struggle. As the nationalist capital moved from Nanking to Canton, Chungking, Chengtu and Formosa, Chiang hopped between these points to rally anti-Communist forces. On July 16 a supreme council with Chiang as chairman and Acting Pres. Li Tsung-jen as deputy was formed to direct the fight against the Communists. Chiang visited Pres. Elpidio Quirino of the Philippines in July and Pres. Rhee Syngman of Korea in August in an attempt to form a Pacific union against Communism. These efforts and his repeated bid for U.S. aid brought no favourable response from the United States. With Acting President Li's departure for the United States late in the year, Chiang virtually exercised the authority of the presidency of the tottering national government. (*See* also CHINA.)
(H. T. CH.)

Chicago. Second largest U.S. city, a port of entry and the county seat of Cook county, Ill., Chicago lies at the southwest corner of Lake Michigan. It is the largest centre of U.S. rail traffic, and in 1949 its airports handled the largest volume of air-borne traffic in the country. The mayor in 1949 was Martin H. Kennelly.

The population of the city proper by the federal census of 1940 was 3,396,808. The U.S. census bureau estimated the population of the city in May 1949 at 3,632,532 and the population of the entire metropolitan district at 5,395,524, an increase of about 12% over the 4,825,527 counted in 1940.

Chicago enjoyed a comparatively tranquil year in 1949 with business activity slowly declining until a revival after the settlement of the national steel strike.

Bank clearings for the year dropped to $35,806,922,424 from $38,885,781,225 in 1948. Total outlay for new industrial plant in 1949 was $102,777,000, compared with $156,279,000 in 1948. Retail sales for 1949 were estimated at $4,200,000,000, or almost the same as in 1948.

Except for the steel strike, mostly in industrial suburbs, there was a marked decline in the number of strikes and the number of workers involved. They were respectively 70 and 64,887 in 1949, compared with 506 and 218,948 in 1948.

LODGE MEMBERS of the Ancient Arabic Order of Nobles of the Mystic Shrine for North America, on parade in Chicago, Ill., during a national convention of the order in July 1949

Passengers carried on the lines of the Chicago Transit authority declined. In Nov. 1949 the decline from the year before was 15%. But the utility also ended its monthly deficits because of a raise in fares to 15 cents on the surface lines and buses and to 17 cents on the elevated and subway. These were the highest fares in the country. Fares on the privately operated Motor Bus company remained at 13 cents.

The 22-month strike of printers against the five major daily newspapers ended Sept. 18 in a compromise. Attendance at the lake front Railroad fair's second season was 2,732,739, slightly exceeding the first year. A Fair commission was set up to plan and hold annual fairs, with varying themes, on the lake front.

A modernized building code was adopted by the city council Dec. 30 in the hope of stimulating private home building, in which Chicago had lagged behind the country at large and far behind its own suburbs. In the first 11 months of 1949 permits for individual homes in Chicago totalled 4,577; suburbs, 10,839; unincorporated suburban areas, 4,472. All types of construction in the first 11 months of 1949 involved an outlay of $361,038,152, about $10,000,000 more than the same period of 1948.

The over-all public relief burden of Chicago in 1949 approximated $22,000,000, with 52,411 on the rolls in December. Reductions of benefits amounting to 10% were ordered by the Illinois Public Aid commission and an investigation of abuses and frauds got under way at the close of the year.

The 1950 budgets of the six governments that cover Chicago in whole or in part follow: city of Chicago corporate fund, operating expenses only excluding bond interest, pension fund, etc. $81,337,584; Cook county $37,346,364; Chicago school board $111,784,314; Chicago sanitary district $29,533,913; Chicago park board $19,188,717; Cook county forest preserve district, approximately $4,660,193.

The gross bonded debt of the six overlapping governments was $309,439,600 of which the constitutional debt applicable to property within the city of Chicago was $275,198,000—3.42% of the assessed values and a per capita debt of $84.18.

(L. H. L.)

Child Labour. **United States.**—The number of employed minors remained high throughout 1949 according to monthly estimates of the U.S. bureau of the census. Twice as many (1,970,000) boys and girls of ages 14 through 17 years were employed full-time or part-time in April 1949 as in April 1940 (1,060,000), and about the same number as in April 1948 (2,040,000). During school months in 1949, one out of every four boys and girls in the United States, or more than 2,000,000, in this age group was employed.

Important and far reaching progress was made in federal law in the protection of boys and girls from undesirable employment, through amendments passed by congress in 1949, effective Jan. 25, 1950, to the child-labour provisions of the Fair Labor Standards act—the Wage and Hour law. The definition of oppressive child labour remained the same with a minimum of 16 years for most jobs, 18 years for jobs found and declared to be hazardous and 14 years for a few occupations outside school hours and with specified conditions of work, but coverage was vastly extended. Two signal achievements in strengthening the 1938 child-labour provisions of the act were (1) broadening them to protect children in the transportation, communications and other interstate industries and (2) giving children employed in agricultural jobs, where production is for interstate commerce, its full protection during school hours for the district in which the child is living while he is working. For the first time an effective bar against agricultural employment which competes with schooling became possible.

In 44 states, Hawaii, the District of Columbia and Puerto Rico, state employment or age certificates continued to be accepted as proof of age under the child-labour provisions of the Fair Labor Standards act through federal-state agreements; the state of Washington resumed the issuance of such certificates on June 9, 1949, and was redesignated by the secretary of labour as a state in which such certificates would be acceptable as proof of age under the federal act. Federal certificates of age continued to be issued in Idaho, Mississippi, South Carolina and Texas.

Legislatures of Maine, Tennessee and Alaska materially strengthened their child-labour standards during 1949, making a total of 22 states, and Puerto Rico and Alaska, which had set a basic 16-year minimum age for employment. Tennessee set a minimum age for employment at any time in any manufacturing or mechanical establishment and in bowling alleys, and raised from 14 to 16 years the minimum age for employment during school hours in any gainful employment except agricultural or domestic work. Maine set 16 years as the minimum age for employment at any time in any manufacturing or mechanical establishment, and in bowling alleys, hotels and places of amusement. It retained 15 years as the minimum for any work during school hours and set a minimum of 15 years for employment at any time in stores and in eating places. Both states improved provisions with regard to the 18-year minimum age for hazardous occupations and hours-of-work standard. The new Alaska child-labour law established a 14-year minimum age for general employment outside school hours, and under authority of the act the commissioner of labour set a minimum age of 16 years in a number of manufacturing and processing occupations and a minimum of 18 years for a considerable number of hazardous occupations.

Other Countries.—A number of countries during 1948 and 1949 ratified International Labour organization conventions on various aspects of child-labour regulations. These were: Argentina, convention 33 dealing with a 14-year minimum age for nonindustrial employment; France, convention 58 (revised), which sets as a standard a minimum age of 15 years for employment at sea; Bulgaria, convention 58 (revised), convention 60 with a minimum age standard of 15 years for nonindustrial employment, convention 77, which deals with medical examination of young persons under 18 years before admission to industrial employment, convention 78, medical examination for nonindustrial employment, and convention 79, which sets standards for the regulation of night work of young persons in nonindustrial employment; Poland, conventions 78 and 79; and Mexico convention 7, which sets a standard of minimum age of 14 years for employment at sea.

(E. S. J.)

Children's Books. In 1949 the lavish use of colour in U.S. picture books was less noticeable and fewer were published. Books of easy reading for the seven- and eight-year olds, however, were becoming more numerous, and there was recognition of the need for mature teen-age fiction. A distinctive contribution to folk literature was *A Harvest of World Folk Tales* edited by Milton Rugoff, while an unusual anthology was *My American Heritage* compiled by Ralph Henry and Lucile Pannell. Picture books gay with bright wash drawings were *Cocolo Comes to America* by Bettina, and Edward Ardizzone's *Tim to the Rescue. Susie the Cat* by Tony Palazzo was intriguing and *Sun up* by Alvin Tresselt carried well-integrated illustrations by Roger Duvoisin. Two unusual picture books were *Little Boy Brown* by Isobel Harris with drawings by André François and *Henry—Fisherman* by Marcia Brown, a story of the Virgin Islands.

Azor and the Haddock by Maude Crowley combined easy reading with rare humour, Eleanor Lattimore's *Deborah's White Winter* and Carolyn Haywood's *Eddie and the Fire Engine* appealed to girls and boys of seven to nine. The mechanically minded read *Pogo's Sea Trip* by Josephine Norling, *The Truck Book* by Margaret and Stuart Otto and *The First Book of Automobiles* by Campbell Tatham while *The First Book of Bugs* by Margaret Williamson also proved interesting.

Animal stories ran the gamut from *A Horse to Ride* by Grace Paull to *Vison, the Mink* by John and Jean George; a story about turf racing was *Bobcat* by C. W. Anderson while *Kalak of the Ice* (about bears) by Jim Kjelgaard was for junior-high age. Fairy tales were *The Treasure of Li-po* (Chinese) by Alice

Ritchie, Mary Hatch's *More Danish Tales* and *The Dancing Kettle* (Japanese) by Yoshiko Uchida. *Pecos Bill, Texas Cowpuncher* by Harold Felton and *The Marvelous Adventures of Johnny Caesar Cicero Darling* by M. Jagendorf were tall tales; *The Little Grey Men* by Denys Watkins-Pitchford and *The White Ring* (Cornish legend) by Enys Tregarthen were English. Humorous stories with a folk quality were *Sonny-Boy Sim* by Elizabeth Baker and *Great-Grandfather in the Honey Tree* by Sam and Zon Swayne. Readers of Robert Lawson chuckled over *The Fabulous Flight* (concerning a sea gull).

For the middle group *Treasure Mountain* (Oregon) by Evelyn Lampman and *Peter's Pinto* (Utah) by Mary and Conrad Buff proved interesting in their depiction of Indians and Mormons. Two stories laid in North Carolina were Ellis Credle's *Here Comes the Showboat* and Mebane Burgwyn's *Lucky Mischief;* Frieda Friedman in *A Sundae with Judy* wrote of New York city while René Prud'hommeaux dealt with adventure in the *Sunken Forest*. Historical stories were Frank Andrews' *For Charlemagne!* and *Two for the Show* (Shakespeare's England) by Isabelle Lawrence; Rebecca Caudill wrote of 18th-century Kentucky in *Tree of Freedom* while in *Midnight Patriot* Emma Patterson told of Revolutionary New York. The Fugitive Slave act was featured in *North Winds Blow Free* by Elizabeth Howard, and the Civil War was the theme of Walter Edmonds' *Cadmus Henry*. Suspense ran high in *Keep the Wagons Moving!* by West Lathrop. *Tidewater Valley* by Jo Evalin Lundy concerned the Swiss in Oregon.

Stories of other countries were *Golden North* (Canada) by Marie McPhedran, *Ali of Baku* (near east) by Judith Shouisky and Ruth McGibeny, *Bush Holiday* (Australia) by Stephen Fennimore, *At the Palace Gates* (Peru) by Helen Parish and *The Runaway Apprentice* (China) by Margery Evernden. For older girls sincere writing characterized *The Trembling Years* (adjustment to polio) by Elsie Barber and *Turn in the Road* by Marguerite Dickson. *Forty-seven Keys* by Erick Berry and *Sand in Her Shoes* by Mildred Lawrence treated writing and newspaper work while postwar Switzerland was the locale for Madeleine L'Engle's *And Both Were Young*. Books about minority groups were Florence Means's *The House Under the Hill* (New Mexico) and Chesley Kahmann's *Gypsy Melody*. Older boys enjoyed a powerful story of big-league baseball *Hit and Run* by Duane Decker; Mt. Rainier was the setting for *Escape on Skis* by Arthur Stapp and Mars for Robert Heinlein's *Red Planet*. The Belgian Congo featured in Dock Hogue's *Bob Clifton, Elephant Hunter*, and *The Talking Tree* by Alice Desmond concerned the Tlingit Indians of Alaska.

DRAWING from Elmer and Berta Hader's *The Big Snow*, which was awarded the 1949 Caldecott medal for excellence as a picture book for children

The nonfiction harvest was rich, as witness *Rodeo* by Dorothy Bracken. *A Pet Book for Boys and Girls* by Alfred Morgan was sound and Herbert Zim's *Snakes* was excellent. A beginning book on plant reproduction was *Bits that Grow Big* by Irma Webber. Clear instructions characterized *Fun with Paper Dolls* by Tina Lee and *Make It and Ride It* by C. J. Maginley. *How Your Body Works* by Herman and Nina Schneider was for 10- to 12-year olds; electrical energy from earliest times was discussed in *The Bright Design* by Katherine Shippen and *Television Works Like This* by Jeanne and Robert Bendick answered many questions. Biography ranged from *George Washington* by Genevieve Foster to *The Youngest General* (Lafayette) by Fruma Gottschalk and the unbiased *The Story of Franklin D. Roosevelt* by Marcus Rosenblum. *America's Ethan Allen* by Stewart Holbrook popularized a national hero. Biographies of women were *Golden Footlights* (Lotta Crabtree) by Phyllis Jackson and *The Story of Phillis Wheatley* by Shirley Graham. In poetry there was *Bridled with Rainbows* edited by Sara and John Brewton and *The Little Whistler* by Frances Frost.

The Bible inspired *The Christmas Story* edited by Elizabeth Yates and *The Lord Is My Shepherd* arranged by Nancy Barnhart; a traditional English song was *The Twelve Days of Christmas* illustrated by Ilonka Karasz and a simple U.S. Christmas story was *The Best Christmas* by Lee Kingman. Old favourites were republished to suit various tastes, as *The Emperor's New Clothes* (Hans Christian Andersen) illustrated by Virginia Burton; Glen Rounds illustrated an *Aesop's Fables* and Leonard Weisgard was successful in his pictorial interpretation of *Alice's Adventures in Wonderland, and, Through the Looking Glass* and *The Night before Christmas; Trigger John's Son* by Thomas Robinson received inimitable drawings from Robert McCloskey and for specialized use there was the *Newbery and Caldecott Awards* (a bibliography of first editions) by Irvin Kerlan. (*See* also BOOK PUBLISHING; LITERARY PRIZES.) (E. A. Gs.)

Great Britain.—The Library association Carnegie medal was awarded to Richard Armstrong for his *Sea Change*.

Biographical works included *Swan of Denmark*, a sensitive study of Hans Andersen by Ruth Manning-Sanders; *Fortune My Foe*, a readable account of Sir Walter Raleigh by Geoffrey Trease; and *Nelson the Sailor*, a critical portrait for older boys by Russell Grenfell. Evelyn Cheesman recounted her own experiences in *Camping Adventures on Cannibal Islands* and imaginary adventures of young castaways in *Marooned in Du-Bu Cove*. *The Story of Art* by E. H. Gombrich and *Our Bird Book* by Sidney Rogerson and Charles Tunnicliffe were amply illustrated. Practical advice was given in H. L. Heys's *Chemistry Experiments at Home for Boys and Girls*. *The Story of Your Home* by Agnes Allen and *The Young Traveller in India and Pakistan* by Geoffrey Trease were pleasantly informative. *The Children's Theatre Book for Young Dancers and Actors* by Cecile Walton was a vivacious introduction to stage technique. Arthur Stanley edited *The Bedside Book for Children*, a wide-ranging anthology.

Additions to folklore included *The Essential Uncle Remus*, a wise selection of Brer Rabbit tales with the original illustrations; African stories in *Where the Leopard Passes* by Geraldine Elliot; and *Legends of the United Nations,* edited by Frances Frost. *The Cat Who Went to Heaven* (published in 1948) was a Chinese legend of unusual delicacy and charm by Elizabeth Coatsworth. H. M. McGill retold Charles Perrault's *Tales of Long Ago;* Eleanor Farjeon contributed original fairy stories in *The Old Nurse's Stocking Basket.*

There was rollicking fun and fantasy in Eric Linklater's *The Pirates in the Deep Green Sea* and Ian Serraillier's *Captain Bounsaboard and the Pirates;* sly humour and magic in J. R. R. Tolkein's *Farmer Giles of Ham;* and animal characters in Hugh Lofting's *Doctor Dolittle and the Secret Lake.*

Among picture books of distinction were Kathleen Hale's gay and detailed *Orlando Keeps a Dog* and *The Story of Noah,* told and drawn with deceptive simplicity by Clifford Webb.

Books for boys included P. H. Newby's *The Loot Runners,* an exceptionally polished tale of modern smugglers, and John Connell's *The Return of Long John Silver,* a worthy continuation of *Treasure Island.* David Severn introduced a supernatural element in *Dream Gold. Snow Dog* by Jim Elgard and *Saltwater Summer* by Roderick Haig-Brown were vigorous tales of North America.

Girls read Noel Streatfeild's portrayal of Hollywood, Calif., in *The Painted Garden, Dusty's Windmill* by Kitty Barne, Elizabeth Goudge's lively and fanciful *Make Believe* and Kathleen Wallace's happy glimpse of a Chinese family in *Cross the Bridge and See.*

Modern social problems determined the plot of *A House of Their Own,* a convincing story by Martha Robinson, and Tasmania formed the background to *They Found a Cave,* an effective camping-out adventure by Nan Chauncy. Amateur sleuths were busy in *The "Polly Harris"* by Mary Treadgold and *The House on the Hill* by Elisabeth Kyle. Sailing was the main theme of *Kestrel* by Aubrey de Sélincourt and there was originality in *The Voyage of the Indian Brig* by Winifred Holmes.

Country life was depicted in *Winter at Pikey's Steep* by C. E. B. Roberts and *The Further Adventures of Farmer Jim* by D. H. Chapman, who also wrote *King Cuckoo,* an imaginative story of bird life.

Ancient Britain was the scene of exciting and sometimes violent adventures in *Kerin the Watcher* by Dorothy Severn and *Boadicea* by C. C. D. H. Abrahall and there was stirring intrigue in *The Young Jacobites* by Kenneth MacFarlane. In quieter vein, *The Great House* by Cynthia Harnett was a painstaking and satisfying story of life in the year 1690.

Life in other countries was skilfully blended into several stories for those under ten. New Zealand was pictured in *The Book of Wiremu* by Stella Morice; Lapland in *Somi Builds a Church* by R. Busoni; Africa in *Blue Smoke* by Y. M. Robinson; and French Martinique in *Simone and the Lilywhites* by Marie-Louise Ventteclaye. *Mimff in Charge* by H. J. Kaeser continued the adventures of a heroic small boy and there was irresistible humour in *My Friends the Beasts* by Allan K. Taylor.

(D. D. Ct.)

Child Welfare.

International Services.—A better world for children was envisaged in the Universal Declaration of Human Rights, approved Dec. 10, 1948, by the general assembly of the United Nations. Children as well as adults usually were included under the term "everyone," the opening word of most of the 30 articles of the declaration. The interests of children were especially stressed in: "The family is the natural and fundamental group unit of society and is entitled to protection by society and the State." (Art. 16, Sec. 3) and "Motherhood and childhood are entitled to special care and assistance" (Art. 25, Sec. 2).

Tangible contributions to child health in many parts of the world were made in 1949 by the United Nations International Children's Emergency fund (U.N.I.C.E.F.), the World Health organization (W.H.O.), and by various voluntary agencies such as the Red Cross in Scandinavian countries, the Cooperative for American Remittances to Europe, Inc. (CARE) and the American Friends Service committee. Children in western Europe were aided by the European Recovery program.

As in previous years the U.N.I.C.E.F. received some of its most generous support from small countries, both in government appropriations and in contributions from individuals. About two-thirds of the total of more than $141,000,000 received during the two years, 1948 and 1949, in cash or pledges came from 36 governments, of which more than $70,000,000 was from the United States on a matching basis. The U.S. provided 72% compared with 28% from other countries. The equivalent of $32,000,000 of the assets of the United Nations Relief and Rehabilitation administration comprised about 22% of the fund's resources. The balance of more than $10,000,000 was obtained from popular appeals in 40 countries. The work of the U.N.I.C.E.F. was not restricted by national boundaries as were many international services. It maintained programs on both sides in war-torn China and in 1949 operated freely in the four zones in Germany and Austria, and in the countries of central and eastern Europe.

The U.N.I.C.E.F. recognized that in parts of Asia tuberculosis among children was more than twice as prevalent as in western countries and that malaria, syphilis and yaws presented acute health problems. Consequently the program in the east consisted mostly of supplying medicines and equipment, and training local personnel in techniques for the control of specific child welfare problems. In Europe and North Africa much progress was made in the world-wide campaign to test 100,000,000 children for tuberculosis. In those areas the work was sponsored also by the W.H.O. and the Red Cross from Scandinavian countries. In three years 18,500,000 children and young adults were tested for tuberculosis and 8,500,000 whose tests were positive were vaccinated against this disease with Bacillus-Calmette Guérin (BCG) serum. U.N.I.C.E.F. programs were approved in 16 of the smaller countries in Central and South America. Mexico, also included in these plans, was to provide the location for a laboratory for the production of Bacillus-Calmette Guérin serum for the Latin American countries. Programs of an emergency nature were developed in Ecuador, following the 1949 earthquake, and in the middle east among the Arab and Jewish refugees.

The World Health organization gave priority to children in much of its work. In addition to its efforts in co-operation with other agencies the representatives of the W.H.O. surveyed the tuberculosis problem in many countries and set up laboratories for the manufacture of BCG vaccine. Outstanding among its achievements in 1949 was the most successful advance in history against the ravages of malaria, which annually afflicts about 300,000,000 and kills about 3,000,000. Again, usually in co-operation with other agencies, notably the U.N.I.C.E.F. and national health authorities, the W.H.O. sent teams of trained health workers, including public health engineers, on malaria control missions to Afghanistan, Bulgaria, Greece, Hungary, India, Iran, Italy, Pakistan, Rumania, Sardinia, Thailand, Turkey and Yugoslavia, reducing the incidence of the disease and reclaiming malaria-infested agricultural areas as well as rehabilitating many who live on farms. In some districts food production was increased as much as 70%. Gammexane and DDT were the most widely used insecticides. Two new medicines which proved effective weapons against malaria were paludrine and chloroquine. Venereal diseases, in some areas affecting nearly half of the population, were combated, again under co-operative arrangements proven so successful in dealing with malaria and tuberculosis. Prenatal and infantile syphilis were treated with penicillin in mass campaigns in several countries. The sanitation program of the W.H.O. led to improvement of water supply and sewage disposal systems and destruction of disease-carrying insects, factors which lowered rates of morbidity and mortality among children. With such improvements some areas saw the death rate among infants cut from 30 to 3 per 100 births in a comparatively short time. The W.H.O. and the Food and Agricultural organization promoted a "food for health" program, stressing health education of the public.

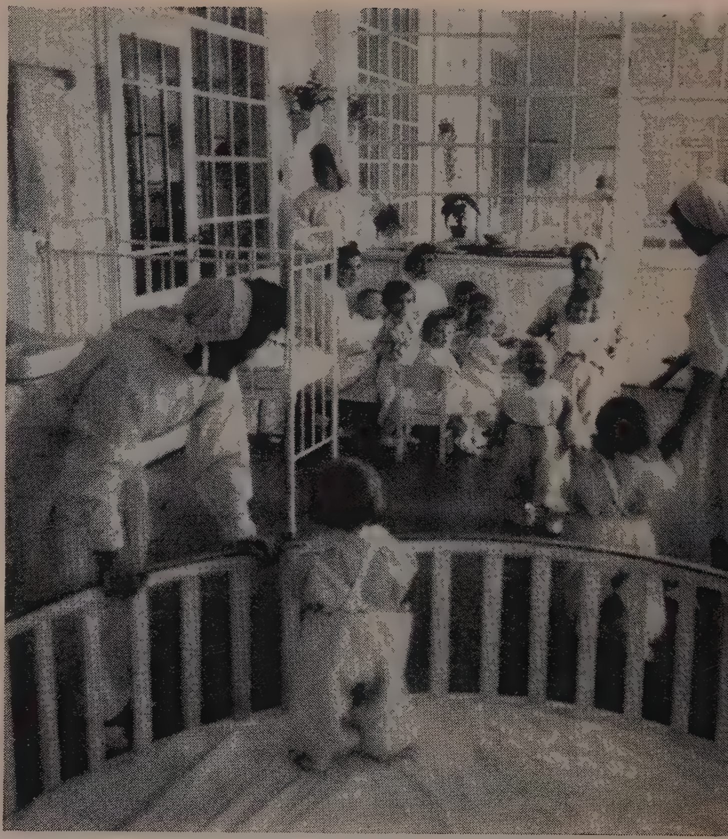
The shipment of food to the war-torn regions of Europe was continued by various nonsectarian and sectarian agencies from the more favoured parts of Europe and overseas. The production of food in most European countries had improved to the extent that there was less rationing in 1949 though a substandard diet still retarded child development in many parts of Europe. There was a marked tendency to adapt programs and use an increasing portion of relief resources for cultural purposes. In July 1949, the first large shipment of books by CARE in its "Food for Hungry Minds" program went to the University of Louvain in Belgium, one of 12 universities in Asia and Europe thus assisted during the year.

Conferences which continued international consideration of child welfare problems begun since World War II included the Second Pan American Congress of Social Work, Rio de Janeiro, Brazil, July 2–9; the Second Pan American Congress on Pediatrics, Mexico City, Mexico, Nov. 2–5; and the Second International Congress for the Education of Maladjusted Children, Amsterdam, Netherlands, July 18–22.

National Developments.—Activities sponsored by the government of India in behalf of children included a continuation of the All India Conference of Social Work, with its second annual session in Madras, Dec. 18–22, 1948. A child welfare exhibition opened in New Delhi, April 18, 1949, under the auspices of the Indian National Committee of the United Nations Appeal for Children. The Indian parliament enacted laws raising the marriageable age of girls from 14 to 15 years.

Poland, like most of the other countries of Europe, made marked progress in services affecting child health. The ministry of health reported a decrease in infant mortality from 26.9% in 1945 to 13.3% in 1946 and 9.7% in 1947. The plan for health services stressed especially the needs of farm communities and mothers and children. The achievements realized were remarkable in view of the scarcity of professional workers, the prewar number of physicians and dentists being about twice as many as those available at the end of the war. The number of practitioners was increased in the postwar years but the shortage was so great as to require long range planning if substantial progress was to continue. The health ministry expected to treble the number of physicians and toward this end effected the establishment of seven university medical departments and three academies of medicine, since the war's end. Assistance was received from Scandinavian countries, the Soviet Union and the health agencies of the United Nations.

Uruguay developed a unified health and welfare service, The Council of the Child, an outgrowth of a children's code enacted in 1934. Policies emphasize the importance of keeping mother and child together, allowing aid to the mother who has difficulty in supporting her child, this being available to unmarried mothers. The care of dependent children in foster homes also was extended under the new services. Among other developments significant to child welfare in Latin America was the publication in Jan. 1949, of a new periodical *Infancia y Adolescencia* in Caracas by the Venezuelan Council of the Child.



POLISH DAY NURSERY at a state-expropriated candy factory in Warsaw, where children up to seven years of age were cared for while their mothers were at work in the plant

The British commonwealth countries, though embarrassed by deteriorations in the postwar economy, sustained social insurance and related services including the various health services which had proved so valuable to children. Family allowances in Australia and New Zealand, apparently were to remain unchanged even though the elections late in 1949 brought defeat to the Labour party in each country. Announcements of the new cabinet in New Zealand, made early in Dec. 1949, designated a minister without portfolio who was to be responsible for matters pertaining to the welfare of women and children.

The United Kingdom in 1949 completed the first year of services to children under the Children bill enacted by the British parliament in June 1948. This, added to the provisions for family allowances, first effective in Aug. 1946, and the expanded health services for adults and children, authorized by parliament in July 1948, placed the United Kingdom in the front rank of those nations recognizing in terms of services and allowances the needs of all children. In 1949 the Home Help services of Great Britain, a voluntary service with strong support from the national and local authorities, was expanded and strengthened as an adjunct to health and welfare services, giving priority to families which need assistance in the care of children under five years of age until the mother is able to resume her household duties following the birth of another child.

The United States had about the same number of children born in 1949 as in 1948, approximately 3,500,000. Recent population increases had led to the overtaxing of schools, hospitals and other facilities essential to the welfare of children, and had increased the need for nurses, physicians, social workers and teachers. The shortage of nurses was apparent in 1949, when many hospitals remained inadequately staffed during the severe epidemic of poliomyelitis.

Plans for the Mid-Century White House Conference on Children and Youth, to be held in Dec. 1950, were advanced especially in preparatory conferences held in most of the states. Among the national meetings for this purpose was the first Protestant Conference on Child Welfare, held in Columbus, O., Oct. 18–19, 1949.

A three-year nation-wide study of child health services, completed in 1949 by the American Academy of Pediatrics, was made with the assistance of other agencies, notably the children's bureau and the public health service of the Federal Security agency. A two-volume report of this study, published by the Commonwealth fund, gives a comprehensive appraisal of health services, stressing two over-all needs: the inadequacy of the general practitioner's training in pediatrics and the scarcity of health services for children in rural areas.

There was little change in the child labour situation, with more than 2,000,000 youth 14 to 17 years of age employed. Federal regulation of child labour, in effect for ten years under the Fair Labor Standards act, had resulted in reduction of much harmful employment of children. Inadequate state laws still allowed employment of many who should be attending elementary schools. The child labour research and youth employment services of the federal government were returned to the bureau of labour standards of the U.S. department of labour after two years of administration in the wage and hour and public contracts divisions of the department. The enforcement of the child labour provisions of the Fair Labor Standards act remains the responsibility of those divisions. Both the American Federation of Labor and the Congress of Industrial Organizations, at conventions held late in 1948, adopted resolutions condemning the continuance of child labour and urging increased appropriations for enforcement of federal and state child labour laws and improvement of state laws governing child labour and school attendance. (H. W. HK.)

Chile.

A republic extending along the southern Pacific coast of South America for about 2,600 mi., Chile has an average width of 110 mi. It is bounded on the north by Peru, on the south by the Antarctic ocean, on the east by Bolivia and Argentina and on the west by the Pacific ocean. It has an area of 286,323 sq.mi. and a population of 5,704,000 (May 1949 est.). Santiago, the capital, has 1,046,857 inhabitants (Dec. 1946, est.). Other leading cities are: Valparaíso with 198,065 inhabitants; Viña del Mar (85,725); Concepción (84,953); Antofagasta (47,326); Talca (44,859); Temuco (37,105); Iquique (34,864); Chillán (31,687) and Valdivia (30,308). Religion: Christian, mainly Roman Catholic. President in 1949, Gabriel González Videla.

History.—During 1949 Chile reaffirmed its belief in democratic principles, made efficient attempts to solve its economic crisis and resisted Communist encroachments. Early in the year its relations with Venezuela became strained because it brought before the consideration of the Organization of American States the unwillingness of the military junta to allow Ex-President Rómulo Betancourt, who had taken refuge in the Colombian embassy, to leave the country.

Late in January the government gave up its power to discharge Communists from public office and freed more than 700 imprisoned Communists. In the elections held in March, the first in which women voted, González Videla won a two-thirds majority in both houses of congress. Communist deputies were reduced from 15 to 6, and out of their 5 senators they retained 2 hold-overs.

In March Chile signed a protocol of friendship and collaboration with Italy.

In his message to congress in May, President González Videla announced that technicians were working on data for a vast irrigation project of the semiarid valley between rich agricultural central Chile and the northern nitrate desert. He also

SCHOOL CHILDREN PLAYING POOL at one of the 135 tables available to them at New York city public school recreation centres in 1949. The tables were installed by the board of education's division of community education, as a step toward combating juvenile delinquency

announced that the year 1948 ended with a budget surplus of more than $18,000,000, and that the Anaconda Copper corporation would spend more than $130,000,000 in new processing and mining facilities.

The drop in the price of copper, however, from 23 to 16 cents a pound about three years before the government had anticipated it and had been able to finish its industrialization and development plans, plus a proposed two cents tax by the U.S. on copper imports, seriously affected the country's economy. The current price was four cents less than was required to cover costs and the creation of a government corporation to sell copper was advocated. Small Chilean-owned mines wanted to close down, but 96% of the copper-production industry was American-controlled and some other solution was needed.

Alberto Baltra, economy and commerce minister, visited the U.S. to seek a solution, and urged Trygve Lie that a United Nations economic commission for Latin America be set up to make studies to carry out President Harry S. Truman's Point Four program in Chile.

Demonstrations in the copper mines, which González Videla charged had been "synchronized" to the Bolivian unrest by anti-democratic forces, caused the death of 1 soldier and the wounding of 26 other persons.

In mid-August martial law was declared to cope with the widespread disorders into which the Communists had turned the rioting initiated by university students protesting a small increase in bus fares in Santiago. The transportation strike was followed by disorders in the mining areas, and a railway and bank strike. The navy was sent to protect the mines and the arrest of Communist leaders, including Humberto Abarca, former member of the chamber of deputies, ended the disorder. There were 328 government employees dropped as Communist sympathizers. After the disorders, Foreign Minister Germán Riesco, Agriculture Minister Victor Opaso Cousiño, Public Health Minister Guillermo Varas Contreras and Labour Minister Luis Felipe Letelier resigned, but González Videla, who had emerged from the crisis with great prestige, refused to accept their resignations.

To meet the economic crisis the government decreed strict budget economy, obtained a $25,000,000 Export-Import Bank loan and, upon the recommendation of the International Monetary fund, proposed to devalue the peso from about 43 to 65 to the dollar. The dollar shortage and inflation still constituted serious problems, and Finance Minister Jorge Alessandri expressed grave concern over their solution.

President González Videla accepted an invitation extended by President Truman to visit the United States during 1950. (*See* also ANTARCTICA.) (J. McAD.)

Education.—In 1945 the public primary schools had 452,826 pupils and the private primary schools, 93,185 pupils. Secondary schools had about 55,000 pupils. University education is available at the state university of Chile, the Catholic university of Santiago and the University of Concepción.

Finance.—The monetary unit is the peso, valued at $0.01 U.S. currency, free (nontrade rate), on Nov. 30, 1949. The rate for imports into Chile was either $0.0323 or $0.0232, depending upon their importance to the Chilean economy. The 1950 budget, as submitted to congress, estimated revenue at 14,264,000,000 pesos (1949: 13,952,200,000 pesos) and expenditure at 14,264,500,000 pesos (1949: 13,035,000,000 pesos). The funded foreign debt totalled $242,300,000 on Dec. 31, 1948; the direct debt on Dec. 31, 1947, was 7,661,000,000 pesos plus guarantees of 1,767,000,000 pesos. Notes and coins in circulation on Oct. 31, 1949, totalled 4,662,000,000 pesos; the gold reserve was $43,400,000. Total sight and current account deposits on Oct. 31, 1949, were 10,396,000,000 pesos; time deposits were 4,697,000,000 pesos and government deposits, 2,577,000,000 pesos.

Trade and Communications.—Exports in 1948 totalled 1,597,613,895 gold pesos; imports were 1,303,793,433 pesos. Leading exports were copper bars (59%), nitrate (16%), beans and lentils (3%) and wool (2%). Leading imports included industrial machinery and equipment (16%), oils, paints and chemicals (13%), textiles (10%), iron and steel products (9%) and petroleum and diesel oil (8%). The leading customers were the U.S. (53%) and the United Kingdom (8%); the leading suppliers, the U.S. (42%), Peru (13%) and Argentina (10%).

Railroads (1947) totalled 5,154 mi. Highways (Dec. 31, 1947) included 1,785 mi. of international highway, 3,815 mi. of national highway and 26,300 mi. of provincial roads. In 1948, 36,770 automobiles, 4,132 buses and 27,580 trucks were registered. According to Lloyd's Register of Shipping, the merchant marine had 92 steamers and motorships (100 tons and over) aggregating 188,168 gross tons on June 30, 1948. The national airline (Linea Aerea Nacional) flew 2,700,000 mi. in 1948. In 1949 there were 48 long-wave and 11 short-wave radio stations. Telephones (1946) numbered 113,585.

Agriculture.—Production of principal crops in the crop year 1947–48 was as follows (in short tons): wheat, 1,180,742; barley, 120,322 (1948–49: 94,903); oats, 79,617 (1948–49; 89,609); potatoes, 613,972; maize, 81,788; rice, 98,569; beans, 80,642; tobacco, 6,350 (1948–49: 8,610). Fruits and vegetables are cultivated extensively. Cattle numbered 2,310,222 in 1948. The last census of other livestock showed 5,749,069 sheep and 810,206 goats. Wool production averages 17,000 short tons a year.

Manufactures.—Manufacturing establishments were reported to number 5,585 in 1948, with a capital of 1,466,587,000 pesos and 296,000 employees. There are 372 textile factories, including 40 cotton mills, 220 knitting mills, and 46 silk and rayon mills. Production figures (1948) (in short tons) included woven cotton fabrics, 203,000,000 yards; wool yarn, 530; cement, 595,000; pig iron, 15,900; steel ingots and castings, 32,900; cigarettes, 5,088,440,000 (units). The index for manufacturing industries stood at 155 in Aug. 1949, and employment in manufacturing was 138 (1937=100). Electric energy is employed extensively; production in 1948 was 1,064,000,000 kw.hr. The cost of living index stood at 528 in July, 1949, the wholesale price index at 397 and the wholesale textile price index at 376 (1937=100).

Mineral Production.—Chile is the leading mineral-producing country in South America. Production in 1948 included copper, 490,467 short tons; nitrate of soda, 1,969,320 short tons; iron ore, 2,988,270 short tons; coal, 2,462,602 short tons; gold, 164,254 troy oz.; silver, 861,941 oz.; manganese, 21,332 short tons and mercury, 17.8 short tons. Mineral production was valued at 4,701,844,832 pesos in 1946.

FILMS OF 1949.—*Chilean Nitrate; People of Chile* (Coast Visual Education Co.).

China. A large republic of eastern Asia, China has an area of about 3,876,956 sq.mi., divided, at the end of 1949, into the People's Republic, under the Communists, dominating practically all the mainland of China, and the republic, under the nationalists, controlling a few pockets in southwest China and the islands of Hainan and Taiwan (Formosa). The government of each republic claimed to be the sole legal government for all China. Peking (name changed from Peiping on Sept. 27) was declared the seat of the People's Republic of China on Oct. 1; Taipei, Formosa, became the capital of the national government in December.

The 1948 official estimate placed the total population of China at 463,493,418 and the population in the principal large cities as: Shanghai 4,630,385; Peking 1,721,546; Tientsin 1,772,840; Canton 1,128,165; Nanking 1,113,972; Mukden 1,021,057; Chungking 985,673; Tsingtao 850,308; Harbin 760,000; Hankow 721,598; Sian 628,499; Dairen 543,690; Changchun about 500,000.

President: Mao Tse-tung (*q.v.*), chairman of the Central People's government since Oct. 1, 1949; Li Tsung-jen (*q.v.*), acting president of the national government after Chiang Kai-shek's (*q.v.*) resignation on Jan. 21, 1949.

History.—The 22-year struggle between the Kuomintang led by Chiang Kai-shek and the Communists led by Mao Tse-tung resulted in the domination of China by the latter. When the Communists began their offensive in China proper in Nov. 1948 they controlled about one-third of China with an approximate population of 200,000,000. Partly because of the defection and disintegration of the nationalist armies, inefficiency and unpopularity of the national government and the abhorrence of the people of civil war, the Communists practically completed the military campaign by the end of 1949.

After the Communists captured Tientsin on Jan. 15 and the nationalist agreement of Jan. 22 to surrender Peking, the Communists drove toward Nanking. In response to appeals for peace, Mao Tse-tung stated on Jan. 14 the willingness of the Communist party to negotiate peace on the following terms: (1) punishment of "war criminals"; (2) abrogation of the 1946 constitution; (3) abolition of the existing form of government; (4) reorganization of the revolutionary armies; (5) confiscation of the bureaucratic capital; (6) land reform; (7) abrogation of the treaties of national betrayal; (8) establishment of a democratic coalition government without the participation of reactionary elements. On Jan. 22, one day after President Chiang's resignation, Acting President Li accepted these conditions as a basis for negotiation. In the meantime the Communists insisted on the surrender of the "war criminals."

In order to line up all the nationalist elements behind his peace efforts Li flew on Feb. 20 to Canton, which had been designated as the nationalist capital, and succeeded in bringing back to Nanking Premier Sun Fo and his cabinet about a week later. Following the visits of the unofficial peace mission and the preliminary peace delegation from Nanking with the Communist leaders in Peking, Mao Tse-tung agreed on Feb. 9 to call a peace conference within a month. Premier Ho Ying-chin, successor to Sun Fo, named the nationalist peace delegation headed by Gen. Chang Chih-chung. The Communist party appointed Chou En-lai chief of the Communist peace delegation and declared peace talks should be begun on April 1 in Peking. Before negotiations got under way the Communists had sufficient time to regroup their forces marching toward Nanking and the Yangtze river. From April 2 to 12 the peace delegates exchanged their views informally over three fundamental Communist demands: (1) the Communist armies be allowed to cross the Yangtze river to help reorganize the nationalist troops; (2) an interim government with Mao as chairman and Li as one of the vice-chairmen must be established; (3) the Chiang, Soong, Kung and Chen families must be punished.

On April 13 formal negotiations opened. Three days later Mao's peace program was expanded to 24 items with the crossing of the Yangtze by the Communist armies and elimination of the national government as the key issues. On April 17 the Communists gave the nationalists three days to make up their minds. Two days later Li's government refused to sign the 24-point peace draft. A few hours after the rejection the Communist armies started an all-out offensive. The fall of Nanking on April 24 marked the beginning of the disintegration of the national government.

Early in May the Communists started their drive to Hankow and final assault on Tsingtao and Shanghai. Hankow was captured on May 17; Shanghai on May 25; and Tsingtao on June 2. To consolidate the nationalist forces, a supreme council with Chiang Kai-shek as chairman and Li Tsung-jen as deputy was created in June in Canton and Marshall Yen Hsi-shan became premier succeeding General Ho. In July the Communists opened their drives in south China and the northwest. Changsha, the rice-bowl bastion, fell on Aug. 5; Foochow, an important seaport, on Aug. 17; Lanchow, a fortress city in the northwest, on Aug. 28. On Oct. 10, the national government officially informed foreign diplomats of its second shift of capital to Chungking. The Communists took over Canton on Oct. 15 and Amoy on Oct. 17. In the autumn the Communists penetrated the southwest. The nationalists abandoned Kweiyang, about 200 mi. south of Chungking, on Nov. 13. On Nov. 24 Chengtu was designated as the seat of the much reduced national government. On Nov. 20 Acting President Li arrived in Hongkong instead of going to Chungking and left on Dec. 5 for medical treatment in the United States. Chungking fell on Nov. 30 and on Dec. 8 the nationalist capital was moved to Taipei, Formosa. The Communists began their entry into Chengtu on Dec. 26. After the Communists occupied Nanning on Dec. 6 Gen. Pai Chung-hsi's army was forced to flee to Hainan and Indo-China. Following the examples of the generals in Sinkiang, the governors of Yünnan and Sikang switched to the Communists in early December. By the end of 1949 the People's government controlled practically all China's mainland except Tibet. Although the civil war not yet ended, its cost in human lives alone was staggering. According to the Communist official figures, the total casualties from 1947 to July 1949 were 1,432,900 for themselves and more than 5,000,000 for the nationalists.

On the foundation of their military success the Communists with the support of minority parties established a preparatory committee of about 134 members in June to make plans for the forming of the People's government. From Sept. 21 to 30 the first session of the People's Political Consultative conference of more than 600 delegates was held to approve the work of the preparatory committee, enact the organic law of the Central People's government, elect Mao Tse-tung as its chairman, elect six vice-chairmen and the other 56 members of the Central People's Government council and proclaim the founding of the People's Republic of China on Oct. 1. On Oct. 2 the Government council, the highest legislative and executive body, took office; it appointed Chou En-lai as premier of the State Administration council, which was to supervise the work of about 30 ministries, and concurrently minister of foreign affairs, Mao Tse-tung as chairman of the People's Revolutionary Military council, Chu Teh as commander in chief of the People's Liberation army, Shen Chun-ju as chief justice of the Supreme People's court and Lo Hung-huan as procurator-general; and declared itself the sole legal government of China. On the same day the U.S.S.R. government announced it had given diplomatic recognition to the People's Republic of China. All other Communist-controlled countries followed suit. On Dec. 16 Mao Tse-tung arrived in Moscow for a state visit. In December Burma and India extended *de jure* recognition to the People's Republic of China.

The nationalist attempt to seek diplomatic mediation of the civil war and foreign aid for their cause met no favourable response. On Jan. 8 the national government requested the Big Four to act as intermediaries in the initiation of negotiation with the Chinese Communist party for peace. Immediately the United States replied that such a request would not serve any useful purpose. The United Kingdom, France and the U.S.S.R. likewise refused the request. On Feb. 9 Herbert Evatt, president of the third session of the general assembly, suggested that the United Nations should mediate the Chinese civil war. The national government welcomed the suggestion but the Communist spokesmen declared that neither the United Nations nor any foreign government had any right whatever to interfere in China's domestic affairs. The matter was dropped.

In September the fourth session of the general assembly voted to include the complaint of the Chinese delegation against the soviet violations of the Sino-soviet treaty of 1945 on its agenda. In a note to the general assembly dated Nov. 5 Chou En-lai stated that the People's government repudiated the legal status of the Chinese delegation of the national government. When the political committee of the general assembly debated the Chinese case in late November, the Chinese delegation submitted a draft resolution urging the member states to desist and refrain from giving any military and economic aid to the Chinese Communists and not to accord diplomatic recognition to the People's government. The soviet delegation refused to participate in the debate and declared it no longer recognized the right of the national government to be represented in the United Nations. The United States, the United Kingdom, France and several other members indicated their unwillingness to support the Chinese draft resolution. As a result the general assembly adopted in early December two resolutions calling upon member states to respect China's independence and territorial integrity and referring the matter to its interim committee for further examination and report.

Sino-U.S. relations deteriorated. Early in 1949 the United

States withdrew its marines from China and Economic Co-operation administration offices from the Communist-held cities. To avoid involvement the United States ordered all its ships out of Shanghai on April 25. Effective June 26 the nationalists blockaded all ports held by the Communists. The United States regarded the nationalist action as illegal. Despite the nationalists' repeated bid for U.S. aid and proposals by some congressmen for such aid the state department gave no favourable response. The White Paper on China published by the state department put the sole blame on Chiang's regime for its collapse, regarded more aid as futile and warned the Communists to avoid aggression.

The policy and attitude of the Communists toward the United States proved irritating. On June 20 Mao Tse-tung declared that the Chinese Communists belonged to the anti-imperialist front headed by the U.S.S.R. The Communists ordered the closing of the U.S. information offices in Peking, Shanghai and Hankow, arrested a U.S. vice-consul in Shanghai on the charge of obstructing a parade and refused to issue exit permits to several U.S. officials. Following the establishment of the People's Republic of China, news media of countries that failed to recognize the new regime were banned. The most serious act was the arrest of U.S. Consul General Angus Ward in Mukden in October; he was released after strong protest from the United States.

On Dec. 31 it was reported that Pres. Harry S. Truman and the U.S. National Security council agreed not to take any military measures for the defense of Formosa and to withhold recognition of the People's Republic of China.

Education.—Civil war impeded educational advancement. In 1947 there were about 790,000 primary schools with about 23,800,000 pupils and 5,892 secondary schools with more than 1,800,000 students. Many of these schools were closed in 1949. In 1948 there were more than 200 institutions of higher learning with about 140,000 students; most of these continued to function in 1949. In some a new curriculum with emphasis on Marxian ideology was introduced. In December the People's government made plans for the founding of People's universities.

Defense.—Toward the end of 1949 the fighting strength of the nationalist army was reduced to approximately 300,000 while the People's Liberation army increased to more than 4,500,000. The national government still maintained an air force of about 200 planes and a navy of more than 100 small vessels. About 80% of nationalist expenditures was for military purposes. It was reported that the People's government devoted about 38% of its budget to military functions.

Finance.—Civil war threw China's finance into confusion. Complete budget figures of 1948 and 1949 were unavailable. Both the national and People's governments faced deficits. The 1948 budget deficit of the national government was about 63% and in 1949 before the fall of Canton the nationalist monthly revenue was estimated at 20,000,000 Canton silver yuan while the monthly expenditures from both Formosa and Canton were about 50,000,000 yuan. The deficit was being financed by the sale of gold, silver and foreign exchange, of which the nationalists possessed to the value of about U.S. $200,000,000. In December it was revealed that more than 60% of the budget deficit of the People's Government was to be met by a new note issue and victory bonds. Before the nationalists were driven out of Nanking the gold yuan notes in circulation reached more than 30,000,000,000 and the unit value depreciated from about 1,500 gold yuan to U.S. $1 in January to 13,000 gold yuan to U.S. $1 in March. After Nanking fell, the provinces remaining under the nationalist control adopted silver yuan as a currency unit, and the exchange value was about two for one U.S. dollar. In December the official rate of exchange of the Formosa currency was 5 yuan to U.S. $1. In Dec. 1948 the People's Bank of China was established as the central bank having the sole right of note-issue for the areas under Communist control. The exchange rate of the People's bank dollar was 300 to U.S. $1 in May. In October it had depreciated to 4,500 to U.S. $1.

Trade and Communication.—Uncontrolled inflation and civil war crippled foreign trade. In 1948 import and export trade showed a decline from the 1947 figures. In terms of U.S. dollars, China's 1948 export amounted to $173,000,000 against $226,000,000 for imports. The United States headed the list of countries trading with China. Economic aid of $275,000,000 from the Economic Cooperation administration and military aid of $125,000,000 which expired in April helped sustain trade and production.

By the end of 1949 the People's government controlled all the railways on the mainland, totalling more than 13,000 mi., many of which needed repair. About half of China's highways totalling about 100,000 mi. were not usable. However, the inland water traffic showed an increase in 1948. Tele-communication lines further deteriorated.

Agriculture, Manufactures, Mineral Production.—China continued to suffer food shortage because of low production, over-population, civil war and floods. Military and political developments hampered the growth of industry and mining. The People's government decided to concentrate its first efforts in industrial development in Manchuria. The following tables show the general trend of agricultural and industrial production of 1947 and 1948 in comparison with the prewar figures.

Table I.—*Estimated Production of Major Industries and Mining in China*

(In thousand tons)

Unit	1948	1947	1935–39 average
Coal	13,800	19,000	36,000
Iron ore	158	150	3,360
Pig iron	11	6	1,535
Steel	44	57	810
Tin in ore	4.9	4.1	10.9
Tungsten	9.6	7	12
Cotton yarn	366	299	394
Cement	550	500	710
Electric power (million kw.)	2,860	3,120	3,130

Table II.—*Estimated Production of Chief Crops in China*

(In thousand tons)

Unit	1948	1947	1934–38 average
Paddy rice			
22 provinces	46,524	46,507	50,064
Manchuria	460	459	411
Formosa	1,200	1,205	1,642
Wheat and rye			
22 provinces and Manchuria	25,582	23,647	22,640
Coarse grains			
22 provinces	28,454	27,662	30,494

COMMUNIST ADVANCES in China 1946–49 (adapted from a series of maps in the *New York Times*)

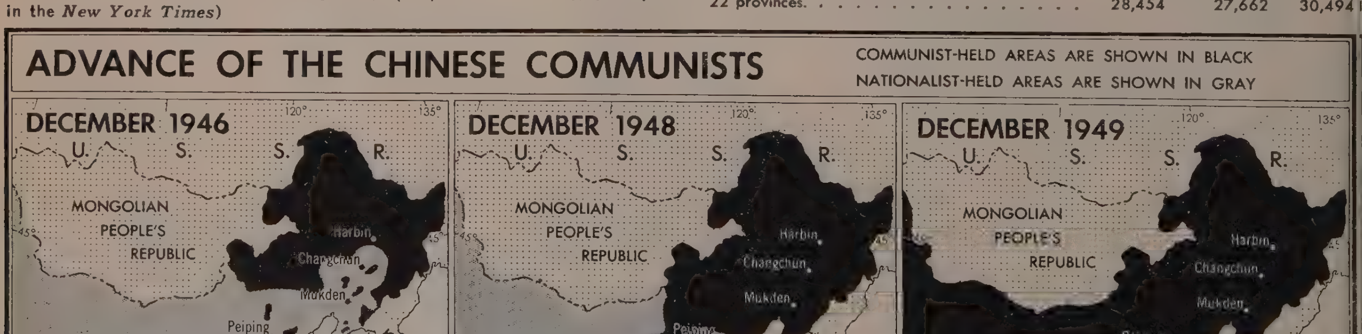

Table III.—*Estimated Products of Livestock and Poultry in China*

(In thousand heads)

Unit	1948	1947	1934–37 average
Hogs	59,510	53,758	60,675
Goats	13,976	13,609	19,695
Sheep	10,450	9,191	15,578
Chickens	209,335	196,743	265,860
Ducks	44,106	44,372	64,307

Chou En-lai

(1898–), premier and foreign minister of the Communist People's Republic of China, was born in Huaiyin, Kiangsu province. As early as 1919 he was imprisoned as an agitator among students. In March 1927 he helped organize workers who proclaimed a "citizens' government" in Shanghai, but Chiang Kai-shek later ordered the arrest of the Communists and sentenced their leaders to death, and Chou escaped and joined in the organization of the Chinese Red army. Throughout the early 1930s he worked for a united front against Japan. In 1936, when Chiang was kidnapped in Sian, Chou was largely responsible for his release. The united front which was later formed between the Communist forces and the nationalists was weak, however, and Chou was frequently an intermediary between the factions to discuss means of keeping civil war from breaking out anew.

Chou was the red representative at talks in 1946–47 with U.S. Gen. George C. Marshall, who sought futilely to end civil hostilities. He later charged that U.S. aid to Chiang was keeping the civil war alive. When the Communists in 1949 extended their control over most of China, Chou on Oct. 1 was named n Peking as premier and foreign minister of the new People's (Communist) Republic.

Christian Science.

Christian Science is a religion founded by Mary Baker Eddy and represented by the Church of Christ, Scientist, made up of the First Church of Christ, Scientist, in Boston, Mass., known as the Mother Church, and approximately 3,000 branches located throughout the world. There were also in 1949 more than 100 college and university Christian Science organizations formed in accordance with the by-laws of the Mother Church.

The Christian Science Church, which in 1948 purchased a building at Sixteenth and I streets, Washington, D.C., for the use of its Committee on Publication, opened in the building an exhibit officially called Christian Science World Activities on Display. The exhibit unfolded in chronological sequence the history of the Christian Science movement and included many unique features of architecture and display.

The Wartime Activities committee of the Mother Church continued in 1949 to help those facing the aftermath of World War II. Substantial quantities of food were supplied for distribution in Austria, Czechoslovakia, Finland, France, Germany, Great Britain, Greece, Hungary, Japan, the Netherlands and Poland. Clothing was sent to Great Britain, Germany, Norway, the Netherlands and elsewhere. Christian Scientists in the United States, Canada and England, interested in helping displaced persons to leave Europe and make new homes for themselves in other parts of the world, were aided by the Wartime Activities committee.

The work of the Christian Science Camp Welfare Activities t military and naval stations doubled during 1949. The Mother Church maintained 56 paid camp and hospital workers. In addition there were 214 volunteer workers who donated their services. Four Christian Science chaplains were assigned to stations with U.S. forces in Germany.

Full legal recognition for Christian Scientists to practice Christian Science and charge for their services was granted through legislation enacted in 1949 in Ohio, the last state in the U.S. to pass such a law.

Publications of the church, which are issued by The Christian Science Publishing society, include the *Christian Science Journal; Christian Science Sentinel; Christian Science Quarterly;* the *Herald of Christian Science,* published in seven languages and in Braille in English; and the *Christian Science Monitor,* an international daily newspaper.

Transcribed radio programs, originating in the Mother Church, were broadcast over more than 450 stations in the United States and territories, Canada, Panamá, Cuba, Bermuda, New Zealand and Australia. It was estimated that there were 10,000,000 listeners to these programs each week. (W. D. K.)

Christian Unity.

Christian unity movements which did not directly aim at the union of churches, but worked as leaven within the larger tendency, were notably accelerated during 1949. The system of state and local councils of Protestant churches had steadily grown until it included more than 700 organizations in the United States and about 200 in Great Britain. Their more recently adopted constitutions almost uniformly professed the ultimate ideal of church union.

United States.—Proposals, negotiations and preliminary steps looking toward actual ecclesiastical union were current among at least 7 important denominational groups in the United States, representing more than 12 actually participating denominations.

Congregational Christian-Evangelical and Reformed.—Following favourable action by the Congregational General council in 1948, the general synod of the Evangelical and Reformed Church voted its approval of the union of the two denominations, subject to the concurrence of 75% of the local synods. This was apparently assured by a previous popular vote which was favourable in the ratio of nearly 10 to 1.

Meanwhile the action of the special session of the Congregational-Christian General council in Feb. 1949, which declared the union effective on the basis of a 72% favourable vote of congregations, was challenged in the courts by an opposing minority. The matter was under adjudication at the close of the year but, pending court decision, it was anticipated that the formal union might be consummated in 1950. The title of the new body, the United Church of Christ, expressed the desire to draw in additional denominations and the matter was receiving formal attention from other bodies.

Presbyterian, North and South.—Long-continued negotiations between the two main branches of Presbyterianism resulted in a proposed basis of union which was under discussion at the close of 1949. Meanwhile the scope of the proposed union was enlarged in May 1949 by a vote of the Presbyterian General Assembly, U.S.A. (later concurred in by the Southern General assembly), inviting the United Presbyterian Church and the Reformed Church in America and "such other Presbyterians as may be willing," to consider a general reunion of churches of Presbyterian tradition.

United Presbyterian-Reformed Church in America.—Prior to the enlarged Presbyterian proposal, negotiations for union between these two bodies were well advanced. Joint sessions of their general assemblies were held in the spring of 1949, and a plan of union was sent down to their subordinate jurisdictions for action.

Northern Baptist-Disciples of Christ.—The commission on a projected union of these two churches reported in the Northern Baptist convention of 1949 that it did not propose going faster than the rank and file of the constituency would favour. It recommended that measures for cultivating closer acquaintance between Baptists and Disciples be continued and that a consideration of a basis of union be drafted, to be considered by the Northern Baptist convention in 1954 and voted upon by individual Baptist churches in 1955.

Meeting later in the year, the international convention of the Disciples of Christ approved the simultaneous meeting of the conventions of the two bodies in the same city in 1952 and the preparation of the basis of union, to be acted upon in 1954.

The 1949 session of the Northern Baptist convention by unanimous vote issued an invitation to all Baptist groups to confer with respect to union, including the bilingual and Negro Baptist churches.

Unitarian-Universalist.—The federal union of these two bodies was considered in their 1949 annual national meetings, held respectively in Portland, Ore., and Rochester, N.Y. They took identical action, referring to the vote of their congregations the question whether they would approve an official study of the possibility of such union. The action was carefully guarded, so as not to pre-judge the ultimate decision, assuming that the study was authorized.

Supplemental action indicated the purpose of including other liberal churches if the plan was approved.

"Crusade for a United Church."—The "Crusade for a United Church," led by E. Stanley Jones, and advocating federal union with the continuance of the existing denominations as subordinate units, was actively pushed in a nationwide series of meetings. A comprehensive movement initiated by the Congregational Christian and Disciples of Christ Churches and authorized to open conversations on the basis of organic union, received further development in a conference of official delegates representing eight interested denominations with about 16,000,000 members, held at Greenwich, Conn., in December. Their deliberations resulted in the formation of a permanent body titled "The Conference on Church Union," and the appointment of a committee to draft a unification plan "of such nature as to leave the door open to all Evangelical Christian bodies." Douglas Horton, general secretary of the Congregational Christian Churches, presided over the conference, and Bishop Ivan Lee Holt, of the Methodist Church, was elected president of the permanent organization.

Other Countries.—In Asia, unity movements within the younger Christian churches were numerous and significant, including developments or new negotiations in Japan, north and south India and Ceylon.

A complete scheme for the union of Anglican, Methodist, Baptist and Presbyterian churches in Ceylon, with the addition of a part of the United Church of South India which was located in Ceylon and which was to be transferred, was set forth by the authorized negotiators and was thought to be reaching the point of action.

In England, renewed conversations between authorities of the Church of England and the British Free Churches were authorized in 1947. A statement of agreements and points for further discussion was issued in early 1949. The statement reiterated that "the visible unity of the Church of Christ should be accepted as the final objective." Congregational-Presbyterian negotiations in Great Britain failed to reach agreement on a proposed organic union, but decided that the two churches should enter into "covenant relationship" which would identify them with one another spiritually and lay a ground for practical cooperation without constitutional union.

In July 1949 the Church of Scotland accepted an invitatio from the Church of England to examine the possibility of establishing intercommunion between the two churches through unification of the ministry.

Conversations underway in Australia for a number of year between the Anglican and Free Churches were stimulated by visit of the bishop of London in 1949. A proposal for the unification of the ministry at the parish level was under consideration, without raising at the moment the question of a commo episcopate.

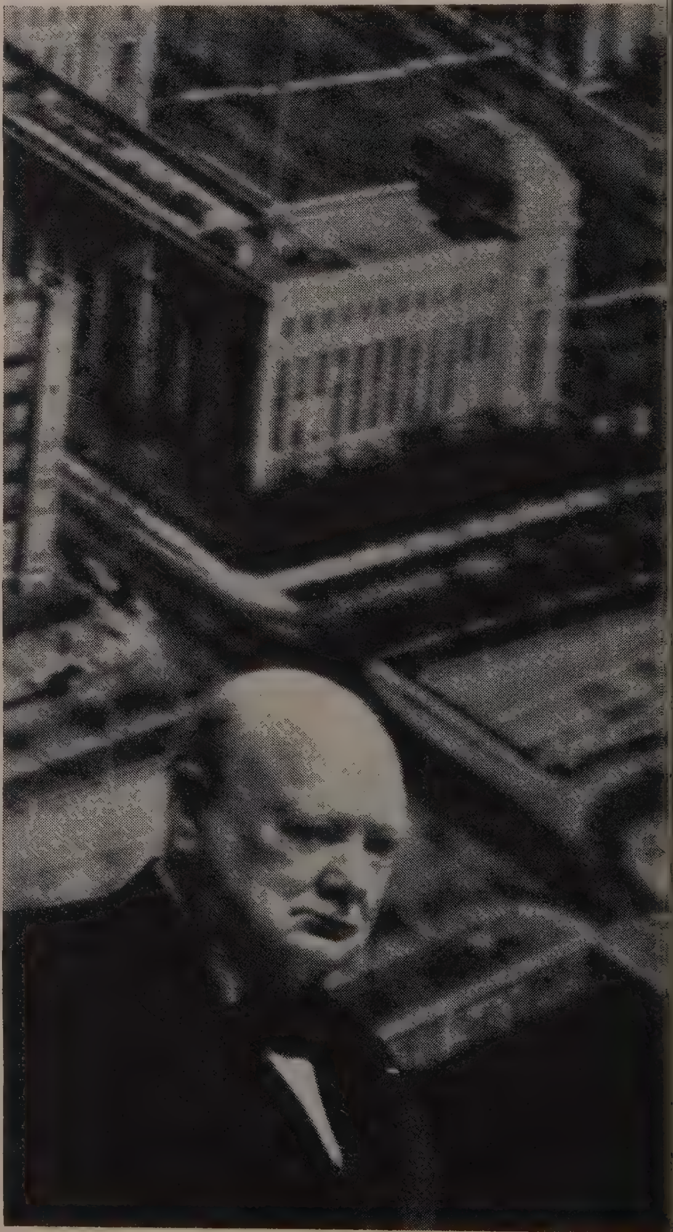
Churchill, Winston Leonard Spencer

(1874–) Britis statesman, was born at Blenheim palace, Oxfordshire, England

WINSTON CHURCHILL at the Boston Garden where he delivered the majo address at the Mid-Century convocation of the Massachusetts Institute o Technology, March 31, 1949. Behind him is a photomural backdrop of th institute



on Nov. 30, the elder son of Lord Randolph Churchill. For his biography and his political career during World Wars I and II, see *Encyclopædia Britannica.* After the defeat of his government in the general election of July 1, 1945, he led the Conservative opposition in the house of commons.

He attended the International Council of the European Movement in Brussels, Belg., in Feb. 1949 and on March 31 he spoke at the Mid-Century convocation of the Massachusetts Institute of Technology, Cambridge, Mass. In August he led the Conservative members of the British delegation at the first session of the consultative assembly of the Council of Europe at Strasbourg.

After the announcement of the devaluation of the pound on Sept. 18 he called for the summoning of parliament, and in the special debate that followed he moved a motion of no confidence in the government and again demanded a general election.

During the year the second volume of his memoirs of World War II, *Their Finest Hour,* was published. The first volume, *The Gathering Storm,* was published in 1948.

Church Membership. The latest information concerning church membership in 56 religious bodies in the United States, each reporting more than 50,000 members, was that published by the *Christian Herald,* New York city, in Sept. 1949 (*see* Table I). The total given for continental U.S. was 77,744,943 members, mainly for years ending in 1948, compared with 75,572,838 members reported by the same bodies the year previously. Some religious bodies do not compile and publish figures annually. In a few instances the latest data in the table are for the year 1936, the date of the last census of religious bodies taken by the federal bureau of the census. According to the official reports of the statisticians of the religious bodies, total church membership had been increasing for many years.

Church membership figures published in 1948 and 1949 represented the highest proportion of the total population ever reported in the religious bodies.

The Church of Christ, Scientist, is not included because the manual of that body forbids the numbering of the people and the reporting of such statistics for publication. The figures for the Disciples of Christ, the Evangelical Lutheran Church and the Evangelical United Brethren as given in 1947 represent corrections of those previously published. The figure for the Religious Society of Friends is for all Friends' denominations.

The religious bodies having more than 50,000 members had 97.4% of all the church members in continental United States, according to a compilation of the reports of 256 religious bodies, published in the *Yearbook of American Churches* (1945). The remaining 2.6% of the members were in more than 200 bodies. Of the total reported church membership in 1945, 32.3% was Roman Catholic, 1.3% Old Catholic, Polish Catholic and Eastern Orthodox, 6.4% Jewish and 60% Protestant. In 1945, mainly for the year ending in 1944, there were reported by 256 religious bodies 72,492,669 members, of whom 59,717,181 were 13 years of age and over. The *Christian Herald* estimated total church membership at 79,576,352 persons in 1949.

(B. Y. L.)

Table I.—*Church Membership in Continental United States, as Reported in 1949, for the Religious Bodies with More than 50,000 Members*

Principal Religions of the World. — Statistics of the world's religions are very rough approximations only; that is, in China, one may be at the same time a Confucian, a Taoist and a Buddhist. Any separate statistics for the various groups can only be estimates. The same difficulty exists in Japan, where one may be both Buddhist and Shintoist. Aside from Christianity few religions, if any, make any attempt to keep statistical records; while even within Christianity, Protestants and Catholics employ quite different methods of counting members. All persons of whatever age who have received baptism in the Catholic Church are counted as members, while in most Protestant churches only those who "join" the church are numbered; however, outside of North America and Europe, the Protestant figures given in Table II represent the total Protestant Christian community. (C. S. B.)

Church of England.

On June 19, 1949, the fourth centenary of the publication of the Book of Common Prayer was celebrated in cathedrals and churches throughout the land. A picture paper, entitled *Your Prayer Book,* was issued by the Society for Promoting Christian Knowledge in an edition of 150,000 copies. The work on the building of Guildford cathedral also continued. The Interim report of conversations between representatives of the archbishop of Canterbury and of the Free Churches was published on March 31, signed by A. E. J. Rawlinson, bishop of Derby, and Nathaniel Micklem. It recorded complete agreement on the apostolic faith contained in the scripture and the creeds, and substantial agreement on the doctrine of the church and the function of the ministry. The function of the episcopate and other questions remained to be discussed. A scheme for the reorganization and amalgamation of the city churches was published in July. It allowed for the retention of 15 of the churches as parish churches, to be open for Sunday services, and for pastoral work among the resident population in the city as well as for existing lunchtime activities; and 21 ward churches were also retained, mainly for lunchtime work, thus leaving the incumbents free for Sunday duty and specialized evening work elsewhere in the diocese. The revenues of the benefices were to be centralized in a common fund and fixed stipends were to be paid to the rectors and vicars of ward churches.

A committee was appointed to consider the Lambeth resolutions concerning the Church of South India. Revision of the canon law was continued by both the convocations of Canterbury and York. The subjects dealt with in 1949 were: church festivals; the vesture of the clergy; the conduct of divine service and time of service in cathedrals and parish churches; the Holy Communion; sermons, the bidding prayer, hymns, anthems and church music; Holy Baptism.

The Benefices (Suspension of Presentation) measure, 1946, (amendment) received final approval by the Church assembly. The Reorganization of Areas measure, 1944, (amendment), restricting the rights of patrons in certain areas, was extended until 1954. Some other measures received general approval; and it was agreed to drop from the Bishops Retirement measure certain clauses concerning doctrine, ritual and ceremonial, leaving these matters to be dealt with by the convocations in the revision of the canons. The reports of several committees were received. It was agreed that the Report on Lay Evangelism be referred to the convocations, diocesan and ruridecanal conferences and parochial church councils; the suggestion was made that the ministry of works should take over disused churches of historical interest. A commission was appointed under Sir Walter Moberly to draw up resolutions on the relations between church and state, and a council on ecumenical co-operation was appointed to maintain relations with the World Council of Churches and the British Council of Churches. Civil Aeronautics Administration.

During 1949 there was an improvement in the combined domestic and international air line safety record and a marked increase in the number of revenue passenger miles flown and freight carried by the scheduled air lines of the United States. There was a decline in the number of all types of pilot certificates issued and in the number of civil aircraft manufactured.

The combined accident fatality rate in 1948 for every 100,000,000 passenger miles of domestic and international flying by the scheduled air carriers was 1.3. The 1949 combined fatality rate was 1.0, the lowest in history. In domestic operations, the fatality rate was 1.3, the same as the 1948 rate. In international travel, the rate dropped from 1 in 1948 to 0 in 1949.

Revenue passenger miles flown by domestic and international scheduled carriers increased 12%, from 7,852,177,000 in 1948 to an estimated 8,800,000,000 in 1949.

Ton-miles of freight carried by both domestic and international scheduled carriers increased by an estimated 41% and ton-miles of express by 12%. Freight carried in international operations increased by an estimated 100%.

The total number of private, commercial and air line transport pilots increased from 491,306 as of May 1, 1949, to an estimated 510,000 at the end of the year. During 1949 an estimated 45,000 student pilot certificates were issued, a drop of 62% from 1948. Private certificate issuances totalling an estimated 30,000 were less by 65%; commercial certificate issuances totalling an estimated 7,300 were fewer by 10%; and air line transport pilot certificate issuances numbering an estimated 1,000 were less by 10%.

A marked increase in the number of women holding pilot and other airmen ratings was indicated by the first such inventory conducted by the CAA in nearly four years. The previous count as of July 1, 1945, showed only 5,122 women holding pilot certificates. The May 1, 1949, tally showed 9,678 women pilots, an 89% increase.

The number of civil aircraft manufactured numbered 3,565 compared with 7,302 in 1948, a decrease of 51%. Production of two-place models dropped 70%; of three-, four- and five-place models, 36%; more than five-place models, 37%.

The number of civil airports increased from 6,016 in 1948 to an estimated 6,100 in 1949.

Under the Federal Aid Airport program, as of Dec. 31, 1949, in the fourth fiscal year of the seven-year program, a total of 1,006 grant offers at 736 locations had been accepted by local sponsors, representing $92,126,435 in federal funds and approximately $98,000,000 in sponsors' funds.

International air transportation continued to expand, with four new United States flag air carriers certificated during the year, bringing the total to 24. Operations specifications were also issued to two new foreign flag air carriers, bringing the total in this category to 31.

Implementation of the 15-yr. master plan of all-weather air navigation and traffic control, known as the R.T.C.A. (Radio Technical Commission for Aeronautics) special committee report 31, proceeded rapidly during the year. By the end of Dec. 1949, 370 of the approximately 400 very high frequency radio ranges necessary to blanket the United States were in operation.

Weather delays were being overcome with the installation of

20 instrument landing systems, making a total of 94 such systems in operation at the close of 1949, and other improvements were in various stages of procurement and installation.

Importance was placed on the use of aircraft for industrial and agricultural purposes. The CAA was co-operating with the department of agriculture and Texas A. & M. College system in the development of an agricultural aeroplane. Approximately 2,000 waivers for such operations as dusting, spraying, seeding and fertilizing by air were issued by the CAA in 1949; reports were received of 262 towns and communities which were sprayed from the air for insect control.

At the CAA experimental station in Indianapolis, Ind., studies and tests of fire hazards were made to provide the latest technical data for the protection of fire in aircraft. (*See* also AIRPORTS AND FLYING FIELDS; AVIATION, CIVIL.) (D. W. R.)

Civil Liberties. Hysteria inspired by fear of communism seriously endangered civil rights during 1949, according to the American Civil Liberties union, which deplored the repressive measures advocated both by governmental and private agencies in an all-out campaign to drive Communists and communism from the United States. The proponents of strong-arm methods, however, replied that if communism were not destroyed, it would destroy civil liberties.

The antired fight was carried on through the purging of disloyal employees from government jobs; investigations of subversive activities by legislative committees; the passage of laws requiring loyalty oaths of public officials, including teachers; and attempts to outlaw the Communist party and Communist front organizations by statute and criminal prosecutions. Much criticism was evoked by the loyalty purge of federal employees, commenced in 1948, which resulted in the dismissal of about 83 out of 2,457,000 persons processed up to June, 1949.

The court of appeals of the District of Columbia ruled that freedom of speech does not include the right of a witness to maintain silence in hearings before legislative committees. The court affirmed the convictions of Dalton Trumbo and John Howard Lawson, two of ten Hollywood screen writers who had been held in contempt of congress for failure to say whether they were members of the Communist party.

Academic circles were torn by dissension over the right of members of the Communist party to retain teaching jobs, following the dismissal by the University of Washington of three professors for red affiliations. The civil rights of teachers were also at issue in court attacks on laws requiring them and other public officials to swear to their loyalty. Such laws were enacted during the year in Arkansas, California, Kansas, Maryland, New Jersey, New York and Washington, bringing the total of states with similar legislation to 26. None of the test cases reached disposition in courts of last resort.

The conviction of 11 leaders of the American Communist party for conspiring to advocate the overthrow of the federal government by force in effect outlawed the Communist party in the United States. Civil-liberties issues to be decided on appeal included the constitutionality of peace-time sedition laws, the applicability of the clear and present danger test to the defendants' activities and the freedom of conduct to be permitted defense counsel in such trials.

The U.S. supreme court by a 5 to 4 vote reversed the conviction of Rev. Arthur Terminiello for disorderly conduct in stirring up a demonstration by hecklers outside of the hall where he was making a fascist speech. The court ruled that no clear and present danger "of a serious substantive evil" had been shown. By the same narrow margin the court upheld a Trenton, N.J., ordinance banning the use of sound trucks which emit "loud and raucous noises." "To enforce freedom of speech in disregard of the rights of others would be harsh and arbitrary," the court said.

The damage to civil liberties caused by measures restricting freedom of expression was somewhat offset by gains to racial minorities through growing public tolerance, implemented by legislation and court decisions. Fair Employment Practices committee (F.E.P.C.) laws were enacted in Indiana, Massachusetts, New Mexico, Oregon, Rhode Island, Washington and Wisconsin. Court decisions included a Georgia supreme court ruling that counties with substantial Negro populations must put Negroes on their jury lists; a ninth circuit court order restoring U.S. citizenship to three former citizens of Japanese descent, who had renounced their citizenship under pressure of war hysteria; and the invalidation by the Oregon supreme court of a law barring Japanese aliens from owning or leasing farm land. New York's highest court, however, ruled that discrimination against Negroes by a housing project operated by an insurance company under a special statute was not a violation of constitutional rights.

(*See* also ALIENS; BIRTH CONTROL; EDUCATION; LAW; MOTION PICTURES; NEGROES, AMERICAN; NEWSPAPERS AND MAGAZINES; RADIO.)

Other Countries.—In Great Britain a ban was imposed on March 21, 1949, on political processions in the London area for a period of three months. A previous ban had expired on Feb. 6, but it was reimposed after disturbances with Communist supporters when members of the Union movement attempted to march through east London. The ban expired in June but was reimposed on Oct. 3 for another three months.

The "purge" in the civil service of persons known to be either Communists or fascists and whose duties were concerned with security remained in force. On Jan. 24 the prime minister, Clement Attlee, announced that, from the beginning of the "purge" in March 1948, 17 persons had appeared before the advisory committee. In ten of these cases the persons had been transferred to nonsecret work.

On Nov. 26 the constituent assembly of India adopted a constitution to become operative on Jan. 26, 1950. Part III dealt with fundamental rights. Included were rights of equality, such as the prohibition of discrimination on grounds of religion, race, caste or sex, the abolition of untouchability and freedom of speech; and rights relating to religion, affirming that all persons were equally entitled to freedom of conscience and the right freely to profess, practise and propagate religion.

The basic law (constitution) for western Germany, passed on May 8, contained provisions respecting civil liberties. The law guaranteed equal rights to men and women, and provided that nobody might be privileged or prejudiced by reason of sex, descent, race, language, home or origin, faith and religious or political beliefs. The right to assemble peacefully and unarmed, and to form associations and societies, was guaranteed.

On Sept. 29 the Argentine chamber of deputies passed a bill which regulated the party system. The legality of the existing parties was recognized but they were forbidden to form alliances for electoral purposes. The bill provided for the dissolution of parties endangering social peace, inciting to violence or having international connections. A new constitution was published on Jan. 11, and became operative on March 16. Rights of workers and of the family were guaranteed, but the right to strike was not granted.

Because of a coal strike in Australia, which broke out on June 27, the federal parliament on June 29 rushed through the Emergency Coal Strike bill, which forbade trade unions from using their funds for the continuance of the strike. The bill was retrospective from June 16, the date the miners balloted to strike.

On April 2 Great Britain and the United States presented notes to Bulgaria, Hungary and Rumania accusing them of repeated violations of the human rights clauses in the peace treaties. The three governments rejected the protests. The United Nations general assembly, on Oct. 22, adopted a resolution seeking the opinion of the International Court of Justice as to whether the human rights clauses of the peace treaties had been violated.

Civil Service. During 1949 over-all employment in the civil service of federal, state and municipal governments in the U.S. was on an essentially stable level. A slight increase in state and municipal employment occurred during the year, which was offset by a decline in federal employment. In the federal government, the number of employees fell below the level of the previous year largely because of cutbacks in the national defense program. At year-end, total civilian employment in the executive branch of the federal government was in the neighbourhood of 2,000,000, a decline of approximately 100,000 employees from 1948. State and local government employment averaged approximately 3,790,000 for the year, an increase of about 20,000 over the average for 1948.

Early in the year, a committee under the chairmanship of former Pres. Herbert Hoover advanced a series of recommendations for the betterment of personnel management in the federal government. One of the committee's recommendations, calling for reorganization of the United States civil service commission's administrative setup, was put into effect during the year. Congress also enacted legislation providing for a general overhauling of federal pay schedules. As a result of this legislation, employees in the higher brackets received substantial pay increases—the first upward extension of pay rates for top-level personnel in more than 20 yr. Many employees in the middle and lower brackets also received nominal pay increases as a result of the realignment of their pay schedules.

The general levelling off in living costs during the year was reflected in a comparative stability in pay levels for state and local government employees. Minor upward revisions were made in isolated instances, but for the most part pay rates remained substantially at their 1948 level. In Kentucky, a long-time provision in the state constitution limiting the salaries of public officials to a maximum of $5,000 was repealed and steps were taken to increase pay rates for employees in the upper brackets.

In general, the volume of applicants for public employment increased perceptibly during the year, a result of the decline in industrial employment. However, the supply of applicants for many professional and technical positions was still short of the demand.

During the year legislation was adopted in North Carolina providing for a comprehensive personnel program in the state government. In Georgia the existing state personnel system was expanded to embrace a large segment of highway employees, and an Illinois statute set up a civil service system for the state police department. In Memphis, Tenn., legislation was adopted placing city employees under a civil service system. The Arizona supreme court declared a newly adopted state civil service law to be unconstitutional shortly after the law was scheduled to become effective the first of the year.

In two states, New York and Illinois, major changes were made in previously existing veteran preference laws. In both instances, the revision resulted in giving veterans a lesser degree of preference in public employment than before. Veteran organizations in both states were among the groups backing the changes.

Legislation was introduced during the 1950 session of congress which would provide coverage for public employees under the federal old-age security system. The bill, which would permit states to participate on a voluntary basis, received favourable action in the house, but did not come up for a vote in the senate. (*See* also FEDERAL BUREAU OF INVESTIGATION.)

(J. J. DN.)

Great Britain.—During the latter part of 1948 the development of the social insurance schemes resulted in further additions being made to the staff of the British ministry of national insurance. At the same time responsibility for domiciliary assistance was transferred from local authorities to the National Assistance board, which took over about 1,700 staff with the work. These measures were, however, more than counterbalanced by reductions over a large part of the civil service. The major contributions came from the trade and industrial departments which made relaxations on controls and rationing. The ministry of labour also reduced its numbers. The net result of these changes was that the number of nonindustrial staff employed in the civil service fell from 715,000 in July 1948 to 697,000 in Oct. 1949.

The government accepted the recommendation of the committee on higher civil service remuneration for substantial increases in the salaries attaching to the senior posts in the service. The actual introduction of the new salaries, originally scheduled to begin in Oct. 1949, was deferred because of the worsening of the economic situation and the need for stabilizing wages and salaries generally. The year 1949 also saw the publication of the report of the Masterman committee on the political activities of civil servants, recommending complete political freedom for the first time to about 450,000 members of the industrial classes and of the minor and manipulative grades (mainly in the post office) while leaving about 450,000 members of the office grades from typists to senior administratives subject to the existing limitations. The government accepted the report but for the time being it was being put into effect only to the extent to which its recommendations conferred freedom from restrictions on the industrial classes and minor and manipulative grades.

(E. E. BS.)

Clark, Georgia Neese (1900–), treasurer of the U.S., was born on Jan. 27 in Richland, Kan. She studied at Washburn college in Topeka where she took her degree in 1921, and then followed a stage career with stock companies. In 1929 she married her manager George M. Clark; they were later divorced. She entered politics in 1930 in Richland, and became a leader of the Kansas Young Democrats. She became a member of the Democratic national committee in 1936, and was vice-president of the Democratic Midwest conference in 1947. At the same time, she successfully managed substantial banking and commercial interests which she inherited from her father in 1937, and her financial and political activities were culminated by the announcement by President Harry S. Truman on June 4, 1949, of her nomination as treasurer of the United States. She was unanimously confirmed as treasurer by the senate on June 9. On June 21 she took the oath of office, and then signed a receipt for $27,424,541,375.78 the amount of monies and government securities placed in her custody. Her signature, in facsimile, appears on all U.S. paper currency.

Clark, Thomas Campbell (1899–), associate justice of the U.S. supreme court, was born on Sept. 23 in Dallas, Tex. He studied at Virginia Military institute, Lexington, and at the University of Texas in Austin, and practised law in Dallas from 1922 until 1927. From 1927 to 1932 he was civil district attorney for

Dallas county. In 1937 he entered the U.S. department of justice, serving first as special attorney for the bureau of war-risk litigation and later in the antitrust division. In 1942 he was named co-ordinator of alien enemy control of the western defense command and chief of civilian staff for Japanese war relocation. He was named assistant attorney general in charge of the antitrust division, March 1943, and was in charge of the criminal division, Aug. 1943 to June 30, 1945, and then became attorney general of the U.S.

Early in 1949 he recommended drastic new antiespionage laws, sanctioning wire tapping and a lifting of the statute of limitations in espionage prosecutions, a reflection of congressional and court disclosures of the extent of Communist activity in the U.S. At Pres. Harry S. Truman's direction, he refused on June 1 to divulge to the senate judiciary committee certain files on foreign officials suspected of subversive activity, his grounds being that such a disclosure would be against public interest. On July 28 President Truman announced that he had asked Clark to take the position left vacant by the death of Associate Justice Frank Murphy of the supreme court. The appointment was confirmed by the senate and on Aug. 24 Clark was sworn in by Chief Justice Frederick M. Vinson.

Clay and Ceramic Products.

High production levels were maintained generally throughout the ceramic field in 1949. Most branches of the industry produced slightly below the record totals of 1948, although glass set new production records.

Structural Clay Products.—The structural clay field is largely dependent upon building activity, and during 1949 brick and tile manufacturers operated at capacity during most of the year to keep up with demand.

Modular sizes of structural clay products had been adopted by more than half the industry by the end of the year, as traditional sizes and shapes of brick and tile were replaced by the new standards, which were more in line with modern building design and engineering.

The first industry-wide research project to be projected in the structural clay field was started in 1949, with $1,250,000 pledged by manufacturers for a five-year program of research on structural clay products. Research objectives were larger, lighter-weight units, new colours in face brick and glazed brick and tile and new styles and shapes of products for better appearance and more economical construction.

Glass.—The glass industry in 1949 set production records because of great demand for flat glass, structural glass for new buildings, laminated glass for automobiles and for new products in several fields, although glass container production was somewhat lower than the previous year.

Cheap, lightweight glass beverage bottles designed to be thrown away when empty came into wide use during the year. Glass fibre products of new types, with the warmth and draping qualities of wool, were introduced. Television tubes were a rapidly growing market, with several new types introduced during the year making possible cheaper and longer-lasting tubes. A special glass was developed for television tube faces to make possible images of greater contrast in lighted rooms. Special structural and window glasses which filter out infra-red rays from sunlight were available for home and industrial windows.

Photosensitive glass, in which photographic images can be produced which will not fade and can be washed with water, became commercially available. The glass is exposed by the use of ultra-violet light and developed by baking at temperatures of from 580° to 650° C. (*See* also GLASS.)

Porcelain Enamel.—New applications and new types of porcelain enamels created wider markets for enamelled products during the year. Architectural porcelain enamel was widely used in new buildings, and the appliance and sanitary ware fields were sustained by home and industrial construction.

Research was carried out during the year on new types of enamels which require only one thin coat instead of the two heavy coats necessary with conventional types. The thin enamel coats are much more resistant to chipping, and can be used on quite flexible metal parts without chipping damage.

Kitchen appliances in several pastel colours were introduced during 1949, and porcelain enamelled steel in all colours was in wide use in architecture.

Refractories.—Supplying the steel, ceramic and other heavy industries, the refractories industry operated at high levels to fill demands caused by the general high level of manufacturing.

Results of research in adapting refractories to jet and rocket engine construction in several government projects were released during 1949. Refractory enamels were developed which, applied to few thousandths of an inch thick on metal parts, make the metal able to withstand temperatures several hundred degrees above their normal melting points for short periods of time. Cast refractory parts, such as turbine blades, were developed for jet aircraft engines, and can withstand heat and corrosive action destructive to metals and alloys.

Ceramic engineers at the government's atomic energy projects were working on the application of refractories to controlling the heat of atomic fission, but details were not released. It was known, however, that special refractories being studied had some of the highest known melting points, as well as a very high degree of chemical inertness.

White Wares.—The china and dinnerware industry fell below its postwar production peak in 1948, and the field of fine china was severely affected by the spring and summer business recession. Vitreous sanitary ware production was also hurt, but recovered strongly with increased building activity. Electrical and chemical porcelain manufacture reflected the generally high level of industrial production.

Automatic machinery of several kinds for making dinnerware was produced experimentally during the year, including presses for faster, automatic production of flatware and machines for applying handles to cups and similar pieces, which had traditionally been applied by hand.

Fine china for export was the major objective of the industry in England, and decorated ware was reserved for that market. New colours and shapes in semivitreous dinnerware were replacing the traditional designs in the United States, where the emphasis was on faster, lower-cost production of this ware.

Cement.—The cement industry was a chief supplier of the construction industries, with a resulting high level of production. Experiments were made during the year on the production of concrete brick, which imitated the colour and appearance of clay face brick. The use of prestressed steel reinforced concrete beams was introduced in the United States. Tests showed that such beams have much greater strength for their weight than conventional reinforced concrete.

Cleveland.

Cleveland, O., had a population of 878,336 by the federal census of 1940 and an estimated population of 910,925 in 1948. Its area is 73.1 sq.mi.

Thomas A. Burke, Democrat, won his third consecutive elected term as mayor in the election of Nov. 8, 1949, defeating Franklin A. Polk, the Republican candidate and a member of the board of education, 158,198 to 78,211. The city council elected at the same time was made up of 20 Democrats, 10

Republicans and 3 independents. Voters rejected a proposed four-year term for mayor and councilmen but approved a county charter commission to modernize the Cuyahoga county government.

Earlier, in the October mayoralty primary election, voters had rejected a proposal to raise the mayor's salary by $5,000 annually but had approved a charter amendment which cleared the way for the city to obtain a large loan from the Reconstruction Finance corporation to construct a rapid-transit line on its municipally owned transit system. The 1949 city budget, $36,000,000, was the largest in its history.

Two new theatres were opened by nonprofit organizations. One was by the nationally known Play House group. This theatre, on Euclid avenue, was of revolutionary design and was the third one to be operated by the group. The other new theater was the Karamu, which was constructed by an outstanding Negro drama group.

Cleveland Public library employees were granted salary increases totalling $253,280. A six-day strike by transit workers starting just before Christmas left the city without public transportation. On Dec. 17 a $400,000 fire destroyed historic Central Market, which was owned by the city.

Electrical energy output in Cleveland in 1949 was about 4,000,000,000 kw.hr. Freight car loadings were about 350,000, down 20% from 1948, while unloadings were about 340,000, down 26%. Steel ingot tonnage produced in the Cleveland-Lorain district was 3,875,850, down 4% from 1948. On Dec. 1, 1949, the Cleveland Stock exchange went out of existence, becoming a part of the new Midwest Stock exchange in Chicago. Cleveland shares traded on the new exchange in December were 115,000 or more than had been traded on the Cleveland exchange in any month since Sept. 1939. (P. By.)

Climate: *see* METEOROLOGY.

Clothing Industry.

The clothing industry in the United States made further readjustments during 1949. Stocks fell in retail establishments as continued high prices made the carrying of large inventories unduly speculative. Based on dollar volume, sales approximated 1948, while unit sales were down. Labour costs did not decline, but overtime disappeared and in many factories the work week was reduced to three or four days. Piece goods prices fell somewhat in all fields. Imports of British woollens increased.

An important factor was the continued and increasing importance of synthetics in the men's-wear field. Rayon suitings increased in usage because of a price-conscious market. Technical difficulties in cutting, sewing and pressing were almost entirely resolved by the end of the year. The newest suitings on the market were nylon, with substantial production scheduled for 1950, particularly in the low price men's suit field. Blends of nylon and wool became of increasing importance.

The woollen industry was not unaware of the advance in synthetics. Despite a world-wide lack of wool that approached a shortage, the Wool bureau was formed to publicize the benefits of woollen fabrics for apparel. The woollen and cotton industries seemed to be pulling together to meet a common threat.

Research and development produced continued advances in machinery. Sales to countries outside the United States slackened as the dollar shortage became more acute. Domestic sales of industrial machines also tapered off, but new labour-saving devices promised aid to manufacturers beset with high labour and fabric costs. A six month's strike at the country's largest industrial sewing machine factory caused a temporary shortage of machines and needles but resumption of production in October alleviated the situation. Continued improvement and development of thread-trimming machines was of great importance. New developments on self-sharpening cloth cutters were noted. A new button sewing machine was marketed along with new label-sewing and waistband-edge binding machines. Regular, special and blind-stitch machines were available in new and improved models. New modern factories were erected in suburban and rural areas by the Reece corporation, famed for buttonhole machines, and the Willcox & Gibbs Sewing Machine company, longtime producers of straight and special sewers. The expansion of several highly specialized machinery manufacturers into new sewing machine fields pointed toward increased competition in the general machinery trade. New minor equipment included shock absorbing rests for sewing tables, an overhead conveyor system to carry finished work to the pressing and shipping rooms and new methods of making multiple markers and patterns. Much emphasis was placed on production and price control in the factory.

Style changes were more radical in what they promised rather than in what was achieved. Despite the fact that tie patterns moved toward the conservative, there was a definite indication of profuse colour and bold patterns in men's dress. Regular clothing manufacturers turned toward the simulated hand-stitch slip-stitch machine. Sportswear remained popular with the accent on fabric and colour. The Cuban Guayaberra began to move north from Miami. Men's suits continued the wide shoulder, big sleeve head, square hanging design of the previous year. New coverall and overall designs came into being. Continued cold weather clothing research went hand in hand with the expanded activity in the arctic and in high altitude aviation.

Women's wear featured the development of style merchandise at low income levels. Tailored clothes production slowed because of price resistance at consumer levels. Manufacturers and retailers covered an ever increasing portion of the consumer market with appealing advertisements of attractive, low cost fashions.

Labour made no special gains on the clothing front in 1949. Here and there an individual concern put in the guaranteed 50-work-week year, but in most cases management was skeptical.

Countries other than the United States and Canada continued to increase clothing production, reaching and surpassing prewar totals. Export shipments of machinery and equipment from the United States were only a very small part of the foreign orders booked, because of dollar shortages.

The outlook for 1950 was not clear. New styles and more colourful clothes were in the offing. Store inventories were low and prices were high. The trade was well aware that the 1949 dollar volume had been brought up to that of 1948 only because of a tremendous spurt in retail sales during the last three weeks of December. Competition was rife within the industry, causing sales-minded producers to add frills here and there while trying to meet a price market. Once again production efficiency, good styling and smart merchandising were determining factors—the era of open competition had returned.

Coal.

World production of coal in 1947 surpassed the 1939 level and followed with a 2% increase in 1948. Table I shows the outputs of the major producing countries, along with the estimated world production.

Nearly all of the important European producers except Germany had regained their prewar level of operation, and in several cases had surpassed it by a considerable margin. Most of the countries for which partial 1949 data are shown in Table I reported outputs ahead of the 1948 average, but not by a

Retail dealers	122,764	124,906	121,805	100,586	99,163	89,747

The 1947 coal output surpassed that of all previous years, even the war peak of 1944, but the 1948 output was reduced nearly 5% by a strike over the unsettled work contract in the ituminous fields.

The reduced output was offset by a sharp decline in exports n the second half of the year, and by a cut of 4% in consumption.

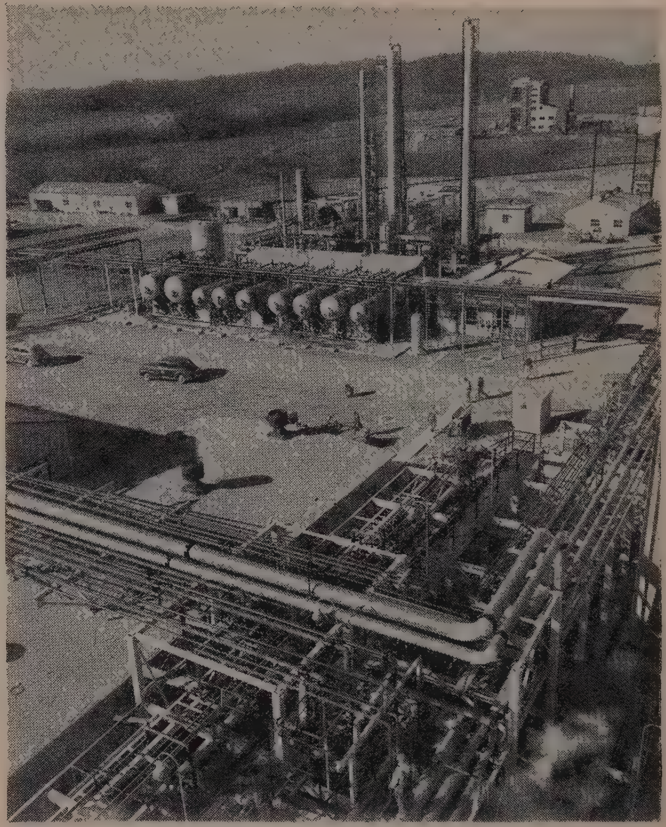
Work stoppages or restrictions were rampant in the industry n 1949, and production suffered accordingly. Up to Dec. 3, 949, the bituminous output totalled 394,988,000 tons and the nthracite output 40,386,000 tons, a total of 435,374,000 tons—9% less than the total for the corresponding period of 1948.



ONE OF TWO EXPERIMENTAL PLANTS for converting coal into oil, which were dedicated at Louisiana, Mo., in 1949. The first of their kind in the U.S., both plants were to be operated by the U.S. bureau of mines

Canada.—Coal production in Canada increased from 15,868,866 short tons in 1947 to 18,435,799 tons in 1948, and to 15,183,584 tons through Oct. 1949, as compared with 14,717,487 tons in the corresponding period of 1948. Imports rose from 30,564,129 tons in 1947 to 31,049,632 tons in 1948, but dropped sharply in 1949, the total through October being only 17,036,638 tons. (G. A. Ro.)

Great Britain.—During its first year of operation the National Coal board accounts showed a deficiency of £23,255,586 but during 1948 this was improved to a surplus of £1,651,965.

The forecasts made for coal production in 1949 were 202,000,000 to 207,000,000 tons of deep-mined coal and 13,000,000 tons of opencast coal. Actual production reached 215,113,800 tons, made up of 202,674,100 tons of deep-mined and 12,439,700 tons of opencast coal. This compared with production in 1948 of 208,400,000 tons, made up of 196,700,000 tons deep-mined and 11,700,000 tons opencast. Export and bunker coal reached 19,330,000 tons in 1949.

Before nationalization a mine which showed repeated losses over a period was closed regardless of social obligations and the loss of capital. Under nationalization the problem acquired a new aspect. The unprofitable mines must be closed but equally the mining personnel must be preserved. To achieve this object a plan was being operated successfully in Scotland where some 8,000 to 9,000 miners with their families were being transferred from the nearly exhausted coalfields of central Lanarkshire to the richer coalfields of Ayrshire and the Forth basin. The completion of the whole scheme would take 15 to 20 yr. but already 1,200 miners from eight abandoned collieries in Lanarkshire were working in the more profitable areas of Fife, Stirling and the Lothians of Scotland. To encourage migration the National Coal board guaranteed a house to every married man who was transferred and paid the fares and household removal expenses for him and his dependents.

When coal mines were nationalized £1,642,000,000 was allocated for division among 21 coal mining districts as compensation for loss of property. The district allocations from this total were announced during the year and steps were taken to divide these sums between the various colliery companies in each district. Considerable difficulty was likely to arise in view of the fact that the owners' total claims were said to amount to 50% more than the sum allocated.

In 1949 the National Coal board for the first time was subjected to open criticism in parliament. The debate was disappointing. Several admissions were made, namely that the output target had not been reached and it was suggested by the opposition that the reasons were a falling off in recruitment, the low output per man shift at the face (although this tended to rise slightly during the latter part of the year) and the amount of voluntary absenteeism.

During the year the organization of the National Coal board was subjected to criticism by Sir Charles Reid, the chairman of the Reid Report committee and a former member of the board itself. His main points were: (1) the National Coal board should confine its activities to matters of policy and give the local directors full executive control in their own areas; (2) in spite of 80% mechanization, the output at the coal face was still about three tons a manshift, about the same as in 1939 when only 56% of the faces were mechanized; (3) nationalization had not drawn from the men any greater effort than did the system of free enterprise; (4) the present impersonal system of administration did not satisfy the workmen.

Australia.—Production of hard coal in Australia in 1948 amounted to 15,060,000 metric tons, or an average output of 1,255,000 tons a month. The year 1949 started badly with the output down to 770,000 tons in January but by May it had risen to 1,489,000 tons. The effects of the disastrous coal strike remained to be assessed. This strike led to further important developments in the mining of brown coal and lignite in open-cast workings and these fuels played an increasingly important part in the internal economy of the British Commonwealth of Nations.

India.—The total output of coal in 1948 was 15,060,000 metric tons (including 240,000 tons from Pakistan). Production had remained at a nearly steady level after 1939 but during the period from January to May, 1949, there was a small increase; the average monthly output being 2,718,600 tons compared with 2,525,000 tons during the corresponding period in 1948.

Northern Rhodesia.—Joint exploration of this territory by the government, the British South Africa company and the copper companies of Northern Rhodesia was being carried out with the view to developing any suitable coal deposits that might be found.

Southern Rhodesia.—There had been a steady increase in the coal output for many years to meet the industrial and domestic needs of a growing population. In 1948 the total output was 1,704,000 metric tons or an average of 142,000 tons a month. It was still going up and in Aug. 1949 amounted to 164,800 tons. This was not enough to meet the rapidly rising demands of the two Rhodesias. Wankie colliery was expected soon to increase output materially.

Union of South Africa.—Production remained practically constant during the last four or five years in the Union. The total output in 1948 was 24,024,000 metric tons and during the first seven months of 1949 it remained at practically the same level.

Films of 1949.—*Coal Country* (Flory Films, Inc.). (J. A. S. R.)

Coast and Geodetic Survey, U.S.

During the year 1949, the major
activities of this bureau of the department of commerce o
curred in the territory of Alaska. Hydrographic surveys we
accomplished by six survey ships, two of which operated as co
bined expeditions in the western Aleutian Islands and adjac
areas of the Pacific and the south Bering sea. The remaini
ships performed hydrographic surveys in the uncharted wat
of Bristol bay, along the south side of the Alaska peninsula,
Prince William sound and in southeast Alaska. The coastal ar
of Alaska from the Alaska peninsula northward along the shor
of Bering sea into the Arctic was delineated by aerial phot
graphic parties. Geodetic control was established in connecti
with this work and extended into the lower Yukon river valle

Hydrographic surveys were extended along the Atlantic a
Gulf coasts, in the Columbia river and in San Francisco bay.

Electronic equipment was used by the survey ships in the o
shore work in Alaska and in the Gulf of Mexico. Continu
improvement had been made in the use of this equipment f
the definite location of the soundings obtained in these survey

A tidal program covering observation of sea tides was co
tinued throughout the year at 132 ports along the Atlanti
Gulf, Pacific, Alaska and South American coasts. Predictio
of times and heights of the tides were published from the da
collected.

The basic network of horizontal and vertical control w
extended during 1949 in a number of states to provide fund
mental data for determining the topography of the countr
under the national mapping program and for the planning
large-scale engineering projects proposed for flood control, re
lamation and other water-use developments in the Misso
river valley.

At six observatories in the United States and its possessio
continuous photographic records were obtained of daily a
annual changes in the principal magnetic elements. Field ma
netic surveys furnished data on the distribution of secul
change in the United States.

By means of seismograph stations, maintained by the burea
in western states, seismic areas were mapped and earth shoc
located. Through co-operation with universities and private i
stitutions operating other seismographs, epicentres of 120 eart
quakes were located.

In the publication of nautical charts for the mariner, add
tional charts were made available for Loran navigation and f
inland transportation on the Gulf Intracoastal waterway. T
regular series of nautical charts of the coast was augmented b
additional charts from data furnished by survey ships.

New aeronautical charts were published for use with hig
frequency air navigation facilities and for simplifying traf
control problems at major air terminals. The regular series
aeronautical charts used by the navigator for contact flying, f
instrument navigation and for approach and landing were co
tinued with revisions of data as needed to show accurate exis
ing conditions of the facilities and the terrain.

The bureau continued its participation in the programs
the state department for the rehabilitation of the Philippin
and for the co-operation with the American republics in trai
ing technicians in the fundamental work of the bureau. (*S*
also Cartography; Geography; Oceanography.) (L. O. C.)

Coast Guard, U.S.

During the fiscal year 1949 the coa
guard saved the lives of 5,423 perso
in a series of rescues. During January the cutter "Owasco," o
ocean weather station, assisted a Danish motor vessel in troub
60 mi. southwest of Cape Farewell, Greenland, and brought h
safely into Ivigtut, Greenland. During the same period th
cutter "Taney," on Pacific ocean weather station, towed a di
abled U.S. vessel to the Farallon Islands. While the cutt

"Duane" was returning from an Atlantic ocean weather station in March, a chief pharmacist's mate went aboard a trawler, 210 mi. off Boston, Mass., and saved the life of a man with a badly mangled limb. The cutters on all nine and one-half weather stations had 15,361 radio contacts from passing trans-ocean planes, made 47,803 weather reports and rendered assistance in 27 cases.

Many other rescues were effected. In April the cutter "Sebago," which was on ocean weather patrol in mid-Atlantic, guided a distressed transatlantic air force C-47 plane to a night landing in the water alongside the vessel and took off the four-man crew before the plane sank. In June, the lighthouse tender "Bramble" and two station boats went to the rescue of 81 persons on a C-46 plane that crashed off Point Salinas, ten miles off San Juan, Puerto Rico, en route to Miami, Fla. Twenty-two survivors were taken from small islands and rocks and six others from the water. In July, the cutter "Perseus" removed 22 crew members from a Greek vessel hard aground near Point Arguello, Calif. In August, the "Casco" found a trawler with decks awash and six crew members in dories 28 mi. southwest of the Lurcher shoal, Mass., light vessel. The cutter pumped her dry and towed her to Gloucester, Mass.

The coast guard's 79 aircraft included 10 helicopters and were based on nine air stations circling the coasts from Salem, Mass., to Port Angeles, Wash. In January, a helicopter from Elizabeth City, N.C., rescued the pilot of a crashed marine corps F4U by means of a mechanical hoist. Shortly before, two navy pilots had been picked out of the ocean off San Francisco, Calif., by coast guard PBM's, one pilot being in the water only 11 min. In February, a PBY directed a coast guard boat to a large yacht in distress off the Anclote Keys, Fla. During the March floods which isolated the Neah Bay, Wash., district, aircraft from Port Angeles Air station carried 37 passengers, 3 medical cases, Red Cross personnel and about 18,000 lb. of supplies from and to the area. In April, a PBM from San Francisco landed at sea 750 mi. offshore and removed a peritonitis case from an army transport to a hospital ashore. In May, a Port Angeles helicopter evacuated two Canadian flyers who had crashed in almost inaccessible mountainous country. One seaman on the cutter "Mendota," 80 mi. off Norfolk, Va., with acute appendicitis, and another on the cutter "Unimak," 60 mi. off Cape Henry, Va., with a steel particle in his eye, were removed in July by helicopters from Elizabeth City air station, using electric hoists, and transferred to shore hospitals. In November, a PBM guided the cutter "Travis" to a yacht sinking 150 mi. off Savannah, Ga. The cutter put pumps aboard to reduce the water level and towed her to Charleston, S.C.

In April the icebreaker "Mackinaw" assisted in refloating a grounded steamer in the Great Lakes, during the annual ice-breaking activities that help expedite commerce at the opening of the navigation season. Her helicopter, meanwhile, evacuated to a shore hospital a crew member of the grounded steamer.

The icebreaker "Northwind," while conducting the annual Bering Sea patrol, assisted the Point Barrow Supply expedition whose navy icebreaker had lost a propeller.

For the first time since it was inaugurated in 1912, after the sinking of the "Titanic" by collision with an iceberg, the International Ice patrol, operated to warn transatlantic liners of menacing icebergs, was conducted entirely by coast guard planes. An oceanographic survey and an iceberg census followed, using both air and surface craft.

Loran networks extending from Greenland to Tokyo, Japan, enabled air and surface navigators to determine their positions at all times regardless of weather conditions. These supplemented 37,309 other aids to navigation, ranging from wooden spar buoys to light stations and lightships.

THE PEASE CRADLE, an air-hoist crane system for lifeboat launching, shown in a test demonstration by U.S. coast guardsmen in 1949. Under this system, lowering time was cut to as little as 5 sec. as against 30 sec. to 2 min. by conventional methods

In the enforcement of safety laws on the high seas and navigable waters of the United States, 13,693 motorboats and yachts were boarded and 3,030 violations of navigation and marine inspection laws were reported. There were 6,630 annual inspections of merchant vessels which insured greater efficiency and safety. The principal activities of marine inspectors embraced 5,590 dry dock examinations, 2,880 reinspections and 27,825 miscellaneous inspections of merchant vessels. Numbers were assigned to 446,108 motorboats. Merchant marine personnel were issued 101,830 documents, including officer's licences and seamen's certificates. Merchant marine units in the principal domestic ports and details in London, Eng., Bremerhaven, Ger., Naples, It., Trieste and Piraeus, Gr., investigated 6,931 cases of negligence, incompetence and misconduct, 804 of these cases being heard by civilian examiners.

There were 1,984 commissioned coast guard officers at mid-year, 284 chief warrant and 502 warrant officers, 294 cadets and 20,484 enlisted men. The 740 salaried civilians at headquarters and 1,335 in the district were augmented by 2,607 wage board employees and 700 lamplighters.

With a membership of 13,276, the coast guard auxiliary, owning 5,987 boats, 224 planes and 185 radio stations, conducted courtesy motorboat inspections, engaged in rescue work, afforded small boat seamanship training for nonmembers and maintained safety patrols for regattas and marine parades.

In active commission there were 180 cutters, 48 patrol boats, 37 lightships, 39 harbour tugs and 10 buoy boats. Among smaller craft there were 178 motor lifeboats, 1,381 motorboats and 2,329 nonpowered craft aboard ships and at shore installations.

In addition to the 9 air stations, authorized shore units included 12 bases, 41 depots, 171 lifeboat stations, 440 manned light stations, 79 light-attendant stations, 34 Loran transmitting stations, 49 marine inspection offices, 11 primary radio stations and 2 supply depots.

The coast guard yard repaired and maintained the larger cutters and built small boats.

After completing the four-year course at the Coast Guard academy at New London, Conn., 54 cadets were commissioned as ensigns, and 700 enlisted men were in training each month at the Groton Training station, Groton, Conn., to qualify themselves for higher ratings.

Public law 207 was enacted by the 81st congress. This codified, revised and enacted into positive law title 14 of the U.S. code, and provided for the first time a clear, concise statutory statement of the duties and functions of the coast guard.

Cocoa

(Cacao). World production of cacao beans for 1949–50 was forecast at 1,571,170,000 lb., compared with 1,650,303,000 lb. in 1948–49 and the 1935–39 average of 1,579,000,000 lb. The African crop, about two-thirds of the total, was estimated at only 1,008,000,000 lb., compared with 1,124,000,000 lb. in the previous year. The decrease was mostly the result of too much rain and damage by disease. The Gold Coast production was estimated at 540,000,000 lb., compared with 623,152,000 lb. in the previous year, and Nigeria 200,000,000 lb., compared with 241,584,000 lb. in 1948–49. South American production of 409,000,000 lb. exceeded the 388,543,000 lb. of the previous year.

The quantity of cacao beans imported into the U.S. increased about 6% from 563,000,000 lb. in 1947–48 to 596,000,000 lb. in 1948–49, but the value of imports declined about 8% to $158,000,000.

During the year prices fluctuated sharply at levels well below the 49 cents per pound peak of 1947, ending 1949 at the 22 to 23 cents level.

(J. K. R.)

Coffee.

Consumption of coffee in the U.S. in 1949, all from imported supplies, was estimated at 17.8 lb. per capita, compared with 18.9 lb. in the previous year, and 14 lb. as a prewar average (1935–39). Imports of raw coffee beans into the U.S. totalled 20,946,793 bags in 1948 and during the first nine months of 1949 were running 7.7% higher than for the same months of the previous year. Europe, which consumed about 12,000,000 bags per year prewar, used only 8,000,000 in 1948.

World coffee production for the 1949–50 crop year, according to early season forecasts for the main producing countries, was expected to equal 38,002,000 bags, compared with 40,492,000 bags in 1948–49 and an average of 43,220,000 bags for the period 1935–39. Brazil was expected to produce only 19,727,000 bags, compared with 22,348,000 bags in the preceding year. The Colombian crop was estimated at 6,140,000 bags, the same as the preceding year, but about 40% higher than prewar. The African crop was expected to be 4,088,000 bags, compared with 3,834,000 bags in the previous year. Prospects in the Netherlands Indies were favourable for a crop 10% larger than that of the previous year, but only about one-fifth as large as prewar. The estimated crop of Guatemala of 980,000 bags was down from 1,140,000 bags in 1948–49.

In the face of continued strong demand in North America and western Europe, world total exportable supplies dwindled to an estimated 28,674,000 bags, compared with 31,364,000 bags in 1948–49 and about 36,000,000 bags prewar. Trading in coffee futures in 1949 on the New York coffee and sugar exchange amounted to 8,922,750 bags, largest since 1937, compared with 3,633,750 bags in 1948. Dwindling supplies and consumer hoarding, spurred on by newspaper headlines, were reflected in coffee prices on the exchange; prices which had stood at 20 cents per pound in April, reached more than 52 cents in November. (*See* also Brazil.)

(J. K. R.)

Coinage.

The three U.S. coinage mints located at Philadelphia, Pa., San Francisco, Calif., and Denver, Colo., manufactured a total of 987,627,226 domestic and foreign coins during the government fiscal year 1949.

U.S. coin production was valued at $51,779,863 and consisted of the following denominations:

Denomination	Number of pieces produced
Half dollars	6,782,826
Quarter dollars	70,402,400
Dimes	179,925,000
Five-cent pieces	156,347,000
One-cent pieces	497,800,000
Total domestic	911,257,226

The composition of the half dollars, quarter dollars and dimes was 90% silver and 10% copper; five-cent coins, 25% nickel and 75% copper; and one-cent coins, 95% copper and 5% zinc and tin in conformity with U.S. coinage laws.

Foreign coinage during the fiscal year 1949 totalled 76,370,000 pieces of various denominations and alloys for the governments of China, Cuba, Dominican Republic, Mexico, Saudi Arabia and Venezuela.

In addition to the coinage mints, four other mint service institutions comprising the bureau of the mint were in operation in 1949—the assay offices at New York city and Seattle, Wash.; the gold-bullion depository at Fort Knox, Ky.; and the silver-bullion depository at West Point, N.Y. The entire mint service is administered by the director of the mint, with offices in Washington, D.C.

The principal functions of the bureau of the mint, other than the manufacture of domestic and foreign coins, include the safeguarding of the government's holdings of monetary metals, valued at billions of dollars; acquisition of gold and silver bullion; the refining of gold and silver; administration of the issuance of treasury licences for the acquisition, ownership, possession, use and exportation of gold for industrial, professional and artistic purposes; the manufacture of medals for the armed services and the manufacture of medals of historic interest for sale to the public.

At the close of the government fiscal year 1949 the mint institutions held in their custody approximately 24,000 tons of gold bullion valued at $24,466,165,743; and approximately 36,600 tons of silver bullion valued at more than $1,000,000,000.

(N. T. R.)

Coke.

In general, world production of coke had not only recovered to its prewar level but most countries had surpassed their war peaks. Germany was the chief delinquent; there were smaller deficiencies in Japan and Belgium. The out-

By iron furnaces . .	56,701	57,072	50,653	43,098	57,636	59,286

The 1948 level of operation was not maintained in 1949, output for the first ten months totalling 54,292,650 tons, including 51,037,930 tons of by-product coke and 3,254,720 tons of beehive coke—a reduction of 12% in the total from that of the same period of 1948.

Canada.—Coke output advanced from 3,501,130 tons in 1947 to 3,946,101 tons in 1948 and 2,631,282 tons in the first eight months of 1949. Good coking coals are not plentiful in Canada, and some three-quarters of the coke output is made from imported coal, mostly from the United States. The improved domestic supply was reflected in reduced imports and increased exports. Net imports of coke declined from 457,753 tons in 1947 to 394,604 tons in 1948 and 119,440 tons through August 1949. (G. A. Ro.)

Cold, Common.

No fundamental information was added to knowledge of the common cold in 1949, although intensive research was in progress at the National Institute of Health and at the Western Reserve Medical school in the United States and at the National Institute for Medical Research in England. C. H. Andrewes, director of studies at the last named laboratory, restated the problems involved in a series of questions as follows: Is the common cold caused by viruses, by bacteria or neither? Is it an entity or a group of diseases? Can it be "caught" from a patient with a cold, or activated in a person who harbours the causative agent or both? If it can be activated, how? What determines its seasonal incidence and why does resistance to it vary from person to person or in one person at different times? Andrewes succeeded in transmitting colds to volunteers by means of filtered exudates obtained from patients with colds, but was unable to confirm the work of U.S. investigators who reported the cultivation of the filtrable agent artificially. The size of the virus was estimated as between 20 and 50 mμ. None of a large variety of animals could be infected. From his experiments on volunteers Andrewes concluded that colds are probably caused by viruses which constantly pass from one person to another, usually without causing symptoms, or only mild ones. A cold develops only in a person whose resistance is temporarily low. From such a person, virus is disseminated in large amounts, but few persons harbour it long and it probably dies out soon.

Report was made of the beneficial effects of antihistaminic agents on the symptoms of the cold when given early in the course of the disease. It was assumed that the symptoms are caused by an allergic response of the mucous membranes to the protein of the cold virus or to other proteins. There was little doubt of the effectiveness of antihistaminic agents for allergic rhinitis, but their value in preventing or treating the infectious cold was not positively established.

Clifford Kuh and M. F. Collen gave penicillin by mouth regularly to a large number of persons for a year and observed an equal number of untreated ones to see if penicillin had any value in the prevention of respiratory tract infections. Evidence was lacking that penicillin had any effect on the incidence of colds in the treated group.

VOLUNTEERS infected with common cold virus at a U.S. prison hospital. Research was enormously speeded up in 1949 by a chemical test, developed at the National Institute of Health, Bethesda, Md., for rapidly detecting the presence and potency of cold germs in the infecting fluid; new drugs could thus be tested on many more volunteers than was previously possible

Colombia.

A republic situated in northwestern South America adjoining the Isthmus of Panamá. It is the only South American country with both Caribbean and Pacific coast lines. Area: 439,714 sq.mi.; pop. (1948 est.): 10,777,000. Approximately 68% of the population is classified as mixed blood, 20% as white, 7% as Indian and 5% as Negro. Most of the inhabitants live in the highlands and mountain valleys of the interior. The capital is Bogotá (pop. in 1945: 443,520). Other principal cities are Barranquilla (206,630), Bucaramanga (66,220), Cali (135,610), Cartagena (101,520), Cúcuta (72,440); Ibagué (78,970), Manizales (109,820), Medellín (219,-

790), Neiva (38,270), Pasto (60,070), Popayán (34,550), Santa Marta (41,310) and Tunja (25,380). Language: Spanish; religion: predominantly Roman Catholic. President in 1949: Mariano Ospina Pérez.

History.—The political situation in Colombia, acute since the assassination of Liberal leader Jorge Eliécer Gaitán in April 1948, reached a new crisis in 1949 when the Liberals boycotted the presidential election and allowed the Conservative candidate to win virtually unopposed. Meanwhile the gloomy economic condition was brightened materially by the upsurge of coffee prices on the world market.

Frequent armed clashes between Liberal and Conservative partisans throughout the country caused about 40 deaths in the first three months of the year and induced Pres. Ospina Pérez to form a coalition cabinet in May. The Liberal ministers, however, resigned from the cabinet during the same month, charging the administration with restricting their party's activities in the congressional election campaign. The new cabinet, formed May 22 and composed of ten Conservatives and three army officers, decreed the suspension of all political gatherings, demonstrations and radio broadcasts from May 25 until three days after the congressional elections.

In the relatively quiet elections, June 5, the Liberal majority in the chamber of deputies was cut in half. The presidential election, originally scheduled for June 5, 1950, was advanced to Nov. 27, 1949, by a bill sponsored by the Liberals and approved reluctantly by the president in October. The major candidates were the Conservative former foreign minister Laureano Gómez, who returned in June from Spain where he had resided since the April 1948 riots in Bogotá, and the Liberal former minister of interior Darío Echandía.

Political clashes, killing hundreds and causing thousands to flee, continued throughout the country as the presidential election neared. In October the Liberals, accusing the administration party of resorting to violence and impeding the registration of their partisans, withdrew their candidate and prepared to boycott the election. Meanwhile Pres. Ospina Pérez, declaring a nation-wide state of siege, dissolved the Liberal-dominated congress, imposed press and radio censorship, established an evening curfew, banned all public meetings, suspended all state legislature sessions and neutralized the Liberal majority in the supreme court by decreeing a three-fourths majority necessary to nullify presidential edicts. Troops were called out to patrol Bogotá.

Under these conditions the election was held Nov. 27, and the boycott of the Liberals, though not complete, gave the Conservative candidate an adequate majority. No significant violence occurred, although the brother of the Liberal candidate was assassinated two days previously. The Liberals observed election day as one of mourning. President-elect Gómez was scheduled to take office Aug. 7, 1950.

On the economic front Colombia's commercial indebtedness ($23,000,000 for the first three months) was gradually reduced and was completely wiped out by November. A movement in October to devalue the peso by 15 to 20% was abandoned shortly when rising coffee prices promised substantial increases in the country's dollar income. Agricultural and industrial expansion continued throughout the year, financed in part by an Export-Import bank loan of $10,000,000 and a grant of $5,000,000 from the International Bank for Reconstruction and Development. On the darker side, petroleum exploration declined in the face of new nationalization legislation for the industry. Meanwhile the cost of living continued at a high level, the labour-class index rising from 256.3 in March to 304.9 in August (Feb. 1937: 100). In December the government ordered the establishment of a national minimum wage of two pesos a day, effective Jan. 1, 1950.

Education.—In 1945, 12,147 primary schools reported enrolments totalling 788,143 pupils with 23,432 teachers; 1,830 secondary and vocational schools listed 94,669 students and 7,825 teachers (1,421 primary and 606 other schools not reporting). There were six public and two private universities. Approximately 7.4% (14,733,953 pesos) of the 1945 national budget was allocated to public education.

Finance.—The monetary unit is the peso, officially valued at 51.02 cents U.S. on Aug. 19, 1949. The original national budget for 1949 provided for expenditures of 383,476,973 pesos. During the first five months of 1949 the 18,000,000-peso deficit carried over from 1948 was increased by 15,160,000 pesos, and at the end of June a 19,000,000-peso reduction in the current budget was ordered to offset the shortage. The total assets of the Bank of the Republic on Sept. 30 amounted to 660,715,143.78 pesos; major liabilities were 356,425,265.50 pesos in circulating currency and 138,909,557.05 pesos in deposits; the ratio of gold reserves and foreign-exchange holdings to bills in circulation was 39.36%. At the end of 1948 the national debt totalled approximately 530,000,000 pesos, 340,229,745 pesos of which was internal indebtedness.

Trade.—Exports in 1948 were valued at $291,600,000 U.S., including monetary gold and silver ($253,800,000 in 1947), while imports, excluding bullion, totalled $335,000,000 ($345,500,000 in 1947). The United States took 81.1% of the exports and supplied 58.8% of the imports. During the first six months of 1949, exports were up 14.7% and imports were down 7.9%. The chief imports in 1948 were automotive vehicles, raw cotton and textile machinery. The main exports were coffee (5,587,535 bags of 132 lb. each, valued at $225,210,814), bananas (4,416,817 stems, at approx. $5,000,000), petroleum (18,831,621 standard barrels, at $47,875,440), gold, silver and platinum.

Communications.—There were 2,159 mi. of railways in 1945, 9,850 mi. of improved highways, 4,620 mi. of navigable rivers, 72.5 mi. of aerial cables and 41 airports. Registered motor vehicles included 15,306 automobiles, 3,738 buses and 10,062 trucks. In 1948 the nation's registered aeroplanes made 43,130 local flights totalling almost 10,000,000 mi. and carrying more than 500,000 passengers and 170,000,000 lb. of freight.

Agriculture.—The basic industry in Colombia is agriculture, and coffee (normally 6,500,000 bags) is the main commercial crop. Other crops (with 1948 production figures) are sugar (119,638 short tons), corn (699,961 tons), potatoes (535,718 tons), rice (200,575 tons), cotton (6,063 tons), wheat (130,986 tons). Total agricultural production in 1948 amounted to 4,769,652 tons, valued at 1,288,000,000 pesos.

Manufacturing.—The leading manufacturing industries are foodstuff processing, textiles and beverages. In 1945 industrial establishments totalled 7,853, capitalized at 399,940,643 pesos and employing 135,400 persons at pay totalling 641,081,498 pesos.

Mineral Production.—The chief extractive industries (with 1948 production figures) are petroleum (23,850,469 bbl.), gold (335,260 troy oz.), silver (108,716 oz.), platinum (40,047 oz. in 1947), salt (137,073 short tons) and cement (400,960 tons). Gold production was up 13.6% during the first six months of 1949 and during the first eight months petroleum production was up 40.5%.

BIBLIOGRAPHY.—William Russell, *The Bolívar Countries: Colombia, Ecuador, Venezuela* (1949); periodicals: *Foreign Commerce Weekly* (Washington); *Hispano-Americano* (Mexico City); *Revista del Banco de la República* (Bogotá). (M. L. M.)

Colorado. A Rocky mountain state of the United States, in the west-central part, Colorado has a mean elevation above sea level of 6,800 ft., the highest of any state. Admitted to the union in 1876 as the 38th state, it is known as the "Centennial state." Its area of 104,247 sq.mi. includes 280 sq.mi. of water surface. The U.S. owns 34.5% of the total land area and 59.3% is in private ownership, the remainder belonging to state, county and municipal governments.

Population (1940) 1,123,296; 52.6% urban, 47.4% rural; 93.6% native, 6.4% foreign-born; white 98.5%, Negro 1.1%, other .4%; 102.6 males per 100 females. The 1940 census reported 2,734 Japanese, the largest in number of all races other than white and Negro. On July 1, 1949, the bureau of the census estimated the population at 1,215,000, a gain of 8.2% from 1940. Capital, Denver, pop., 1940 census, 322,412. Other cities (with 1940 populations): Pueblo, 52,162; Colorado Springs, 36,789; Greeley, 15,995.

History.—The Colorado general assembly convened in regular session on Jan. 5, 1949, and adjourned on April 20 after one of the most controversial sessions ever held. Controversy centred mainly over the reorganization of the state highway department and the enactment of a severance tax on oil, both of which the governor requested in his inaugural address and both of which were defeated. Important legislation enacted provided for the creation of a state department of agriculture and the concentration of most agricultural functions in the new department; the ratification of two water compacts with neighbouring states, the Arkansas river and the upper Colorado river compacts; increased benefits under the workmen's and unemployment compensation acts; and the re-enactment of the state income tax at the high rates which had been in force for two years and which would have expired if action had not been taken by the legislature.

The principal constitutional changes made were an amendment providing for the election of a board of education and the appointment by the board of a commissioner of education to replace the superintendent of public instruction.

Democrats occupied all but one of the major state offices during 1949. Governor William Lee Knous began his second term. The other principal officials were: Walter W. Johnson, lieutenant governor; George J. Baker, secretary of state; Myron G. McGinley, state auditor; John W. Metzger, attorney general; Homer F. Bedford, state treasurer; and Mrs. Nettie S. Freed, the only Republican, superintendent of public instruction.

Education.—The total state appropriation for public education in 1948–49 was $8,790,249.88. The average yearly expenditure per pupil in average daily attendance was $47.31; the total average daily attendance was 185,789. The school population, including persons 6 through 21 years of age, increased from 296,939 in 1948 to 305,068 in 1949. A total of 9,548 teachers and administrators were employed.

A program of special services for physically handicapped children in hospitals and at home was maintained by the state.

Social Insurance and Assistance, Public Welfare and Related Programs.—Disbursements from the state public welfare fund in 1948 amounted to $51,116,214.91. Of this amount, $40,297,748.59 was expended for pensions, including burials and the 1948 bonus; $4,360,825.59 for aid to dependent children; $276,512.91 for aid to the blind, for awards, treatment and burials; $3,860,288.52 for general assistance; $365,869.43 for tuberculosis hospitalization; $206,501.26 for child welfare; and $1,748,468.61 for state office administration expenses and allotments to counties for the state's share of salaries and travel. There was a transfer to the general fund of $2,730,550.83. Federal participation during 1948 in old-age pensions, aid to dependent children, aid to the blind, child welfare and administration amounted to $15,822,935.17.

The average monthly number of recipients by program were as follows: for old-age pension, 45,386 received an average of $72.01; 12,577 child recipients of aid to dependent children received an average of $28.96 per child; and 391 aid to the blind cases received an average of $52.08.

Communications.—Total highways (state and federal) in 1949 were 78,789 mi. Improved roads totalled 25,793.2 mi., unimproved roads 52,996.2 mi. Total funds disbursed for highways in 1948 amounted to $23,430,049.07. The total number of registered motor vehicles in 1948 was about 500,000. In 1949 there were 54 bus companies serving the state, and 19 railroads had a total railroad mileage within the state of 4,292.2 mi. There were 6 scheduled air lines serving the state. There were 168 airports and landing fields operating, of which approximately one-third were personal-use ranch type fields.

Telephones in use in Oct. 1949 numbered 392,764. There were 33 standard AM radio stations and 3 FM stations.

Banking and Finance.—As of Dec. 1948 there were 77 national banks and 67 state banks. Deposits in all banks at the close of 1948 were $1,098,866,365. Clearings in Denver (1948) $5,447,361,607.78; in Pueblo, $106,345,322.00; in Colorado Springs, $113,797,254.48.

The cash balance in the treasury on June 30, 1949, was $44,779,693.68. Total revenue in the fiscal year ended June 30, 1949, was $146,017,435.77. All expenditures, including functional services, debt services and transfers amounted to $146,887,988.87. The bonded debt amounted to $470,000, and anticipation warrants $9,015,000; outstanding warrants, cash and general revenue, totalled $4,615,622.44. Investments of $31,014,182.80 plus a cash balance on June 30, 1949, of $44,779,693.68 made a total of $75,793,876.48 in liquid assets.

Agriculture.—Agricultural production remained above the 10-yr. average, although the wheat and potato crops did not attain the record 1948 totals. Production of the leading crops is given in Table I.

Manufacturing.—The department of commerce estimate for the value added by manufacture in Colorado in 1947 was $290,300,000, an increase of 221% over 1939. There were in 1949, 1,603 industries in the state, employing 54,300 persons, with an annual pay roll of $145,000,000. Principal industries were food and kindred products, machinery (except electrical), printing and publishing, petroleum and coal products and stone, clay and glass products. Only 7 plants out of each 100 employed more than 50 persons.

Table I.—*Leading Agricultural Products of Colorado*

Crop	1949 (est.)	1948	Average 1938–47
Corn, bu.	17,160,000	14,304,000	13,902,000
Sorghum for grain, bu.	3,281,000	3,096,000	2,205,000
Wheat, all, bu.	46,297,000	53,525,000	27,703,000
Oats, bu.	7,582,000	6,208,000	5,684,000
Barley, bu.	21,114,000	15,275,000	14,948,000
Sugar beets, tons	1,769,000	1,370,000	1,912,000
Potatoes, bu.	16,750,000	20,670,000	15,506,000
Dry beans, 100-lb. bags	2,336,000	2,333,000	1,873,000
Broomcorn, tons	11,200	9,600	10,910
Hay crops, tons	2,333,000	2,382,000	2,161,000
Apples, bu.	1,606,000	1,395,000	1,524,000
Peaches, bu.	2,109,000	1,922,000	1,868,000
Pears, bu.	198,000	155,000	189,000

Table II.—*Leading Mineral Products of Colorado*

Mineral	Production 1948	Value 1948 (est.)
Molybdenum	...	$10,000,000
Zinc	45,164 tons	12,013,624
Gold	154,802 oz.	5,418,070
Lead	25,143 tons	9,001,194
Silver	3,011,011 oz.	2,725,117
Copper	2,298 tons	997,332

In 1949 the income derived from tourist travel in Colorado was $211,780,000.

Mining Production.—Colorado is a major gold-producing state and in 1946 produced 44% of the world total of vanadium.

Colorado ranks first among the states in the production of molybdenum and vanadium; fourth in lead; sixth in zinc. The total number of persons employed in the state's mineral industries in 1948 was 6,600. The total coal produced was 5,679,876 tons valued at $26,979,411. The number of men employed in the coal mines was 5,680. (P. Ae.)

Communism.

The history of communism in 1949 was characterized by the growing emphasis on Russia's undisputable precedence in world communism and on Joseph Stalin's "infallibility" in the political, economic, scientific and artistic fields. Generalissimo Stalin's 70th birthday on Dec. 21

POLICE DETAIL outside the federal courthouse in New York city where 11 Communist leaders were being tried in 1949 on charges of conspiracy to overthrow the U.S. government by force. On Oct. 21, 10 of the defendants were sentenced to five-year prison terms each, and the 11th, to a three-year term; all 11 were also fined $10,000 each

"HE'S MAINTAINING RELATIONS WITH THE ENEMY," an Italian view of the conflict between Communism and the Roman Catholic Church, published in *Candido* (Milan) in 1949

was celebrated with unprecedented solemnity throughout the Soviet Union, Communist China and the Russian satellite countries of eastern Europe. On the occasion of this celebration Stalin could look with satisfaction on the immense expansion of his power after World War II. It was true that during 1949 the expansion of communism had been checked in Europe. Not only had there been a re-invigoration of democracy in all non-Russian controlled European lands, but Communist Yugoslavia had successfully challenged the unlimited Russian control over all Communist lands. But this relative setback in Europe had been more than outweighed by the great advance of Communist control in eastern Asia, where Communists occupied almost the whole extent of the Chinese republic and found themselves at the gates of Indo-China and of Burma. Thus communism, at the end of 1949, controlled an area inhabited by about 700,000,000 people and containing, in addition to the resources of the greatly expanded Soviet Union, those of Poland with the former German industrial regions of Silesia, Czechoslovakia, Saxony and Thuringia and Manchuria.

During 1949 Communist policy deepened its antiwestern stand, especially in all fields of culture, science and the arts. The Communist central organ, *Pravda,* carried on Jan. 28 a violent four-column article against six "anti-patriotic" theatre critics which was followed by a similar article in the weekly *Culture and Life* on Jan. 30. "Once and for all," *Pravda* declared, "we must decidedly put an end to the liberal tolerance of all these aesthetic nonentities who lack the healthy feeling of love of country and the people." The year 1949 was largely devoted to a program of doing away with "this aesthetic drivel decisively, once and for ever." Similar constructive energy as to the fight against "decadent bourgeois art" was devoted in the Soviet Union and in its satellites to depict in movies, plays and novels the moral decadence and the economic oppression prevailing in the United States and to denounce the warlike intentions of the U.S. and Britain. Vocal support for the "peace loving" soviet policy against the "war mongering" of the western democracies was organized among non-Russian intellectuals through the various Communist-sponsored "peace" congresses. The most violent attacks, however, were reserved in the domestic field for what was called "homeless cosmopolitanism" and "belittling" of the leadership of Russia in all fields of culture. Russian priority was claimed for many scientific inventions.

This policy within the Soviet Union went hand in hand with an attempt to tighten Communist control over the satellite states. The main instrument of this policy was the Communist Information bureau, or the Cominform. In June 1948 the Cominform had begun its attack on the Yugoslav Communist government. In Nov. 1949 the Cominform met in Hungary and adopted a number of resolutions directed against "Anglo-American Imperialism," the "enslaving Marshall Plan," the "reactionary trade union leaders, the accomplices of the war-mongers, who conceal their betrayal in pseudo-Socialist cosmopolitan phraseology," and the "traitorous Tito-Rankovich clique," the Yugoslav Communist government which was accused of conducting a provocative campaign against the U.S.S.R., "using the foulest provocations, borrowed from the arsenal of Hitler." There could be no doubt that the long and successful resistance of Marshal Tito and his fully Communist government to the "cold war" waged against them by the Soviet Union and the Cominform did much to weaken the influence of Moscow among Communists and fellow travellers.

The actions of the Cominform and the unquestioning loyalty which Moscow demanded from Communists everywhere made it clear that the Communist International, though officially disbanded in 1943, was stronger than ever. In that sense Georgi Dimitrov, the Bulgarian Communist leader, wrote on Dec. 18, 1948: "It should not be forgotten that—in spite of the fact that the Communist International does not exist—all Communist parties in the world form one single Communist front, under the direction of the most powerful and most experienced Communist party, the party of Lenin and Stalin; that all Communist parties have one common scientific theory as a guide to their actions—Marxist-Leninism; and that all Communist parties have one leader and teacher, recognized by all—Comrade Stalin." In that connection the leaders of the French and Italian Communist parties, Maurice Thorez and Palmiro Togliatti, declared that in case of a war with the Soviet Union the workers of France and Italy would show the same attitude toward the soviet army as did the people of Poland, Rumania and Yugoslavia. The Communist party in the U.S. backed this declaration of loyalty to the Soviet Union on the part of the European Communist leaders.

The Moscow leadership took strong measures in all European satellite countries to assure an unswerving loyalty to its commands on the part of the local Communists. Purges were conducted in all the Communist parties, and even some of the most prominent Communist leaders became their victims. Among them were Laszlo Rajk in Hungary, Traicho Kostov in Bulgaria, and Koçi Xoxe in Albania who were executed while the Greek Communist leader, Gen. Markos Vafiades, and the Polish Communist, Wladyslaw Gomulka, were disgraced, and the Russian marshal, Konstantin Rokossovsky, was put in charge of the Polish army. No such measures were necessary in China, where the Communist party, under the leadership of Mao Tse-tung, followed faithfully the Moscow line and repeated wholeheartedly the sharp Communist attacks against the United States and the democratic countries. The establishment of the Communist People's Republic of China on Oct. 1 was hailed by the soviet historian, Eugene Tarle, in *Izvestia* as one of the two "stupendous events" of the year, the other being the end of the U.S. monopoly of atomic bombs.

The Communist victories in Asia had no counterpart in Europe. There, even in countries bordering on the Soviet Union or partly under soviet influence, such as Norway, Finland and Austria, communism was fast losing whatever hold it had on the working masses. The Communist-led strikes in Finland, which started in August, ended within four weeks with a complete victory of the anti-Communist government; in the elections to the Norwegian parliament no Communist candidate was elected; and as a result of elections in Austria, the representation of the Communists in the chambers of labour fell from 135 to 54. At its September meeting the British Trades Union congress endorsed by 6,746,000 to 760,000 votes the campaign of its general council against Communist interference in the affairs of its affiliated trade unions. Similarly the Communists ost much of the influence which they had gained in the last 20 years in the U.S. labour movement. The Congress of Industrial Organizations (C.I.O.) withdrew from the Communist-conrolled World Federation of Trade Unions and was responsible, ogether with the American Federation of Labor, for the creation of an anti-Communist International Confederation of Free Trade Unions. The C.I.O. convention in Cleveland, O., at the beginning of November expelled two affiliates, the United Elecrical, Radio and Machine Workers of America and the United Farm Equipment and Metal Workers of America, accusing them of being creatures of the Communist party, masquerading as rade unions. Similarly Britain's largest trade union, the Transport and General Workers' union, voted to bar Communists and members of the British Fascist union from holding office in he union.

The 12 top leaders of the Communist party of the United States who were indicted by a special federal grand jury on July 20, 1948, were tried (with the exception of William Z. Foster who was ill) before Federal Judge Harold R. Medina rom Jan. 17 to Oct. 14, 1949, when they were found guilty by he jury of secretly teaching and advocating, on secret orders rom Moscow, the overthrow of the U.S. government and the destruction of American democracy by violent means. Ten of hese were sentenced to five years' and one to three years' imprisonment and all were fined $10,000 each, but the verdict was appealed. The small vote which the American Labor party cast at the mayoralty elections in New York city in Nov. 1949, the dissolution of the American Youth for Democracy, a Communist-front organization on college campuses, and the decline of the influence of the American Slav congress, a Communist-front organization among the U.S. citizens of Slav descent, all pointed in the same direction. A similar weakening of Communist influence, especially in the labour movements, became visible in Canada, Australia and New Zealand. (*See* also CHINA; DEMOCRACY; EDUCATION; LAW; SOCIALISM.)

Community Chest.

The community chest is the name given to a local federation made up of ealth, welfare and recreation agencies supported by voluntary contributions. Its purpose is to raise annually, by a single, united campaign, funds for the support of its member agencies, nd through community welfare councils financed by chest unds, to promote joint planning for health and welfare in the ommunity.

Community Chests and Councils of America, Inc., is the naional association of local community chests and welfare counils, and was organized in Feb. 1918.

Of the 1,679 community chests and welfare councils in operaion in Sept. 1949 (1,270 chests and 409 councils) 1,207 chests nd 382 councils were in the continental U.S.; 5 chests and 4 ouncils in Hawaii; 50 chests and 22 councils in Canada; 2 hests in South Africa; 1 chest in the Virgin Islands; 1 chest n Puerto Rico; 1 council in the British West Indies; 2 chests n Japan; 1 chest in the Philippines and 1 chest in Alaska. Almost every city in the U.S. (except New York city, which as a limited joint-financing organization and a welfare council) n 1949 had a community chest or similar plan of federated nancing for its voluntary social services. In 1,152 cities in 948, more than 18,000,000 contributions totalling $188,061,328 were given to community chests to be used during 1949 for voluntary health and welfare services in their communities. In 1949 the United Service organizations (U.S.O.) also got its major support through inclusion in chest campaigns throughout the country.

National promotion of chest campaigns is carried on under the name "The Community Chests of America" using the national symbol of the Red Feather.

Officers of C.C.C., Inc., for 1949 were: honorary president, Gerard Swope, New York city; president, Edward L. Ryerson, Chicago, Ill.; treasurer, Milton H. Glover, Hartford, Conn.; secretary, Mrs. Oswald B. Lord, New York city. Ralph H. Blanchard was executive director.

The address of the association was 155 E. 44th St., New York 17, N.Y. (B. A.)

Community Trusts.

Assets of $91,401,968 were reported as constituting community trusts and foundations in the United States, Canada and Hawaii on Jan. 1, 1949. During 1948 these composite foundations appropriated $3,361,521 for charitable projects and received new resources totalling approximately $3,200,000.

The largest of these foundations was the New York Community trust, whose 100 funds were valued at $18,201,629. The Chicago Community trust held $13,308,000; the Cleveland foundation, $11,094,406; the Permanent Charity fund, Boston, $8,563,382; and the California Community foundation, $7,312,002.

Of the disbursements made in 1948, the New York Community trust paid out $649,910; Kalamazoo, $558,371; Chicago, $420,716; Cleveland, $417,068; and Boston, $353,551.

Funds newly received during 1948 included $770,261 accruing to the New York Community trust; $475,000 to the Minneapolis foundation; and $362,147 to the California Community foundation. The San Francisco foundation became operative in the year and the Lake County foundation, Painesville, O., made its initial distribution of funds.

Of 64 community trusts surveyed in 1949, 57 were administering principal resources and 46 were making current distributions out of 755 funds on hand. Cumulative disbursements of community foundations since 1927 amounted to $32,595,352.

A community trust consists ordinarily of a series of trust funds of varied sizes and for diverse charitable uses. Fiscal management of the administered amounts is usually entrusted to trustee banks selected by the contributors of the funds. Appropriations are made under the authority and supervision of a central distributing committee, which undertakes to give expression to the specific desires of a founder but which is likewise empowered by him to take appropriate remedial action if originally expressed preferences subsequently become impossible or impractical of execution. Congregational Christian Churches.

The Congregational Christian Churches of the United States, established at Plymouth, Mass., in 1620, had 5,715 churches in 1949. The denomination reported 1,184,661 members for the year, 534,118 church school members and 5,839 pastors. The total benevolence giving was $5,596,949 and for home expenses $27,477,429. The average salary for pastors was $2,813. The value of church property was $241,351,575.

During 1949 the American Congregational Churches entertained the International Congregational council for its world convention at Wellesley college, Wellesley, Mass., June 17 to 24, when 600 delegates from 21 countries met to consider world conditions and the church's responsibility for bettering the ills of mankind. A world program was adopted for bringing the churches of the world closer together for strengthening church ties, for undergirding moral and religious teachings and for assistance to the world's needy.

The Congregational Christian Churches were planning a merger with the Evangelical and Reformed Church to be consummated at Cleveland, O., in June 1950. This merger would unite two church bodies, one of English ancestry, the other with German and Swiss background. The name of the new united church would be the United Church of Christ. Headquarters would be maintained in New York, Chicago, Philadelphia and St. Louis. (*See* also CHRISTIAN UNITY.)

The merger would involve uniting the educational, missionary and publishing agencies of the two church bodies. (*See* also CHURCH MEMBERSHIP.)

Congress, United States. The 81st U.S. congress convened for its second session on Jan. 3, 1950. It comprised the following members (as of Jan. 3, 1950):

United States Senate

Presiding Officer: Alben W. Barkley of Kentucky
Majority Leader: Scott W. Lucas of Illinois
Minority Leader: Kenneth S. Wherry of Nebraska
Democrats: 54; Republicans: 42.

[7] Elected May 17, 1949, to fill the vacancy caused by the death of Sol Bloom, Mar. 7, 949.

[8] Elected Sept. 13 1949, to fill the vacancy caused by the death of Robert L. Coffey, Jr., pr. 20, 1949.

Congress of Industrial Organizations: *see* LABOUR UNIONS.

Connally, Tom (Thomas Terry) (1877–), U.S. senator, was born ug. 19 in McLennan county, Tex., and graduated from Baylor niversity, Waco, Tex., and from the University of Texas, ustin, Tex. He was elected to the Texas house of representatives in 1900 and again in 1902. In 1916 he was elected to the .S. house of representatives, where he served for six successive terms. He was elected to the U.S. senate in 1928 and was re-elected in 1934, 1940 and 1946. At the close of World War II, during most of which he served as chairman of the senate foreign relations committee, he attended the United Nations Conference on International Organization at San Francisco, Calif., as vice-chairman of the U.S. delegation, and he was also a delegate to the first U.N. general assembly meeting in London, England, early in 1946. He attended the Council of Foreign Ministers session in Paris, France, in 1946 and the peace conference in Paris the same year. When the Republican party gained control of the 80th congress, Connally, a Democrat, relinquished the chairmanship of the senate foreign relations committee, but during that time worked with Republican Senator Arthur H. Vandenberg on a bipartisan approach to foreign policies. Early in 1949 he resumed the chairmanship and steered the North Atlantic treaty through the senate, in addition to the $5,430,000,000 European aid bill and the Military Assistance program to implement the Atlantic treaty.

Connecticut. One of the 13 original states and the southwesternmost of the New England states, popularly known as the "Nutmeg state," the "Land of Steady Habits" or the "Constitution state," Connecticut has an area of 5,009 sq.mi., including 110 sq.mi. (approx.) of water. Its population (1940) was 1,709,242; a bureau of the census estimate of July 1, 1949, placed its population at 2,019,000, an 18.1% gain. Population figures (1940 census) for the principal cities included: Hartford, the capital, 166,267; New Haven, 160,605; Bridgeport, 147,121; Waterbury, 99,314; New Britain, 68,685; and Stamford, 61,215.

History.—The regular session of the general assembly met Jan. 5, 1949, and adjourned at the constitutional deadline, June 8. In addition, three special sessions were called by Gov. Chester Bowles: the first, June 14–30; the second, Oct. 5–6; and the third, Nov. 9–Dec. 2. The first special session was adjourned by proclamation. The Republican controlled house refused to recognize this procedure and met July 6 in a so-called "rump" session, passed several acts and then recessed, subject to the call of the speaker of the house. The governor refused to act on the measures passed, but the house still claimed to be recessed and met at the second special session at the call of the speaker of the house as well as that of the governor.

In all these sessions there were frequent deadlocks and periods of inactivity since the governor and senate (23 to 13) were Democratic, and the house (179 to 93), Republican. The house, therefore, had veto power on all those measures which required the approval of both branches of the general assembly.

Despite this situation, the administration secured enactment of a fair amount of its program through compromise. In the field of education, $22,350,000 was appropriated to aid towns and school districts in meeting increased expenses in operating schools; $3,200,000 was appropriated for remodelling and for new buildings at the state university. A bond issue of $7,000,000 for the biennium was authorized for the building of vocational-technical schools. A bond issue of $4,000,000 was authorized for the expansion of teachers' college facilities.

In the field of welfare, benefits to the permanently incapacitated worker were extended from 10 yr. to 12 yr. Allowances to dependent children of a man killed on the job were increased from $3.50 to $5.00. Workmen's compensation coverage was extended to employers of three or more men, instead of five or more; the period for which a worker could draw benefits was extended from 22 weeks to 26 weeks. Discrimination in pay between a man and a woman performing identical work with equal skill was prohibited. The limitation on payments for old-age assistance, minors and blind persons was removed, and payments were to be based on the need of the individual. A bond issue of $17,000,000 was authorized to improve and enlarge the facilities of the state's humane and welfare institutions, including the state prison.

Taxes on the manufacture and sale of margarine were repealed, and its use in state institutions was authorized although the legislature refused to permit the sale of coloured margarine.

Legislation was enacted adding $20,000,000 to the already authorized $45,000,000 aid to local housing authorities for low-income rental units and providing $30,000,000 for low and moderate "for sale" units.

In the confusion of the last day's business, the general assembly adjourned June 8 without final action on the state budget. The governor immediately called a special session for June 14 to act on this. A general fund budget of $230,342,900 was finally approved.

The second special session was necessary to correct a technicality which had been found in the housing bill.

The third special session was called by Governor Bowles to take up the question of state aid for local school building programs. The governor favoured a bond issue, but the Republican controlled house wanted any aid to come out of current revenue. Finally a compromise was agreed upon, under which the state would pay roughly one-third of the cost of the new schools financed by the towns by local bond issues.

State officers in 1949 included: governor, Chester Bowles; lieutenant governor, William T. Carroll; secretary of state, Mrs. Winifred McDonald; treasurer, Joseph A. Adorno; comptroller, Raymond S. Thatcher; attorney-general, William L. Hadden. Finis E. Engleman was state superintendent of education. On Dec. 5 Governor Bowles announced the appointment to the U.S. senate of William Benton, of Southport, to succeed Raymond E. Baldwin, who was to resign on Dec. 17 to become an associate justice of the state supreme court of errors.

Education.—The state department of education reported for the year ending June 30, 1949: 676 public elementary schools with 196,741 pupils and 6,781 teachers; 33 junior high schools with 15,590 pupils and 790 teachers; 90 public high schools with 62,679 pupils and 2,961 teachers; 206 parochial and ecclesiastical schools with 62,712 pupils and 2,591 teachers. The state expenditure on education, through the state board, was $11,409,994, and local expenditure, $56,626,855.

Social Insurance and Assistance, Public Welfare and Related Programs.—The state public welfare department reported that as of June 30, 1949, there were 64,393 persons in the state receiving assistance, compared with 48,855 the year before, an increase of 31.8%. The cost of this assistance in 1949 was $3,204,584, compared with $2,059,894 in 1948, an increase of 55.6%. The various types of assistance in June 1949 were: general local relief, 18,131 persons costing $546,100; old-age assistance, 16,846 persons costing $950,500; 12,186 persons in mental, feeble-minded and tubercular state institutions, costing $1,155,643; 11,992 dependent children costing $356,506; 3,282 county wards (6–18 yr.) costing $141,081; 2,097 state wards (under 6 yr.) costing $43,467; and aid to 263 blind, costing $11,287. The total expenditure by the state for the year ending June 30, 1949, for charities, hospitals and correctional institutions exceeded $33,000,000, and for health and sanitation, more than $1,300,000.

Communications.—The Federal Communications commission reported that in 1949 there were 27 standard AM broadcast stations in the state, 14 with frequency modulation (FM), 1 licensed television station and 2 experimental stations.

On Nov. 1, the tunnel through West Rock at New Haven was opened to the public, thus completing the 117 mi. highway from the New York line to the Massachusetts line.

There were 2,978 mi. of road in the state highway system, 880 of which were concrete. There were also 2,098 mi. of other kinds of improved roads. On July 1, there were 687,136 automobiles licensed and 793.616 drivers. Approximately 146 newspapers and periodicals were published in the state.

Banking and Finance.—The treasurer's report for the fiscal year ending June 30, 1949, showed the financial condition of the state as follows: cash balance July 1, 1948, $29,027,803.34; total receipts, year ending June 30, 1949, $274,665,512.94; total, $303,693,316.28; total payments, year ending June 30, 1949, $276,977,230.06; cash balance July 1, 1949, $26,716,086.22. The bonded debt, June 30, 1949, amounted to $82,230,000, and the bond retirement fund totalled $10,905,831.68. The bonded debt Nov. 1, 1949, was $86,265,000. The unemployment trust fund on deposit with the Federal Security agency, June 30, 1949, was $173,541,004.63.

The banking department reported that as of Sept. 30, 72 mutual savings banks had total assets of $1,490,317,790; 62 state banks and trust companies had assets of $819,612,100; 31 building or savings and loan associations had assets of $60,461,352; 7 industrial banks had assets $6,287,327; and 2 private banks had assets of $1,660,835. As of June 3 51 national banks had assets of $750,890,000.

Agriculture.—The department of farms and markets reported that t total cash receipts from farm marketing in 1948 were $184,104,000, compared with $151,133,000 (revised) in 1947. From commodity crop the receipts were $81,986,000; from livestock and livestock product $101,587,000; and government payments, $531,000.

Leading Agricultural Products of Connecticut

	1948	1947 (Revised)
Apples	$2,656,000	$3,018,00
Potatoes	6,145,000	5,298,00
Truck crops	6,086,000	5,870,00
Tobacco	53,743,000	31,049,00
Cattle and calves	8,603,000	6,736,00
Chickens (including broilers)	20,816,000	15,674,00
Eggs	26,202,000	26,644,00
Dairy products	41,909,000	39,706,00
Hogs	1,920,000	2,040,00

Manufacturing.—The business recession was especially severe in t manufacturing industries of the state during 1949, and several localiti were designated as "distress areas." At the height of the distress perio about mid-July, the state labour department reported that there we 106,200 persons unemployed, an 11-year peak. There were 693,82 workers in nonagricultural industries in Aug. 1949, compared with 773 910 in Aug. 1948. Average weekly earnings were $52.32, compared wi $56.02 in 1948. A preliminary report for September showed a defini drop in unemployment. (J. Br.)

Consumer Credit.

Consumer credit, as reflected by consumer debt statistics published by th board of governors of the federal reserve system, reached a unprecedented high in the United States during 1949, whe more than $18,000,000,000 of receivables were reported held b retail and service establishments and by consumer cash loa agencies. Not only was the amount of such debt unequalle but the rate of its growth was likewise notable, for during th past decade this type of consumer debt had doubled, and sinc 1943, a wartime year when it was abnormally low, it ha increased threefold.

The increase of total consumer debt since World War II wa attributable almost entirely to the increase of instalment deb particularly that arising from the sale of automobiles. Durin postwar years, charge accounts outstanding increased but slightly, and on the whole the volume of all noninstalment deb remained remarkably constant.

Notwithstanding the marked growth of consumer debt i absolute amount, its increase was relatively less than the overall growth of the entire economy since 1939. Consumer deb increased, but so also did the means of paying debt and th general setting in which the debt arose. It is true that wherea consumer debt in 1939 was $7,000,000,000, in 1949 it was $18 000,000,000. Nevertheless, while such debt increased to 2.5 times what it had been a decade before, personal disposable income remaining after payment of taxes was, in 1949, 2.75 time what it had been in 1939. Similarly, personal savings made during 1949 were more than six times as much as they were in 193 Thus, while consumer debt experienced tremendous growth during the decade, this should be cause neither for alarm nor f superficial criticism of the role of consumer credit in th economy.

The quantity of consumer debt outstanding is no more significant than its qualitative aspects, and in 1949, in addition attaining unprecedented volume, consumer credit also manifested certain characteristics attributable to circumstances peculiar to that year. During 1949, consumer credit terms we liberalized and collections were retarded, as a result of increase competition among sellers for consumer purchases and th expiration of legal restraints imposed by the federal government upon instalment sales.

On the one hand, terms were affected by increased competition, which, in turn, reflected the growing availability of consumer durable goods following the war and the curtailed demand resulting from reductions in employment and in factory pay rolls. Pressures upon sellers also arose from threats of economic instability hinted by a declining rate of physical production and by a drop in many wholesale and retail prices. In order to open broader markets and to appeal more effectively to marginal income groups, easy credit terms were offered widely.

On the other hand, the expiration of regulation W, providing through federal authority for minimum down payments and maximum credit periods, accentuated the trend toward competition in credit terms. The abandonment of credit regulation, however, was gradual. Reinstated as of Sept. 20, 1948, following a brief lapse, regulation W was partially relaxed March 7, 1949, when the maximum maturity on all consumer instalment contracts was made uniformly 21 months, instead of 15 to 18 months, and the required down payment was reduced from 20% to 15%, except in the case of automobiles, where the down payment remained at 33⅓%. The regulation was further relaxed as of April 27, 1949, when down payments for articles other than automobiles were further reduced to 10% and all maximum maturities were increased to 24 months. At the same time, all sales amounting to less than $100 were thereafter exempted from regulation. Finally, on June 30, the authority of the federal reserve board to regulate consumer credit expired, and sellers were again free to set what terms they deemed best and necessary for the conduct of their business.

The predictable effect of the passing of legal restraints upon consumer credit, especially in the face of tightening sales conditions, was a noticeable breaking away from prevailing terms. This, of course, was the case mainly in instalment credit, for charge account regulation expired in 1948 with little evident effect upon that form of credit. In the instalment field, however, the termination of regulation was accompanied by the general elimination of down payments on radios, television sets, refrigerators, furniture and the like, and by the common extension of the payment period up to 24 months. Terms on automobile credit were made easier than for most other commodities. In the case of soft goods, too, credit terms were liberalized by the elimination of the down payment and the extension of time to from 6 to 12 months.

Another development in consumer credit was the slowing down of the rate of collections. This was particularly characteristic of lines of trade where sales were in large measure made on instalment credit. Within a 12-month period, for example, monthly ratios of collections to beginning-of-month outstandings dropped 22% in furniture stores, 24% in household appliance stores and 19% in jewellery stores. Department stores, on the other hand, fared somewhat better, for there appeared to be no appreciable change in the collection of either their instalment or charge accounts during the same period of 1949. (*See* also Federal Reserve System.) (R. Ba.)

Canada.—Rising 1949 prices increased the cost of living and the pressures were reflected in moderate but definite increases in consumer credit. According to the dominion bureau of statistics, by July, 11 of the 15 major retail trades were showing a decreased ratio of cash to credit sales; 7 of the 10 normal instalment trades were showing an increased ratio of credit to cash sales. Cash sales stood at 63.3% in July 1949, compared with 67% in July 1945. In general, instalment sales (except in furnishings and furs) were almost back to pre-1939 levels, though department stores reported that credit purchases as a proportion of total sales were 1% above 1939. Collection agencies revealed that the delinquent ratio of accounts was 2½%. The retail clothing trade took tentative steps to provide a central credit plan so that small retailers might benefit from instalment sales in the same way as clothing sections of department stores.

Easier credit began to appear in the new and used car fields in an effort to boost sales.

The consumer credit picture in New Brunswick presented a special aspect of the national situation. Instalment buying soared dangerously throughout the province under the impact of a British-operated chain department store that offered a wide range of goods at very low weekly rates: $1 a week for $150 worth of merchandise, $2 for $300 worth and up to $4 for $600 worth. To combat the effects of such competition, other retail outlets successfully lobbied for provincial legislation which called for 15% down payments and a maximum of 24 months to pay.

The royal commission on prices which sat during 1948 presented a three-volume report early in 1949. Pages 289–306 of vol. 3 summed up the commission's findings which labelled consumer credit "a significant economic factor," reported that the consumer was generally unaware of what he actually paid for credit, and noted its increase. The total cash and commodity credit outstanding in Canada was: 1941, $675,900,000; 1947, $947,500,000; at June 1948, more than $1,000,000,000. (C. Cy.)

Great Britain.—During 1949 traders in all parts of Great Britain reported a substantial increase in the demands that were being made upon them for credit facilities for the purchase of consumer goods. The tendency for the situation to change in this way had become apparent in 1948, but during 1949 it became much more marked. Not only had the surplus of ready money in the hands of the purchasing public, which had accumulated by reason of savings during the war years and by the payment of service gratuities, become exhausted, but there was a very much larger variety of goods on the market competing for such cash as was still available.

Although the increase was not confined to any one particular type or method of consumer credit granting, it was probably most marked in the instalment-purchase field. Such items as furniture, domestic appliances, radios, refrigerators, bicycles and motorcycles were largely sold on this system, and traders handling these lines in some districts reported that unless they could extend credit to their customers they would be unable to keep their stocks turned over.

In August and again in September, restrictions were relaxed on a considerable number of articles which, until then, had prevented the making of a service charge for instalment purchase or credit sale transactions. The easing of this control enabling a further range of goods to be sold on instalment-purchase terms also contributed to the increase in the amount of consumer credit that was granted during the year.

The increase, large as it was, would probably have been even greater had it not been for the continuation of the policy laid down by the treasury some years previously restricting the amount of finance which could be made available for instalment-purchase transactions on consumer goods. Before World War II a high percentage of such transactions had been financed not by the retailer himself but by the banks or by the specialized finance houses. The effect of the treasury restriction made it impossible for these sources to accept all the increased business offered to them, and some retailers reported that they were unable to grant any further instalment-purchase credit because they themselves were unable to obtain the additional financial backing they required.

An increase was also noticed in the length of credit being granted. On open credit accounts, longer time was required before the account was to become due for payment, and those customers who were discussing instalment purchase agreements were found, in a high percentage of cases, to ask for the agreement to be drawn so as to cover a longer period than would have been the case a year or so previously.

During the year, collections on amounts outstanding appeared on the whole to be satisfactory, although in one or two quarters a tendency to slowness was reported. The full employment of the community, which had continued throughout the year, was obviously an important factor in bringing this about and, where proper care had been exercised in checking the credit standing of the customer prior to the opening of the account, overdues were not high. (C. C. Ws.)

Contract Bridge. In the United States, bridge news was perhaps overshadowed by the emergence of the new card game canasta (*q.v.*). Never before had contract bridge been threatened as the nation's favourite social card game in America. But despite the competition, there seemed to be about as much bridge played as in any previous year, and attendance at tournaments continued to increase.

In January new laws for duplicate bridge were released. For the first time, these laws were an international code, adopted by the European Bridge league's members as well as in the western hemisphere.

In bidding, the principal development was the espousal of point-count valuation by Charles Goren of Philadelphia, Pa., one of the principal authorities. Under this method, based on calculations originally made by W. M. Anderson of Toronto, Can., each ace is counted as 4 points, king 3, queen 2, knave 1; 1 point is added for each doubleton in the hand, 2 for each singleton, 3 for each void. A hand of 14 points or slightly less is considered biddable, and a combined partnership count of 26 or more justifies bidding game.

In November the New York metropolitan women's pair championship was won by a Negro pair, Doris Brooks and Geraldine Gibson, and Mrs. Brooks also won the mixed-pair contest, paired with a white partner, M. C. Keller.

Winners in the principal American Contract Bridge league tournaments in 1949 were:

Masters' Championships: Individual, George Rapee, New York, N.Y. Pairs, Leo Roet, New York, N.Y., and Ruth Gilbert, Philadelphia, Pa. Teams, Alvin Landy and Sol Mogal, New York, N.Y., Arthur Goldsmith, Cleveland, O., Jeff Glick, Miami, Fla., and Bruce Gowdy, Toronto, Ont., Can. Mixed pairs, John Crawford, Philadelphia, Pa., and Margaret Wagar, Atlanta, Ga. Mixed teams, Mr. and Mrs. Charles J. Solomon and Mrs. R. C. Young, Philadelphia, Pa., and Peter Leventritt, New York, N.Y.

National Championships: Individual, Sol Seidman, Brooklyn, N.Y. Pairs, Charles Whitebrook, New York, N.Y., and Gardner Goldsmith, Philadelphia, Pa. Teams, cumulative scoring (Harold S. Vanderbilt cup), Lee Hazen, Charles Lochridge, Morrie Elis, Harry J. Fishbein and Lawrence Hirsch, New York, N.Y. Teams, match-point scoring, tie among three teams: Landy, Mogal, Goldsmith, Glick and Elmer Schwartz of Cleveland, O.; E. N. Marcus and Sidney Aronson, Boston, Mass., Mrs. J. E. Folline, Richmond Va., L. J. Kabakjian, Philadelphia, Pa., and B. O. Johnson, Spartanburg, S.C.; Hazen, Leventritt, Hirsch, Jack Shore and Richard Kahn, New York, N.Y. Men's pairs, Oswald Jacoby, Dallas, Tex., and Charles H. Goren, Philadelphia, Pa. Women's pairs, Ruth Sherman and Mrs. Lester Rhodes, New York, N.Y. Mixed pairs, Mr. and Mrs. Arnold Kauder, San Diego, Calif. Men's teams, Roet, Howard Schenken, Alphonse Moyse and Maurice Levin, New York, N.Y. Women's teams, tie between two teams: Mrs. L. C. Robinson, Mrs. Henry Sabott, Mrs. R. H. Sondheim and Mrs. C. T. Evans, Philadelphia, Pa.; Mrs. E. T. Carter, Mrs. Ernest Boschan and Kathleen McNutt, Washington, D.C., and Mrs. F. Eberson, Memphis, Tenn. Mixed teams, Helen Cale and Jack Ehrlenbach, San Francisco, Calif., and Mr. and Mrs. Arnold Kauder, San Diego, Calif. (E. CUL.; A. H. MD.)

Europe.—For the second year in succession the winners and runners-up in the European championship of 1949 were respectively Great Britain and Sweden; Denmark finished third. The contest was played in Paris from July 4–10, 11 countries taking part. The British team was M. Harrison Gray, K. W. Konstam, L. Dodds, E. Rayne, B. Shapiro, T. Reese and A. Meredith. The women's event was won by Denmark (winners in 1948 also) with France second and Italy third. Great Britain, whose team was Mrs. A. L. Fleming, Mrs. F. Gordon, Lady Rhodes Mrs. L. Litante, Mrs. P. Williams and Mrs. M. Lester, finished fourth.

A champion team from America, S. Stayman, G. Rapee, J Crawford and P. Leventritt, played a match in London during May for the Crowninshield cup, presented by an American for a contest between the leading English and American players The English players, who won by a narrow margin, were M Harrison Gray, K. Konstam, B. Shapiro, T. Reese, Ewart Kempson, L. Dodds, E. Rayne, J. Pavlides, G. Mathieson and Mrs. R. Marcus. The first four, who represented Crockford's club, gained a lead of 2,950 in the first half of the match. The American team also lost to the Lyndhurst club, whose team was L. Tarlo, H. Franklin, H. Leist, A. Meredith, M. Rockfelt and A. Rose.

For the first time in the history of the Gold cup, Britain's premier team contest, a Scottish side reached the final. The cup was, however, won by Graham Mathieson's London team The annual North-South contest was won by the south who now led 7–6 in the series. The international contest between England, Scotland, Wales, Northern Ireland and the Bridge association of Ireland, was won by England.

(E. KN.)

Co-operatives. In 1949 there were about 10,000,000 members of various types of U.S. co-operative including agricultural marketing associations, credit co-operatives or credit unions, consumer co-operatives, insurance, housing, health and medical care, publication and broadcasting and other enterprises.

The outstanding development of co-operatives in 1949 was an increase in co-operative housing and a drive for legislation in middle-income housing. At the close of 1949 more than 100 co-operative housing projects were in operation, serving about 30,000 families. These projects included all types of homes from city apartment houses in New York to small ten-family project of individual homes in rural and suburban areas.

In the field of medical co-operatives, the Cooperative Health Federation of America and the American Medical association reached a working agreement on the role of co-operative and prepayment medical care in the U.S. economy, and a number of new co-operative health associations were established. Membership continued to increase in prepaid medical care plans and co-operative hospitals, the largest of which was the Group Health association in Washington, D.C.

In retail food distribution about 1,000 co-operative stores handled a volume of business estimated at about $100,000,000 at retail, with units from Massachusetts to California.

Consumer Co-Operatives in the U.S., Jan. 1950

Type of associations	Number of Associations	Membership	Volume of business
Commodity co-ops			
Co-operative stores	2,400	1,356,000	$ 828,000,000
Service stations	2,500	960,000	385,000,000
Farm supply	1,353	710,000	480,000,000
Other	80	38,000	16,500,000
	6,333	3,064,000	$1,709,500,000
Service Co-ops			
Medical associations	130	198,000	$ 10,825,000
Funeral associations	41	30,300	499,000
Housing	125	13,000	3,000,000
Campus co-ops	180	22,000	6,000,000
Miscellaneous	125	25,000	1,800,000
	601	288,300	$ 22,124,000
Specialized consumer co-ops			
Rural electric co-ops	815	2,404,000	$ 137,000,000
Credit unions	9,329	3,749,000	633,784,000
Telephone	33,000	675,000	10,000,000
Co-operative insurance*	8	1,150,000	51,000,000
	43,142	7,978,000	$ 831,784,000

*Includes only those organizations affiliated with the Cooperative League of US Mutual insurance companies reported by the U.S. bureau of labour statistics include 2,000 associations, with 11,300,000 members and business of $207,500,000.

Farm supply co-operatives continued to be the largest single lume business in the consumer co-operative field, with sales nearly $1,000,000,000 in seed, feed, fertilizer, farm machin- y and other farm supplies.

Marketing co-operatives represented more than half of the S. families with a volume of business of more than $3,000,- 0,000. There were 13 major fields of marketing, including iry products, grain, citrus fruits, wool, poultry products and forth.

Internationally the co-operatives continued to make headway. e largest—Cooperative for American Remittances to Europe, tter known as CARE—had distributed nearly $100,000,000 rth of relief packages (food and textiles) abroad since it was tablished late in 1945. Another, the International Cooperative troleum association, was completing its second year of opera- n and was shipping petroleum products from the co-opera- ves in the U.S. to co-ops in South Africa, Australia, New Zea- nd, France, Scotland and Yugoslavia and many other countries. (W. J. Cl.)

Great Britain.—In 1948 retail sales amounted to £490,000,- 0, as compared with £434,000,00 in 1947. Trading surplus, at 5,921,000, was a little lower than in 1947, despite increased les, because of price-cutting at the government's request, a licy which could not be sustained when it threatened seriously affect dividends on purchases without leading to any large in- eases in membership. Dividends on purchases, at £35,461,000, ere nearly the same as in 1947, but at a reduced rate on the £1 sales. The co-operative wholesale societies of all types in- eased sales from £293,000,000 to £331,000,000, but trading rpluses fell from £14,000,000 to £12,000,000. The total pro- uction value of all co-operative productive agencies was £181,- 6,000, as against £157,569,000 in 1947.

The principal development in British co-operation during 49 was the inauguration of "national membership," to which ost of 1,000 retail societies were parties. This system was de- gned to enable any member of a participating society to re- ive dividends on purchases made at any such society's shops.

Other Countries.—No conference of the International Co- erative alliance, which still included countries of eastern Eu- pe as well as of the west, was held during 1949. In the inter- tional field the main events were a considerable expansion of e revived co-operative movement in western Germany, a further owth of co-operatives in the British colonies, especially in est Africa, and an increase in educational work, especially in aining co-operative leaders for work in the less advanced eas.

East of the "iron curtain," there was a further rapid growth state-controlled agricultural co-operatives in the satellite ates and also in Yugoslavia. In Palestine the Israeli govern- ent continued to promote co-operative enterprise.

opper.

World production of copper was gradually recovering from the postwar slump. The 1948 total was 4% more than the 1939 level, but was still short of the war peak by a similar percentage. The outputs of the major producing countries and the world totals during recent years are shown in Table I.

Incomplete smelter reports for 1949 indicated appreciable gains in output in Canada, Germany, Japan and Northern Rhodesia, but these were largely offset by declines in Chile and the United States, and little improvement could be expected in the yearly total.

Demand exceeded supply until well into 1949, when a reversal of the trend was marked by a sharp drop in prices.

United States.—The salient features of the copper industry in the United States during the past several years are shown in Table II, while mine output by states is shown in Table III.

The 1948 output fell somewhat short of that of 1947 because of strikes in the industry, though the decreased ore tonnage was partly offset by a small increase in copper content of the ore. The decline in domestic output was more than offset by increased imports, giving small increase in total supply above that of 1947.

In 1949 the mine output suffered further declines, partly from labour stoppages and partly from a cut in working time from 48 to 40 hr. per week. Mine production during the first three-quarters of 1949 totalled 557,581 tons, a reduction of 11% from the average monthly rate in 1948.

Canada.—Primary copper production advanced from 225,861 tons in 1947 to 240,732 tons in 1948, and continued to improve at about the same rate in 1949 with a total of 172,925 tons through August. Small tonnages of ore and concentrates are exported, but the bulk of the output is converted into refined copper. Refinery output increased from 202,427 tons in 1947 to 221,275 tons in 1948 and 151,985 tons in the first eight months of 1949. (*See* also MINERAL AND METAL PRODUCTION AND PRICES.) (G. A. Ro.)

Corn

(MAIZE). The 1949 U.S. corn crop of 3,377,790,000 bu. was the second largest on record, 8% below the 3,681,793,000 bu. of 1948, but 21% above average. The large 1949

crop plus the record carry-over of 815,000,000 bu. provided a total supply about 400,000,000 bu. larger than the 1948 record.

Acreage harvested was 86,735,000 compared with 86,067,000 in 1948 and 88,617,000 average for the decade 1938–47. Average yields per acre declined to 38.9 bu. against 42.8 bu. in 1948, but only 31.4 bu. average for 1938–47.

Corn prices fluctuated erratically during the year at a level well below the average government loan rate to farmers of $1.44 per bushel on the 1948 crop and $1.40 per bushel on the 1949 crop; from $1.25 per bushel in January the average price received by producers broke to $1.12 in February, recovered to $1.25 in July, declined to a harvesttime low of $1.02 per bushel in November, then increased again. The secretary of agriculture late in December ordered production controls on the 1950 corn crop, calling for a cut of 11,000,000 ac. to provide a goal of 2,627,000,000 bu.

The world corn crop of 1949–50 was estimated at 5,680,000,000 bu., second only to the record crop of 5,990,000,000 bu. in 1948–49, and much in excess of the prewar average of 4,750,000,000 bu. (*See* also FOOD SUPPLY OF THE WORLD; VEGETABLES.) (J. K. R.)

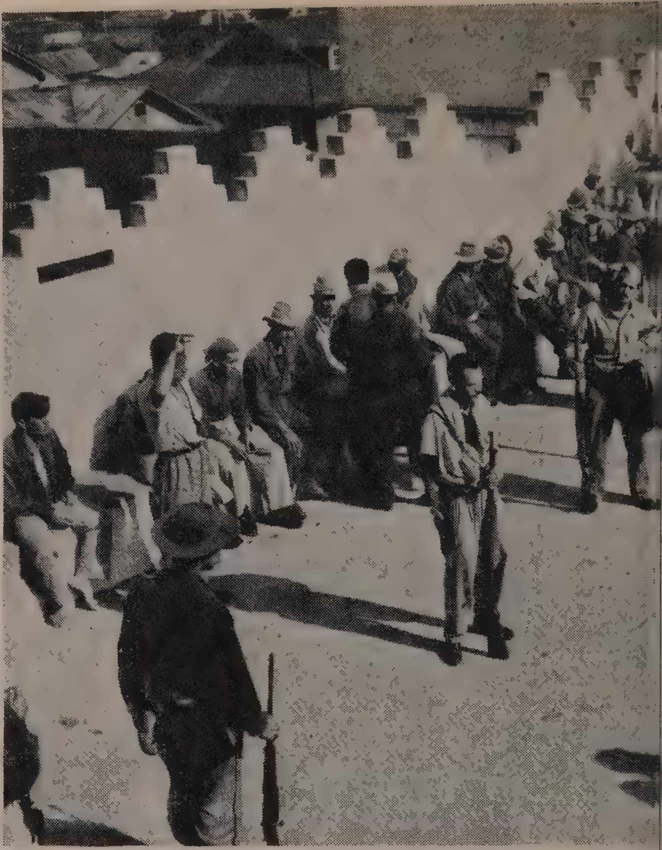
Costa Rica. A Central American republic, Costa Rica is located between Nicaragua and Panamá. Area: approximately 19,238 sq.mi.; pop. (Dec. 31, 1948, official est.) 825,378, classified as about 80% white, 16% mixed, 3% Negro, less than 1% Indian. The capital is San José (pop., 1948, 90,615); other principal cities are: Alajuela (11,663), Cartago (11,505), Heredia (12,038), Liberia (4,622), Limón (11,373) and Puntarenas (10,230). Language: Spanish. Religion: predominantly Roman Catholic.

Presidents in 1949: Col. José Figueres (provisional) and Otilio Ulate Blanco.

History.—The year 1949 brought a restoration of constitutional government after a previous year of revolt and dictatorship. The constituent assembly met on Jan. 16, restored political liberties, drew up a new constitution, and retired, Nov. 8, in favour of a legislative assembly. On the same date Col. José Figueres and his revolutionary junta resigned, and President-Elect Otilio Ulate Blanco was inaugurated.

The return to democratic government was interrupted on April 2 by a military revolt fomented by the minister of national defense, Col. Edgar Cardona, but the uprising was crushed within 24 hr. Six were killed and 24 were injured in the fighting. Those arrested in connection with the revolt were granted complete amnesty in June by Col. Figueres.



COSTA RICAN ARMY REBELS captured by volunteer loyalist forces at Bel Vista fortress in April 1949 during an attempted revolt against the Figuer regime

Notwithstanding the attempted coup, the junta agreed in April to resign on May 8 and turn the government over t Ulate, but the president-elect refused to take office until th new constitution was promulgated and a legislative assembl elected. In the congressional elections, Oct. 2, Ulate's part the National Union, won a majority of the seats (33 out of 45 and also elected both of the vice-presidents. The remainin seats in the assembly were distributed among five other partie On his inauguration, Nov. 8, Pres. Ulate pledged particula support to new social-security legislation, public health, educ tion and a higher standard of living for the general public.

The critical relations between Costa Rica and Nicaragua ari ing from the so-called "invasion" of exiled former Pres. Rafa Calderón Guardia's sympathizers in Dec. 1948 were smoothe in January through the offices of the Organization of America States (*q.v.*). The dispute was settled completely in Februa by a friendship pact signed by the two countries in Washin ton, D.C.

On the economic front, rising coffee prices in the world ma ket were offset during 1949 by previous commitments to se the current crop at lower prices. The general cost-of-livin index figure rose from 240.63 in March (1936: 100) to 250. in August. In July, however, a series of government decre established new minimum wage rates affecting almost eve employee in the country and calling for wage increases fro 15% for peons in the central plateau to as much as 250% f some white-collar workers. A 10-day strike, beginning Aug. 3 in the United Fruit Co. banana plantations was settled by go ernment intervention, with the workers being awarded increase in minimum pay.

Education.—In 1948 there were 919 primary schools with 99,5 students, and 44 secondary schools with 10,955 students. The nation university had 907 students and 180 professors in 1945.

Finance.—The monetary unit is the colón, valued officially at 1 cents U.S. on July 31, 1949, but with street-market quotations as l as 11.11 cents on Oct. 22. The national budget for 1949 provided ordinary expenditures of 110,762,088 colones and extraordinary expen ures of 106,968,294 colones. Actual expenditures in 1948 amounted to 14,796,553 colones; receipts, 90,079,514 colones. At the close of 1948 he public debt was 169,136,173.96 colones, external; 147,960,742.77 colones, internal. At the end of June 1949, the central bank had gold eserves totalling 11,547,000 colones; total bank deposits were 63,128,000 olones; currency in circulation, 103,410,000 colones.

Trade and Resources.—Exports in 1948 were valued at $31,839,900 J.S., a new annual high ($24,749,472 in 1947); imports amounted o $42,344,379 ($45,000,000 in 1947). The United States took 72.04% of the exports and supplied 77.7% of the imports. The main imports vere wheat flour ($2,461,052), sulfate of soda ($1,314,806) and cotton extiles ($1,304,108). The chief exports were coffee (51,935,827 lb. at 14,189,041), bananas (419,887,360 lb. at $8,036,729), cacao (9,488,991 lb. at $3,378,925) and abacá fibre (13,809,180 lb. at $3,240,225). The 1949–50 coffee crop was forecast to reach a record 475,000 bags of 132 lb. each (302,107 bags in 1948–49). Other major crops (with 1948 production figures): corn (46,846,800 lb.), rice (28,209,480 lb.), otatoes (27,646,000 lb.) and beans (22,338,420 lb.). In 1949 there vere 492,048 head of cattle in the country.

Communications.—At the end of 1947 there were 414 mi. of public and 255 mi. of private railroads and 1,014.9 mi. of improved highways. In 1948 the public railroads carried 2,077,327 passengers and 441,635 ons of freight. At the end of 1946 there were 2,800 automobiles, 600 buses and 1,300 trucks registered.

Cotton.

Cotton Manufacture.—The decline in the U.S. cotton industry continued through the first half of 1949, but there was appreciable improvement after midsummer. By the end of the year, the heavy inventories of the previous year had been replaced by an active demand and a rising trend of production and prices.

However, the production for the year was expected to show a minimum drop of 13% compared with 1948. On a yardage basis, 1949 production was down at least 1,200,000,000 yd. Production during the first nine months of the year was 6,197,000,000 yd., compared with 7,377,000,000 yd. in the corresponding period of 1948. Spindle activity in September was 115% of 80-hr. capacity, as compared with 103% for the first six months of the year. Some prices had advanced as much as 25% above the July low, but the average increase was nearer 10% to 15%.

The U.S. continued to hold a large share of the world's textile export market—about 25% compared with 4% prior to World War II. Widespread devaluation of currencies apparently had little immediate effect upon imports and exports of cotton cloth.

Japanese production for the low-priced type of trade increased and complaints of competition began to be heard, though Japanese production for export was apparently not more than 800,000,000 yd., or about one-third as much as prewar.

United States Production.—The raw-cotton surplus and its unsolved problems became a dominant factor in 1949. The U.S. cotton crop of 1949 of 16,034,000 bales (of 500-lb. gross weight) was the sixth largest on record, and the largest since 1937, comparable with 14,877,000 bales in 1948, and an average for 1938–47 of only 11,304,000 bales. It was valued at approximately $2,300,000,000. The estimated lint yield per harvested acre in 1949 was 285.8 lb., low compared with 312.6 lb. in 1948, but the third highest on record and comparable to the 254-lb. average during 1938–47. Acreage harvested in 1949 was 26,898,000, or 18% more than the 22,821,000 ac. harvested in 1948, and even larger in comparison with the 21,396,000-ac. average of the previous decade. This large acreage was in spite of a government request that an acreage goal of 21,894,000 ac. be observed. Texas, California, Arizona and New Mexico produced 50% of the 1949 crop. Dry November weather was favourable for harvesting the late crop. Fertilizers were more abundant and their use in larger amounts accounted in part for the high yields. The 1949 crop of American-Egyptian cotton was 4,300 bales, whereas only 3,600 bales were produced in 1948, but the average for 1938–47 was 29,500 bales.

Cotton prices during much of the year were rather stable near the loan level. Prices to growers reached a peak of 30.13 cents per lb. in June, before the condition and probable size of the 1949 crop were adequately indicated, but declined to 27.76 cents per lb. in November. The probable average price for the 1949 crop was indicated at 28.60 cents per lb., compared with 30.41 cents average for the 1948 crop.

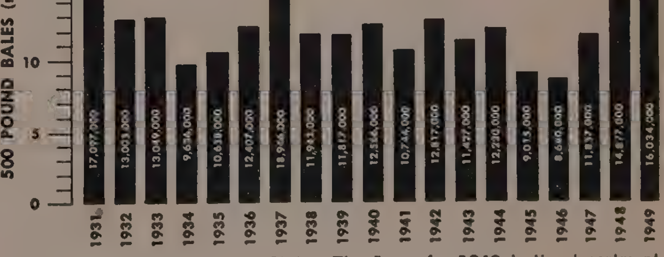
The average government loan rate on 1949 seven-eighth inch upland cotton to producers was 27.23 cents per lb.; the 1948 rate was 30.74 cents per lb. Some 5,270,000 bales of the 1948 crop were placed under government price support; it was estimated that a larger part of the 1949 crop would eventually move into the support program.

Exports of cotton from the U.S. during 1949–50 were expected to decrease moderately from the 4,747,600 bales in 1948–49, but to continue below the prewar rate. A large portion of the exports from the 1949 crop would go to countries of the Economic Cooperation administration (ECA) program (60% of the raw cotton exports in 1948–49) and to areas of military occupation.

In summary, the 1949 crop of 16,034,000 bales, plus a carry-over of 5,283,000 bales, provided a total U.S. supply of 21,317,000 bales against a probable domestic consumption of 8,000,000 bales and an export of perhaps 4,500,000 bales, thus leaving a probable carry-over as of Aug. 1950 in excess of 8,500,000 bales, much of it in the hands of the Commodity Credit corporation (CCC). This mounting surplus resulted in an order from the department of agriculture that plantings in 1950 be allocated to producing areas on the basis of a national goal of 21,000,000 ac.—21% less than in 1949. Growers in December approved by a 9 to 1 ratio that marketing quotas be established on the 1950 crop, hence loans would continue to be available to co-operating growers at 90% of parity.

World Cotton Production.—World cotton production continued its upward trend in 1949. The preliminary estimate for the crop for 1949–50 indicated 30,400,000 bales, an increase of 4.5% compared with the 29,100,000 bales of the previous year, but below the 21,676,000 bales of 1935–39. Acreage increased sharply to 68,640,000 from 63,840,000 in 1948, but was substantially below the 81,142,000 ac. of prewar. Mexico harvested 1,334,000 ac. against 1,050,000 ac. in 1948, producing a record crop of 896,000 bales, or more than double the 1940–44 average. India increased production to 2,400,000 bales from 1,960,000 bales the previous year. Egypt reported a crop of 1,616,000 bales, a 12% smaller crop from an acreage 17% larger than in 1948, a result of a 25% reduction in yields following insect damage. Brazil's crop was expected to be less than the 1,500,000 bales of the previous year.

World total cotton carry-over from previous crops increased to 14,768,000 bales, from 13,907,000 bales in 1948, but was low compared with the 1935–39 average of 17,352,000 bales. The carry-over was expected to increase to about 17,000,000 bales



COTTON CROP in the United States. The figure for 1949 is the department of agriculture's estimate by crop year end, Aug. 1950. Total world consumption was expected to decline about 600,000 bales, with the decrease largely in China; Japan, Germany, France and the United Kingdom were expected to show increases and demands from importing countries would be not much below 1948–49.

Cottonseed.—Cottonseed, a highly valuable derivative of fibre production, part of which is used as an edible oil base for margarine, was estimated preliminarily at 6,477,000 tons, compared with 5,945,000 tons in 1948 and a ten-year average of 4,631,000 tons. The government improvised a support price program of $49.50 per ton (90% of parity) on safely stored seed of low moisture content. The price of cottonseed to the producer varied widely during 1949, ranging from $67.70 per ton in January to a low of $37.50 in July, although by the year end there was moderate recovery. A world crop of 14,000,000 short tons was forecast, a 5% increase over 1948. The average price for the crop was estimated at $42.80 per ton; that for 1948 was $67.20 per ton. Council of Europe: *see* EUROPEAN UNION.

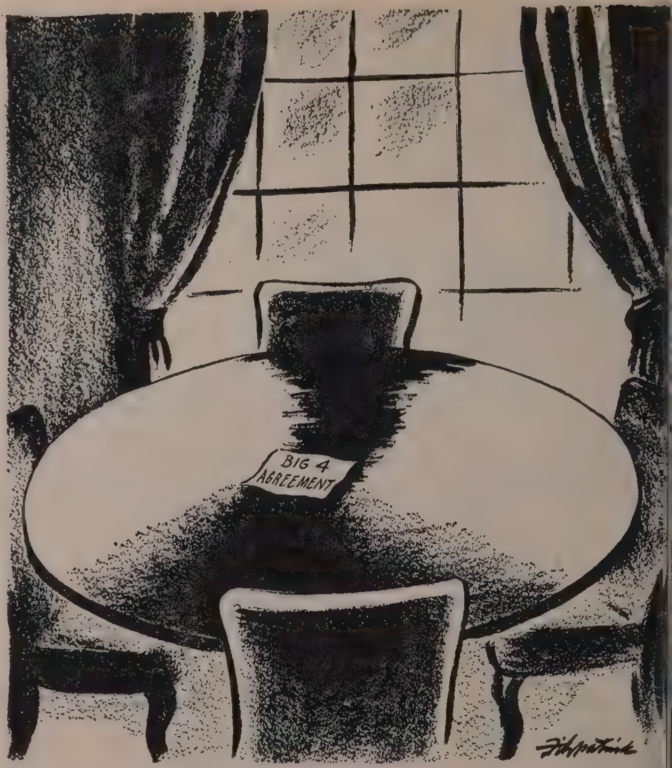
Council of Foreign Ministers. The sixth session of the Council of Foreign Ministers—the first to be held since the fifth session had adjourned *sine die* at London on Dec. 15, 1947—met at Paris from May 23 to June 20, 1949, to consider the basic problems of allied policy toward Germany and Austria. The session left the four governments as far apart as before on the question of Germany, but recorded substantial progress toward agreement on re-establishing Austria as a free and independent state.

The holding of the session was arranged as one part of a four-power agreement, reached on May 4, for the lifting of the soviet blockade of the western sectors of Berlin (*q.v.*) and for the removal of allied countermeasures against trade with eastern Germany. The blockade of western Berlin had been strongly countered by the United States and British air lift, as well as by determined resistance on the part of the people of Berlin. Between Feb. 15 and May 4 the United States government, with the approval of the British and French governments, had negotiated with the soviet government, through ambassadors Philip Jessup and Jacob Malik, in the search for a way out of this dangerous impasse.

First official information concerning the negotiations came from the soviet Tass News agency on April 26, followed by a fuller state department release of the same day. The soviet decision to abandon the blockade in return for a revival of negotiations on Germany marked a serious relaxation of international tension, for the soviet government thereby acknowledged the right, denied in the negotiations of 1948, of the Allies t occupy Berlin and gave up its claim that all Berlin constitute part of the soviet zone of occupation.



"NOT MUCH, BUT SOMETHING," editorial comment by Fitzpatrick of th *St. Louis Post-Dispatch,* on the sixth session of the Council of Foreig Ministers which ended in Paris June 20, 1949, with limited accord on th question of an Austrian peace treaty

From May 23 to 31 the four foreign secretaries, Dean G Acheson, Ernest Bevin, Robert Schuman and Andrei Y. Vishinsky, debated the problem of German unity and allied contro Vishinsky urged the reinstatement of the four-power Allie Control council, together with the formation of a German stat council, based upon the economic organs already functioning i eastern and western Germany respectively. He again argued fo separate four-power control of the Ruhr with direct soviet participation, and for large-scale German deliveries of reparation to the Soviet Union. He refused all requests for informatio concerning the economic condition of the soviet zone, includin the status of soviet-owned industries, which were estimated t constitute about one-third of the industrial assets of that zon

Vishinsky's proposals were met by a western proposal o May 28 for extending to all of Germany the fundamental law drafted for the west German state, through holding free election in the soviet zone and through guaranteeing personal and political freedoms there. The four allies could then enact a ne occupation statute, regulating their relations with the unifie German state and reserving only limited powers to themselve with most decisions of the allied commission being taken henceforth by majority rather than unanimous vote. Germany woul make no reparations deliveries from current production stocks and Germany would recover ownership of all industri enterprises taken over by a foreign power since the surrende of May 8, 1945. These proposals were rejected by the sovie government, and the three western representatives also decline the soviet proposal that the council receive a delegation of th soviet-dominated people's congress.

From June 1 to 10 the foreign ministers discussed the problem of restoring a unified administration and currency in Berlin. Again the western members proposed that broad powers b granted to the municipal administration, based on free election vith its decisions subject to disapproval by the four-power ommandatura, normally by unanimous vote. Three secret meetngs failed to reconcile the widely divergent viewpoints, since he soviet counterproposals would have subjected the Berlin adninistration closely to the allied kommandatura, which, in urn, would be able to act only through unanimous decisions. fter extensive discussion of the economic problems of Berlin nd its relations to the soviet zone and of relations between the oviet and western zones, the foreign ministers were unable to each any definite agreements and merely instructed their auhorities in Berlin to consult concerning the expansion of trade nd other questions of common interest in Berlin. The council eaffirmed the May 4 agreement which removed the soviet blockde of Berlin.

The discussion of how and when to draft a peace treaty for ermany was also fruitless. The soviet proposals that the four overnments prepare a draft treaty within three months and hat all occupation forces be withdrawn from Germany one ear after conclusion of the treaty seemed designed to win suport in Germany. The western negotiators objected that there vas little point in promising to prepare a treaty unless the four overnments agreed first to re-establish the political and ecoomic unity of Germany, to determine its boundaries and to lecide the questions of reparations and the future status of oviet-owned properties. The final communiqué, June 20, reorded the failure of the foreign ministers to find any common neeting ground for the restoration of joint control over Gernany as a whole, or for the economic and political unity of ermany. Despite the statement that the ministers would, durng the next session of the general assembly of the United Naions, "exchange views regarding the date and other arrangenents for the next session" of the council to deal with the Gernan question, no such arrangements were made during the inormal meetings of the four ministers at New York in late eptember and early October.

The Paris session succeeded, however, in removing several of he main obstacles which had blocked for many months the ompletion of a four-power treaty re-establishing Austria as a ree and independent state, as promised in the Moscow declaraion of Nov. 1, 1943. Negotiations, begun at London in Jan. 947, transferred to Moscow, then to Vienna and back to London, and broken off in May 1948, had been resumed by the forign ministers' deputies at London, on Feb. 9, 1949, but were till deadlocked in May by continuing disputes over Yugoslav laims to Austrian territory and to reparations, as well as over oviet claims to German assets in eastern Austria.

In the last days of the Paris session the soviet government bandoned the Yugoslav claims; it had previously upheld them, lespite the increasingly bitter controversy between the soviet nd Yugoslav Communist parties, beginning in June 1948. In he final communiqué of June 20 the four ministers announced heir agreement to re-establish Austria within its pre-Anschluss oundaries, with cultural and administrative protection for the lovene and Croat minorities. Vishinsky also abandoned the ugoslav claim for $150,000,000 in reparations from Austria, vhile agreeing that Yugoslavia should retain or liquidate Ausrian properties within its own territory.

In return for these important concessions the western powers nade several concessions to soviet economic interests. Of the erman "assets" which had been assigned to soviet ownership y the Potsdam protocol, certain important items, especially in he fields of oil and Danubian shipping, were now to be assigned o the Soviet Union, and, in return for its renunciation of all ther claims to German assets, Austria was obligated to pay 150,000,000 over a six-year period. Details of the settlement vere referred to the deputies, who were instructed to complete the draft treaty by Sept. 1.

After the agreed protocol had already been issued to the press, Vishinsky attempted to recall it, in order to insert into the agreed statement a provision assuring the free export of profits of the soviet enterprises in Austria; this matter was finally left to later settlement. The Yugoslav government denounced the Paris settlement declaring that it would never abandon its claims against Austria and attacking the four governments for again sanctioning the injustice of "the imperialist peace of Versailles."

The final negotiations for the Austrian treaty were not completed by Sept. 1, and the deputies were directed to resume their work on Sept. 22 at New York, where the general assembly of the United Nations was in session. The foreign ministers also met informally, on Sept. 26 and 29 and again on Oct. 6, to settle some of the disputed points. On Dec. 14, after 246 meetings, the deputies suspended their negotiations, to resume them in London on Jan. 9, 1950. It was widely believed that soviet reluctance to complete the final drafting of the treaty was because of the hostile pressure which it was exerting upon Yugoslavia; as long as soviet troops occupied eastern Austria the soviet government had the right to maintain lines-of-communications troops in Hungary and Rumania, from whose territory the chief centres of Yugoslavia could be threatened.

During their New York sessions the deputies completed many of the unresolved provisions of the treaty. They elaborated detailed arrangements for the protection of the cultural and educational rights of the Slovene and Croat minorities in Austria and the use of their languages regionally for administrative purposes. They rejected, however, the Yugoslav demand of full political autonomy for the Slav minority in Austria.

Original soviet demands for full ownership of German "assets" in eastern Austria would have left the Austrian economy bound hand-and-foot. Over many months of relentless bargaining the extent of soviet claims had been considerably reduced, and the soviet negotiators had also abandoned the demand of extraterritorial status for their enterprises. In the spring of 1949 the deputies agreed to assign to the Soviet Union oil-refining equipment with a capacity of 420,000 tons of crude oil, and to transfer to its possession certain physical assets of the Danubian steamship company located in eastern Austria, as well as in Hungary, Rumania and Bulgaria; by giving up its long-maintained claim to share in the control of the Austrian steamship company the new soviet position left Austria free to develop its own navigation facilities independently.

At their Paris session the foreign ministers agreed that Austria should be denied the right to nationalize the soviet enterprises except with soviet consent. The Paris bargain also assigned to soviet control 60% of Austria's oil-producing areas, at the 1947 level, under 25-year concessions. In addition, the deputies were directed to elaborate a list of oil-exploration regions, exactly specified, in which the soviet government would be free, during 8 years, to conduct explorations and to receive further 25-year concessions for those areas which proved oil. Untapped areas would revert to Austrian control in eight years.

When the negotiations were suspended, in December, the main disagreements concerned the method of settling disputes over the interpretation of the treaty; the support of displaced persons located in Austria; and the employment by Austria of foreign technicians. None of these questions had sufficient intrinsic importance to prevent conclusion of the treaty if the four powers could agree, politically, to recognize Austria's independence and to withdraw their forces of occupation. Cricket.

The winter of 1948–49 saw two overseas cricket tours. A Marylebone Cricket club side visited South Africa and a West Indies team went to the Indian peninsula. The M.C.C. team, captained by F. G. Mann, was unbeaten throughout its program and won the only two finished games out of the five four-day tests that were played.

The West Indies team lost only one of its 19 matches in India, against six wins, including the only test match that was finished. In one of the drawn games Pakistan put up an impressive performance.

In the domestic season in Australia, New South Wales won the Sheffield Shield competition and Sir Donald Bradman celebrated his knighthood by scoring yet another century in his testimonial match. A team of English women cricketers, captained by Molly Hide, had a successful tour of Australia and New Zealand, losing only one of their 28 fixtures but that one the only finished test match in Australia. Miss Hide made over 1,000 runs and five centuries.

The English season of 1949 recalled in its continual sunshine and hard wickets the years 1911 and 1921. Chief interest centred in the visit of a New Zealand team, the first to visit England for 12 years. Captained by W. A. Hadlee and managed by J. H. Phillips, the tourists suffered only a single defeat—at the hands of Oxford university—and held England to a draw in all four test matches.

The county championship of 1949 provided the most open and prolonged struggle within living memory. At the beginning of August five counties had some chance of finishing on top. In a desperate match with Derbyshire at Lord's a wonderful innings by D. Compton, when all seemed lost, carried Middlesex into security, but Yorkshire, playing with something of the ruthless *élan* of the county's great days, came with a rush at the finish to tie for first place. L. Hutton, with an aggregate of 3,429, only surpassed three times in cricket history, was supported by an impressive reinforcement of young players of whom Brian Close's record of 1,000 runs and 100 wickets in the first full season rivalled that of J. N. Crawford in 1906.

There was a fine Gentlemen *v.* Players match in which runs were always hard to come by; at one time the Players, set 139 to win, had lost 6 wickets for 60, but spirited batting by T. Evans and R. Jenkins won the day. The university match provided the surprise of the season. Oxford had had a notable record at home, defeating both the New Zealanders and Yorkshire, but Cambridge, well led by D. J. Insole and with two fine batsmen in G. H. G. Doggart and J. G. Dewes, consolidated notably on their tour and at Lord's outplayed Oxford to win by seven wickets. Statistically, the outstanding feature of the university season was the partnership of 429 by Doggart and Dewes against Essex, a record for the second wicket in English cricket. Eton, a strong side, was too good for Harrow, and there were some signs of a general revival in school cricket. For the first time representative sides picked from the grammar and secondary schools of England and Wales met in an international match. Lancashire second XI won the minor counties' championship.

(H. S. A.)

Crime.

United States.—Most urban crimes rose in volume in 1949, thus reversing the downward tendencies noted in 1948. But the rise in rural robberies cancelled out the decline recorded in the preceding year, while rural burglaries and larcenies added a further crest to the rising tide of these crimes. Auto thefts in both city and country continued their decline, thus probably reflecting the gradual satisfaction of the extraordinary demand for cars that developed in the midst of wartime shortages. Homicides further extended the decline recorded in 1948.

CITIZENS OF GARY, Ind. at the Gary city hall in March 1949, demanding that city and county officials provide stronger protection against crime. Indignation was arouseu by the murder of a Gary high school teacher a week earlier

Table I.—*Crime in 1948 and 1949 in U.S. Cities and Rural Areas—January to June, 1948 and 1949*

Offense classification	Per Cent Change in 1949 Cities	Rural Areas
Murder and nonnegligent manslaughter	− 6.6	− 7.1
Negligent manslaughter	−15.5	− 4.9
Rape	+ 1.3	0.0
Robbery	+ 0.5	+ 8.0
Aggravated assault	+ 4.1	+ 3.8
Burglary	+ 4.4	+13.1
Larceny	+ 3.3	+ 8.8
Auto theft	− 3.7	− 5.8
Total	+ 2.7	+7.6

Table I presents a large sampling of the crime totals, since it includes crimes committed in 2,081 cities and towns having a total population of 58,000,000 plus rural areas comprising 39,000,000 inhabitants.

Based upon these figures, the total number of offenses of the types listed in Table I, committed in the United States during 1948 was estimated at 1,686,670. Reduced to daily averages, 36 persons were slain feloniously, 255 were victims of rape or assault with a deadly weapon and 150 persons were robbed by the use of personal force or putting in fear. In the average

Table II.—*Urban and Rural Crimes per 100,000 Population, 1948*

Offense classification	Urban	Rural
Murder and nonnegligent manslaughter	5.99	6.15
Negligent manslaughter	3.96	4.26
Rape	12.3	12.23
Robbery	56.2	18.4
Aggravated assault	75.8	36.5
Burglary	392.2	149.8
Larceny	975.2	220.3
Auto theft	165.5	54.0

Table III.—*Range in Crime Rates per 100,000 Population Among Cities of Various Geographic Divisions; January–June 1949*

Offense classification	Highest Rate		Lowest Rate	
Murder and nonnegligent manslaughter	East south central	7.64	New England	0.39
Robbery	Pacific	63.2	New England	9.2
Aggravated assault	South Atlantic	118.5	New England	5.7
Burglary	Pacific	363.9	Middle Atlantic	117.2
Larceny	Pacific	1,017.1	Middle Atlantic	230.5
Auto theft	Pacific	153.7	Middle Atlantic	50.4

day also, there were 1,032 burglaries, 463 automobile thefts and 2,672 miscellaneous larcenies. Comparisons of the relative frequency of the various reportable offenses appear in Table II.

The narrow spread between urban and rural rates for murder, manslaughter and rape, together with the wide disparity in crimes involving property, is a persistent characteristic of crime in the United States.

The proceeds of larcenies increased slightly in 1948, but declined for robbery and for burglary. Average value of stolen property was $202 in robberies, $127 in burglaries, $64 in general larcenies and $869 in auto thefts. In a group of 337 cities having a total population of 37,000,000, the value of stolen property totalled $112,093,594, almost 60% of which was recovered by police. Geographic distribution of crime continued to be highly unequal among the various regions, partly because of the irregular distribution of great cities with their high crime rates, and in part because of regional differences in the character and derivation of the general population. Murder and assault continued to show the highest rates in the southeastern quarter of the United States, with the northeast consistently showing lowest rates for all reportable offenses.

Viewed over the course of 10 years, all but two categories of urban crimes were higher in 1949 than they were during the prewar period 1938–41. (*See* also FEDERAL BUREAU OF INVESTIGATION; JUVENILE DELINQUENCY; LAW; POLICE; SECRET SERVICE, U.S.)

BIBLIOGRAPHY.—Committee on Uniform Crime Records. *Uniform Crime Reporting; a Complete Manual for Police,* International Association of Chiefs of Police (1949); Federal Bureau of Investigation, *Uniform Crime Reports* (semiannual bulletins) for 1948 and first half of 1949); U.S. Bureau of the Census, *Judicial Criminal Statistics* (1945) and *Prisoners in State and Federal Prisons and Reformatories* (1947). (BR. S.)

Great Britain.—In 1948 the total of persons in Great Britain found guilty of offenses other than against defense regulations was 656,950, of whom 129,384 had committed indictable offenses and 527,566 nonindictable offenses, a rise of 11.9% compared with 1947 for indictable and of 5.8% for nonindictable offenses. In addition, 20,163 persons were found guilty of offenses against defense regulations, against 18,863 in 1947. Of these, 89% had committed black market, especially rationing, offenses, compared with 83% in 1947. About half the total of persons found guilty had committed traffic offenses viz., 49.6% against 52.8% in 1947. The number of those guilty of larcenies remained fairly constant at slightly over 12% and that of sex offenders at 0.6%. Excluding certain categories of indictable offenses which are considered separately, the highest increase, *i.e.*, 27%, was found among offenders guilty of violence against the person. The highest increases in nonindictable offenses referred to drunkenness (31,260 as against 23,762) and prostitution (5,647 against 5,041). The figures quoted, however, referred to court appearances only and did not necessarily mean as many different individuals.

Indictable offenses known to the police increased from 498,576 in 1947 to 522,684, as against 283,220 in 1938. Of them, 216,942 were cleared up during the year. Of 147 cases of murder of persons aged one year and over, 130 were cleared up during the year and 109 persons were charged. In 34 cases the murderer or suspect committed suicide; in 43 cases he was found insane.

In Scotland the total of persons convicted or found guilty in 1948 was 89,459, which was 1,335 more than in 1947. The total number of crimes and offenses known to the police was 172,129, or 2.6% more than in the previous year.

Europe.—Reliable and comprehensive statistical information was unobtainable for most eastern European countries and for Germany, where criminal statistics were still not reorganized after World War II. However, figures available for a few western and northern European countries indicated certain trends.

Belgium.—The prison population declined from 21,891 in 1947 to 15,746 in 1948.

The Netherlands.—Crimes known to the police numbered 49,061 in the second half of 1948 and 41,853 in the first half of 1949. Of this total, slightly more than 70% were crimes against property, whereas sexual offenses numbered about 7% and offenses against the person about 13%. The number of prison inmates present in the course of the year increased from 37,330 ordinary and 10,390 political prisoners in 1946 to 43,754 ordinary and 18,479 political prisoners in 1948, the increase in the latter category being due to technical factors related to the administration of criminal justice rather than to an actual rise in political crime.

Scandinavian Countries.—In Sweden, the total of crimes per 100,000 of the population was 341.4 in 1947 against 349.6 in 1946 and 225.5 in 1940. In Norway, the absolute figures were 5,731, or 186 per 100,000, for 1946 (published in 1948), against 4,698, or 154 per 100,000 in 1945; about three-quarters of them were crimes against property. (*See* also POLICE; PRISONS.)

Cripps, Sir (Richard) Stafford (1889–), British chancellor of the exchequer, was born on April 24. He was educated at Winchester and University college, London, and was admitted to the bar in 1913. He was knighted and appointed solicitor general in the Labour government in 1930, and in 1931 was elected Labour member for East Bristol. On Jan. 25, 1939, Sir Stafford was expelled from the Labour party for attempting to create a popular front. In June 1940 Winston Churchill appointed him ambassador to Moscow, where he completed the Anglo-soviet pact. He returned to London in Feb. 1942 to become lord privy seal, and in March left for India to work out terms for independence. On Feb. 28, 1945, he was readmitted to the Labour party. In the Labour government he was president of the board of trade, July 1945 to Sept. 1947, and minister for economic affairs, Sept. 29 to Nov. 13, when he became chancellor of the exchequer though retaining general responsibility for economic affairs.

On April 6, 1949, he presented his budget to the house of commons and because of the continued rapid drain on Britain's dollar reserves he presided over a meeting of the commonwealth finance ministers in London in July. This was preceded by talks with John Snyder, United States, and Douglas Abbott, Canada. In September Sir Stafford visited Washington, D.C., for further financial talks between the three countries. He returned to Great Britain on Sept. 17 and the following evening announced in a broadcast that the government had decided to devalue the pound. He visited Brussels and Paris many times during the year for meetings of the Organization for European Economic Cooperation and of the finance ministers of the Brussels treaty powers.

Crude Oil: *see* PETROLEUM.

Cuba. The republic of Cuba occupies a large island lying between 20° and 25° N. lat. and 74° and 85° W. long., of 44,217 sq.mi., including Isle of Pines and smaller islands. The population (est. Dec. 1949) was 5,295,000, approximately half of European and half wholly or partly of non-European origin. Greater Havana had a population in excess of 800,000 (1949); other important cities (est. 1946) Santiago de Cuba, 152,000; Camagüey, 87,000; Pinar del Río, 64,000; Matanzas, 55,000; Santa Clara, 54,000; Cienfuegos, 53,000. President in 1949: Carlos Prío Socarrás.

History.—The development of Cuban affairs during 1949 was uneventful. Public discussion was chiefly focused upon economic and financial affairs. The outlook for the marketing of sugar was clouded early in the year, but gradually the entire surplus was disposed of, and the year ended with a prospect of marketing the larger crop which favourable weather was foreshadowing for the season 1949–50. The death, just before Christmas, of Sen. José M. Casanova, long the recognized spokesman for the sugar industry, and an outstanding industrialist, was an unfavourable factor, as he for some years had been the chief negotiator on behalf of Cuba in foreign sugar-quota discussions, as well as the successful conciliator of the conflicting interests of field labour, contract farmers and sugar refiners.

During 1949, the volume of imports declined (by volume), but less than 10%; bank clearings were down slightly more than seasonally through the year and both price and wage levels rose. Some industrial expansion, however, took place; and there were indications of renewed mining activities. The search for oil, sporadically promoted in former years, became more intense and important. The construction of an oil refinery was carried forward. Some steps were taken toward the rehabilitation of railroad rolling stock and roadbed. The availability of construction materials from the United States spurred the construction of new housing (chiefly multiple) in the capital and provincial cities.

There was a perceptible increase in apprehension over the stability of various trust funds established to support industrial pensions and the government disability system, during the later months of 1949. Apparently the cumulative effect of some years of injudicious management gave rise to exaggerated fears. On Oct. 11 the president announced a comprehensive financial program, seeking congressional authorization to contract a long-term loan for as much as 200,000,000 pesos (the peso is kept on a parity with the U.S. dollar). This borrowing would involve refunding only in insignificant measure, as initially projected, and would envisage a program of extensive public works of new highways, new housing for urban and agricultural workers, port improvements, aqueducts and irrigation and an intensive cultivation of the tourist business. The debates brought little to light as to the practical aspects of the program; on Nov. 17 the borrowing was authorized. Discussions with financial groups in the United States began before the end of the year.

Substantial progress was made toward a treaty with the United States, for the elimination of the double taxation of income, in technical conversations between respective officials.

The closing months of 1949 were overshadowed by serious difficulties with the Dominican Republic. The government of the latter alleged that Havana was the centre of conspiracies to organize expeditions to overthrow the Dominican regime. The Cuban congress met in special session at the end of December to confer emergency powers upon the executive in the event of attack. The Organization of American States was officially requested to investigate the charges. (C. Me.)

Education.—In the school year 1944–45 there were 498,286 children in attendance at public schools and 72,000 at private schools. There were 21 institutes for advanced education and a normal school and a commercial school in each province. University education was available at the University of Havana.

Finance.—The monetary unit is the peso, officially pegged at par with the U.S. dollar. The executive budget for the fiscal year 1950 (July 1, 1949-June 30, 1950) estimated ordinary government revenue at $97,704,519 and ordinary expenditure at $97,543,800. The extraordinary budget was balanced at $134,517,412. As of June 30, 1949, the national debt was $107,305,000, of which $75,287,700 was foreign and $32,017,300 was domestic. Notes in circulation (including U.S. currency) on June 30, 1949, totalled $644,100,000; the gold reserve was $301,000,000. The composite statement of the 15 principal banks on Dec. 31, 1948, showed assets of $628,820,461; total deposits amounted to $558,470,981.

Trade and Communications.—Exports in the year 1948 amounted to $709,872,461; imports were $527,799,365. The chief exports were sugar (82%), molasses (5%) and tobacco (4%), and the chief imports included rice, butter and flour. The U.S. supplied 79.7% of the total imports and absorbed 51.6% of the exports.

Cuba in 1949 had 3,017 mi. of main-line public railroad and about 660 mi. of sidings and yards. In addition, there was a total of 7,870 mi. of industrial trackage, almost all of which was operated by the sugar companies. Roads in existence on Jan. 1, 1949, included 1,720 mi. of paved highways and 600 mi. of improved highways. As of Dec. 31, 1948, there were in operation 40,878 passenger cars, 2,795 motorcycles, 24,634 trucks, 320 truck-trailers and 4,118 buses. There were two domestic aviation companies—Compania Cubana de Aviacion and Aerovias "Q," both of which had international routes. In addition, international service was supplied by Pan American World Airways, Braniff Airways, Chicago and Southern Air Lines, K.L.M., Linea Aeropostal Venezolana and National Airlines. According to Lloyd's Register of Shipping, the merchant marine had 34 steamers and motorships (more than 100 gross tons) aggregating 34,684 gross tons on June 30, 1948.

On Dec. 31, 1948, there were 93,426 connected telephones. About 100 long- and short-wave broadcasting stations were in operation.

Agriculture.—Cuba is primarily an agricultural nation, and sugar cane is by far the leading crop. Agricultural production in 1948 included raw sugar equivalent to 6,675,000 short tons; blackstrap molasses 340,800,000 gal.; leaf tobacco 28,000 short tons; coffee 36,440 short tons; henequen fibre 14,400 short tons; pineapples 186,000 short tons; and rice (milled) 44,000 short tons.

Cattle and dairying are of increasing importance. The livestock census of July 1, 1946, showed 4,136,000 cattle, 1,338,000 pigs, 154,000 sheep and 141,000 goats. The value of forest products was estimated at $4,500,000 in 1948 and that of fisheries at $2,000,000.

Manufactures.—The manufacture of sugar from sugar cane is the principal industry. There are 160-odd sugar mills scattered throughout the island. Other industrial production in 1948 included cigars 620,000,000; cigarettes 7,691,000,000; cement 1,676,200 barrels; and cotton piece goods 38,868,000 yd. A wide range of other consumers' goods is produced. The cost-of-living index stood at 237 in Aug. 1949 (July-Dec. 1937=100).

Mineral Production.—Refractory chromite is the most important mineral in volume of output; 109,612 long tons were produced in 1948. Other minerals include copper, gold, iron ore and zinc.

Curaçao: *see* Netherlands Antilles.

Curling. Canadian skips outscored their U.S. rivals, 343 to 312, in 29 matches at Montreal, Que., to return the Gordon medal, symbol of international supremacy, to Canada after a one-year stay south of the border. The Schenectady (N.Y.) club won the Gordon Champion Rink medal.

U.S. curlers broke a Canadian monopoly on the International bonspiel's top prize when J. J. Ahern's St. Paul (Minn.) rink, skipped by Bob Dunbar, defeated W. B. White's rink of Oshawa, Ont., 12 to 11, at Detroit, Mich.

Other major winners in 1949 included Hamilton (Ont.) Thistle club, Douglas medal; Granite (Toronto, Ont.) Curling club, Mitchell Gold medal; Ardsley (N.Y.) C. C., Mohawk trophy; St. George (Montreal) C. C., Royal Caledonian trophy; St. Andrews (N.Y.) Golf club, Utica cup; Ottawa C. C., St. Lawrence cup; and the Country club of Brookline, Mass., Stockton cup. (T. V. H.)

Cycling. Fausto Coppi, Italian star, captured the 25-day Tour de France, blue-ribbon classic of cycling, finishing with an elapsed time of 149 hr. 40 min. 49 sec. Coppi also took the pursuit title in world professional racing, other victors being R. H. Harris of Great Britain, sprint; Henri Van Steenbergen, Belgium, road, and E. Frosio of Italy, motor-paced. Amateur title winners were Sid Patterson of Australia, sprint; K. E. Anderson of Denmark, pursuit, and H. J. Faanhof

CYCLING CONTESTANTS on a boulevard of Paris at the start of the 1949 Tour de France; the race was won by an Italian, Fausto Coppi

of the Netherlands, road. Patterson defeated Jacques Bellenger of France and Jack Heid of the United States in defense of his crown at Copenhagen, Denmark.

Jim Lauf of Hydes, Md., was champion of the United States amateurs and made a sweep of the one-, five- and ten-mile point races at New Brunswick, N.J., to capture the eastern states dirt-track honours. Donald Clausen of Kenosha, Wis., retained the men's junior crown and Doris Travani of Detroit, Mich., kept the women's title.

Tom Montiage of Buffalo, N.Y., annexed the Jack Busch Memorial race which drew a field of 60 U.S. and Canadian stars to Buffalo in June. The season saw the comeback of six-day racing in New York, with two events held at the Twenty-Second Engineers armoury. A Swiss team of Walter Diggelman and Hugo Koblet triumphed in the March grind, and Alfred Strom and Reggie Arnold of Australia placed first in a November contest. (T. V. H.)

Cyprus.

A British colony and island in the eastern Mediterranean, Cyprus lies south of Turkey and west of Syria and Lebanon. Area: 3,572 sq.mi.; pop. (1946 census): 450,114, (1948 est.): 460,000. Chief towns: Nicosia (cap., 34,463); Larnaca (14,746); Limassol (22,693); Famagusta (15,912). Languages: Greek 80%, Turkish 20%; English also is spoken by about 10%. Religions: Greek Orthodox 80%, Moslem 20%. Governor in 1949: Sir Andrew Wright.

History.—A report published during 1949 on the progress of the ten-year development plan showed an expenditure of £1,178,036 on various projects in the two years and nine months since its inception; irrigation, at a cost of £313,915, was the largest single item. Formal announcement of the success of the anti-malarial campaign was made on April 4, when it was claimed the island had been cleared of the malarial mosquito at a cost of £220,000.

Municipal elections were held during May and resulted in slight gains for the right-wing parties, which gained control of three main towns and seven rural centres or municipalities. But political agitation continued for *enosis,* or union with Greece, supported equally by both right- and left-wing parties of the Greek-speaking community.

The island's economic position, with a very large adverse trade balance, gave rise to serious concern, and the government took various steps to secure new markets abroad and to aid threatened industries.

The interim report of the committee on Turkish affairs which had been carrying out an investigation into matters concerning the Turkish community in Cyprus was published. It was an all-Turkish committee and, bearing in mind that it dealt with an all-Moslem community, it recommended certain far-reaching reforms including the abolition of polygamy, the discontinuance of the dowry system, restricted divorce subject to a judicial decision and reconstitution of the Sheri courts under a modern name and modern laws.

Finance and Trade.—Currency: the Cyprus pound, at par with sterling and divided into 180 piastres. Budget (1948): revenue £5,915,985; expenditure £5,812,952. Foreign trade (1948): imports £15,422,091; exports £5,678,617. Principal exports are minerals (cuprous concentrates, iron pyrites and asbestos) and agricultural products. (Jo. A. Hn.)

Czechoslovakia.

A people's republic of central Europe, Czechoslovakia has an area of 49,330 sq.mi. Pop.: (June 1937 est.) 15,239,000; (May 22, 1947, census) 12,164,631; (Dec. 31, 1948, est.) 12,408,982. Languages: Czech and Slovak. Religion: mainly Roman Catholic. Chief towns (pop. 1947 census): Prague (cap., 921,416); Brno (272,760); Moravska Ostrava (181,181); Bratislava (172,664); Plzeň (118,152). President of the republic in 1949: Klement Gottwald; prime minister: Antonín Zápotocký.

History.—The main political event in 1949 was the conflict between government and Roman Catholic Church. The hostility of the hierarchy to the rump People's party, the purged remnant of the formerly strong party of Czech Catholic Social Democrats, and to the person of its leader, the suspended Catholic priest Josef Plojhar, a member of the Zápotocký cabinet, had caused serious friction in 1948. Discussion between government and hierarchy for the settlement of outstanding problems began in Feb. 1949 but broke down without agreement. The failure was attributed by the government to Vatican intervention, by the hierarchy to unacceptable interference by the government with church affairs. On June 9 the government set up a body called the Catholic Action committee. It had nothing to do with the Catholic Action organization, but was a Communist-controlled "action committee" similar to those which had been set up at the time of the Feb. 1948 "revolution." It included a number of lay Catholics and some priests, and issued a newspaper called *Catholic News.* Its purpose was to persuade Czech Catholics that the government wished to respect and protect their religion but that the reactionary bishops and the Vatican "in the service of western imperialism" were out to prevent agreement. Archbishop Josef Beran (*q.v.*) of Prague denounced the committee, and threatened all who supported it with "ecclesiastical sanctions." The archbishop's sermon in Prague cathedral was interrupted by Communists on June 19; and he became a prisoner in his own palace. On July 15 a draft law was published, which provided for the payment of priests' salaries by the state, on comparatively generous terms, but gave the government power to interfere in the church appointments and to take action against priests considered hostile to the "popular democratic regime." The law was passed in October and the hierarchy permitted priests to accept salaries under it, since they would otherwise be unable to keep alive. The conflict between church and government was, however, in no way solved. The government controlled the schools and avowedly intended to use them to propagate among the young the "scientific doctrine of Marxism-Leninism." At the same time the government clearly intended to separate at least a part of the Czech Catholic Church from the Vatican. A "national" Czech church could receive sole recognition and, isolated from the outer world, would be at the mercy of the state. Hitherto, with very few exceptions, the Czech and Slovak priests remained loyal to their bishops, and the people to their priests.

The year was marked by a series of conspiracy trials. On Jan. 28 Gen. Heliodor Pika, former head of the Czechoslovak military mission in Moscow and later assistant chief of staff, was condemned to death for espionage. One of the accusations against him was that in 1940 he had passed to the British information about the Red army. The sentence of death was carried out on June 21. Another war hero, Gen. Karel Kutlvašr, organizer of the 1945 rising of Prague against the Germans, was sentenced to life imprisonment on May 16 for espionage on behalf of foreign powers. On Aug. 30 it was announced that another insurrectionary plot had been unmasked; six persons were executed and ten sentenced to life imprisonment. In March, Capt. Philip Wildash, British military permit officer for the western zones of Germany, was arrested by Czech police on a charge of espionage. In October a member of the U.S. embassy, Samuel Meryn, was also arrested on espionage charges.

The 9th congress of the Czechoslovak Communist party was held in May. In the first months of 1949 a "verification" of members was carried out. But at the time of the congress, though more than 500,000 had been reduced to "candidate" status, only 100,000 had been expelled. Clearly this purge was inadequate and more drastic action was bound to follow. The Rajk trial in September (*see* Hungary) "revealed" that nationalistic deviationism and Titoism were rife in the Czech party. During October large numbers of arrests were carried out, including many party members but no prominent leaders.

Perhaps the most significant change in Czechoslovakia's foreign relations during 1949 was the adoption in official circles of a new attitude toward Germany. As soviet policy increasingly organized eastern Germany into a centralized Communist state and gave more support to German nationalism—directed of course against the western powers—the old negative attitude of the soviet satellites to Germany became impossible. Already in February Zdeněk Fierlinger, who had attended a congress of the S.E.D. (Communist) party in the soviet zone, urged a friendly attitude to the new "true democracy" which was arising in soviet Germany. At the party congress in May, Václav Kopecký, minister of information, stated that the test of the "true proletarian internationalism" of Czech Communists would be their relations with the "democratic and progressive elements and popular sections" of Germany whose spokesman was S.E.D.

Agreement was reached on the position of the Hungarian minority in Czechoslovakia and a Czechoslovak-Hungarian treaty of friendship and mutual assistance was signed in Budapest on April 16, 1949. (H. S-W.)

Education.—(1947) Elementary schools 11,836, pupils 998,177; higher grade schools 2,122, pupils 398,721; secondary schools 335, pupils 119,093; technical schools 700, pupils 99,781; universities 7, students 52,456; other institutions of higher education 9, students 5,549.

Finance and Banking.—(In koruny) Budget estimates (1948): revenue 56,896,000,000, expenditure 67,056,000,000; (1949) revenue 89,320,000,000, expenditure 89,278,000,000. National debt (Dec. 1948) 141,891,000,000. Currency circulation (Sept. 1949) 69,200,000,000. Monetary unit: koruna with an exchange rate since Nov. 1945: 50.15 koruny = $1 U.S.

Foreign Trade.—(In koruny) imports (1948) 37,716,000,000; exports (1948) 37,648,000,000.

Transport and Communications.—Roads (1946) 43,969 mi. Licensed motor vehicles (Dec. 1948): cars 155,000, commercial vehicles 54,000. Railways (1947) 8,161 mi.; passenger-mi. (1948) 11,282,000,000; freight net ton-mi. (1948) 7,874,000,000. Telephones (1947): subscribers 350,108.

GIANT BUST of Klement Gottwald, Communist president of Czechoslovakia, being moved through the streets of Prague during a political demonstration in 1949

CZECH FARMER learning to drive a tractor at a government tractor station school in 1949, as part of a government program for mechanizing farming in Czechoslovakia

Agriculture.—Main crops (1948, in metric tons): wheat 1,398,000; rye 1,124,000; barley 925,000; oats 908,000; maize 252,000; potatoes 6,578,000; sugar (raw value) 629,000. Livestock: cattle (Jan. 1948) 3,275,000; pigs (Jan. 1948) 2,566,000; horses (Jan. 1949) 640,000; sheep (Jan. 1948) 386,000; chickens (Jan. 1948) 10,976,000. Food production (1948, in metric tons): milk 2,258,000; butter 22,800; meat 264,000 (beef 118,800).

Industry.—Persons employed in industry, excluding building (June 1949): 1,395,000. Fuel and power (1948): coal (in metric tons) 17,746,000; lignite (in metric tons) 23,591,000; manufactured gas 72,818,000,000 cu.ft; electricity 7,514,000,000 kw.hr. Raw materials (in metric tons): iron ore, metal content (1948) 1,429,000; pig iron (Jan.–Nov. 1948) 1,515,000; steel ingots and castings (Jan.–Nov. 1948) 2,425,000. Manufactured goods (1948): plate glass (in metric tons) 131,000; rayon (in metric tons) 18,000; footwear 63,000,000 pairs; railway trucks, coaches and motor trains 11,000; commercial vehicles 13,000; cement (in metric tons) 1,657,000.

Dairy Products.

Production of milk on farms in the U.S. in 1949 was estimated at nearly 118,000,000,000 lb., compared with 115,500,000,000 lb. in 1948 and a record production of 121,504,000,000 lb. in 1945. This provided for a total milk consumption (in all forms) per person of 742 lb., a near record low, compared with 801 lb. per person as an average for 1935–39. Of the total, 375 lb. were used as fluid milk and cream in 1949, or 10% more than the 340 lb. of 1935–39.

The output of milk per cow was at a new record level of slightly more than 5,150 lb. in 1949, compared with the previous record of 5,036 lb. in 1948, and a prewar average of only 4,403 lb. The number of milk cows on farms at the beginning of the year was 24,450,000, compared with 25,039,000 in 1948 and 26,118,000 average for the previous decade. The value per head increased to $193.00 as of Jan. 1, 1949, from $164 a year previous.

A general decline in the price to the farmer for milk and milk products was in evidence. Late in the year reductions in price at retail began to appear. Cash farm receipts for the sale of milk and dairy products in 1949 was estimated at about $3,750,000,000, as compared with a record of about $4,500,000,000 in 1948. Prices per hundredweight fluctuated between a high of $4.52 in January to $3.59 in June, and averaged nearly 20% lower than in 1948. In November, average prices dropped below parity for the first time since 1941, although the situation varied sharply from one part of the country to another. Retail prices averaged about one cent per quart lower than in the previous year.

The Agricultural act of 1949 made price support mandatory on milk and butterfat at from 75% to 90% of revised parity. This, however, was below the $4.23 per hundredweight received by farmers in Dec. 1949 and the 63.3 cents received for butterfat. The department of agriculture announced that farm prices of butterfat and manufacturing milk would be supported through March 1951 at a national average of approximately $3.07 per hundredweight for milk and 60 cents per pound for butterfat. Cheese would be purchased at 31 cents per pound and evaporated milk at $3.95 per case. Dried milk solids also would be purchased. The dairy product feed price ratios continued favourable.

Stocks of dairy products rose to levels near record for peacetime. Consumption in the U.S. of butter increased about 3% in 1949, as compared with 1948, but the 10.3 lb. used per capita was only 62% as much as prewar. Meanwhile, production of butter in the U.S. in 1949 was estimated at 1,675,000,000 lb., compared with 1,513,000,000 lb. in 1948 and 2,170,000,000 lb. annually before World War II. With lesser consumption of whole milk, supplies of milk for manufactured dairy products were relatively large and the excess was absorbed in making butter, cheese and nonfat powder. More than half the gain in butter output was accumulated in storage in carrying out the price support provisions of the Agricultural act of 1948. Total stocks of butter on Nov. 1 were, in milk equivalent, 2,939,800,000 lb., as compared with 1,693,300,000 lb. a year previous and 2,567,800,000 lb. average prewar.

The price of 92 score butter at Chicago, Ill., fluctuated between a high 63.2 cents per pound in January and a low of 58.8 cents per pound in June, approximately 20 cents per pound below the levels of the previous year. Retail prices averaged about 10 cents per pound higher than wholesale prices.

The U.S. production of cheese in 1949 was estimated at 1,190,000,000 lb., as compared with 1,097,000,000 lb. in 1948 and an average of 669,000,000 lb. in 1935–39. Production per capita was 7.9 lb. in 1949, 7.4 lb. in 1948 and an average of 5.2 lb. in 1935–39, but consumption was estimated only at 7.1 lb. per capita in 1949. Thus stocks accumulated, and late in the year were (in milk equivalent) 1,876,900,000 lb. compared with 1,692,100,000 lb. a year earlier and an average of 1,080,400,000 lb. prewar. Unlike the butter stocks, cheese stocks were largely in commercial hands. Nevertheless, more than 37,000,000 lb. of cheese were purchased by the government under price support operations in 1949.

American cheddar, as in previous years, was the major type produced. Wisconsin continued to hold first place among the states with both standard and specialty types, producing about one-half of the total for the U.S. Prices were comparatively stable near the government support price—ranging from 37.1 cents per pound wholesale at Chicago in January to a low of 33 cents in July, compared with an average of 45.5 cents per pound in 1948.

The 1949 U.S. production of ice cream was estimated preliminarily to have used 6,575,000,000 lb. of milk, or 43.8 lb. per person, as compared with 6,790,000,000 lb. in 1948 and a record in 1946 of 8,196,000,000 lb., but nevertheless well above the restricted production of the war period. Thus consumption in 1949 was about 25% below the record of 1946 but still about 75% above the prewar level.

Production of nonfat dry milk solids in 1949 was a record of 885,000,000 lb., compared with 659,000,000 lb. in 1948 and 243,000,000 lb. prewar. Domestic requirements were only a little more than one-half of production, so 40% to 50% of the output in 1949 was purchased by the government as a price support measure for manufacturing milk.

Production of dry whole milk had been declining—in 1949 it was 130,000,000 lb., compared with a wartime (1945) peak of 217,000,000 lb. and a prewar level of production of only 19,000,000 lb. Domestic consumption accounted for less than half the total.

Production of evaporated milk in the U.S. in 1949 was substantially below recent record levels and mounted to 3,295,000,000 lb., compared with 3,831,000,000 lb. the previous year. Stocks late in the year were 7% lower than in 1948, after starting 1949 at record levels.

An important factor, other than the critical dollar shortage, in the falling off of U.S. exports of dairy products in 1949 was the rather sharp increase in milk production in foreign countries. In western Europe, milk production in the second quarter of 1949 was reported to be 28% larger than a year earlier.

FILMS OF 1949.—*We Make Butter* (Young America Films Inc.).

(J. K. R.)

Dams. The continuing effort of governments throughout the world to raise living standards by increased irrigation and hydroelectric power facilities resulted in increased activity during 1949 in the construction of dams.

In the United States, the U.S. bureau of reclamation began pouring concrete on Sept. 7 at Hungry Horse dam in Montana, world's fourth largest concrete dam. Diversion of the river was begun in the spring, and by the middle of the summer the 1,000,000 cu.yd. of earth and rock excavation required to prepare the foundation was more than 75% completed. The excavation disclosed the necessity for a deeper foundation than had been originally contemplated. The resulting increase in height of the dam above its foundation would make it the third highest dam in the world.

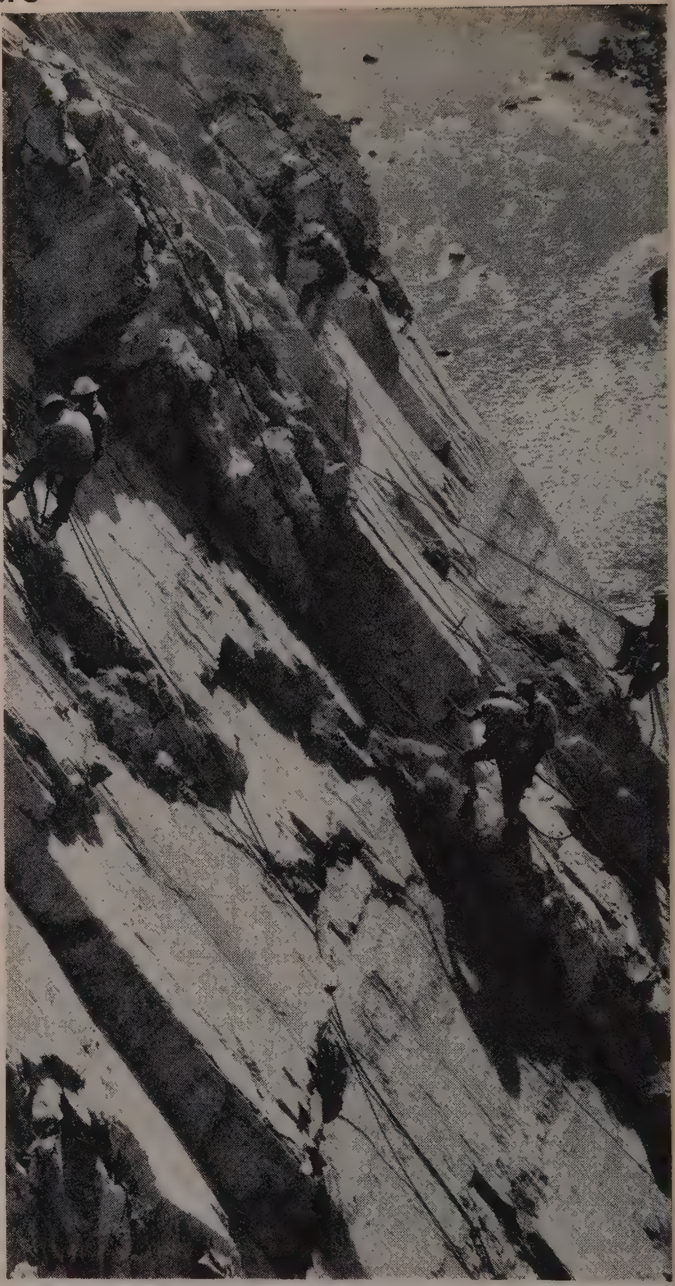
Davis dam, on the Colorado river below Hoover dam, was completed in April, ten months after the river was diverted, and three months ahead of schedule. A new record for earth placement on work of the U.S. bureau of reclamation was established with the placing of 730,000 cu.yd. of earth in one 30-day period.

At Garrison dam, principal unit in the U.S. army engineers' joint program with the U.S. bureau of reclamation for the development of the Missouri river basin, 1,000,000 cu.yd. of earthfill were placed in one week in July, with a maximum of 176,000 cu.yd. in one 24-hr. period.

The construction of three 200-ft.-high earthfill dams for the water supply of New York city was not sufficiently advanced to avert a serious water shortage in the fall of 1949, which was caused by drought and increased consumption. The construction program had been interrupted by World War II, and the first of the three dams, Merriman dam on Rondout creek, was not expected to store water before the spring of 1950.

In Mexico, the President Alemán dam was underway in 1949. One of five dams in the Papaloapan Valley development program, it would be the largest in Central or South America and would store 5,000,000 ac.ft. of water.

The Santa river dam in Peru was completed in 1949. Its unique downstream face is vertical to avoid erosion from heavy debris expected to pass over the 78-ft.-high masonry spillway. Throughout South America dams for hydroelectric projects were being undertaken with funds provided by the International Bank for Reconstruction and Development and the U.S. Export-Import bank.



JACKHAMMERMEN, working in pairs for safety, shown drilling holes in the sheer canyon wall above the Hungry Horse damsite in Montana, in 1949. Dynamite was then placed in the holes and exploded, blasting away surface rock and exposing the solid bedrock which was to support the huge concrete dam

In India, preliminary construction, preparatory to the construction of the Hirakud dam, India's largest, was nearly complete by the end of 1949. Located on the Mahanadi river in Orissa province, it was to be 132 ft. high, 15,700 ft. long and would have a gross storage of 5,300,000 ac.ft. for power and irrigation. Three other projects of the central board of irrigation, the Tunga Bhadra in Madras, the Bhakra in the East Punjab, and the Damodar valley in Bihar and West Bengal, were also under construction in 1949.

The largest dam in East Africa was under construction in 1949 on the Ruiru river to provide a water supply for Nairobi, capital of Kenya. A contract was awarded in the fall of 1949 to construct a concrete and stone masonry dam, 85 ft. high and 2,725 ft. long, at Owen falls on the White Nile river, below Lake Victoria, in Uganda. The dam would raise the level of Lake Victoria one metre, making it the largest reservoir in the world.

In Scotland, the Loch Sloy dam, part of the second largest

Chief Dams Completed or Under Construction During 1949

Name of Dam	River	Place	Type	Maximum Height, Ft.	Crest Length, Ft.	Volume (Cu.yd.)	Purpose*	Built by	Progress†

ance.

United States.—The Sadlers' Wells Ballet of London made its American debut, enjoying a success hich stimulated interest in the ballet throughout the country. irected by Ninette de Valois, Frederick Ashton, and Constant ambert, the company opened at the Metropolitan Opera ouse, New York, N.Y., in Oct. 1949 in a full-length version f Peter Tschaikovsky's *Sleeping Beauty*, with Margot Fonteyn the title role. Later productions included a complete *Swan ake* and ballets choreographed by De Valois, Ashton and Rob- rt Helpmann. Leading dancers were Fonteyn, Ashton, Help- ann, Moira Shearer, Beryl Grey, Pamela May, Violetta Elvin, arold Turner, Michael Somes, John Hart and Alexis Rassine.

The New York City Ballet, directed by Lincoln Kirstein, pro- uced Jerome Robbins' ballet *Guests*, with music by Marc Blitz- ein, and revived Antony Tudor's *Time Table*, with a score by aron Copland and décor by James S. Morcom. George Balan- hine choreographed *Bourrée fantasque*, to music by Emmanuel habrier, and a brilliant new version of Igor Stravinsky's *Fire- ird*, with Maria Tallchief in the title role, and décor by Marc hagall. Janet Reed, Melissa Hayden, and Frank Hobi joined e company; other leading dancers were Tanaquil le Clerq, eatrice Tompkins, Francisco Moncion, Todd Bolender, Her- ert Bliss and Nicholas Magallanes.

Ballet Theatre reorganized after a period of inactivity which ad lasted since the spring of 1948. Directed by Lucia Chase nd Oliver Smith, with the collaboration of Antony Tudor, it pened in New York city on April 17. Principal dancers were ora Kaye, who danced her first *Giselle*, Igor Youskevitch, ugh Laing, Janet Reed, Paul Godkin, Diana Adams and Bambi inn, with Nana Gollner, Maria Tallchief and Jerome Robbins s guest artists. *La Fille Mal Gardée* was revived. During the ummer of 1949 Ballet Theatre appeared at Jacob's Pillow, Lee, ass.

The Ballet Russe de Monte Carlo toured extensively and had pring and autumn seasons in New York city. Ruth Page's *Love ong* to Franz Schubert's music was presented March 1, and ere was a revival of Michel Fokine's *Carnaval*. New autumn roductions included a one-act version of *Paquita* by Alexandra anilova, with music by Edouard Deldevez; *Birthday*, choreo- raphed by Tatiana Chamie to music by Gioacchino Rossini, nd revivals of *The Mute Wife*, *Igrouchki*, and *Graduation Ball*. March, Alicia Markova and Anton Dolin appeared as guest rtists while Alexandra Danilova and Frederic Franklin danced London. Other soloists included Nathalie Krassovska, Ruthanna Boris, Mary Ellen Moylan, Leon Danielian and Nina Novak.

The Image in the Heart, with a score by John Coleman, had its *première* at a special New York performance of ballets choreographed by Todd Bolender. The Ballet Repertory company, headed by Arthur Mahoney and Thalia Mara, made two appearances. The Page-Stone Ballet, which made a long tour, presented the *première* of *Beauty and the Beast* with choreography by Ruth Page and music by Tschaikovsky.

The New York City Dance Theatre, organized under the auspices of the City Center of Music and Drama, held its first season of modern dance works in December. The dancers included Charles Weidman, José Limon, Valerie Bettis, Pauline Koner, Nina Fonaroff, Letitia Ide, Betty Jones, Nadine Gae, Iris Mabry, Beatrice Seckler, Katherine Litz, Eve Gentry, Lucas Hoving, Merce Cunningham, Jane Dudley, Sophie Maslow, William Bales, and the New Dance Group, in works choreo-

MOIRA SHEARER (left) in the title role of *Cinderella*, with Frederick Ashton as one of the Ugly Sisters, during a 1949 performance of the three-act ballet at Covent Garden, London. Choreography for the new Sadler's Wells production was by Ashton, with ballet music by Sergei Prokofiev graphed by Doris Humphrey, Hanya Holm, Weidman, Limon, Maslow and others. Weidman's *Rose of Sharon,* with music by Lukas Foss, had its *première* Dec. 20.

In October Roland Petit's Ballets de Paris, headed by Renée Jeanmaire, Colette Marchand and Gordon Hamilton, presented Petit's *Carmen, L'Oeuf à la Coque, Le Rendez-vous* and *Pas d'Action,* and William Dollar's *Le Combat.*

José Limon and his company presented the *première* of *La Malinche* with music by Norman Lloyd, and *Corybantic* choreographed by Humphrey to music by Béla Bartók. Uday Shankar returned to the United States for concert appearances, after an absence of 11 years.

Two experimental groups, the Choreographers' Workshop, directed by Trudy Goth, and Theatre Dance, Inc., presented new works by young choreographers, including Valerie Bettis, Myra Kinch, Jean Erdman, Gertrude Lippincott, Jean Houloose, Virginia Johnson, Betty Lind, Frank Westbrook, Tony Charmoli, Alan Banks and Nelle Fisher.

In television, dance activity expanded. A ballet series showed new works by George Balanchine, Todd Bolender, Paul Godkin and Michael Kidd. Ballet Theatre was televised in *Pas de Quatre* and *La Fille Mal Gardée;* Gollner and Youskevitch danced a condensed *Swan Lake.*

Summer dance festivals were held at Jacob's Pillow and at Connecticut College, New London. Jacob's Pillow saw the *premières* of Ted Shawn's *The Dreams of Jacob,* Ruth Page's *Harlequinade* and Bentley Stone's *Reunion.* Connecticut College gave a number of new works, including José Limon's *The Moor's Pavane,* Doris Humphrey's *Invention,* Bettis' *Domino Furioso* and Maslow's *Festival.*

Civic ballet groups were active during the year. The Chicago Ballet Guild gave *Indian Lament.* A complete production of Tschaikovsky's *Nutcracker,* choreographed by Willam Christensen, was presented by the San Francisco Ballet, which also gave his *Parranda,* with a score by Morton Gould, and Lew Christensen's *Vivaldi Concerto.* The Pacific Dance Theatre presented new ballets by Serge Temoff, Walton Biggerstaff, Ann Halprin and Welland Lathrop. Lasar Galpern organized the Concert Ballet for appearances in southern California. The Dance Theatre company, headed by Lester Horton, gave performances in Los Angeles. The New Orleans Opera association presented Stravinsky's *Petrouchka* with choreography by Leila Haller. Angna Enters, Martha Graham, Iva Kitchell, Rosario and Antonio, La Meri, Mia Slavenska, Marina Svetlova and Charles Weidman made extensive tours.

Pearl Primus was awarded a Rosenwald fellowship for dance research in Africa; Doris Humphrey received a Guggenheim fellowship to write a book on choreography. The Donaldson awards for Broadway performances went to Viola Essen, for her dancing in *Along Fifth Avenue,* and Gower Champion, for his choreography for the revue *Lend an Ear.* The Dance Film society was organized in New York city.

England.—The Sadlers' Wells Ballet appeared at Covent Garden in *Cinderella,* with choreography by Ashton and music by Sergei Prokofiev. There were revivals of Ashton's *Wedding Bouquet* and *Apparitions.* Margot Fonteyn reappeared on Feb. 25, after a long absence due to a leg injury. The company also appeared at the Musical May festival in Florence, Italy. The Sadlers' Wells Theatre Ballet presented *Sea Change,* with choreography by John Cranko and music by Jan Sibelius, and revived *Étude* and *Casse Noisette.*

Ballet Rambert returned to England after a long tour of Australia and New Zealand and appeared in London and the provinces. Two new works were presented: *Kaleidoscope* and *Antonia,* with choreography by Walter Gore. Nathalie Krassovska and Vladimir Skouratoff made guest appearances.

The Metropolitan Ballet toured England, Belgium, the Netherlands and Switzerland. New works were *Ballamento, Topaz, Trio détruit,* and *Pleasure Drome,* choreographed by Rosella Hightower to music by John Lanchbery.

The Grand Ballet de Monte Carlo danced at Covent Garden during the summer, presenting one world *première, The Enchanted Mill.*

Markova and Dolin made a long tour of South Africa and the English provinces, and danced in London. International Ballet toured England, presenting one new ballet, *Visions,* choreographed by Julian Algo of Stockholm, Swed. Mona Inglesby, prima ballerina, returned to the company in September after an absence due to illness.

The Ballets des Champs Élysées, directed by Boris Kochno, appeared at the Edinburgh festival, and in London, presenting several works new to Great Britain: *L'Amour et son Amour,* the first choreographic work of Jean Babilée, with music by César Franck; *La Rencontre,* choreography by Lichine, music by Henri Sauguet, and a revival of *La Nuit.*

France.—The Paris Opera suspended its première danseuse étoile, Yvette Chauviré, for one year, and replaced her with Nina Vyroubova, 27-year-old Russian ballerina educated in France. On Feb. 2, Serge Lifar reappeared for the first time since the liberation of France. The opera produced Lifar's *Endymion* and *Le Chevalier errant,* and revived the dances from *Prince Igor.* Josette Clavier made an impressive debut in *Entre deux Rondes,* choreographed by Lifar to Marcel-Samuel Rousseau's music.

The Paris Opéra Comique produced *Etude* and *Fantaisie impromptu,* both with choreography by Jean-Jacques Etcheverry and music by Frederic Chopin, and revived De Falla's *Le Tricorne.*

The Marquis de Cuevas' Grand Ballet de Monte Carlo toured Europe and North Africa. Its new productions were *Infanta, In Memoriam,* and *Del Amor y de la Muerte,* while *Mad Tristan, The Good-Humored Ladies,* and *Le Tricorne* were revived. Principal dancers were Tamara Toumanova, André Eglevsky, Rosella Hightower, George Skibine, Tatiana Riabouchinska and Lichine.

Canada.—The first Canadian ballet festival, in which ten groups from all parts of the dominion participated, was held at Toronto in March. The Volkoff Ballet of Toronto and the Ruth Sorel Montreal Ballet made one joint appearance in New York city, under the auspices of the Choreographers' Workshop. The Sadler's Wells Ballet appeared in Toronto, Ottawa and Montreal.

Austria.—In Salzburg, Hanna Kammer choreographed De Falla's *Three-Cornered Hat* and Gnecchi's *Atalanta.* In Vienna, the Staatsoper presented three ballets with new choreography by Erika Hanka: *The Legend of Joseph, Don Juan* and *Hoellische G'schicht.* The Third International Music festival featured group works by Rosalia Chladek and Elinor Tordis. Solo performances were given by Harald Kreutzberg, Lillian Moore, and Pola Nirenska.

Czechoslovakia.—In Prague, Tschaikovsky's *Sleeping Beauty* was given at the State Opera, with choreography by Sasha Machov. Galina Ulanova and Tamara Chanum made guest appearances, and the Polish Army ballet appeared in *Janko the Musician* and *Village Wedding.* In Brno, Vania Psota staged *Work Symphony* to music by Tschaikovsky.

Germany.—The Berlin Staedtische Opera presented Werner Egk's ballet *Abraxas* with choreography by Janine Charrat. The Essen Folkwang Tanztheater was reorganized under the direction of Kurt Jooss, who returned to Germany for the first time since 1933, with Hans Zuellig as his assistant. In Munich, Rudolph Koelling choreographed *Orpheus, Sacre du Printemps, Scheherazade, La Rosière* and *Don Juan.* Mary Wigman taught

EXHIBITION SQUARE DANCING, in 1949, by students of Normandy high school, Normandy, Mo.

in Dresden.

Italy.—The Sadler's Wells Ballet and Harald Kreutzberg danced at the May festival in Florence, where Boris Romanoff staged Monteverdi's *Orfeo* and Cimarosa's *Il Maestro di Capella.* At La Scala, Milan, Leonide Massine staged *The Four Seasons* and *Gaîté parisienne.* At the Rome opera, Aurel Milloss revived his *La Dame aux Camélias.* Romanoff staged Gounod's *Walpurgis Night* at the Baths of Caraculla, Rome, and Darius Milhaud's *La Sagesse,* with a libretto by Paul Claudel and costumes by Benois, in Perugia. An international folk dance festival was held in Venice. In Syracuse, Sicily, Rosalia Chladek staged the dances for the *Medea* of Euripides and *The Cyclops* of Aeschylus.

Netherlands.—The Ballet of the Low Countries presented *Street of Imagination, Les Petits Riens* and *The Bewitched Costumes.*

U.S.S.R.—A new ballet, *Mirandolina,* with music by Vasilenko, had its *première* at the Bolshoi theatre, Moscow, where the company was headed by Ulanova, Semenova, Olga Lepeshinskaya, and Vachtang Chabukiani. *Ruby Stars,* with music by Andrei Balanchivadze (brother of George Balanchine) and *Stoneflower,* with music by Prokofiev, were in preparation. A new ballerina, Raisa Struchkova, came into prominence.

Scandinavia.—In Copenhagen, Harald Lander celebrated his 25th anniversary as a dancer. *Coppélia* was revived, with Margot Lander. Margot Fonteyn and Robert Helpmann made one guest appearance. *Aurora's Wedding* was staged by Hans Brenaa, under the supervision of Lubov Egorova. Antony Tudor was engaged as choreographer of the Royal Opera, Stockholm.

The New Norwegian Ballet, directed by Louise Browne, was active in Oslo and made a guest appearance at the Doncaster Arts festival, in England.

South America.—The Ballet Alicia Alonso made a long tour through South America, appearing in Cuba, Mexico, El Salvador, Guatemala, Argentina, Brazil, Uruguay, Ecuador and Peru. *Sombras,* choreographed by Alberto Alonso to music by Sibelius, had its *première* in Lima, Peru. Nicholas Magallanes replaced Igor Youskevitch as premier danseur, and was later replaced by Luis Trapaga.

Margarete Wallman remained as ballet mistress of the Colon theatre, Buenos Aires, but new ballets were staged by several guest choreographers. Jan Cieplinski choreographed *The Woodcut Prince* and *El Pillan.* Aurel Milloss staged *Bolero, Neapolitan Burlesque Scenes* and *Orpheus,* and David Lichine arranged *Sueño de Nina.*

FILMS OF 1949.—*Steps of the Ballet* (British Information Services and D. D. Livingston). (LN. M.)

Ballroom Dancing.—During 1949 there were two marked, completely different influences in ballroom dancing. One widespread interest was in square dancing and the other in Cuban rumba. Designers promoted square dance fashions; the dance was seen on television, in newsreels and in magazines. Bookshops reported a demand for instructions.

In the United States, the popularity of the rumba became second only to that of the fox trot. The Mambo, with its new syncopated rhythm, was the most popular rumba with expert dancers.

There was a decreased interest in jitterbug, and the tango was danced only in cosmopolitan centres. The samba grew in popularity, as evidenced by the great number of new compositions. The waltz gained popularity from the appearance of new song hits, such as those from the outstanding stage show, *South Pacific.* (A. MU.)

Deafness.

In 1949 otologists further improved the diagnostic procedure to select hard-of-hearing cases most likely to benefit from fenestration operation. The operation, no matter how well performed, unfortunately did not re-establish normal hearing.

Roughly estimated, there were 12,000 fenestration operations in the United States as of 1949, of which about 70% gave practical, serviceable natural hearing.

Most hard-of-hearing persons continued to be rehabilitated by means of a hearing aid. A hearing loss of 30–35 decibels (sound level units) in both ears within the speech frequency range was declared as a handicapping loss. The hard-of-hearing person was advised to have his ears examined by a physician before purchasing a hearing aid. Essential to good performance was a comfortable ear mould, made before attempting to select a hearing aid. New clinics appraised the hearing of a deafened person and provided an opportunity to try out a large number of acceptable hearing aids. This service assisted many difficult cases to the successful wearing of a hearing aid. There were also hearing aid bureaus in many local branches of the American Hearing society in some 117 cities. These bureaus helped deafened individuals to select hearing aids by permitting the individual to try out the instruments on display at the bureau.

Most of the hearing aids sold in 1949 were of the "single unit" type in which all of the components were packed in a single case with the exception of the receiver and its connecting wire. Hearing aids weighed approximately five to six ounces complete and cost from $75 to $200. In general, the difference in price was attributed largely to the amount of free service rendered to the hard-of-hearing after purchase of an aid. The upkeep for maintaining batteries was approximately ten cents a day on an eight-hour operational basis.

In 1949, there was no reliable census of adults totally deaf in the United States, but a rough estimate indicated that there were about 100,000. Approximately 18,000 deaf children were being educated in 64 public residential schools, 118 public day schools and 20 denominational and private schools in the United States. Mothers of deaf children were advised to seek information about early training so that a child's native ability would not necessarily be retarded. Lip reading was preferred to the use of sign language.

In 1949 there were about 10,000,000 to 15,000,000 people in the United States who were hard-of-hearing to some extent in one or both ears, but only 4,000,000 were believed to have serious handicaps. At least 3,000,000 required hearing aids or used lip reading or both. Probably no more than 900,000 used hearing aids. Estimates indicated at least 1,000,000 hard-of-hearing children in public schools, not sufficiently handicapped to require hearing aids or the fenestration operation.

A list of accepted hearing aids and requirements for acceptance were obtainable from the Council on Physical Medicine and Rehabilitation, American Medical association, 535 N. Dearborn St., Chicago, Ill.

Deaths (of prominent persons in 1949): *see* Obituaries.

Death Statistics.

Provisional records for the first nine months indicated that the death rate in the United States during 1949 was about 3% below that for 1948. For the latter year, the estimated number of deaths was 1,449,000, and the death rate 9.9 per 1,000 population. Canada experienced a small reduction in mortality from 1948 to 1949; according to provisional data there were 119,352 recorded deaths in 1948, with a death rate of 9.3 per 1,000. Reports from England and Wales for the first nine months of 1949 pointed to a definite rise in mortality since 1948, when the country as a whole experienced 469,897 deaths and a rate of 10.8 per 1,000. Australia, in 1948, had a death rate of 9.9 per 1,000, and New Zealand (excluding the Maoris) a rate of 9.1 per 1,000.

According to the nine months' mortality experience of the millions of industrial policyholders of the Metropolitan Life Insurance company who reside in the United States and Canada, the year 1949 indicated lower death rates than 1948 from pneumonia, tuberculosis, syphilis, the principal cardiovascular-renal diseases, appendicitis, the puerperal state, homicide and accidents. The severe outbreak of acute poliomyelitis brought the death rate from this cause in 1949 to more than double that of 1948; the only other causes of importance to show a rise were cancer and diabetes mellitus. The number of deaths and the death rates for the ten leading causes of death in the entire United States in 1948, the latest year available, are shown in Table I, with comparable rates for 1940.

Table I.—*Deaths and Death Rates per 100,000 Population for the Ten Leading Causes of Death; United States*

Cause of Death	1948 Number*	1948 Rate*	1940 Rate	Per cent change since 1940
All Causes	1,449,000	991.7	1074.1	− 7.7
Heart disease	473,434	324.0	291.9	+11.0
Cancer	195,432	133.8	120.0	+11.5
Cerebral haemorrhage	130,736	89.5	90.8	− 1.4
Nephritis	76,555	52.4	81.4	−35.6
Accidents, excluding motor vehicle accidents	66,648	45.6	47.3	− 3.6
Pneumonia and influenza	55,849	38.2	70.1	−45.5
Tuberculosis	44,129	30.2	45.8	−34.1
Premature birth	39,684	27.2	24.5	+11.0
Diabetes mellitus	39,135	26.8	26.5	+ 1.1
Motor vehicle accidents	33,360	22.8	26.1	−12.6

*Estimated

Some of the rise in the death rate from heart disease, cancer and diabetes mellitus since 1940 was due to the increase in the proportion of the aged in the population; the rise in the death rate from premature birth may be associated with the increased birth rate.

Maternal mortality in the United States also reached new low levels; in 1948 there were only 4,071 deaths from this cause, as compared with 4,978 in 1947. The maternal mortality rate in 1948 was 1.1 per 1,000 live births, or less than one-half of the rate for 1944 and not quite one-third of the rate for 1941. Although both the white and nonwhite segments of the population shared in these improvements, the level of the maternal mortality rate for nonwhites was three times that for the whites in 1947. For both races combined, maternal mortality in 1947 was at a minimum of only 0.8 per 1,000 live births to women at ages 20 to 24, but the rate rose steadily with advance in age to a high of 9.2 for women 45 and over. For women of all ages, the maternal mortality rate in 1947 was 0.4 per 1,000 live births from puerperal septicaemia, 0.4 from puerperal toxaemia, 0.4 from haemorrhage, trauma or shock and 0.1 from other puerperal causes. The maternal mortality rate for Canada in 1948 was 1.5; that for England and Wales was 0.9 per 1,000 live births, and New Zealand had a rate of 1.3.

Death rates according to age and sex for the population of the United States in 1948 are compared with 1940 in Table II. Females at ages 1 to 14 in 1948 had a rate as low as 0.8 per 1,000 population of those ages, while the rate for males was somewhat higher, namely 1.1 per 1,000. These rates rose steadily with advance in age to a level, at ages 65 and over, of 74 per 1,000 for males and 60.1 per 1,000 for females. In each sex and age category, the death rates for 1948 were well below those for 1940.

An estimate was made of the lives saved in 1947 alone by the reduction in mortality in the brief period since 1940 (*Statistical Bulletin,* Metropolitan Life Insurance company, May 1949). If

Table II.—*Death Rates for All Causes per 1,000 Population According to Age and Sex; United States*

Age, Years	Males 1948	Males 1940	Males Per cent decrease	Females 1948	Females 1940	Females Per cent decrease
All ages	11.4	12.0	− 5.0	8.5	9.5	−10.5
Under 1	39.3	61.7	−36.3	30.1	47.7	−36.9
1 to 14	1.1	1.7	−35.3	0.8	1.4	−42.9
15 to 24	1.9	2.3	−17.4	1.1	1.8	−38.9
25 to 44	3.5	4.5	−22.2	2.4	3.5	−31.4
45 to 64	17.1	17.9	− 4.5	10.1	12.4	−18.5
65 and over	74.0	77.6	− 4.6	60.1	66.2	− 9.2

e population of the United States in 1947 had experienced the eath rates of 1940, there would have been 267,000 more deaths 123,000 males and 144,000 females); there would have been 7,000 more deaths from pneumonia and influenza, 51,000 more rom the cardiovascular-renal diseases, 18,000 more from tu- erculosis, 13,000 more from diarrhoea and enteritis, 4,900 more rom the principal communicable diseases of childhood, 3,700 ore from diabetes mellitus, 11,000 more from accidents, but ,000 fewer from cancer. Of the total lives thus saved, more an one-fourth were under one year of age and almost one- urth were at ages 65 and over.

As a result of reductions in mortality, the expectation of life t birth in the U.S. rose by 3.2 yr. from 1939–1941 to 1947 hen a level of 66.8 yr. was reached (the latest available fig- re). Compared with the situation of a century ago, in 1850, hen the expectation of life at birth was 40 yr., the latest gure established a rise of about 27 yr., or by two-thirds. Ac- ording to mortality conditions in 1947, the expectation of life t birth was 65.2 yr. for white males, 70.5 yr. for white females, 7.9 yr. for Negro males, and 61.9 yr. for Negro females. At age o, the respective figures for expectation of life were 30.6 yr., 4.7 yr., 27.1 yr. and 30.3 yr. (*See* also ACCIDENTS; CENSUS ATA, U.S.; DISASTERS; INFANT MORTALITY; SUICIDE STATIS- ICS.)

ebt, National. The gross public debt of the U.S. government at the end of 1949 was $257,130,- 00,000—$4,330,000,000 larger than the total of $252,800,000,- 00 at the end of Dec. 1948. All of the increase occurred in he second half of the year. In his budget message of Jan. 9, 950, Pres. Harry S. Truman estimated that, as a reflection of udget deficits, the national debt would be increased to $258,- 00,000,000 by June 30, 1950, and to $263,800,000,000 by June 0, 1951. (*See* Table I.)

urce: Data from 1913 to 1949 are from U.S. Department of the Treasury, daily easury statement (revised); 1950 and 1951 are estimates from President Truman's Jan. 950 budget message.

The increase in the U.S. public debt in 1949 followed three uccessive years of debt reduction. At the end of 1948 the na- ional debt was $26,414,000,000 below the peak total of $279,- 14,000,000 reached at the end of Feb. 1946. This sharp re- uction during the 1946–48 period marked a reversal of the pward trend apparent from the onset of the depression of the 930s.

The postwar debt-retirement program of the U.S. treasury volved a gross reduction in marketable interest-bearing se- urities of $44,686,000,000 from March 1946 to the end of 1949. The distribution of this reduction among the various types of securities is shown in Table II.

Table III furnishes data on the sources of funds for the reduction in the marketable interest-bearing public debt. The funds used to retire aggregate maturities of $23,197,000,000 during the last ten months of 1946 were obtained chiefly from the general fund cash balance accumulated by the Victory Loan drive. In 1947, 1948 and the first half of 1949 funds for reducing the marketable public debt were derived mainly from the growth in nonmarketable issues and from budgetary surpluses. In the second half of 1949, when the decrease in marketable securities was nominal, the further substantial increase in nonmarketable obligations was offset by a budget deficit and an increase in the general fund balance. As a result of the substantial reduction in marketable issues, together with the increase in nonmarketable issues, the portion of the total public debt constituted by marketable interest-bearing obligations declined from 72% in March 1946 to 60% at the end of 1949.

The significance of federal-debt management in 1949 can best be viewed against the background of previous management operations. The maintenance of order and stability in the government bond market—a policy initiated in the pre-World War II period—was a primary objective of the debt-management program in the war and postwar periods. In line with this objective, the prewar structure of interest rates was maintained with only minor variation during the war, permitting the authorities to finance cheaply the huge requirements of war finance.

In the postwar period, the stabilization of the government bond market, a joint treasury-federal reserve function, required different policies to meet changing conditions. Beginning in the spring of 1947, for example, several steps were taken to control an incipient boom in the government bond market. But in 1948, when a downward pressure on government bond prices developed, the federal reserve system shifted its policy. It supported the market through substantial purchases of government bonds from investment institutions and other nonbank holders seeking to acquire funds for lending.

The prices of the longest-term issues were stabilized at slightly above par.

Source: U.S. Department of the Treasury, Feb. 1946—June 1949; Dec. 1949 estimated by Council of Economic Advisers.

While pursuing the broad policy of stabilizing the market for government securities, treasury and federal reserve authorities adopted numerous measures designed to combat postwar inflation. Among them may be noted: (1) the substantial reduction effected in bank ownership of federal securities; (2) active promotion of the sale of savings bonds; (3) permitting interest rates to rise on short-term government securities from mid-1947 until the fall of 1948; and (4) raising by approximately $3,000,000,000 in 1948 the amount of reserves required to be held by member banks, to prevent the additional reserves created by federal reserve support purchases from becoming the basis for multiple credit expansion.

With the abatement of inflationary pressures and the moderate slackening of business activity, the federal reserve board in May, June and August 1949 reduced reserve requirements of member banks in order to make credit more freely available.

The strong bank demand that stemmed from the series of reductions in reserve requirements resulted in sharp increases in the prices of government securities. To maintain orderly conditions in the money markets, the federal reserve sold short-term securities in considerable volume; but it discontinued the practice of freely selling government bonds. This compromise policy moderated the decline in yields on short-term government securities but permitted market forces to depress sharply the yields on medium and long-term government securities, thereby encouraging investors to seek municipal and corporate securities and mortgage loans as outlets for their funds.

It was thus evident that the policy established in mid-1949 marked a new development in public-debt management. Removing the maintenance of a fixed pattern of rates on government securities from the position of primary concern gave the monetary authorities more flexibility in adapting to changing economic conditions.

Debt operations in the postwar period effected a striking redistribution in public debt ownership. (*See* Table IV.) The public debt and guaranteed securities held by banks declined from 42% of the total in Feb. 1946 to 33% in June 1949. The decline was arrested during the remainder of the year as a result of commercial bank investments of excess reserves.

The average interest rate on the public debt was 2.208% in Dec. 1949, as compared with 2.215% in Dec. 1948. In President Truman's Jan. 1950 budget message it was estimated that total payment of interest on the public debt would amount to $5,625,000,000 in fiscal 1951. This was lower than the total of $5,725,000,000 in fiscal 1950 because of a nonrecurring addition of more than $200,000,000 in the latter total occasioned by a change in reporting methods.

U.S. State and Local Government Debt.—From June 30, 1948, to June 30, 1949, the aggregate debt of state and local governments in the U.S. increased more than $2,000,000,000—from $18,702,000,000 to $20,875,000,000. (*See* Table V.)

The rise during fiscal year 1949 was mainly a reflection of increased borrowings to finance the construction of roads, schools and other public works. However, bond issues for bonu payments were again important—in Ohio, Louisiana, Nort Dakota and South Dakota—and operating costs were risin more rapidly than tax revenues.

Source: U.S. Department of Commerce.

The rise in state and local government debt from 1947 to 194 was in contrast to the widespread reductions effected during th war years.

Rising revenues and restricted expenditures allowed state an local governments to reduce their total gross debt from $20,246,000,000 in 1940 to $15,922,000,000 in 1946.

Other Countries.—In Table VI are presented data on th

ational debts of many countries of the world. In so far as vailable information permitted, the data are shown for 1946 or 947 and for 1939, affording a comparison of national debts beore and after World War II. In nearly all the countries for which data are provided in the table, national indebtedness was ubstantially higher in the postwar period than in 1939. During he war, debt increases were particularly large in the belligerent ountries, but sizable increases occurred in numerous nonbelligerent countries, which were required to make unusual expendiures.

Delaware.

Delaware, on the middle Atlantic seaboard, one of the original 13 states of the United States, is called the "First state" from its having been the first to ratify he federal constitution, Dec. 7, 1787. Another popular name is he "Diamond state." Area 2,057 sq.mi. (land 1,978; inland water 79). Population (1940) 266,505, of which 139,432 were urban, 127,073 rural. Native white numbered 215,695; foreign-born 14,913; Negro 35,876. The bureau of the census 1949 estimate was 310,000. Dover (pop. 1949) 7,652 is the capital. Wilmington 126,000 (1949 est.) is the one city of more than 8,000 population.

History.—Outstanding measures enacted at the regular 1949 session of the legislature were: provision for a state-wide referendum on the question of paying an immediate cash bonus to veterans of World War II (the bonus was approved by popular vote and payments begun); increase in the salaries of state officers and judges; major revisions of the state educational system; creation of a state public utility commission; increase of state income and gasoline taxes and levy of a tax on cigarettes. Also enacted were proposals for two amendments to the state constitution: to create a separate supreme court; and to permit county zoning in New Castle county. These provisions would become part of the constitution if approved at the next succeeding regular legislative session.

The chief state officers in 1949 were: governor, Elbert N. Carvel; lieutenant governor, Alexis I. du Pont Bayard; secretary of state, Harris B. McDowell, Jr.; attorney general, Albert W. James; treasurer, Willard D. Boyce; auditor, James W. W. Baker; tax commissioner, Howard S. Abbot; bank commissioner, John C. Darby; insurance commissioner, William J. Swain; adjutant general, Paul R. Rinard; chancellor, William Watson Harrington; chief justice, Charles S. Richards; director, legislative reference bureau, Robert W. Tunnell.

Education.—Items in the revised public school program included a uniform state supported salary schedule for administrative, supervisory, teaching, nursing and clerical personnel; a unit plan for allocation of school funds; a construction program of $19,000,000 and an appropriation of $1,000,000 for delayed repairs. During the fiscal year ending June 30, the state board of vocational education placed 410 disabled persons in earning jobs.

The cost of operation of the state schools for the fiscal year was $8,312,110. Expenditures per pupil in attendance increased from $199 to $212. The 151 elementary schools had an enrolment of 27,113 and a teaching staff of 924 in June 1949. The 46 secondary schools had 16,109 pupils and 837 teachers.

Social Insurance and Assistance, Public Welfare and Related Programs.—Servicemen's readjustment allowances paid in 1949 totalled $694,216; state unemployment compensation, $2,368,625; the number of active claims in the last week of Dec. 1949 was 4,384. The cost of outside relief for the fiscal year ending June 30 was $428,051 for an average of 99 cases per month. The cost was shared half and half by the state and the county in which the relief was given. In Dec. 1949, 1,617 persons were receiving state old-age pensions compared with 1,413 in Dec. 1948.

During the fiscal year ending June 30, 854 children were cared for in their own or foster homes at a cost of $208,771; the number of dependent children aided was 1,567 at a cost of $465,301. The total state appropriation for public welfare was $2,029,748. Included were Ferris school (industrial for boys) $158,800; Woods Haven school (correctional for white girls) $50,000; Kruse school (correctional for Negro girls) $49,508. The New Castle county workhouse which accepts some long term prisoners from the other counties (there is no state prison) received 2,279 prisoners during the fiscal year and discharged 2,257. There were 354 inmates on June 30, 1949.

Communications.—Mileage of highways and rural roads (all under state control) was 3,910 at the beginning of the year 1949. Income of the state highway department for the year ending June 30, 1949, including federal aid of $1,559,036, was $8,618,095; expenditures $8,211,603; cash balance $406,492. Railroad mileage was approximately 270.

Business at the port of Wilmington increased in tonnage and value of cargoes during the calendar year 1949. For January through November tonnage was 618,140 compared with 540,133 for the whole year 1948; the value of cargoes was $33,980,633 compared with $26,626,509 for the year 1948. Tonnage through the Delaware and Chesapeake canal Jan. through Oct. 1949 was $5,240,376; transits of vessels 11,308. The four air lines maintaining scheduled passenger and freight service at the New Castle county airport reported 13,863 passengers using the airport, and the handling of 86,206 pounds of air mail and 541,761 of express and freight during the fiscal year ending June 30. The city of Wilmington had four radio stations. On Nov. 30 the state had 109,486 telephones in use.

Banking and Finance.—There were 28 state banks, mutual savings banks and trust companies, with 6 branch banks and 9 branch offices; 13 national banks, 39 building and loan associations and 22 small loan companies. Total assets of all state banks June 30, 1949, were $557,028,448 compared with $558,809,206 on the same day in 1948; deposits June 30, 1949, were $489,508,176 compared with $494,285,101 on the same day in 1948. Assets of the national banks were $41,742,597 June 30, 1949, compared with $43,340,867 on the same day in 1948.

Total state revenue for the year ending June 30, 1949, was $25,754,590.11; nonrevenue income $3,243,721.15; total $28,998,311.26. Expenditures were $33,378,901.58. The deficit of $4,380,590.32 paid out of the balance of $17,907,899.11 at the beginning of the year left a cash surplus of $13,527,308.79. The gross debt (serial bonds for permanent improvements) was $8,218,000. Total debt service (appropriation) $308,691.24.

Agriculture.—The estimated total cash income from agricultural production in 1949 was $105,000,000. Total livestock income (estimated) was $75,854,000 (including the large broiler industry for which separate data were not available). Total for crops January to October was $13,904,000, including $5,317,000 from 43,150 acres of truck crops.

Table I.—*Leading Agricultural Products of Delaware*

Crop	1949	1948	Average 1938-47
Corn, bu.	4,380,000	4,309,000	3,976,000
Apples, bu.(commercial)	624,000	382,000	714,000
Hay, tons	90,000	96,000	96,000
Wheat, bu.	1,202,000	986,000	1,289,000
Tomatoes, tons (processed)	45,000	32,000	
Strawberries, crates	63,000	47,000	
Lima beans, tons shelled	11,700	10,000	

Manufacturing.—Gross receipts of 709 licensed manufacturers for the year ending June 30, 1949, were $185,246,411, compared with $349,854,364 in the previous fiscal year. The total of employees under the unemployment compensation law July 1, 1949, was 94,937. Total wages for the year ending June 30, 1949, were $284,667,833. On Nov. 15, 1949, 559 plants in the Wilmington area reported an employment total of 56,287 compared with 62,128 for Nov. 15, 1948. New corporations chartered at Dover for the year ending June 30, 1949, were 2,333 compared with 2,686 in the preceding year. Dissolutions were 977 compared with 632 in 1948 and 442 in 1947. "Miscellaneous" manufactures in the following table include chemicals, shipbuilding, fibre, leather, textiles, foundries and machine shops—the notable industries of the Wilmington area.

Table II.—*Principal Industries of Delaware*

Industry	1949	1948
Food	$63,299,055	$52,945,704
Clothing	17,095,871	63,802,565
Household supplies	458,643	454,318
Auto supplies	6,100,656	2,464,020
Drugs and medical supplies	8,066,907	62,799
Tobacco	397,120	3,208
Miscellaneous	89,828,159	230,121,750

Mineral Production.—According to the federal census of manufactures in Delaware (1947, released 1949), the total value added by manufacture of stone, clay and glass products was $1,011,000.

Democracy.

Lately the word democracy has been used for two opposite concepts. The more recent use of the word is exemplified in the people's democracies in eastern Europe and in eastern Asia. That kind of "democracy" is discussed in the article COMMUNISM. This article deals only with democracy based upon the multiparty representative system and upon liberty of thought and discussion in the way established in the 18th and 19th centuries.

During 1949 democracy in the western sense was consolidated and strengthened wherever it existed. All the elections held in democratic countries had made manifest the decline of communism. The growing co-operation of the democracies and the new security gained by the North Atlantic treaty (*q.v.*) had infused the democratic masses everywhere with a new feeling of confidence. This surprising vitality of democracy in the face of Communist challenge was most clearly shown in Norway, where elections were held on Oct. 10, 1949. The Communists, who were represented in the Norwegian parliament by 11 members, conducted their campaign with the slogan of peace, as used by the various Communist-inspired "peace" congresses throughout the world, and in bitter opposition to the Atlantic pact by which, they declared, Norway as an immediate neighbour of the Soviet Union was especially endangered. Nevertheless, the elections ended in an overwhelming defeat for the Communists who were unable to return even one candidate. The winner of the election was the Norwegian Labour party which counted 85 among the 150 members in the new parliament. Norway thus became the first western European country with no Communist in its parliament. The Norwegian elections also showed that in Europe a strong labour party represented one of the best bulwarks against a growth of communism. Only in countries where there was no strong Socialist Democratic party, as in Italy or France, did Communists preserve their strength in 1949, though they were losing in influence there too.

On the other hand, the elections in New Zealand on Nov. 30 and in Australia on Dec. 10 showed clearly that wherever under socialism democracy was preserved, the fundamental democratic process of alternative governments continued to function. The Labour government in New Zealand was ousted after 14 years in parliament, and that in Australia after 8 years in parliament, in favour of the conservatives who, however, were determined to maintain the social gains achieved under the preceding governments. In Britain, on the other hand, the Labour government won all the by-elections during 1949, though with smaller majorities, but was to face a general test in 1950. In Canada the Liberal party, which had been in power for 14 years, was returned with an overwhelming majority in the election of June 1949.

All other elections in Europe, wherever the elections were free with opposition parties admitted, confirmed the same trend toward strengthening democracy and defeating communism. In the cantonal elections held in France on March 20 and March 27, the middle parties, the so-called third force which represented the government, gained impressively in strength, while the Communist opposition of the left lost 147 seats, and the De Gaullist opposition of the right received only slightly more than half of the seats gained by the government parties. In the elections in Belgium at the end of June, the Christian Social party (Catholic), which emerged as the strongest without, however, receiving a majority, gained 13 seats, the Liberals gained 12 seats, while the Socialists lost 3 seats, and the Communists lost 11 seats so that they held only 12 seats among 212. Similarly, in the elections held in Austria in Oct. 1949 the communists were unable, in spite of Russian occupation of part of the country, to register any appreciable gains; the two governmental parties, the People's party and the Socialists emerged victorious from the elections. Even in soviet-controlled eastern Germany the elections held on May 15 and 16 brought a puzzling development. The election was for a "People's Congress." No opposition was allowed and the ballots contained the following statement: "I am for the unity of Germany and a just Peace Treaty. Therefore I vote for the following list of candidates." In spite of this wording stressing national unity and a just peace, the results announced by the Communist-controlled news agency, showed 7,943,949 persons voting "yes" and 4,080,272 persons voting "no." In the free elections held in August in western Germany the Communists suffered a spectacular defeat, the Christian Democratic union receiving 139 seats, the Social Democrats 131 seats, and the Communists 15 seats out of a total of 402. The fact that the western sectors of Berlin did not participate in the election probably diminished the Social Democratic vote. The Communists showed greater strength in Japan where in the elections of Jan. 1949 they sent 35 representatives to the Japanese lower chamber, but the majority went to the Democratic Liberal party whose leader Shigeru Yoshida, former ambassador to Britain, was re-elected as premier over the Social Democratic candidate, with 350 votes out of 451 cast.

Progress in the interests of democracy was made in many other fields. Race relations in the United States continued their steady improvement and Negroes were employed in growing numbers in industrial and technical positions. Even in India, where racial caste segregation in Hindu society was stronger than anywhere else, progress was made in the improvement of the position of the Untouchables, who were guaranteed complete equality in the new constitution. Only in the Union of South Africa did there appear to be no lessening in the tension between the white and the Negro population.

The greater awareness of the danger of Communist infiltration into strategic positions from within eliminated Communists from sensitive government positions and from leadership in the trade unions in the United States and in the British commonwealth. Non-communist labour organized the International Confederation of Free Trade Unions at a meeting in London on Dec. 7, 1949. This new labour international was formed in opposition to the Communist-dominated World Federation of Trade Unions which had been formed in 1945. Brussels, Belg., was selected as the permanent headquarters of the confederation. It was to be headed by an executive board which would meet every six months and which would consist of 19 delegates, 1 from Africa, 3 from Asia (1 Japanese, 1 Indian and 1 Iranian), 2 from Latin America (1 Cuban and 1 Chilean), 1 from the West Indies, 1 from Australia and New Zealand, 2 from Britain, 5 from Europe (1 each from Scandinavia, Germany, France, Benelux, and Italy respectively) and 4 from North America. The delegates, representing about 48,000,000 workers in democratic countries, asserted in their manifesto "that economic and political democracy are inseparable," and underlined their opposition to all forms of totalitarianism and dictatorship, in the Communist-controlled countries as well as under the existing regimes of Spain, Peru, Venezuela, the Dominican Republic, Nicaragua and Argentina. They advocated full support of the European Recovery program and of the unification of western Europe.

The European Recovery program and the attempts at a closer integration of the democratic countries in Europe, had strengthened democracy throughout western Europe. Efforts in that direction were also planned for the lands outside Europe. In his inaugural address to the United States people on Jan. 20, 1949, Pres. Harry Truman outlined as point 4 of his program, a "bold new program for the improvement and growth of undeveloped areas." Such a program would bring U.S. technical assistance to vast areas in Asia, the middle east, and Latin America, and thus help to raise the standard of living there and create the conditions for a secure growth of democracy. FILMS OF 1949.—*Are You a Good Citizen?; Discussion in Democracy* (Coronet Instructional Films). (H. Ko.)

Democratic Party. Pres. Harry S. Truman led the Democratic party to several important victories at the polls in the off-year of 1949, but intraparty differences on Capitol Hill prevented passage of most of his "welfare state" legislation at the first session of the 81st congress.

Assuming a more aggressive leadership role as a result of his election in his own right in 1948, Truman submitted a truly formidable program in his January inaugural and subsequent messages. He also discarded the Roosevelt New Deal as a party slogan in his inaugural address, substituting for it the Truman Fair Deal. "Every segment of our population and every individual," he said, "has the right to expect from his government a fair deal."

In outlining his Fair Deal, he called for repeal of the Taft-Hartley act, civil rights legislation against discrimination of any kind, an expanded and more generous social security system, continued farm subsidies, federal financial aid for education and housing, compulsory national health insurance, greater protection of natural resources, public power development and more opportunities for small business. His proposals were regarded as more far-reaching than anything ever offered by Franklin D. Roosevelt.

He also proposed an eight-point plan for controlling inflation. He startled congress by demanding authority for the government to build industrial plants to overcome commodity shortages, if necessary. To finance these many new activities, he asked for a $4,000,000,000 tax increase.

In foreign affairs Truman urged continued American cooperation with western Europe to combat communism, which he assailed as "false doctrine." He advocated support of the United Nations, the Marshall plan and the North Atlantic treaty. In a novel approach to world difficulties, he advanced a "bold new program for improvement of under-developed areas" through U.S. public and private aid.

His proposals for extension and expansion of governmental power and activity were defeated through a combination of Republicans and conservative Democrats, mostly from southern states. He obtained only a housing construction bill and a farm measure providing for sliding and slightly lower subsidies. The minimum wage scale was raised from 40 cents to 75 cents an hour.

Truman's foreign program was enacted almost as he presented it, despite some grumbling over cost of the foreign-aid bill.

Despite this paucity of performance, the president professed satisfaction. Replying to charges that the session had rebuffed him almost as completely as the 80th congress, which he had characterized as a "do-nothing" body, he remarked that he expected more Fair Deal legislation from the 1950 session.

In Labor day addresses before factory workers at Pittsburgh, Pa., and farmers at Des Moines, Ia., he reiterated demands for action on all his original proposals. He urged a political alliance between farmers and workers as the two groups responsible for the "tremendous production of the country's economic system." Denouncing his opponents as "standpatters who want to go back to 1890," a phrase frequently used by other Democratic speakers, he declared that "with the Fair Deal we will win in 1950 and 1952."

The special election results in 1949 offered some ground for these forecasts. The Democrats won four of the five contests for house vacancies, losing only in a normally Republican district in Pennsylvania. They won mayoralty fights by sizable majorities in Boston, Mass., New York, N.Y., Pittsburgh, Pa., Cleveland, O., and Louisville, Ky.

"OUR THREE-PARTY SYSTEM IN CONGRESS," cartoon by Fitzpatrick, published in the *St. Louis Post-Dispatch* in 1949

The senatorial race in New York took on unusual significance because it was the first major test since Truman's enunciation and development of his Fair Deal philosophy. Moreover, John Foster Dulles, the Republican candidate, denounced the administration's program as "statism," while Truman made a special appeal for the election of former Gov. Herbert H. Lehman, the Democratic nominee. When the latter won by 196,293, the president interpreted the outcome as endorsement of his later record. He declared that it marked an advance in the creation of the "welfare state." The Lehman victory gave the Democrats an additional senate seat, as Dulles had occupied it by appointment of Gov. Thomas E. Dewey. For the session opening on Jan. 3, 1950, the senate line-up was 54 Democrats and 42 Republicans. In the house it was 261 Democrats, 169 Republicans, 1 American Labor party member, 1 Democratic-Liberal member and 3 vacancies.

The outcome of several ordinarily unimportant contests gave Democratic leaders considerable satisfaction. In a state-wide judicial election in New York, the Democratic entry won by 335,000, compared with Lehman's 196,293. The Democrats captured a similar post in Pennsylvania by 30,000, although the G.O.P. candidate in this normally Republican territory usually had won by 250,000 in an off-year.

The Democrats also showed strength in the cities. The Republicans placed only 1 man on the new 25-man council in New York city. For the first time in recent history, the Democrats took four municipal offices in Philadelphia.

Two political warhorses who had frequently embarrassed Democratic occupants of the White House suffered defeats that might mean the end of their careers. In a spring election Frank Hague lost control of Jersey City, N.J. When he sought a comeback in November, his candidate for governor, state Sen. Elmer H. Wene, lost to Gov. Alfred E. Driscoll, Republican.

In Boston James Michael Curley made a fifth bid for the mayoralty. He was defeated by City Clerk John B. Hynes, who had served as mayor for five months in 1945 while Curley served a prison sentence.

The Democrats were unusually active and enthusiastic during 1949, staging numerous Victory, Jefferson-Jackson day and special dinners at prices ranging from $1 to $100 a guest. As a result, they closed the year with the sum of $612,000 in the treasury. Plans were also made to raise $1,000,000 for 1950 needs through $1 subscriptions.

President Truman took obvious delight in participating in party gatherings. He marched in parades, delivered formal speeches or made surprise visits to these affairs. His partisan interest and activity naturally aroused speculation that he might seek re-election in 1952. Several prominent leaders urged his renomination, but he made no comment. After the 1948 election he said he would not run in 1952, when he would be 68.

The chairmanship of the Democratic National committee changed hands in 1949. When former Sen. J. Howard McGrath of Rhode Island resigned to become attorney general, he was succeeded by William M. Boyle, Jr., of Kansas City, Kan. A former policeman and practical politician, and a close friend of the president, Boyle stepped up activity at national headquarters at Washington, D.C., and throughout the country. Like the president's, his formula for victory was an alliance of labour, farm and other numerically strong groups whose lot, he maintained, had been bettered by Truman policies.

Democratic leadership in the senate consisted of Alben W. Barkley of Kentucky as vice-president, Sen. Scott W. Lucas of Illinois as majority leader and Sen. Francis J. Myers of Pennsylvania as majority whip. Sam Rayburn of Texas presided over the house as speaker, and Rep. John W. McCormack of Massachusetts served as majority leader, with J. Percy Priest of Tennessee as his assistant. (*See* also ELECTIONS; UNITED STATES.) (R. TU.)

Denmark. A monarchy of north-central Europe, Denmark has an area of 16,569 sq.mi.; pop. (1945 census): 4,045,232 (mid-1948 est., 4,190,000). Capital: Copenhagen (731,707, or including Frederiksberg and Gentofte 927,404; 1947 est., 976,000). Other principal cities (1945 census): Aarhus (107,393); Odense (92,436); Aalborg (60,880). Religion: Lutheran Christian. Ruler in 1949, King Frederick IX; prime minister, Hans Hedtoft.

History.—The early days of 1949 saw repeated meetings in Karlstad, Swed., Copenhagen and Oslo, Nor., at which strenuous efforts were made to bind together the countries of the north. At the Copenhagen conference, Jan. 22–24, not only ministers but leaders of all the parliamentary parties (except the Communists) from Norway, Sweden and Denmark were present. Sweden had offered to extend its defense area to include Denmark and Norway in return for a mutual defense pact. This offer was an attempt to keep Sweden's two neighbours from joining the projected North Atlantic treaty, for Sweden feared that alliance with the west would pull Scandinavia into the next war. Others thought so too, but they did not share the Swedish hope of being able to keep out. All wanted a Scandinavian pact, but Norway insisted upon the right to ally with Britain and the United States in addition. Sweden insisted that the Scandinavian group must be neutral.

Denmark stood between, and its statesmen tried valiantly to find a formula for compromise. The Danes wanted a close Scandinavian group, but they wanted arms and other support from the west. Their needs and their experience in World War II put them closer to the Norwegian position than to the Swedish. The result was that after the middle of February, when hope vanished for agreement between Sweden and Norway, the Danes had to decide whether they should become members of the Atlantic system or stand alone.

PUBLIC CELEBRATION before the parliament building in Copenhagen, June 5, 1949, marking the 100th anniversary of the signing of Denmark's first act of constitution under Frederick VII

The United States was blamed for splitting the north, because the United States government had let it be known that it could not guarantee priorities in arms deliveries to countries, however friendly, who stood outside the commitments of the Atlantic pact.

Denmark, once it was clear that the Scandinavian states could not agree and that Norway intended to join the west, soon determined to affiliate with the North Atlantic alliance. Foreign Minister Gustav Rasmussen journeyed to Washington, D.C., in March, and flew back to Copenhagen to advise Danish acceptance of the treaty. The U.S. was particularly eager to have Denmark in the group because of the importance of Greenland's airfields and weather stations. (*See* also GREENLAND.) On March 24 and 25 the two houses of the Danish *rigsdag* voted 119–23 and 64–8 to accept and to ratify the terms of the alliance, and Rasmussen signed in Washington in the general ceremonies of April 4. In the early morning hours of that day a soviet note of protest was delivered to the Danish foreign office, but it had no more effect in Copenhagen than did a similar move in Oslo.

Denmark was on the receiving end of considerable aid from the European Cooperation administration, and continued to use that aid effectively to expand its production and export. A significant and much appreciated sign of improving times was the abandonment of rationing on many items: soap, tea and cocoa on Sept. 1; meat on Nov. 19. This indicated an easing of the *valuta* problem. Danes studied the U.S. market and found purchasers for an increased quantity of goods, such as a shipment of 2,000 cases of premium hams sent in the autumn—a direct result of Marshall plan grain sent to Denmark. Special exhibits of porcelain attracted buyers in U.S. cities.

In the general devaluation of currencies in September, Denmark had no choice but to follow Britain, its most important customer, in the 30.5% cut in relation to the dollar. Prices of Danish goods in the U.S. market were lowered appreciably, but it remained to be seen whether the new values would stimulate enough new trade to overbalance the loss in price. On May 5 Foreign Minister Rasmussen signed in London the agreement on the Council of Europe. Denmark joined with the countries of western Europe in a series of tariff reductions, and continued to urge a Scandinavian customs union. On this problem the Scandinavian commission and public debate laboured throughout the year; in November the foreign ministers of Denmark, Norway and Sweden told U.S. Ambassador W. Averell Harriman that they intended to take prompt action on customs union, but positive achievement was still not quite attained.

Considerable publicity in both Denmark and the United States attended the appointment to the Copenhagen post of the United States' first woman ambassador, Mrs. Eugenie Anderson (*q.v.*) of Minnesota. In prewar years Denmark had also received the first woman minister of the U.S., Mrs. Ruth Bryan Owen.

Denmark's deep concern about the crowding of east German refugees into the provinces just south of the Danish border was somewhat assuaged late in the year. In September the Schleswig-Holstein *landdag* ratified an agreement guaranteeing minority rights to the Danish-minded citizens of the province. Denmark's Scandinavian neighbours had joined Denmark in demanding easing of the tensions on the German border, and action was obtained when the West German government at Bonn (Nov. 10) passed a law providing for the resettlement of 150,000 of the east German refugees who had crowded into certain small areas, particularly Schleswig-Holstein. About 300,000 had migrated there, and the two provinces experienced a 73% increase in population in the decade 1939–1949, compared with a 20% increase for west Germany as a whole.

The last of the 210,000 German refugees who had fled into Denmark itself were removed into western Germany in February. A minor problem remained of what to do with about 2,000 Allied refugees, but that too was partly solved with the departure of 150 for Canada and 569 for Australia. But between 1,000 and 1,500 of the ill and the aged were likely to remain in Denmark.

The Social Democratic government survived the autumn attack on its economic policies. Most of the liberals abstained in the vote of confidence on the administration, and thus a new election was avoided. Evidently it was realized that even after an election no party would have a clear majority, and therefore a series of compromises was agreed upon.

Finance.—The monetary unit, the krone, was pegged at 20.84 U.S. cents until Sept. 18, and thereafter was worth 14.48 U.S. cents. Revenues, April 1, 1948, to March 31, 1949, totalled 2,248,000,000 Kr.; the estimate for 1950–51 was 2,066,000,000 Kr. Expenditures, April 1, 1948, to March 31, 1949, amounted to 2,148,000,000 Kr.; the estimate for 1950–51 was 2,057,000,000 Kr. The national debt was reduced in the fiscal year 1948–49 by 243,000,000 Kr., and an additional 175,000,000 Kr. was paid to the special account for liquidation of German occupation expenses. Notes in circulation, Aug. 1949, totalled 1,432,000,000 Kr., compared with 1,428,000,000 Kr. in Aug. 1948.

In the devaluation Denmark lost 375,000,000 Kr. on debts contracted in dollars or Swiss francs; the loss was to be written off over a ten-year period.

Trade and Communications.—During the first eight months of 1949 imports were about 740,000,000 Kr. above those of the same period in 1948, and exports were about 425,000,000 Kr. higher. Butter, eggs and bacon were considerably larger in quantity of export, but prices were down. In September prices turned upward slightly.

Unemployment as of Aug. 1949 amounted to 2.2%, compared with 1.5% in Aug. 1948. The industrial employment index was up three points over Aug. 1948, and the output up five points.

Denmark's exports in 1948 totalled $550,000,000 (1947: $480,000,000). Imports in 1948 totalled $668,000,000 (1947: $548,000,000).

Of the exports in 1948 the United Kingdom bought $169,000,000 and the United States $29,000,000 (chiefly for use in occupied Germany). Of the imports the United Kingdom furnished $181,000,000 and the United States $99,000,000.

Agriculture.—A livestock census of March 1949 showed favourable increases over the years immediately after the war, though numbers were not back to prewar levels: poultry numbered 18,000,000; pigs 2,200,000; milk cows 1,600,000.

Agricultural Production in Denmark

(In millions of pounds)

	1948	1947	1939

Dentistry.

An experiment in the training of auxiliary personnel for the care of children's teeth was started and supported in 1949 by the children's bureau of the Federal Security agency, sponsored by the Massachusetts state department of health, and conducted by members and staff at the Forsythe Dental Infirmary for Children in Boston. A group of young women was carefully selected for a two-year course of training in dental hygiene plus intensive courses in the techniques of filling simple cavities in the teeth of children. After completion of the formal training, these young women were to work in the clinic for three years, their chief duty being the filling of decayed teeth in children.

The Good Teeth Council for Children, Inc., continued active in bringing dental health education to children in all parts of the country through puppet shows and booklets carefully prepared for various ages. The Council on Dental Health of the American Dental association sponsored a National Children's Dental Health day. Dental societies in most of the states developed dental health education programs of interest to parents, teachers and dentists, all centring on the child. This was so successful that a bill was introduced in congress authorizing the president to proclaim annually a day set apart as a National Children's Dental Health day.

During 1949 the U.S. public was bombarded with advertisements by tooth powder manufacturers implying that dental decay might be wiped out by use of ammonium ion toothpaste. The evidence, however, was still incomplete as to the effectiveness in terms of percentage of ammonium ion toothpaste preparations.

Meanwhile the use of sodium fluoride, especially by topical application, was extended. The United States public health service, through funds appropriated by the congress, sent out demonstration teams to provide information on the approved application technique to dentists, health officers, civilian leaders and the public; and to show how community fluoride programs operate.

Evaluation of results as reported by the United States public health service indicated that "A minimum of 4 applications of a 2% sodium fluoride solution, preceded by a dental prophylaxis, is required to obtain a maximum of 40% reduction in the incidence of dental caries." (John W. Knutson, "Evaluation of the Use of Fluorine as a Caries Control Measure: The Effect of Topically Applied Fluorides," *J. Am. Dent. A.*, Feb. 1949.)

There was considerable interest in the role played by fluorine and other trace elements in the body chemistry, especially in the field of nutrition. It was suggested that where no fluorine is present in the drinking water, it might be added to the diet.

A.*, 39:438–443 (Oct. 1949); and "Evaluation of the Use of Fluorine as a Caries Control Measure: The Effect of Topically Applied Fluorides," *J. Am. Dent. A.*, 38:204–212 (Feb. 1949); F. J. McClure, "Fluorine and Other Trace Elements in Nutrition," *J.A.M.A.*, 139:711–716 (March 12, 1949).

Films of 1949.—*Save Those Teeth* (Encyclopædia Britannica Films Inc.).

(L. M. S. M.)

Dermatology. Aureomycin continued to exhibit remarkable versatility as an antibiotic. Studies indicated that it exerts bacteriostatic or bactericidal activity against a wide range of both gram-negative and gram-positive bacteria, including penicillin-resistant and streptomycin-resistant organisms. It was proved highly effective against most strains of *Rickettsia,* as well as viruses of psittacosis and lymphogranuloma venereum.

In most of the groups of cases of rickettsial infections reported, the outstanding feature was the uniformity with which the fever and symptoms subsided in relation to the treatment, irrespective of the time when treatment was begun. Where similar cases treated symptomatically were available for comparison, a considerable reduction of the period of acute symptoms, fever and rash, and a decided shortening of the convalescent period was noted in the aureomycin-treated cases. There were no complications and no deaths in these cases.

Clinical improvements in symptoms of the acute illness usually occurred within 24 hr. after oral therapy with aureomycin was started. The temperature returned to normal, either during or before the third day of treatment and the rash in the cases of typhus or spotted fever usually faded at about this time.

Experience with the use of aureomycin in the treatment of lymphogranuloma venereum indicated a definite effect in the acute cases and some benefit, particularly as an adjunct to surgical and other measures, in the management of chronic cases. Some of the chronic cases relapsed after cessation of treatment. Possibly better and more lasting results could be obtained with larger doses given by mouth and maintained over longer periods.

A number of cases of pyoderma of various types, some in newborn infants and in patients with other severe systemic disease, showed improvement in varying degrees and for varying periods under treatment with aureomycin after failure to obtain benefit from penicillin and streptomycin. Many of the lesions yielded penicillin and streptomycin-resistant staphylococci. In some cases of herpes zoster in which treatment was undertaken early the lesions failed to progress, the pain subsided, new lesions failed to appear and old lesions began to dry up and healed promptly after treatment with oral aureomycin was instituted. This antibiotic drug proved particularly useful in cases with ophthalmic distribution of the lesions. Relapses in herpes zoster occurred with new lesions reappearing after treatment was discontinued prematurely, but aureomycin was again given with benefit in some of these cases.

There were 100 unselected patients with scabies treated with a new preparation of the gamma isomer of hexachlorocyclohexane in a vanishing cream base, with 100% cures reported by A. B. Cannon and M. E. McRae. Complete relief from pruritus within 24 to 48 hr. was reported by about half the patients, and many observed that itching ceased within two to three hours. Pronounced clinical improvement was seen in all cases after one application. Of those under observation, 61, or nearly two-thirds, showed no signs of activity after a single treatment. Thirty-six were given two treatments and three patients received three. All were cured, and in no case could the acarus be demonstrated after the first application of the cream. This remedy was found to be effective in cases in which other preparations had failed. No cases of irritation or sensitivity occurred, either as primary or late manifestations, and there were no contraindications even in the presence of severe secondary dermatitis. This preparation was also successful in the treatment of all types of pediculosis.

Increased use of beryllium in industry brought to light several new pathologic reactions among workers handling it, and the product was added to the ever expanding group of serious industrial intoxicants. In the beryllium refining industry, cases of acute dermatitis occurred from contact with the soluble salts. Crystals imbedded under the skin had produced foreign body reactions with ulceration. Extensively proliferating granulomas necessitating wide excisions developed following cuts from glass fragments in which particles of beryllium phosphor remained.

Bacitracin, another antibiotic drug, was used with success in some superficial pyogenic diseases of the skin. J. L. Miller, M. H. Slatkin and B. A. Johnson found it effective in impetigo contagiosa, folliculitis, infectious eczematoid dermatitis, ecthyma and dermatitis repens, but only of limited value in sycosis vulgaris. Their results were best with bacitracin in a concentration of 500 units per gram and an oil and water or greaseless carbowax base.

Excellent results were reported by W. E. Wooldridge and H. L. Joseph in the treatment of circumscribed and disseminated neurodermatitis and other itching dermatoses by the local application of phenindamine (thephorin) ointment. In the cases that responded to this drug, improvement in the eruption was noted in a week and once improvement became evident, it was progressive and usually reached a peak within four weeks. Even though no more improvement occurred in most patients after that time, they could be maintained in an improved condition.

Since the advent of streptomycin and the determination of the effectiveness of this drug in the treatment of granuloma inguinale, many trial dosage schedules had been used to attempt to standardize a regimen of therapy. M. H. Samitz, P. N. Horvath, P. P. Mari and H. Berman reported 19 cases of chronic granuloma inguinale treated with a uniform total dosage of 20 grams of streptomycin administered in fractions of 0.5 grams every three hours for five days. All patients responded with rapid healing and there were no recurrences during an observation period of 6 to 15 months. (*See* also MEDICINE.)

FILMS OF 1949.—*Care of the Skin* (Encyclopædia Britannica Films Inc.).

(H. Fx.)

Detroit. Centre of the southeastern Michigan industrial area, the city of Detroit and its surrounding communities accounted in 1949 for an estimated 13% of U.S. manufacture and consumed 10% of the nation's steel.

The 137.9 sq.mi. of Detroit proper held an estimated 1,785,000 population in 1949, compared with 1,623,452 by the 1940 census count, when it stood fourth among United States cities.

Despite shrinkage from the wartime population peak, housing shortages persisted in the rental categories, and 11 public housing projects were tentatively planned. Estimates placed owner occupancy of single dwellings between 70% and 75%, as against 38% in 1940.

As of June 30, 1949, close of the fiscal year, the assessed value was $3,979,780,680; gross bonded debt (notes included), $310,316,805; net bonded debt (notes included), $280,489,878; net tax supported debt, $190,937,020; gross appropriation (including school, library and utilities), $272,033,671; tax levy (including school and library), $114,959,137; tax rate (including school and library), $30.69.

Employment remained at a generally high level.

The outstanding labour relations event of the year was the entry of the Ford Motor Co. and the United Automobile Workers into a contract providing worker pensions wholly financed by the company. It stipulated that the employer would pay pensions which, added to the retired employee's social security, would give the recipient a $100 monthly income.

The outstanding civic accomplishment was a fund-raising campaign innovated to embrace all welfare and health agencies obtaining support from public subscriptions. Conducted by the United foundation, it sought support for 143 organizations and surpassed its goal of $8,550,000. The single campaign principle drew strong support from business managements and unions.

Incumbent Mayor Eugene I. Van Antwerp was defeated for nomination in the nonpartisan primary when City Treasurer Albert E. Cobo led the ticket, with Council President George Edwards second. Cobo was chosen mayor at the general election. A charter amendment to extend the terms of mayor, treasurer and city clerk from two to four years was narrowly defeated.

The principal problem to confront the municipal government during the year was the financial disability of the city-owned Detroit street railway. Despite higher fares and service curtailments, revenues fell short of operating costs.

A major municipal controversy turned on welfare policies. Laxness in granting aid was charged, and procedural changes were instituted.

The Detroit Symphony orchestra was disbanded during the year for lack of adequate financial underwriting.

The city was free of major disasters and disturbances, though crimes of violence in certain classes followed an upward trend, which was nationally noted. (R. Ho.)

Devaluation: *see* Exchange Control and Exchange Rates.

Diabetes. The first international conference of Diabetes associations was held in Brussels, Belg., June 9, 1949, under the leadership of J. P. Hoet of Louvain, Belg. Papers were read upon heredity, social relationships, the diabetes detection drive in the United States, life insurance and the employment of diabetics in government and private agencies. Representatives were present from 12 or more countries.

The American Diabetes association expanded its efforts during 1949, concentrating upon a diabetes detection drive for the second year. The drive claimed much attention in the press, radio and before medical bodies; industrial organizations participated more freely than formerly. There were now 20 affiliate societies of the American Diabetes association in the United States and Canada. Many of these had two sections, one for physicians and the other for the lay public. Headquarters for the American Diabetes association in 1949 were at 1 Nevins St., Brooklyn, N.Y.

The diabetes branch of the United States public health service conducted large scale demonstration activities in co-operation with local medical societies and health departments in Brookline, Mass. and Jacksonville, Fla. and began similar surveys in Milwaukee, Wis. and Dallas, Tex. The Oxford, Mass., and Jacksonville surveys were not entirely comparable, but for new cases were not significantly different—1% and 0.9% respectively. To facilitate detection of probable diabetics the Wilkerson Heftmann Blood Sugar Five Minute Screening test was devised; with this and the Hewson clinitron, more than 100 blood sugar tests could be performed hourly. The reagents can be adjusted to a fixed screening level above which the results are positive. Headquarters for the diabetes branch of the U.S. public health service in 1949 were at 639 Huntington Ave., Boston 15, Mass.

The number of diabetes homes and camps for children continued to grow. In the summer of 1949 there were 11 such camps in the United States and Canada listed in the *ADA Forecast*. In England many diabetic children with unsatisfactory home surroundings were placed in various publicly and privately supported homes for year-round treatment and education. Facilities of the Clara Barton Birthplace camp in North Oxford, Mass., were extended to older girls.

Increasing Duration of Life

(Average duration from onset to death in successive eras of treatment—10,673 fatal cases)

Age at onset (Years)	Naunyn era 1897–1914	Allen era 1912–22	Banting era 1922–29	Banting era 1930–36	Hagedorn era 1937–43	C. H. Best era 1944–49
All ages . . .	4.9	6.1	8.0	10.4	12.5	14.4
Under 10. . .	1.3	2.9	2.8	7.3	10.3	18.3
10–19	2.7	2.7	3.4	7.5	11.5	15.6
20–39	4.3	4.9	8.9	14.4	16.9	18.7
40–59	7.0	8.0	9.5	11.7	13.8	15.6
60 and over. .	4.4	6.4	5.5	7.1	8.8	9.4

The steadily increasing duration of life of diabetics was shown in a compilation of fatal cases by the George F. Baker Clinic, financed by the Life Insurance Medical Research fund and the Metropolitan Life Insurance company. Beginning about 1900 steady progress was noted for each age group of patients. Those with onset between 10 and 19 years had the shortest duration, if one allows for a normal lessening expectancy due to age; evidently adolescents were the most difficult to control. The percentage of fatal cases surviving 20 years of diabetes in 1949 was 24.1 for all diabetics in contrast to 1.8 between 1897 and 1914. A hopeful sign was the fall in morbidity and mortality of diabetic coma, once the scourge of the diabetic. It reached its lowest level, 1.9% among 2,299 cases discharged from one clinic and dying later in various parts of the world. No deaths occurred in 92 successive coma cases in one hospital, none for two and a half years in another large hospital and only one in two years among cases in a third institution.

The sombre view regarding the later life of the diabetic child was emphasized by G. Fanconi of Zurich, Switz., reporting 136 cases in which none of the 87 traced lived more than 21 years. This was in contrast to the experience of the George F. Baker Clinic, in which 24% of 2,145 living patients with onset under 15 years had already reached 25 years of age and 12% had survived the disease 25 years and smaller groups 30 and even 35 years.

The importance of duration of the diabetes in the development of arteriosclerosis became evident in Howard F. Root's study of 202 diabetics with onset between the ages of 15 and 30, although it was shown that control of the disease was also a major factor. High blood pressure rose from 2% to 33%, calcified arteries from 21% to 88%, retinitis from 4% to 60% and proteinuria from 3% to 10%, as the average length of the disease advanced from the first to the third 10-year period.

Continuing research emphasized the experimental work dealing with adrenocorticotropic hormone (ACTH) and its diabetogenic action as well as the protective action of glutathione even in humans. Jerome W. Conn found in his experimental subjects, temporarily diabetic by injections of adrenocorticotropic hormone, that the hyperglycaemia fell to normal by intravenous injections of glutathione. Moreover, in a patient with Cushing's syndrome with pituitary diabetes of long standing, the intravenous injection of glutathione brought about immediately a fall to normal of the blood sugar, although of short duration. A hint of the connection of carbohydrate and purin metabolism was evidenced in patients with gout by the production of typical attacks by an injection of ACTH. Other observations pointed to the close relation of carbohydrate and protein in the promotion of synthesis of muscle protein from amino acids in the blood.

Inactivation of insulin in the organism was shown by I. Arthur Mirsky, utilizing a method by which insulin was detected in the urine. He concluded that even when the organism is overwhelmed with insulin, only a small amount (1%) will be excreted. Diabetics had less insulin in the urine than normals.

De Witt Stetten and coworkers showed that alloxan diabetic animals produce only 5% as much fatty acid synthesis from carbohydrates as normals. Insulin corrected this. S. S. Kety and associates found that although large amounts of blood go through the brain in diabetic coma, the oxygen consumption is 40% below normal. (*See* also Endocrinology; Eye, Diseases of; Public Health Services.)

United States Imports.—For many years the United States has been the foremost buyer of gem diamonds, and since 1938 the weight of industrial diamonds imported has been greater than that of the gem stones, though their value was far less. Imports of the various types are shown in Table II.

Table II.—*U.S. Diamond Imports*

(Carats)

	Rough	Cut	Industrial	Total
1939	153,982	488,154	3,570,111	4,212,247
1940	227,886	321,471	3,809,856	4,359,213
1941	215,026	229,582	6,882,750	7,327,358
1942	278,437	126,004	11,204,754	11,609,195
1943	751,674	193,701	12,173,918	13,119,293
1944	896,547	169,097	12,656,823	13,722,467
1945	893,761	377,243	10,792,186	12,063,190
1946	1,044,517	604,638	4,705,118	6,354,273
1947	996,514	347,810	4,038,082	5,382,406
1948	912,762	389,314	10,418,316	11,720,392

The values assigned to the imports reported in 1948 were: rough stones, $44,460,365; cut stones, $56,244,934; industrial stones $32,521,501, besides a small amount of diamond dust and manufacturers' bort; total value $133,226,800, as compared with $109,689,729 in 1948.

The extent to which the United States has absorbed the world's diamond supply in recent years is emphasized by a comparison of the production and import figures shown above. Imports since 1942 total 73,972,000 carats, as compared with a world output of 74,326,000 carats in the same years.

(G. A. Ro.)

Dietetics: *see* Nutrition, Experimental.

Diomedes, Alexander

(1875–), Greek economist and politician, was born at Athens. He was a friend of Eleutherios Venizelos whose Liberal government he joined as minister of finance (1912–14). After World War I he retired from politics and in 1923 was elected governor of the National bank, at that time still the bank of issue. In this capacity he negotiated the refugee loan of 1924 and the stabilization and public works loan of 1928, besides conducting negotiations which led to the creation of the Bank of Greece as the bank of issue (1928). Retiring from public life in 1930 he studied the economics of the Byzantine empire and in 1943 published a two-volume work on the land policy of the Macedonian and Comnene emperors. Before World War II he was honorary president of the Supreme Economic council and from 1945 president of the Supreme Reconstruction board, and chairman of the board of the National bank. On Jan. 20, 1949, he joined the coalition government of Themistocles Sophoulis as a nonparty deputy premier, and after Sophoulis's death he succeeded him on June 30 as prime minister of a Populist-Liberal coalition cabinet. He resigned on Jan. 5, 1950.

Disasters.

During 1949 loss of life and property in disasters included the following:

Aviation

Jan. 2	Seattle, Wash. Fourteen persons, including 11 Yale students, died in the take-off crash of a chartered plane enroute to New Haven, Conn.
Jan. 17	Argyllshire, Scotland. A U.S. B-29 bomber carrying 20 U.S. air force personnel crashed, killing all aboard.
Jan. 27	Near the Canary Islands. A U.S. B-29 bomber disappeared while flying from Dakar, French West Africa, to Marham, England, and the 15 fliers aboard were given up for lost.
Feb. 8	Oresund, off the Swedish coast. Twenty-eight persons aboard a Scandinavian air liner lost their lives when their plane crashed into the water.
Feb. 24	Hong Kong. Nineteen passengers and 4 crewmen of a Cathay Pacific Airways plane were killed when the plane crashed and burned in a fog.
March 1	Northern Luzon. A U.S. B-29 tanker plane, one of those that refuelled the plane "Lucky Lady II" on its nonstop flight around the world, crashed on a mountain peak 25 mi. northeast of Manila. Of its crew of nine, five bodies were recovered.
May 4	Turin, Italy. Thirty-one persons, including 18 members of Turin's championship soccer team, died when a tri-motored Italian air liner struck Superga hill and fell in the courtyard of the Superga cathedral.
June 7	Near San Juan, Puerto Rico. Fifty-three persons lost their lives when a twin-engined transport plane carrying 81 persons crashed in Puerto Rican coastal waters.
July 12	Near Bombay, India. Forty-five persons, including 13 well-known U.S. newspapermen, were killed when a Dutch transport plane crashed.
July 12	Near Chatsworth, Calif. Thirty-six persons died in the crash of an unscheduled commercial plane after the pilot had radioed that a fist fight had occurred between two passengers. It was later established that the fight presumably did not cause the crash, which was laid to poor visibility.
July 30	Near Fort Dix, N.J. Twelve passengers and a crew of three aboard an air liner, and the pilot of a navy fighter plane, died when the two craft collided.
Aug. 19	Yorkshire, England. Twenty-four persons died when a British air liner approaching Manchester from Belfast crashed into a peak; within a few miles, another four persons were killed when a new civilian plane lost a wing and crashed in a cornfield.
Aug. 21	Northern Manitoba, Canada. A twin-engined plane crashed about midway between Churchill and Winnipeg bringing death to 21 persons aboard, including 7 R.C.A.F. crewmen, 8 Eskimos suffering from poliomyelitis, a Canadian press reporter, a woman physiotherapist and 4 weather observers.
Sept. 9	Near St. Joachim, Que., Canada. Twenty-three persons aboard a Quebec Airways plane were killed when the craft crashed and burned on a mountainside. It was later reported that explosives had been placed aboard the plane, and a Quebec woman and a man, whose wife was aboard the plane, were held.
Sept. 26	Near Mexico City, Mexico. Twenty-five persons, all those aboard, were killed in the crash of a Mexican air liner on Popocatepetl volcano.
Oct. 28	The Azores. An Air France Constellation plane, en route from Paris to New York, crashed in flames into a mountain, killing all 48 persons aboard.
Nov. 1	Washington, D.C. The worst civil aviation disaster in U.S. history occurred when 55 men, women and children in an Eastern Airlines Douglas plane died after the air liner was rammed by a P-38 fighter plane being testflown by a Bolivian pilot, who survived.
Nov. 3	Off Hamilton, Bermuda. Eleven of the 13 men aboard a B-29 died when the plane, returning from a routine weather flight, crashed into the sea. It had attempted to land because of one disabled engine but was unable to do so because another plane blocked the runway.
Nov. 16	Stockton, Calif. Two B-29 planes on a mass training flight collided 27,000 ft. above this city, with the resulting deaths of 18 of the 21 crew members of the two craft.
Nov. 20	Near Oslo, Norway. Thirty-four persons were killed, among them 27 children, mostly orphans travelling from Tunisia to a rehabilitation centre in Norway, when the plane bearing them crashed; the sole survivor was a 12-yr.-old boy.
Nov. 29	Dallas, Tex. Twenty-eight of 46 passengers aboard a DC-6 air liner died when the plane, which had encountered engine trouble, crashed into a hangar at the airport and burned.
Dec. 1	Near Jacarèzinho, Brazil. Seventeen passengers and four crew members died when a Brazilian transport plane crashed into a mountainside.

CANADIAN PLEASURE CRUISER, the S.S. "Noronic," ablaze at its Lake Ontario pier in Toronto, Ont., Sept. 17, 1949. Of the 512 passengers, most of them U.S. citizens, and 170 crewmen, 120 lost their lives

Dec. 16 Veracruz state, north of Jalapa, Mexico. An air liner crashed in a fog and burned, carrying its 17 passengers and crewmen to death.

Dec. 22 Near Savannah, Ga. All 11 aboard died when a flaming air force B-50 bomber plunged into a rice paddy.

Fires and Explosions

Jan. 28 Chicago, Ill. Nearly 100 persons were injured in the explosion of a gas-mixing plant.

Feb. 27 Gambier, O. Nine students died in a fire that destroyed a dormitory of Kenyon college; 24 others were injured and property loss was estimated at $1,000,000.

March 30 Nadachi, Japan. Fifty-seven Japanese were killed and 16 were injured when a wartime mine drifted ashore and exploded; 40 houses were demolished.

April 5 Effingham, Ill. Sixty-six persons, including 13 infants, were killed when fire blazed swiftly through St. Anthony's hospital, in the second-most tragic hospital fire in U.S. history.

May 13 New York, N.Y. At least 66 persons were injured following an explosion of carbon disulphide aboard a truck in the Holland tunnel under the Hudson river; a 300-ft. section of the tunnel was damaged and 23 trucks were damaged or destroyed by the explosion and resulting fire.

July 21 Canton, China. One hundred twenty persons were reported killed or injured in the explosion of a Nationalist ammunition dump; officials of the arsenal were held on suspicion of setting off the blast to cover up black market dealings in munitions.

July 26 Tarancon, Spain. At least 33 persons were killed and 105 were injured in the explosion of a military arsenal.

Aug. 5 Big Belt mountains near Helena, Mont. Thirteen men, including 12 "smoke jumpers," specially trained parachute forest-fire fighters, were killed fighting a forest fire.

Aug. 20–22 Gironde department, France. More than 80 persons died in fires that burned about 125,000 ac. of woodland; the fatalities included 60 firefighters among which were 20 soldiers.

Sept. 2–3 Chungking, China. At least 1,700 persons were killed, 100,000 were left homeless and more than 10,000 buildings were destroyed or seriously damaged in an 18-hr. fire.

Nov. 6 Near Zwickau, Germany. An explosion in a soviet zone uranium mine killed 70 German miners, according to a report published on this date by the western zone newspaper *Sozialdemokrat*. Later, however, a fire brigade officer who escaped to the western zone claimed that the disaster had killed about 3,700 miners.

Dec. 14 Sioux City, Ia. Nineteen persons were killed and about 150 others were injured in an explosion, attributed to an accumulation of natural gas, that blasted a packing plant.

Dec. 24–26 United States. Sixty-four persons died in fires during the Christmas holidays.

Marine

Jan. 19 Off the New Jersey coast. Ten crewmen of the U.S. coast guard icebreaker "Eastwind" were killed and 18 others were injured in a collision between the vessel and a tanker.

Jan. 28 Southeast of Shanghai. More than 600 Chinese were missing and presumed dead after a collier and a freight and passenger liner, carrying war refugees, collided and sank.

May 20 East Bengal, Pakistan. About 100 persons were drowned when a ferryboat struck a sandbar and capsized.

July 9 Istanbul harbour, Turkey. At least 56 persons died when exploding chemicals caused a fire aboard a passenger steamer.

July 26 Near Indore, India. One hundred and forty Hindus returning from a pilgrimage were drowned when a ferryboat capsized in the Narbada river.

Aug. 26 Arctic waters near Norway. Seven persons perished when the U.S. submarine "Cochino" exploded, burned and sank; while 77 of the submarine's personnel were saved, one civilian technician attached to the vessel was killed in the explosion and an officer and five enlisted men from the sister craft "Tusk" were swept overboard and lost during rescue operations.

Sept. 17 Toronto, Canada. A total of 120 persons lost their lives when fire destroyed the Great Lakes passenger steamer "Noronic" at its berth.

Sept. 22 Magellan Straits. Seventy-seven Argentine navy officers and men perished aboard the mine sweeper "Fournier" when the ship struck a submerged rock and sank while en route to Ushuaia, Tierra del Fuego territory.

Oct. 18 Off Berwick, England. Twenty British seamen perished aboard the freighter "Maystone" when it sank during a gale after colliding with the unfinished aircraft carrier "Albion," an 18,300-ton ship, which was being towed by tugs to the drydock at Rosyth, Scotland, for completion.

Dec. 5 Off Korea. A typhoon that swept the east coast of Korea dispersed a vast fishing fleet and brought death to the crews of more than 130 boats, totalling several thousand men.

Dec. 10 Between Pu Toi or Tain Kun islands, south of Hong Kong. More than 60 Chinese passengers lost their lives when a motorship broke up in heavy seas.

Dec. 13 Off the coast of Spain in the western Mediterranean. More than 80 persons were reported dead in the sinking of four fishing boats during a storm.

Miscellaneous

Feb. 12 Quito, Ecuador. A radio dramatization of H. G. Wells's *War of the Worlds* so terrified radio listeners that a mob attacked and burned the building housing the radio station and the city's leading newspaper. Twenty persons were killed in the rioting; property damage was estimated at $350,000.

July 14 Saigon, Indo-China. Twelve persons were reported killed and 118 wounded in a riot during Bastille day celebrations.

Sept. 8 Seoul, Korea. Deaths in an encephalitis epidemic reached 206, with a total of 699 cases reported since Aug. 24.

Sept. 16 Southern Korea. Revelation was made of the deaths of at least 95 prisoners who participated in a mass jailbreak, while at the same time it was disclosed that at least 5 guards also were killed. Of 430 convicts who escaped, 275 still were at large.

Oct. 22 Cali, Colombia. Twenty persons were killed and another 40 were injured when a mob stormed a political meeting.

Nov. 22 Near Mandalay, Burma. Thirty passengers aboard an Irrawaddy river ferry were killed when rebels attacked the vessel.

Dec. 1 Burma. Clashes between government and rebel forces accounted for the deaths of an estimated 360 persons.

Dec. 14 Cocuy, Boyacá department, Colombia. A raid by persons described by the government as "bandits" caused the deaths of 82 persons.

Dec. 15 Sulu province. Republic of the Philippines. Moro rebels ambushed a constabulary combat unit and killed 71 officers and men.

Natural

Jan. 3	Louisiana and Arkansas. Fifty-nine persons were killed and more than 250 were injured as tornadoes lashed a dozen communities; 54 of the fatalities occurred in Warren, Ark.
Jan. 5	Shanghai, China. A total of 4,727 persons, of whom 3,879 were children, were reported dead of cold and hunger in Shanghai during the preceding month.
Jan. 22	West central United States. Repeated blizzards caused death of thousands of cattle and sheep, with losses to stockmen amounting to millions of dollars.
Feb. 20	Praia, Cape Verde Islands. At least 232 persons, lined up for government famine relief, were crushed to death and 50 others were injured when a wall collapsed on them.
March 24–26	Midwestern U.S.A. Tornadoes left 28 persons dead in Oklahoma, Texas, Tennessee, Kentucky, Mississippi and Arkansas.
April 13	Northwestern U.S.A. Eight persons died in earthquakes that rocked the Pacific northwest, causing damage estimated at $25,000,000.
April 20	Central Chile. Fifty-seven persons were reported killed and 89 injured when an earthquake, which caused damage estimated in the millions of dollars, shook several cities.
April 30–May 1	Oklahoma, Kansas, Texas and Louisiana. A succession of tornadoes, including 16 in Oklahoma alone, caused 9 deaths and injuries to 85 persons; property damage was estimated at many millions of dollars.
May 20	Maceio and vicinity, Brazil. More than 100 persons died and more than 200 were injured as the result of a 60-hr. torrential rain.
June 20	New South Wales, Australia. The worst flood in the history of this area caused the deaths of 7 persons and created property damage estimated at millions of dollars.
July 17	Yangtze and Yellow river valleys, China. The worst floods in half a century, aggravated by incessant rain, were reported to have made 20,000,000 people homeless. In Hunan province alone, 57,000 persons were reported drowned, 5,000,000 were rendered homeless and 5,000,000 ac. of rice fields were destroyed.
July 23	Okinawa. Thirty-eight persons died and 252 were injured, while 40,000 buildings were damaged or destroyed when a typhoon struck this U.S. naval base; 55 fishing craft were sunk and a great proportion of U.S. installations on the island were damaged.
Aug. 5–7	Central Ecuador. An earthquake that virtually demolished four towns and laid waste sections of many others killed more than 8,000 persons and left an estimated 100,000 homeless. Property damage was estimated at more than $86,000,000. Among the towns hardest hit were Ambato, Pelileo, La Libertad, Banos, Guano, Mocha, Patate and Pillaro.
Aug. 18	Erzerum, Anatolia, Turkey. Forty-five villages, including 1,565 houses, were destroyed, some 6,000 persons were left homeless, 437 were killed and 355 gravely injured as the result of an earthquake.
Sept. 1	Japan. One hundred and twenty-three persons died, 51 were missing, 419 injured and approximately 150,000 left homeless as the result of a typhoon, followed by landslides and floods.
Oct. 8	Oberschlema, Thuringia, Germany. One hundred German miners were reported killed in a flood in a mine.
Oct. 13–14	Guatemala. Torrential rains followed by floods that did $23,000,000 worth of damage to coffee, banana and rice crops caused an undetermined number of deaths, the count ranging from a police tabulation of 171 bodies, made on Oct. 18, to a government estimate of more than 4,000, announced on Oct. 19.
Oct. 27	Southeastern India. Nearly 1,000 persons were killed in a cyclone that also caused the loss of many cattle and much property damage.
Oct. 31–Nov. 2	Republic of the Philippines. The central Philippines' worst typhoon in 12 years left a total of 975 persons dead or missing and presumed dead, besides 20,000 homeless and property damage calculated at $25,000,000.
Nov. 28	Northwest United States and southwest Canada. Thirty-four persons lost their lives as the result of storms that swept across a 1,000-mi. front.

Railway

Jan. 10	Milford, Va. Twenty-three persons were injured when ten cars of the Seaboard Airline railway's Orange Blossom Special left the rails.
Jan. 11	Bay Lake, Fla. Twenty persons were injured when another section of the Seaboard Airline railway's Orange Blossom Special was derailed.
Feb. 12	Near Tarragona, Spain. Thirty persons were killed and 40 injured when the Madrid-Barcelona express was derailed.
Feb. 18	Port d'Atelier, France. Forty-three persons were killed when a locomotive crashed into an express train..
April 28	Near Johannesburg, South Africa. Three electric trains, all headed in the same direction, were involved in the Union of South Africa's worst rail disaster, resulting in the death of 74 persons and injury to more than 90 others. One of the trains crashed into the rear of a second, driving it into the third.
Oct. 22	Nowy Dwor, Poland. In what was said to be Poland's worst rail disaster in 30 years, more than 200 persons were killed when the Danzig-Warsaw express left the rails on a curve.
Nov. 15	Near Waterval Boven, Transvaal, South Africa. At least 56 persons were killed and 105 injured when a train filled with natives returning to Mozambique from months of work in the gold mines plunged off a 70-ft.-high bridge.

Traffic

July 2–4	United States. A total of 315 persons died in traffic accidents over the July 4 week end.
Sept. 3–5	United States. Four hundred and ten traffic victims were among the 550 persons killed over the Labor-day week end.
Oct. 8–10	Canada. Accidents during Canada's 71st Thanksgiving-day week end caused the deaths of at least 43 persons, including 20 killed in highway accidents.
Nov. 23–24	United States. At least 123 persons died in traffic accidents during the Thanksgiving holiday.
Dec. 24–26	United States. A total of 378 persons died of traffic accidents during the Christmas holidays.

Disciples of Christ.

The total membership of this Christian movement in the United States in 1949 was 1,738,983; world membership amounted to 1,888,236. The Disciples celebrated "A Century of Co-operation" in 1949, holding their centennial convention at Cincinnati, O., the city in which their first convention was held in 1849. Registrations reached a total of 8,303 with an estimated attendance of well over 10,000. Dr. F. E. Davison of South Bend, Ind., served as the centennial president. Highlights included the honouring of 20 out of 22 living past presidents of the convention; the commissioning of 11 new missionaries; the dedication of 1,000 young people for full-time service and a communion service with an attendance estimated at 15,000.

During 1949 new victories were scored in the Disciples "Crusade for a Christian World." Two thousand and seven hundred young people had been recruited for full-time Christian service. Eleven million dollars of the $14,000,000 crusade goal had been underwritten. Evangelism and Christian unity were stressed as key notes of this church's message to the world.

Fifty representatives from United States Disciples of Christ participated in the 50th anniversary of Protestant missions in Puerto Rico in March. Six representative Disciple ministers and secretaries shared in the plans for the formation of a United Protestant church, U.S.A., meeting at Greenwich, Conn., Dec. 14–16.

During the year there were 206 missionaries and 2,439 nationals serving in 10 fields as follows: Africa, China, India, Jamaica, Japan, Mexico, Republic of the Philippines, Puerto Rico, Argentina and Paraguay. These fields were served by the United Christian Missionary society, a board of missions and education located in Indianapolis, Ind.

A total of $44,608,325.89 was received during 1949 for all purposes including local church support, missions and benevolence.

Headquarters: The International Convention of Disciples of Christ, 516 K. of P. Building, Indianapolis, Ind.; John A. Tate, president; Gaines M. Cook, executive secretary.

Dominican Republic.

Approximately the eastern two-thirds of the island of Hispaniola constitutes the Dominican Republic. Its area, 19,129 sq.mi., is ruggedly mountainous, like that of its neighbour, Haiti; and the pop. (official est. June 1948) of 2,214,000 is predominantly of Afro-American composition. The population of the capital, Ciudad Trujillo (known as Santo Domingo from the time of Christopher Columbus, whence the name of the nation) was about 165,000 (1949); the three major provincial cities (est. of 1946), Santiago de los Caballeros (56,000); San Pedro de Macorís (23,000) and San Felipe de Puerta Plata (16,000). The president in 1949 was Gen. Rafael Leónidas Trujillo y Molina.

History.—The commercial and industrial activities of the Dominican Republic in 1949 were moderately stimulated by the firm markets for sugar and coffee. By the late summer, virtually ll marketable supplies had been shipped abroad; and at the end f the year, a genuine coffee shortage existed—as in almost all he other coffee producing areas in the western hemisphere in ate 1949, with famine prices being paid for inferior qualities. Nevertheless, the inflow of imports did not at once reflect this brisk activity, since the great bulk of goods imported comes rom the United States, and the coffee and sugar generally are old in Europe. A slight increase (by volume) in European exports to the Dominican Republic was noted late in the year. Banking activities reflected some trends of slightly slower import movement, and accelerated exports. There was some expansion of housing construction, improved transportation and he hardwood timber trade.

President Trujillo continued to acquire, for cash, extensive armament, from whatever source available. His government, which had been intermittently upon bad terms with Haiti for ome years, became particularly aroused in late 1949 by the aleged existence of conspiracies in both Haiti and Cuba to overurn by violence the Dominican regime. Returning from a cruise in U.S. waters, the president called the national congress n extra session for the purpose of securing extensive war powers. The Dominican chargé d'affaires in Port-au-Prince, Haiti, was withdrawn after he had been held incommunicado for a week, as he alleged. Sporadic reports of expeditions of exiles, starting from Cuban soil, continued to circulate through the year, after one such diminutive expedition actually ended in failure.

Relations with the rest of Latin America and with the United Nations were uneventful. The interest of the Dominican regime n European displaced persons continued to attract relatively arge numbers of such immigrants, who received extensive governmental assistance. (C. ME.)

Education.—On Dec. 31, 1948, there was a total of 2,576 schools (including 1,172 emergency schools), all of which were maintained by he state except 53 semiofficial (state-aided) and 136 private schools. The total number of pupils was 242,545. University education was available at the University of Santo Domingo.

Finance.—The monetary unit is the peso, officially pegged at par with he U.S. dollar. The 1949 budget estimated government revenue at $66,35,260 and expenditure at $66,719,649. There was no external funded debt. Short- and long-term internal obligations totalled about $23,500,000 on Dec. 31, 1948. Notes in circulation on Nov. 30, 1949, totalled $20,90,000; the gold reserve was $4,000,000. Checking deposits in commercial banks (including government deposits) totalled $27,430,000 on Aug. 31, 1949; time deposits were $15,640,000.

Trade and Communications.—Exports in the year 1948 were valued at $82,296,399 and imports at $65,329,183. Chief exports were sugar (51%), cacao (20%), coffee (8%), molasses (5%) and leaf tobacco (4%). Principal imports included machinery and apparatus (14%), oodstuffs (12%), iron, steel and manufactures (11%), cotton and manufactures (11%) and automobiles and vehicles (8%). The U.S. (including Puerto Rico) supplied 79%; the U.S. (including Puerto Rico) (37%), the United Kingdom (26%), and Canada (20%) were the eading customers. Almost all of the sugar exports went to the United Kingdom and Canada.

There were 170 mi. of public railway, all owned and operated by the government. In addition, there were about 1,650 mi. of industrial railway, operated mainly by the sugar companies. In 1949 the mileage of urfaced highway was about 500; that of all roads was about 3,000. n 1948 there were 3,124 automobiles, 2,390 trucks, 537 buses, 495 motorcycles and 44 truck-trailers. Domestic air service was supplied by Compania Dominicana de Aviacion. International service was supplied in 949 by Pan American World Airways, K.L.M., British West Indian Airways and Caribair. In 1948 there were 2,408 telephone subscribers nd about 20,000 radios.

Agriculture.—The country is predominantly agricultural and sugar cane s the chief crop. In the 1948–49 season (September-August) 525,130 hort tons of raw and refined sugar were produced; sugar exports in 948 were valued at $41,653,858. Other important crops are cacao 1947–48: 31,000 short tons), tobacco (1948–49: 24,800 short tons), offee, maize, bananas and rice. In 1946 there were 597,000 cattle, 547,00 pigs, 346,000 goats and sheep and 1,988,000 poultry.

Manufactures.—Manufacturing is limited chiefly to the processing of gricultural commodities and the production of light consumers goods. On Dec. 31, 1947, there were more than 4,200 industrial establishments epresenting a total investment of $98,000,000, of which the sugar indusry accounted for more than two-thirds. Important manufacturing enterrises in 1949 included 14 sugar mills, a large chocolate plant (comleted in 1948), 2 breweries and a cement plant. The cost-of-living index n Ciudad Trujillo, as reported by the International Labour office, stood t 218 in July 1949 (1941=100).

Mineral Production.—Activity is limited principally to the exploitation f salt and gypsum deposits and rock-quarrying.

Donations and Bequests.

In spite of what was characterized as a "mild recession" in 1949, the indexes of giving by the people of the United States held up remarkably well. It was thought that 1949 giving would come close to the $3,178,000,000 estimated for 1947, if not to the estimated total of $3,250,000,000 for 1948.

As of Nov. 30, 1949, the John Price Jones company's yearly study of publicly announced gifts and bequests in eight large cities showed a total of $251,162,946. The cities included in the study were New York, Baltimore, Boston, Chicago, Los Angeles, Philadelphia, St. Louis and Washington, D.C.

Of this total $207,250,666 was in gifts, showing a decrease of only 3.39% from 1948. Bequests—attributable entirely to the unpredictable accident of death and not to economic factors in a given year—amounted to $43,912,280, in place of $98,232,982 the year before. This brought the combined total of gifts and bequests to a point 19.69% below the 1948 figure.

The fact that large-scale giving for philanthropic purposes still prevailed, however, was shown by another of the company's studies. This revealed that between July 1, 1948, and June 30, 1949, there were published records of 87 gifts of $500,000 and over made in the United States, for a total of $173,547,770.

Of these benefactions, 37 were bequests totalling $95,213,770, while 25 were gifts by living persons for a total of $26,954,000. Foundation and corporate support made up the balance.

The largest proportion of this philanthropy went to educational institutions. Other fields, in the order favoured, were health, fine arts, organized social work, recreation, religion and foreign relief.

Published reports of 178 fund-raising campaigns, however—responsible for a total of $361,597,538—showed the largest amounts going to organized social work and health organizations. It was estimated, moreover, that religion is the largest single beneficiary of American generosity, with gifts totalling more than $1,250,000,000 annually for religious purposes.

(J. P. J.)

Great Britain.—The already high rate of death duties which was raised in the 1949 Finance act severely curtailed large bequests. The second Viscount Leverhulme, who died on May 26, left "as far as at present ascertained" (Aug. 1949) £2,357,039. Death duties amounted to £1,656,475. He made only nominal charitable bequests, the largest being £1,000.

During the year a personal bill was presented to the house of lords by Countess Mountbatten of Burma. She wished to obtain greater control over her inheritance under the will of her grandfather, Sir Ernest Cassel. The bequest was subject to restrictions which prevented her dealing with the capital of over £1,400,000. It was stated that her income, after taxation, was about £4,500 a year and that the joint income of Earl and Countess Mountbatten was only one-ninth of what it had been in 1922. The bill was passed unanimously by the house of lords but, because of opposition by Conservative members in the house of commons, was withdrawn after a government assurance to introduce a bill to free from similar restrictions all persons affected by such bequests. The Married Women (Restraint upon Anticipation) bill was introduced by the government. It was given a second reading in the house of lords on July 5 and in the house of commons on Nov. 7. The attorney general estimated that the number of married women affected was "thousands, but not tens of thousands." An amendment to reject the bill was defeated in the house of commons by 47 votes to 180.

During the year Nottingham university appealed for a £1,000,000 endowment fund. Within five months £250,000 was received. The appeal was to be open for three years. James P. R. Lyell, a solicitor, bequeathed the bulk of his £39,250 estate to Oxford university, the income to endow a readership in bibliography. He gave to the Bodleian library 100 rare mediaeval manuscripts. Drew, George Alexander

(1894–), Canadian political leader, was born May 7 at Guelph, Ont. He was educated at Guelph Collegiate institute, Upper Canada college and the University of Toronto.

He became leader of the Ontario Conservative party in 1938, and was elected by acclamation to the Ontario legislature in 1939. In 1943 he was sworn in as premier of Ontario and minister of education. In the 1948 election, although his government won 53 out of 90 seats, he was personally defeated, and he entered federal politics.

On Oct. 2, 1948, at a dominion-wide convention he was chosen leader of the national Progressive Conservative party. The federal seat of Carleton was opened and Drew was elected to parliament on Dec. 20.

In the June 27, 1949, general election Drew retained his seat in Carleton, although his party suffered defeat at the polls and reduced its membership from 68 to 42 seats.

During the first session of the 21st parliament, Sept. 15 to Dec. 10, Drew was the centre of many stormy scenes. He strongly condemned the government methods which resulted in the raising of rents, and unsuccessfully called for the resignation of the minister of justice for the suppression of the McGregor combines report, and the resignation of the reconstruction and supply minister for the suspected lack of loyalty among national film board members.

On Oct. 31 the executive of the Progressive-Conservative association passed a unanimous vote of confidence in Drew's leadership. (C. Cy.)

Drug Administration, U.S.

The detection of potential sources of error in drug factories was given major emphasis in the federal drug control program in 1949. Despite the exercise of adequate precaution in most plants, faulty manufacturing procedures in a few, followed by inadequate testing of the finished products, insufficient research, poor control in the label department and inadequate warnings on the label, resulted in an unprecedented number of drug recalls. In 26 of these cases the manufacturers, frequently aided by federal and local drug officials, recovered all outstanding stocks of the suspected drugs. In the remaining seven, the Federal Security agency's Food and Drug administration issued radio and press warnings because the records of manufacturers and distributors were inadequate to locate retailers and consumers possessing the dangerous drugs. The most extensive of the 1949 recalls involved several manufacturers' lithium chloride salt substitutes found to cause lithium intoxication in patients on salt-free diets.

The Food and Drug administration intensified its efforts to restrict retail sales of prescription drugs that had moved in interstate commerce to the specific orders of physicians. Inspectors investigating the promiscuous sale of barbiturates, reported tragic tales of suicides, accidental deaths and broken families. Occasionally there was no original prescription, but usually a single prescription had been refilled repeatedly without the knowledge of the victims' physicians. In general, pharmacists refuse to sell such drugs without physicians' orders. In the exceptional cases, criminal actions were brought in federal court against druggists making promiscuous sales.

INSPECTORS of the U.S. Food and Drug administration, tuned in on 1949 television programs to listen for false or misleading statements in advertising

Seizure figures for misbranded remedies differed little in 1948 and 1949. Several involved curative claims for cancer, tuberculosis, poliomyelitis and other scourges that had been publicized by epidemics and appeals for funds. A great majority, however, promised cure or alleviation for nervous upsets, arthritis and rheumatism, stomach and intestinal disorders and skin and scalp conditions.

Before a new drug may be marketed, the manufacturer must submit an application to the Food and Drug administration, supported by research showing that it will be safe to use and that production controls will be adequate. Labelling claims of efficacy after the drug is placed on the market are subject to the misbranding provisions of the act. The most important therapeutic agents included in the 360 new-drug applications permitted to become effective in 1949 were vitamin B_{12} and three antibiotics later covered by an amendment to the act requiring predistribution certification by the administration of aureomycin, chloramphenicol and bacitracin. These drugs, produced by biological processes and assayed by biological methods, were spectacularly efficacious in many diseases not formerly amenable to treatment with drugs.

During the fiscal year, 295 batches of drugs composed wholly or partly of insulin, 12,557 batches of penicillin and penicillin products, 1,280 of streptomycin and 782 of dihydrostreptomycin were certified after passing tests for purity, potency and stability. Also certified were 4,858 batches, representing more than 4,000,000 lb., of coal-tar colours for use in foods, drugs and cosmetics.

More than 2,000 factory inspections and the examination of samples of 11,785 shipments of drugs and devices resulted in 375 seizures and the institution of 80 criminal prosecution and 4 injunction cases. More than 1,900 drugs and devices that did not comply with the requirements of the United States were denied entry at the ports. (*See* also Federal Security Agency; Narcotics and Narcotic Traffic.)

Dutra, Eurico Gaspar

(1885–), president of Brazil, was born in Cuiabá, Brazil, on May 18. He was educated in Rio Pardo and Porto Alegre, Rio Grande do Sul, and was graduated from the Brazilian Military school, Rio de Janeiro, in 1908. Becoming a second lieutenant of cavalry in 1910, he progressed through the military grades until in 1932 he was named brigadier general and director of military aviation. In 1936 he was named minister of war and served in that capacity through World War II, during which he visited the U.S. to inspect war activities and organized the Brazilian expeditionary force that fought in Italy. He was elected president of Brazil in Dec. 1945, and took office Jan. 31, 1946. His government extended recognition to Israel in Feb. 1949. In May President Dutra made the first visit to the U.S. that had been paid by any Brazilian chief of state since that of Emperor Dom Pedro II in 1876. He was greeted by Pres. Harry S. Truman, and on May 21 the White House announced that the two chiefs of state had reached an agreement to work out a program for economic development and social progress. The negotiation of a cultural treaty between the two nations was also approved.

Dyestuffs.

The volume of dyes sold during the first seven months of 1949 was approximately 15% lower than for the same period in 1948. The tightening of consumer buying forced reductions in the textile, paper, leather and other colour-consuming industries with a resultant decrease in the consumption of dyes. The situation changed materially in August with renewed industrial activity, and the demand for dyes continued strong throughout the balance of the year. Export requirements remained fairly stable despite the uncertainty of dollar exchange in many foreign countries. Little change occurred in the weighted average domestic price of dyes; a reduction of 4% was made on a few products but the unit value per pound was comparable to the previous year's figure.

The U.S. dyestuff industry maintained close co-operation with scientific and technical associations. These played a vital part in establishing high standards of dyed and finished textiles by developing new testing methods and specifications which were widely adopted by the textile industry. Dyestuff research resulted in the marketing of a number of new products possessing better fastness and improved dyeing properties. The use of fast vat colours was extended to a broader variety of fabrics with varying end uses that gave the consumer the ultimate in colour durability. New hydrophobic and other types of synthetic fibres presented complex coloration problems, but it was generally possible to provide colours and formulas adapted to the chemical characteristics of the fibre. The ability of the industry to meet these previously unknown exigencies became an important factor in the development of new synthetics.

According to official figures released by the United States tariff commission, the production of all types of dyes in 1948 amounted to 201,376,000 lb., 5% less than the record output of 212,000,000 lb. in 1947. The decline in several low-priced dyes, including sulphur black and indigo, was largely responsible for this decrease. Sales of all dyes in 1948 totalled 186,782,000 lb. valued at $163,833,000 compared with 205,210,000 lb. valued at $148,154,000 in 1947. The unit value of all dyes sold amounted to 88 cents per pound compared with 72 cents in 1947. The class of vat colours still remained the most important from the standpoint of both production and sales, and in 1948 accounted for 29.7% of the total quantity produced, direct dyes for 25.8%, acid dyes for 12.7% and sulphur dyes for 10.1%.

Four classes of dyes accounted for 85% of the total production of all dyes: azo dyes for 44%, indigoid and thioindigoid dyes for 16%, anthraquinone vat dyes for 14%, and sulphur dyes for 10%. The largest increase in 1948 was registered by the azo group, which increased 13.2% to 88,559,000 lb. while the greatest decrease was reported for the sulphur dyes, which declined in output about 51% from 41,820,000 lb. in 1947 to 20,366,000 lb. in 1948. Production of direct dyes increased 20% to 51,967,000 lb. and acid dyes increased 9% to 9,298,000 lb.

Sales of vat dyes, other than indigo, were valued at $40,131,000, direct dyes at $38,605,000, acid dyes at $22,955,000 and sulphur colours at $6,394,000, the latter having been exceeded in total value by the azoic, basic and acetate dyes. Figures for 1949 production and sales were not available at the close of the year. (A. G. Br.)

Europe.—It became evident in 1949 that European output of dyestuffs was keeping pace with consumption. With the possible danger of overproduction of dyestuffs in mind, as well as to see what reductions in dollar expenditure might be possible, the chemical products committee of the Organization for European Economic Cooperation undertook a study of seven major chemical products, one of which was dyestuffs. Replies to a questionnaire by the committee to the various countries revealed that a considerable increase in production was anticipated.

European Production of Dyestuffs

(In metric tons of commercial product)

Country	Production 1947	Production program 1952-53	Anticipated Exports 1952-53
Benelux	1,900	6,400	4,500
France	16,000	27,000	10,000
Italy	8,900	20,000	8,000
United Kingdom	34,000	52,000	20,000
Switzerland	15,000	20,000	18,500
Germany (Bizone)	4,300	33,000	18,000
French zone of Germany	4,000	4,300	1,000
Total	84,100	162,700	80,000

A working party, consisting of representatives of the western European countries, was formed to make a critical study of consumption and foreign outlets, but had not yet published its report.

Dyestuff manufacturers reported a widening of interest in fast colours and specialities. There was also an increasing demand for special colours for mixed fibres.

Some light on Russian dye production was thrown by Herbert Levinstein, during an address at Bradford in 1949. The industry formed an important part of the latest five-year plan and was scheduled to produce by 1950 one-and-a-half times as much as before World War II. The target was 43,000 tons, with special emphasis on fast colours.

Ear, Nose and Throat, Diseases of.

W. J. Hitschler made an exhaustive study of opinion in reference to the effect of swimming and diving on sinusitis and hearing loss. Eighteen hundred letters and post cards were sent to swimming coaches, general physicians, school and health physicians, ear, nose and throat physicians, physical instructors and many swimmers.

Large numbers of students were examined, and Hitschler reached the following conclusions:

1. The incidence of sinusitis and hearing loss among healthy, adult, trained swimmers was no greater than among unselected college graduates.
2. There was less severe upper respiratory infection among swimmers than among the controls.
3. In the experimental group, the figures suggested that lesions contracted from swimming and diving were more likely to be severe than were those contracted from other causes.
4. Geographical location bore no definite relation to the incidence of disease.
5. Coaches and swimming experts saw little infection; school and college physicians and boarding school personnel saw more; otolaryngologists (ear, nose and throat men) still more; and pediatricians most.
6. Salt water swimming was considered safer than fresh water swimming.
7. Factors emphasized leading to the contraction of disease were lack of proper training and supervision, immaturity, the presence of already existing upper respiratory infection and contaminated water.

Haemorrhage.—Haemorrhage occurs in all surgery of the ear, nose and throat and is often difficult to stop; hence the constant search for an easy, foolproof method of stopping bleeding. However, after carefully reviewing the literature and their own extensive experience in all manner of nose and throat surgery, B. H. Senturia, J. H. Ogura and T. E. Walsh found that thrombin was useful in controlling venocapillary oozing after tonsillectomy and adenoidectomy. Vigorous venous and arterial bleeding were not controlled by the use of thrombin.

The application of thrombin may be of value in the control of venocapillary ooze from the nose, but brisk bleeding from Little's area (front interior of nose on septum; *i.e.*, central partition) or from the lateral nasal wall was not controlled. Bovine thrombin, as a sterile white powder, was used in the middle ear following radical mastoidectomy, and provided a dry bed for skin grafting. Also, it was effective in cases of bone and soft tissue oozing, dural and lateral sinus bleeding where epinephrine failed and where cautery (hot wire) was deemed inadvisable.

Absorbable sponge saturated with thrombin was demonstrated to be a harmless and valuable adjunct for use in the following surgical procedures: (1) good results were obtained during radical mastoidectomy; *e.g.*, obliteration of inaccessible parts of the mastoid cavity prior to skin grafting; (2) it was found useful to patch lacerations and incisions of the dura (covering of the brain), jugular bulb and lateral sinus; (3) it was used successfully as an innocuous haemostatic agent as well as a protective cushion over the exposed facial nerve; (4) the sponge was used to protect linear tears in the membranous flap during the fenestration operation (window operation on the inner ear) for a certain type of conduction deafness; (5) good results were obtained in radical neck dissection where unusual bleeding followed X-ray therapy; (6) promising results were obtained in the use of a thin sheet of sponge as an interseptal bridge in cases of postoperative through and through perforations of the nasal septum; (7) unsatisfactory results were obtained when the sponge was used to control brisk bleeding from the lateral nasal wall; (8) no methods could be devised for the safe use of absorbable sponge in the oropharynx or nasopharynx.

Antibiotics.—A. C. Furstenberg gave an excellent résumé of the varied uses of all the new powerful drugs used in ear, nose and throat diseases. He concluded that nearly all acute infections of the ear, nose, sinuses and throat respond in a gratifying manner to the intramuscular administration of penicillin. The isolation and identification of the causative organism in every case of infection is an idealistic pronouncement but hardly feasible and practicable in everyday practice. When, however, a definite clinical response to the antibiotic is not promptly observed, the organism must be identified and its sensitivity determined.

When dealing with meningitis, where time is an essential factor, delay for the identification of the organism can hardly be advocated. There can be no compromise with the prompt institution of therapy. Antibiotics of proved values—penicillin, streptomycin, and even aureomycin and chlormycetin, particularly the latter when an intracellular organism is suspected—should be employed in maximum dosage in conjunction with chemotherapy. Some of these agents will of course be eliminated when the organism is found and the specific antibiotic can be used.

Penicillin, to be effective, must come in actual contact with the organism and maintain a sustained contact. The difficulty of applying this principle to the upper air passages accounts perhaps for the disappointing results observed from the popular methods of topical administration. Penicillin aerosol is of little value in the treatment of bronchiectasis (dilatation of the bronchi) although direct application of concentrated solutions of penicillin to the bronchiectatic cavities through the bronchoscope was productive of encouraging results.

A dense capsule surrounding a chronic abscess in the neck is a barrier to penicillin therapy. Likewise necrotic (dead) tissue or a foreign body within the abscess renders the lesion resistant to the antibiotic. Similar factors influencing adversely the effect of penicillin were found in chronic suppurative otitis media (pus-forming middle ear disease), and mastoiditis, osteomyelitis of the skull and facial bones and chronic nasal accessory sinus disease. No antibiotic known in 1949 could cure these pathological entities when used systemically, locally or by both methods.

The possible injurious effects of penicillin in the absence of infection were pointed out. The normal basic flora of the throat may be altered to include harmful organisms. It could be argued that the prolonged administration of the antibiotic might produce resistant organisms, which would not respond in the future to a sorely needed antibiotic.

Streptomycin was found to be particularly effective in tuberculous cervical adenitis and in tuberculous mucous membrane lesions. Its allied agent dihydrostreptomycin, comparatively free from neurotoxic effects (nerve injury effects) gave promise of replacing the original antibiotic in treatment of these conditions. However, until further experimentation yielded an improved product devoid of irritating effects, dihydrostreptomycin could not be advocated for use in the spinal column.

Nasal Surgery and Rhinoplasty.—The most significant advances in nasal surgery were brought to the fore by Armand Carron, Samuel Fomon, and Dean M. Lierle and W. C. Hoffman. There were changing concepts in the structural anatomy and surgery of the obstructing septum (the cartilaginous bony partition separating the two sides of the nose). As Carron pointed out, a closer liaison had been effected between physiology; *i.e.*, reason and function, and nasal surgery. The nasal cartilages, the external ones, both lower and upper, are tremendously important in the ventilation of the lung and help to regulate the minute volume of inspired air. Detailed diagnoses of causes of collapsing alae (lower cartilages and flare of nose) and their surgical correction were clearly presented by Carron. One of the significant trends in otolaryngology in 1949 was the formal incorporation of rhinoplastic surgery in the training of all those interested in diseases of the ear, nose and throat.

astern Orthodox Churches.

The new ecumenical patriarch, Athenagoras , was solemnly enthroned in Istanbul, Turk., on Jan. 27, 1949, nd the year which elapsed saw a continual sharpening of the livision within the Orthodox body. Four days after his enhronement, Athenagoras, who had only lately relinquished his J.S. citizenship, went to Ankara, Turk., to deliver a personal nessage from Pres. Harry S. Truman to Pres. Ismet Inönü. As gesture of satisfaction at his election the Turkish government ave him formal permission to appear publicly in his robes of ffice. And not only with the United States and the Turkish overnments, but with the papacy and the Roman Catholic Church, the new ecumenical patriarch developed a cordiality hat his predecessors had not found it possible to achieve. In is first allocution after his election Athenagoras called on the Orthodox to co-operate with all Christian churches, including he Roman Catholic Church; in March he called on Msgr. Andrea Cassulo, apostolic delegate to Turkey, to offer his conratulations on the tenth anniversary of the coronation of Pope Pius XII; and on Greek Independence day it was at his special nvitation that Monsignor Cassulo came to hold a Roman Cathoic religious service on the premises of the Greek consulate in stanbul—these were illustrations of the greatly changed atnosphere that the new ecumenical patriarch introduced.

The patriarchate of Moscow, on the other hand, continued to dentify itself more and more intimately with the policies of the J.S.S.R., thus accentuating its separation from most of the rest f the Orthodox world. The Moscow theologian A. Krachenninikov, in the *Journal of the Moscow Patriarchate* in the utumn, went as far as anyone yet had done, when he declared hat the Russian Church, in supporting the foreign policy of he soviet government, had fulfilled "a holy duty of the religion f love" and that the position of the Russian Church had not varied "in the face of the current forces in the world today—hose of progress and those of reaction." He went on to make a violent and characteristic attack on the Roman Catholic Church nd the World Council of Churches, and to say that there was n "irreconcilable opposition" between the Orthodox east and he rest of Christendom. Patriarch Alexei of Moscow made a ypical comment in August, when he replied to a series of quesions from Reuters' agency on the papal excommunication of Communists; Athenagoras, on the other hand, had expressed himself in sympathy with that Roman decree.

The division among the Orthodox reflected itself in various reas: the patriarch of Alexandria had the reputation of feeling ome sympathy with Moscow; and there were many misgivings mong the Orthodox in Palestine when the Israeli parliament lecided to acknowledge the claims of the Moscow patriarchate o Russian Orthodox property and institutions in Israel. In Yugoslavia Patriarch Gavrilo found some relief in Marshal Tito's quarrel with the Cominform; and Balkan prelates, like he metropolitan Josip of Skoplje and Bishop Varnava of Saraevo, could even be described as anti-Russian. On the other hand, the patriarch Justinian of Rumania showed himself more nd more committed to the Communist revolution.

In Greece, Archbishop Damaskinos of Athens, the former egent, died on May 20, and on June 4 the Holy Synod elected s his successor the metropolitan Spiridon Vlachos of Janina. (*See* also Religious Education.) (M. Dk.)

Economics.

The central theme of the annual December meeting of the American Economic association at New York city, "A Stocktaking of American Capitalism," suggests the dominant spirit in the organized discipline of economics for the year 1949. Several significant and sobering events and developments of the year contributed to this attitude of critical self-appraisal by suggesting the existence of soft spots in the economy of the United States and by playing up contrasts between conflicting world economic ideologies. These included a pronounced recession, a period of grave uncertainty and an unmistakable recovery at about mid-year; a continuation of the nearly complete political impasse in U.S.-soviet international political relations; currency devaluation by Britain and the sterling bloc; and an apparently only partially successful demand by Paul G. Hoffman, director of the European Recovery program, that the Marshall plan nations of Europe coordinate their economies by tariff reduction, trade quota reforms and collaborative planning. At a time when the United States faced the certainty of an unbalanced federal budget in a predominantly prosperous year, acute differences in top level economic opinion were evinced by the resignation of Edwin G. Nourse as chairman of the president's council of economic advisers. In the meantime the disposition and tactics of unionism continued aggressive even though the inflationary movement had apparently stopped.

With economists in a stocktaking mood it was inevitable that the interest in aggregative economics already sharpened by the events and writings of 1947 and 1948 should have become intensified. The effects of such things as changing monetary policy, technological advance, income inequality, monopolistic and oligopolistic restrictionism, power blocs and collective bargaining by a type of economic blackmail on the total operations and income flows of the economy were uppermost in the minds, analytical agenda and research projects of economists. There was considerable evidence that oligopolistic pricing, with or without collusion, was coming more and more to be recognized as the typical or modal market situation in the United States. Aggregative economics and oligopolistic price analysis, then, both with a marked emphasis on institutional factors, moved into the forefront of economic theory.

The veritable flood of "new approach" elementary texts perceptibly abated during the year. Books in the area of intermediate theory became more numerous. There was a heightened interest in locational analysis stimulated to some extent by a number of industrial reallocation projects for national defense. There was a continuing lively interest in econometrics.

A cold, objective, critical, but sympathetic diagnosis, rather than either a blatant and partisan defense or a complacent acceptance of capitalism, is probably the best characterization of economics in the United States in 1949. (G. J. C.)

Ecuador.

A republic on the west coast of South America, straddling the equator, after which it was named, Ecuador is bounded on the north and east by Colombia, on the east and south by Peru and on the west by the Pacific ocean. It has an area of 104,510 sq.mi. (including the Galápagos Islands, a dependency of 3,029 sq.mi.) and a population (1948 estimate) of 3,362,000. About 60% of this figure represents Indians, 30% mestizos, 9% whites and 1% Negroes. Quito (pop., 1947 census, 200,185) is the capital; other major cities (with pop. estimates) are Guayaquil, the main port (235,000); Cuenca (53,520); Riobamba (28,500); Jipijapa (23,000);

RESCUERS searching for casualties among the ruins of the cathedral at Ambato, Ecuador, following the disastrous earthquake of Aug. 1949, in which more than 8,000 persons were reported killed and about 100,000 made homeless

Vinces (22,350); Chone (22,280); Ambato (22,300); Loja (21,560); and Latacunga (21,750). The predominant religion is Roman Catholicism. President in 1949: Galo Plaza Lasso.

History.—Although political opposition began to coalesce in 1949, the Plaza administration remained fundamentally stable. The government pushed forward with sweeping programs calling for land distribution and resettlement, irrigation, selective credits to farmers and other producers, and servicing of the external debt. The administration was hampered somewhat by the gradual disintegration of the National Civic Democratic Movement, the hybrid organization chiefly responsible for President Plaza's election in 1948, and on June 27 the Socialist party proclaimed its "revolutionary opposition" to the government. A subversive plot was broken up on July 4, when Julio Moreno Espinosa of the Liberal Radical party, Juan Manosalvas of the Federation of University Students, and five army majors were imprisoned.

Delegates from 14 American republics attended the fifth Pan American Press congress, held at Quito from July 11 to 18.

On Feb. 12 a realistic radio dramatization of H. G. Wells's *The War of the Worlds* so terrified residents of Quito that a mob attacked and burned the building which housed both the radio station and the offices of *El Comercio*, the capital's leading newspaper. Twenty persons were killed in the rioting, and the property damage was estimated at $350,000. Three officials charged with responsibility for the broadcast were arrested.

South America's most catastrophic earthquake in ten years struck Ecuador in a series of 15 tremors occurring between Aug. 5 and 7. The centre of destruction lay about 50 mi. south of Quito, and the affected area embraced about 1,500 sq.mi. and a population of approximately 300,000, of whom 100,000 were left homeless. The death toll, at first placed at 4,600, was eventually estimated to be more than 8,000, and the property damage was calculated at more than $86,000,000. The village of La Libertad (pop., 600) was completely buried in a mile-wide pit more than 1,500 ft. deep. Between 400 and 500 people died at Ambato, where a reported 70% of the houses were uninhabitable. President Plaza hastened to the stricken area to learn the extent of the disaster, and reported in a radio address on Aug. 7: "Just to give you an idea of the magnitude of the catastrophe, in one town of about 3,500 residents [Pelileo], about 300 survived."

Relief activities, jointly undertaken by the U.S. and other American republics, were organized within a few hours. A "mercy airlift," grouped around about 20 aeroplanes based at the Panama Canal Zone, was in operation by the afternoon of Aug. 7, delivering doctors, nurses and supplies to the stricken area and evacuating refugees and injured persons.

In balloting at Lake Success, N.Y., on Oct. 20, Ecuador received a nonpermanent seat on the United Nations Security council. (G. I. B.)

Education.—Primary education is gratuitous and compulsory. In the school year 1948–49 there were 3,029 public primary schools with 208,155 pupils and 396 private schools (mostly Roman Catholic) with 56,116 pupils. There were 57 public secondary schools with 11,321 pupils, 68 private schools with 5,502 pupils and 2 municipal schools with 1,192 pupils. There were four public universities—Quito (2,383 students matriculated), Guayaquil (1,472), Cuenca (541) and Loja (144)—and one private university—the Catholic university of Quito (60 students). Education was scheduled to receive 20.5% of the 1949 budget.

Finance.—The monetary unit is the sucre, valued on Oct. 15, 1949, at $0.0741, U.S. currency, official rate, and at $0.0544, free rate. The national budget for 1949 balanced revenue and expenditure at 436,400,000 sucres. The foreign debt on Nov. 30, 1947, was $37,595,000; the internal debt on Oct. 31, 1947, was 124,262,000 sucres. Notes in circulation on Oct. 31, 1949, totalled 330,000,000 sucres; the gold reserve was $20,600,000. On Sept. 30, 1949, commercial banking deposits were 368,000,000 sucres, time deposits were 99,000,000 sucres, and government deposits 58,000,000 sucres.

Trade and Communications.—Foreign trade through the port of Guayaquil in 1948 included exports (excluding gold) valued at 462,000,000 sucres and imports valued at 568,146,000 sucres. Chief exports were rice (41%), cacao (39%), coffee (8%) and petroleum (5%). Principal customers were the U.S. (35%), the Philippines (13%) and Venezuela (4%). Leading suppliers were the U.S. (73%) and the United Kingdom (6%).

The length of the nine railroads in operation in 1947 was 650 mi. Highways (1947) included 1,591 mi. of main roads and 1,121 mi. of branch roads. In 1948 there were 2,921 automobiles, 4,245 trucks and 945 buses. Air service is maintained by two Ecuadoran companies—Transandina and Ateca (Aereos Transportes Ecuatorianos)—and by Avianca (Aerovias Nacionales de Colombia), Braniff Airways, Lineas Aereas TACA de Colombia and Panagra. On Dec. 31, 1948, there were 43 radio broadcasting stations.

Agriculture.—Ecuador's economy is basically dependent upon its export crops. Production of the principal export crops in the crop year 1948–49 was estimated as follows: cacao 22,000 short tons; coffee 345,000 bags of 132 lb. each; and rice (1947–48) 97,000 short tons (milled). Other crops include bananas, citrus fruits, castor beans, tobacco and cotton. In 1945 there were about 1,200,000 cattle, 1,443,000 sheep and 346,000 goats.

Important forest products include tagua nuts (exports 1947: 14,325 short tons), balsa wood (1,250 short tons), hardwood logs and lumber (3,750 short tons) and cinchona bark. Rubber collection and exports dropped sharply in recent years; only 83 short tons were exported in 1947.

Manufactures.—The most important manufacturing activity is the textile industry, which produces cotton (principally), woollen, silk and rayon textiles, some of which are exported. The manufacture of *toquilla* (Panama) hats is also important; 3,116,387 hats were exported in 1947. Numerous factories produce consumer goods for domestic consumption.

Mineral Production.—Production in 1948 (South American Development Co.) included gold 70,196 fine oz.; silver 226,664 fine oz., and lead 760,226 lb. Production of petroleum, concentrated on the Santa Elena peninsula in Guayas province, was 2,460,000 bbl.

Education. The chief educational trends during 1949 in the United States were the following: (1) an all-out campaign to secure a federal law which would bring the level of education in the poor states up to that of the more fortunate ones; (2) the rise of religious tempers, especially the Catholic and the Protestant, over the issue of federal aid to education; (3) the increase in public interest with regard to the improvement of the material and pedagogical conditions, particularly in the south and the west; (4) the persistence of the shortage of suitable school buildings and of qualified teachers in the elementary schools; (5) the intensification of the efforts to reduce discrimination against minorities in education and to grant the Negroes equal rights to schooling all over the nation; (6) the growing and widening debates on the place of communism and Communists in the schools; (7) the rise of enrolments on all scholastic levels, with a falling off in veterans' attendance in the colleges; (8) the steady increase in the number of foreign students attending U.S. colleges and universities; (9) the extension of the idea of regional higher education from the south to the west; and (10) the continued interest in international educational co-operation and in the work of U.N.E.S.C.O. (United Nations Educational, Scientific and Cultural organization).

According to the United States office of education, the school year 1949–50 would be marked by the following attendance figures: elementary schools, 23,377,500; high schools, 6,533,000; higher education, 2,400,000; private commercial and nursing schools, 361,000; grand total, 32,671,500. The actual number of persons in school during 1948 was 31,880,000. With the birth rate still climbing, educational leaders predicted a rise in enrolment in elementary and high schools for several more years.

There were three sets of statistics on attendance in the colleges and universities. The United States office of education estimated that 2,456,000 students were enrolled in 1,809 higher institutions, an increase of 2% over the figure for 1948, in spite of a drop of 166,000 in the number of veterans. The results of a questionnaire survey of 1,387 colleges and universities, publicized in November by Benjamin Fine, education editor of the *New York Times*, revealed 2,510,931 students. President Raymond Walters of the University of Cincinnati, Cincinnati, O., in his 30th annual survey of statistics in higher education reported a total of 1,567,500 full-time students and 427,295 part-time students, or an over-all enrolment of 1,994,795, in 753 approved four-year institutions (*School and Society*, Dec. 17, 1949). Veteran attendance, according to the office of education, fell off from 1,022,000 in 1948 to 856,000 in 1949, a decrease of 16%. (*See* also VETERANS' ADMINISTRATION, U.S.)

Federal Aid.—Once more, President Harry S. Truman took the initiative in January by urging in his message on the state of the union that congress act in behalf of "prompt federal financial aid to the states to help them operate and maintain their school systems." He maintained that "shocking" educational conditions prevented "millions of our children" from "receiving a good education." His budget message to congress included a request for $300,000,000 for "federal aid to education." Also in January, Senator Elbert D. Thomas of Utah introduced a bipartisan bill, S. 246, authorizing "the appropriation of funds to assist the states and territories in financing a minimum foundation education program of public elementary schools, and in reducing the inequalities of educational opportunities through public elementary and secondary schools, for the general welfare, and for other purposes." This bill, which was the same as S. 472 passed in 1948, allotted $300,000,000 per annum to the states on the basis of need and with no federal control of school policy. Each state was to receive at least $5 for each child in elementary and high school. Those states operating separate schools for minority races were to give a proportional share of the money for the improvement of these schools. The senate passed S. 246 by a bipartisan vote of 58 to 15, a wider margin than in 1948.

The house of representatives continued its practice of letting educational legislation bog down. Its Barden bill (H.R. 4643), which differed from S. 246 by restricting the annual fund of $300,000,000 to the public, tax-supported schools and banning the extension of auxiliary school services to the nonpublic schools, ran into a snag in the house labour and education committee after Cardinal Francis J. Spellman of New York city denounced it as a discriminatory measure. Despite efforts to compromise, there was no congressional action on the issue of federal aid to education. Opposition to federal legislation on education was also expressed on grounds other than the religious. In the forefront were the United States chamber of commerce and such leading educators as presidents Dwight D. Eisenhower of Columbia university and Harold W. Dodds of Princeton university, the latter two chiefly because of their belief that federal aid would involve federal control of schools. Former President Herbert Hoover opposed federal aid, whereas the task force Report on Public Welfare, which was issued in January by his Commission on Organization of the Executive Branch of the Government, was in favour of it.

Legislation enacted by the first session of the 81st congress included a grant of $7,500,000 to local school agencies for educational services to children on federal reservations or in defense areas; a fund for the construction of public schools and colleges in time of depression; the continuation of gifts of surplus property to schools; the restriction of federal funds to veterans' courses which were not avocational or recreational in nature, and the withholding of scholarships under the Atomic Energy commission program from persons who advocated the violent overthrow of the United States government; and money for the instruction of Finnish and Chinese students in U.S. colleges and universities. An attempt to raise the Federal Security agency to the level of cabinet status was defeated. Some educators felt that the U.S. office of education, under this plan, would fall under political control.

Elementary and Secondary Education.—The annual report of the National Education association (N.E.A.) in December revealed that about 250,000 pupils attended half sessions in many school systems and that at least 4,000,000 more suffered from overcrowded classrooms and poor educational conditions. The U.S. office of education judged that an investment of $11,000,000,000 was required to bring up to par the nation's school buildings and facilities. The N.E.A. reported in April that the grade schools were devoting four times as much time to the "three R's" as they did a century before. Questions as to the validity of intelligence tests and the use of intelligence quotients (I.Q.'s) as a basis for school curricula were raised at meetings of the American Association of School Administrators by Allison Davis of the University of Chicago. According to Davis, the tests, by their very nature, favoured children of the more fortunate economic levels. This view received support by some psychologists and was attacked by others. Other events of interest were the debates about the teaching of sex education, especially in the form of films; the increased emphasis on American history in New York state; the requirement of a course in driving for all high school students in California; and the stress in *Educational Forum* and other professional journals on the fact that the fees charged in many high schools for supplies, workbooks and other purposes forced families of low income to withdraw their children before the completion of their studies.

Higher Education.—The salient problem facing colleges and universities in 1949 was probably the shortage of funds. A survey in October of 630 institutions by the *New York Times* indicated that 20% of the private colleges were operating at a deficit; that nearly all of the colleges found it more difficult to raise funds among the alumni and the public than in 1948; that average tuition rates had been increased from $299 in 1948 to $312 in 1949; and that students had to pay more for nearly everything else pertaining to higher education. Responsible administrators pointed out that the rising costs of obtaining a college education prevented about a third of the qualified candidates from matriculating. Officials in many universities also showed concern over the dearth of money for research in the social sciences and the humanities. The sum of $100,000,000 which was donated by governmental and private agencies, according to a report by the *New York Times* in December, went mainly to various types of scientific research projects. Included among the larger grants in 1949 were $8,000,000 to New York university (Bellevue medical centre), and $5,000,000 to both Harvard university and the Massachusetts Institute of Technology by the Rockefeller foundation.

Another significant question considered in higher educational circles in 1949 was that of qualified young men and women who could not afford to attend college. At a conference in January, the Association of American Colleges urged the federal government to provide some 400,000 scholarships and fellowships at an estimated annual cost of $200,000,000. In September, the senate approved S. 1453, a measure setting up a five-year emergency program of scholarships and grants in the professional fields of medicine, dentistry, public health, nursing, dental hygiene and osteopathy. New York state authorized by law the competitive award of scholarships to 100 students of medicine and dentistry. Much publicity was given in the newspapers to the proposal by Earl J. McGrath, the new United States commissioner of education, that the federal government allot $300,000,000 each year for scholarships to be apportioned among the several states in accordance with a definite formula. According to this plan, superior high school pupils obtaining high scores on objective tests would have a chance to attend approved colleges for a period of four years.

Also of serious concern to administrators was the problem of how to evaluate the instructional offerings of colleges and universities, since the Association of American Universities had decided to discontinue its accreditation activities. A number of officials in higher education suggested the creation of a single agency, on the model of the American Medical association, to accredit all institutions. However, there was no move in this direction by the end of the year. In the realm of the collegiate curriculum there were several interesting events, such as the inauguration of a school of history and international affairs at Lafayette college, Easton, Pa.; the introduction of a course, "Great Decisions," dealing with current problems in a world framework, at Cornell university; the replacement of group requirements by specific course requirements at Barnard college, New York, N.Y.; and the utilization of various recording devices in the teaching of foreign languages at Cornell, Georgetown and Yale universities. Leaders in higher education continued to express their approval of the academic standing of veteran students. An order by the Veterans' administration in September attempted to restrict the veterans' privilege of changing schools and courses. Although this regulation was based on public law 266, it was rescinded in October on account of vigorous protests.

The Teacher Situation.—As in previous years, the teacher shortage continued to be a vexing problem. This was particularly true with respect to elementary schools. Dr. Ray C. Maul's study for the National Education association revealed that there were 260,000 elementary school teachers who lacked proper qualifications for their duties; that only 28,000 qualified teachers were being made available by the teachers colleges for elementary school service in September, whereas there existed a need for 150,000 elementary teachers; and that there were 65,000 college graduates prepared to teach in the high schools, with only 30,000 positions available. Enrolment in the teachers colleges showed an increase in 1949, according to the annual surveys by the office of education and Pres. Raymond Walters of the University of Cincinnati. The latter reported an over-all total of 153,099 full-time and part-time students in 104 accredited teachers colleges, a rise of 14% over the enrolment in 1948.

To meet the teacher shortage, educational organizations carried on campaigns to obtain recruits for the teaching profession. The American Association of Colleges for Teacher Education, a department of the N.E.A., urged the federal government to grant $100,000,000 annually in the form of scholarships to high school graduates to attend teachers colleges, but there was no legislative action. It was evident that low salaries were still responsible for the lack of candidates for elementary school positions. The N.E.A.'s estimate of a national average salary of $2,985 for 1949–50 for teachers in the elementary schools was slightly above the average of $2750 for the previous year.

The annual report by the N.E.A., released toward the end of 1949, contained important data about the teacher problem. This document stated that 36,000 more teachers were needed for the nation's schools, at least 28,800 of whom were urgently required for the elementary classes. In addition, the report pointed out that the increase of 20,000 teachers was insufficient to meet the demand; that, on account of the deplorable school conditions, a total of 250,000 children were attending half sessions in many school systems; and that at least 4,000,000 more pupils were receiving poor educational service.

Adult Education.—The Great Books courses continued to flourish in public libraries in many parts of the country. To inform the public about atomic energy, the Oak Ridge Institute of Nuclear Studies established in March the American Museum of Atomic Energy, the first permanent institution of its kind in the world, according to its sponsors. A survey by Prof. Paul L. Essert of Teachers college, Columbia university, in June indicated that about 30,000,000 persons were benefiting from the various programs of adult education. In December, the office of education published a series of readers and teaching aids to teach the "three R's" to illiterate adults. This was the outcome of a program of research carried on for three years by the Project for Literacy Education, under the direction of Dr. Ambrose Caliver, specialist in the division of higher education.

Race and Religion.—There was evidence in 1949 that a concerted effort was being made to obtain equal rights in education for all citizens. Special attention was given to the problem of improving the Negro's educational status in the south. The campaign in behalf of regional collegiate centres to provide better professional education to Negro students, while continuing the practice of segregation, appealed to many southern educators, but not to the Negroes. A Board of Control for Southern Regional Education was organized, with former Governor Millard F. Caldwell of Florida as chairman.

There were several court suits involving the rights of the Negro in education. One suit in the federal court in Valdosta, Ga., which sought to obtain equal educational facilities for Negroes, was supported by many white southerners and strongly opposed by Governor Herman Talmadge. In rejecting a suit by a Negro high school graduate to be admitted to the school of nursing of the University of Maryland, a Baltimore court gave sanction to segregation. An outcome of earlier court action by G. W. McLaurin, a Negro graduate student, was the enactment of a law by the state of Oklahoma to enable Negroes to attend public colleges and universities under segregated conditions. The appeal by McLaurin to the United States supreme court to reverse this policy of segregated attendance was not acted upon by the close of the year.

Signs were in evidence that the solid front of segregation was being breached. The universities of Kentucky and Texas admitted Negroes for the first time in their history. A Negro, Wesley A. Brown, became the first of his race to receive a commission as ensign at the United States Naval academy. Dr.

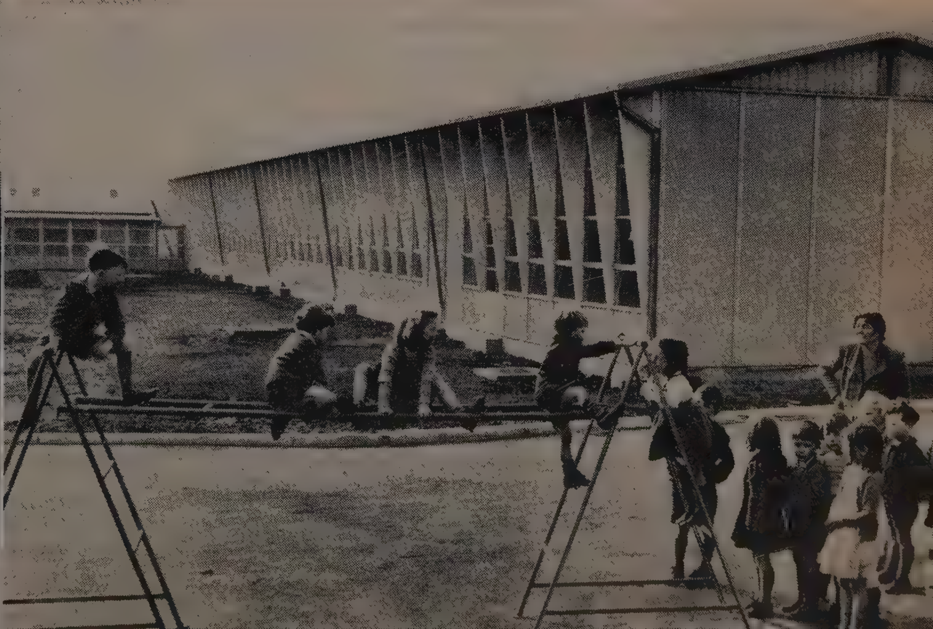
uropean union) opened at Ashridge college, Berk-
mpstead, England, in 1949. The group shown
low were discussing the influence of language
western European culture

Below: FIRST PREFABRICATED ALUMINUM SCHOOLHOUSE in England, opened at Lockleaze, Bristol, March 9, 1949. In April, manufacturers of the building erected one at Neuilly, France, in 30 hr., to demonstrate the speed with which new schools could be set up



Harold L. Trigg, president of St. Augustine's college, Raleigh, N.C., was the first Negro appointee to the state board of education of North Carolina. Mrs. Mary McLeod Bethune was awarded a doctor of humanities degree by Rollins college, Winter Park, Fla., probably the first instance of the conferment of an honorary degree upon a Negro by a southern institution. The trend during 1949 was for the admission of increasing numbers of Negro students to fraternities which had hitherto barred them. Thus, despite the revocation of its charter by the national fraternity body for having pledged a Negro student in 1948, Phi Kappa Psi of Amherst college did not change its stand. Captain Levi Jackson of Yale university's football team received invitations to join three fraternities. White students in several colleges voted in favour of admitting Negroes to their respective institutions and social clubs. Of great importance to interracial relations was the decision by the National Interfraternity council to discontinue policies of racial bias in college fraternities. Also of significance in this respect was the action by the American Association of University Women in June to admit Negroes to membership. On the other hand, an effort by some congressmen to pass a law abolishing the segregation of the races in the public school system of the District of Columbia was successfully opposed by representatives of the southern states.

There was little doubt that the Negro schools had a long way to go to catch up with those of the rest of the population. The Southern Regional council revealed in January that a sum of $545,000,000 was necessary to improve Negro school buildings to the level of the white schools and that more money was required to equalize teachers' salaries and other school services.

In October a grant of $50,000,000 was made by George W. Armstrong, Sr., to the Jefferson Military college of Natchez, Miss., for the teaching of "the superiority of the Anglo-Saxon and Latin-American races." According to the terms of the donor, the college was to bar Negroes, Asiatics and Jews. Since the college refused to modify its charter, and in this decision it was supported by many persons and groups all over the country, Armstrong withdrew his offer and declared that he would apply the fund toward his struggle against "racial mongrelization."

The most important incident involving Catholics in education grew out of the denunciation in June by Cardinal Spellman of the Barden bill. After critical comment of the principle of federal-aid to sectarian schools was expressed by Mrs. Franklin D. Roosevelt in her newspaper column, the cardinal published a letter sent to Mrs. Roosevelt in which he took sharp issue with her point of view. His use of uncomplimentary terms toward Mrs. Roosevelt led to a lively exchange of opinion in the press by supporters—leading clergymen, educators, legislators and citizens of all faiths—of the two disputants. In spite of the later reconciliation of the overt differences between the cardinal and Mrs. Roosevelt, it was evident to objective observers that both federal aid to education and interfaith relations suffered damage during this debate.

Other events concerning Catholics in education included the following: the dismissal by a state court in New Mexico of 143 public school teachers of the Catholic faith for having allegedly taught Catholic doctrine in their classes in Dixon, N.M.; the dismissal of four faculty members of Boston college, which is controlled by the Jesuits, for their disapproval of what they described as the institution's heretical teachings, that is, the possibility of salvation outside the Catholic Church; frequent debates in the press between Catholic and Protestant clergy and educators; the resolution by the National Catholic Educational association for federal aid to parochial schools; and the ruling by Francis T. Spalding, commissioner of education in New York state, upholding the removal by the New York city boar of education of *The Nation,* a weekly accused of containin articles criticizing Catholicism, from the libraries of the hig schools.

Communism.—In January three professors were dismisse by the University of Washington, Seattle, Wash., on account c alleged membership in the Communist party. Despite a petitio by 150 professors and college officials to reinstate the dismisse faculty members in the interest of academic freedom, the un versity did not rescind its action. Support for the dismiss came from educators and from members of congress.

The committee on un-American activities of the house c representatives attempted in June to secure lists of college tex books to see if Communist ideas were being spread, but desiste after opposition by college presidents and congressmen. Th New York state supreme court declared unconstitutional November the Feinberg law, which directed school boards dismiss Communist and other subversive teachers. Loyalt oaths were opposed by the faculty and officers of the Universit of California, where the board of regents wished to impose the upon the staff. Presidents Eisenhower of Columbia and Cona of Harvard university were among the many university exec tives who denounced the imposition of loyalty oaths. The test mony of Chancellor Robert M. Hutchins (*q.v.*) of the Unive sity of Chicago was instrumental in disproving the charges subversive teachings and activities by his faculty which we made before the Seditious Activities Investigation commissi of the state of Illinois.

During the year, the matter of employing Communists teachers in schools and colleges was widely debated. Taking t negative were Commissioner McGrath, President Eisenhow Chancellor Harry W. Chase of New York university and oth prominent educators. Among those who believed that Co munists should not be banned as teachers were such liberal a conservative educational leaders as John Dewey, Chancell Hutchins and I. L. Kandel, editor of *School and Society.* T same cleavage was evident between the report of the N.E.A Educational Policies commission, "American Education and I ternational Tensions," and that of the American Association University Professors. The press stressed the former doc ment's suggestions that Communism be taught and that Co munists should not be allowed to teach. The A.A.U.P. co tended that the Communist party was a legal body and th its members have therefore a right to academic appointmen

International Educational Relations.—According to a ce sus by the Institute of International Education in April, the was a total of 26,759 foreign students, representing 151 natio and 152 religions, in 1,115 colleges and technical schools in states. This enrolment exceeded that of 1948 by more th 5,000 and that for the previous year by more than 10,000. T department of the army brought 193 students from occup countries, 115 of whom came from Germany, in accorda with its democratic re-education program. Public law 2 passed by Congress in August, provided that Finland's futu payments on its debt incurred during World War I should applied for "educational and technical instruction in the Unit States for citizens of Finland" and for similar purposes. Pu law 327, passed in October, set aside $4,000,000 for the tuit and expenses of Chinese students stranded in the United Sta because of the civil war in China. Changes were made in administration of the program of graduate scholarships un the Fulbright act. Henceforth U.S. applicants were to be chos by a decentralized procedure, the initial screening to be p formed by the individual colleges. In all, 614 U.S. gradu students obtained grants to study in foreign countries under Fulbright program during 1949–50.

The United Nations Educational, Scientific and Cultural or- nization (U.N.E.S.C.O.) increased its activities during the ear. A budget of $8,000,000 was approved by 271 delegates om 47 of the 50 member states at the fourth annual general onference which met in September and October in Paris. The onference also decided to co-operate in the program of aid to nderdeveloped countries to be set up by the United Nations. the face of strong protests by delegates from eastern Europe, e conference approved the extension of U.N.E.S.C.O. activi- es to Germany, as well as to Japan. The other significant de- elopments included the following: the admission of Israel and akistan as members; the release to radio stations throughout e world of "UNESCO World Review," a weekly program of ews concerning all fields covered by the organization; the or- nization of international educational missions to combat illit- racy and to improve educational conditions in the Philippines, hailand, and Afghanistan; the publication of new educational eriodicals such as the *Quarterly Bulletin of Fundamental Edu- ation;* the issuance, together with the International Bureau of ducation, of the *International Yearbook of Education for 948;* the organization, again with the International Bureau of ducation, of the 12th International Conference on Public ducation which met during July at Geneva, Switz., to explore e possibilities of teaching science, geography, and reading; the onvocation in June of an international conference on adult ducation at Elsinore, Den.; the award of 52 scholarships to ake it possible for citizens of 17 countries to study in the niversities of 7 member nations; the arranging of international egional conferences on illiteracy in Brazil and India; and the rganization of a National commission for U.N.E.S.C.O. in ndia, the 35th of such national bodies. Many schools, colleges nd miscellaneous groups organized assemblies, seminars, and ourses on the work of U.N.E.S.C.O. and of the United Nations. he Cleveland conference of the United States National com- ission for U.N.E.S.C.O., which took place in March and April, as marked by an attendance of 9,000 and by an address by aime Torres Bodet, the new director-general of U.N.E.S.C.O.

Education in Other Countries.—The reports concerning lucational developments in occupied Germany were conflicting uring the year. Despite the optimism of John J. McCloy, gh commissioner of the U.S. zone in Germany, with regard to e German people's abandonment of militarist and nazi ideals, ere was abundant evidence compiled by competent newspaper orrespondents, that the U.S. attempts at teaching democracy ere of little or no avail. Nazis were reported once more in ey positions in all fields, including the schools. Dr. Alonzo G. race, who resigned in October as director of the educational nd cultural relations division of the high commission, declared at an educational program of 20 years was necessary to de- ocratize the Germans. Other events of interest were the con- rence on comparative education at Chiemsee, Bavaria, Ger., e appointment of James Read to succeed Dr. Grace, the open- g of an Institute of American Affairs at Munich, and the nding of 618 German specialists to the United States to ob- rve democratic procedures in their respective fields.

Reports of education in Japan appeared to be more prom- ing. The national diet made the functions of the ministry of lucation advisory rather than administrative. A total of 6,000 apanese university students joined the member groups of the ational U.N.E.S.C.O. student council of Japan to further inter- ational understanding and co-operation. Adult education was ostered by the Japanese government and by labour unions. A gnificant development was the quiet purge by Japanese gov- nmental agencies of Communist educational personnel.

The process of communizing education and all other aspects cultural and intellectual life went on with renewed vigour in the U.S.S.R. The watchword in education was nationalism, while scholars in various learned disciplines were forced to adopt the current Communist, that is Stalinist, ideology in place of the beliefs they had formerly held. The influence of soviet educational ideals and methods was very profound during 1949 on such satellite nations as Czechoslovakia, Hungary, Rumania and Poland and Communist-dominated China. The only resistance to the communization of the countries behind the "iron curtain" seemed to come from the Catholic Church in Czechoslovakia. Apart from these efforts, the soviet campaign of transforming its neighbours into ideological confederates in the "cold war" was apparently running with smoothness and precision.

On the basis of a survey of 14 nations, Benjamin Fine of the *New York Times* claimed in November that educational facilities in all countries save Greece, Italy, Norway and Finland had attained prewar standards. Another incident of note was the opening of a co-educational divinity school in Turkey, testifying to the new attitude of the government to the propagation of the Moslem faith. (*See* also BLIND, EDUCATION OF THE; CHILD WELFARE; LIBRARIES; MOTION PICTURES; for statistics of institutions *see* UNIVERSITIES AND COLLEGES.) (W. W. BN.)

Canada.—Educational problems in Canada were highlighted during the year by several pleas for federal intervention in a field which the 1867 constitution had specifically relegated to the provinces. The pleas came from: (1) the Canadian Teachers' federation, which presented the federal government with a brief asking for amendments to income-tax legislation affecting teachers, for assurances that the provincial governments collect enough taxes to meet their educational responsibilities and for additional supplementary federal grants for education; (2) the Canadian Education association, which said that increasing federal grants to encourage research, training in agriculture and vocational training were necessary trends; (3) the National Conference of Universities, which stated that rising costs and dropping revenues were jeopardizing smaller institutions and pleaded for direct annual grants to medical, dental, forestry and agricultural faculties; (4) the Provincial Association of Protestant Teachers of Quebec, which asked for federal help with capital expenditures in the educational field. The question of the way in which the federal treasury might or should directly subsidize education was broadly discussed in the house of commons and the prime minister asked that consideration of the problem be postponed until the royal commission on arts, letters and sciences reported. During the year the commission had heard briefs from educational organizations.

Reports presented at the 12th annual meeting of the Vocational Training Advisory council indicated that training of veterans was practically ended, that full-time pre-employment training of apprentices had started in Nova Scotia and New Brunswick, that classes for unemployed workers had opened in Manitoba and British Columbia and had been extended elsewhere and that youth training courses had been expanded to include nurses' aids. (C. CY.)

Great Britain.—In June the minister of education for England and Wales publicly expressed his belief that "in the perspective of educational history 1949 will be regarded as the end of one period (*i.e.*, the transition from war to peace conditions) and the beginning of another." High standards had been restored in the schools, sufficient teachers were being trained, school building was rapidly increasing and the further education and training scheme had fed out into industry, commerce and the professions 75,000 well-qualified young men and women.

Two inquiries by teachers' associations increased the grave fears already felt in grammar secondary schools about the acute shortage of well-qualified teachers of science and mathematics.

In February the Central Advisory Council for Education (Wales) issued its first full report, *The Future of Secondary Education in Wales*. This proposed two types of organization: single multilateral schools covering a wide range of ability, and a dual system of grammar-technical schools for more intelligent pupils and modern-technical schools for the less intelligent.

In January the Scottish education department announced that after 1949 the senior leaving certificate (taken normally at the end of a five-year secondary school course) would be awarded on a subject and no longer on a group basis. From 1950 candidates would be required to follow a course of study approved by the department but the school would decide how many subjects each took.

In October new regulations for entrance to the teaching profession ended the system whereby prospective women teachers could do the first of three years' training in a secondary school. For entrance as a nongraduate any candidate must in future have a leaving certificate showing five passes, including English and one other subject at the higher grade.

Australia.—The large-scale immigration by which 250,000 people were expected to arrive in Australia from the United Kingdom and Europe between Jan. 1949 and June 1950 presented the education authorities with many problems including that of teaching English to foreigners. Schools were established for children and adults at all the numerous immigrant reception centres and methods were devised for the teaching of English to foreign immigrants, especially Russians and Balts, whose languages were virtually unknown in Australia.

South Africa.—In March the government appointed a commission "to formulate the principles and purposes of education for natives as an independent race . . . examine means by which all educational processes for natives . . . need to be changed . . . to fit in with the aforementioned basic principles . . . suggest methods of organization and administration for . . . native education, and recommend the basis on which the system should be financed."

Eggs. Eggs in amounts 25% above prewar continued to be substituted for the more expensive high-protein meats in the food supply of the United States in 1949. Production on farms was estimated at more than 55,600,000,000 eggs for the year. In 1948, 55,168,000,000 eggs were produced, and only 39,695,000,000 in 1940. Civilian consumption was 374 eggs per capita, compared with 386 eggs per capita in 1948, and a record of 397 eggs per person in 1945.

The number of hens and pullets on farms on Jan. 1 was 413,000,000 head, against 426,000,000 head a year earlier, but in November the nation's laying flock averaged 378,879,000 head, 4% more than November 1948 and 6% above average. The average rate of lay per hen for the first 11 mo. was 154 eggs, compared with 152 for 1948. The egg-feed price ratio was less favourable than a year earlier.

In Dec. 1949 the average price to the farmer was 40.5 cents per dozen, against 52.8 cents a year earlier. The enlarged production plus less than usual commercial storage put the burden of price support on the Commodity Credit corporation (CCC). This support level for 1949, at 90% of parity, was a nationa average farm price of approximately 45 cents per dozen. Th method of support was that of purchasing dried eggs; net pur chases Jan. through Oct. 1949 were 58,900,000 lb., and inven tories, including some 1948 stocks, valued at about $1.25 pe pound, were 69,000,000 lb. near the end of the year. It wa announced by the department that the support program in 1950 under the Agricultural act of 1949, would attempt to maintai the national average annual farm price at 37 cents per dozen or 75% of modernized parity.

Exports of eggs in 1948–49, in spite of large government acquired stocks, declined sharply to 89,000,000 lb. from 326, 000,000 lb. (shell equivalent) in 1947–48. Comparable figures for earlier years were 536,000,000 lb. in 1946–47, 608,000,00 lb. in 1945–46, but only 3,000,000 lb. average prewar. Storage stocks of shell and frozen eggs late in 1949 were the lowest on record, not much more than half as large as a year earlier Dried egg stocks, on the other hand, were almost four times those of the previous year.

Statistics on world egg production were inadequate but indi cations were that production reached its highest postwar leve during 1949 because feeds were more abundant and flocks ha been expanded, particularly in Europe. (J. K. R.)

Egypt. An independent kingdom of northeast Africa, Egyp is bounded N. by the Mediterranean, S. by the Anglo Egyptian Sudan, E. by Israel and the Red sea, W. by Cyrenaic and the Sahara. Area: 383,000 sq.mi., but the cultivated an settled area (the Nile valley, delta and oases) covers only 13, 496 sq.mi. Pop.: (March 26–27, 1947, census) 19,087,304; (mid 1948 est.) 19,528,000. Language: mainly Arabic. Religions Moslem 91.4%; Christian (mainly Copts) 8.19%; Jewish 0.4% Chief towns (pop., 1947 census): Cairo (cap., 2,100,506); Alex andria (925,081); Port Said (178,432); Tanta (139,965) Mahalla el Kubra (115,509); Suez (108,250); Mansura (102 709). Ruler: King Farouk I (*q.v.*); prime ministers in 194 Ibrahim Abdul Hadi Pasha and (from July 25) Hussei Sirry Pasha.

History.—The year 1949 began ominously under the shado of the assassination on Dec. 28, 1948, of Mahmoud Fahmy e Nokrashy Pasha, the prime minister. The murderer claimed t be a member of the fanatical Moslem brotherhood, whose leade Sheikh Hassan el-Banna, was himself assassinated in Feb. 194

The king appointed Ibrahim Abdul Hadi Pasha, who was the holding the office of minister of finance, to be prime ministe The new premier, an Independent in politics, added several In dependents to the existing cabinet of Liberals and Saadists. O Feb. 27 Ahmed Mohamed Khashaba Pasha became minister foreign affairs.

The government's first task was to restore the situation whi had arisen from Egypt's participation in the unsuccessful i tervention of the Arab league in the affairs of Palestine. Alrea the state of Israel was recognized *de facto* by the most powerf states in the world—although not by any important orient power. On Feb. 3, Egypt, following a Pakistani example, d nounced these recognitions which, it was claimed, implied t acceptance of the rule of force.

At the beginning of the year, Egyptian military and nav forces were still in contact with the Israelis and the latter h achieved several penetrations into Egyptian territory. Howeve the acting mediator, R. J. Bunche (*q.v.*) announced a cease f as from Jan. 7, which was followed by armistice negotiatio under his chairmanship. These were successfully concluded an agreement signed on Feb. 24. This provided for the evacu tion of El Faluja, by Egyptian, and of Bir Asluj, by Isra forces, with a demarcation line between the two rival armies

MPLE OF AMON at Karnak, undergoing restoration by the Egyptian gov-
ment's department of antiquities in 1949. Rebuilding of the ancient
ple, a major attraction for tourists, meant identifying and reassembling
hundreds of stone blocks fallen from the original structure

Negeb, which, running about 20 mi. south of Tel Aviv, left
za in Egyptian and Beersheba in Israeli hands. Provision was
made for the limitation of the armed forces to be main-
ned by either party in the area.

n April, Husni ez-Zaim, then head of government of Syria,
v to Cairo for talks with King Farouk, which were followed,
his part, by the declaration, satisfactory to Egyptian leaders,
t he was opposed to any plan for a Greater Syria, and, on
part of the Egyptian government, by the recognition of his
ime on April 23.

On March 7, after long negotiations, a new agreement was
ncluded between the Egyptian government and the Suez
nal company. By this, Egypt was to receive a much increased
re in the profits of the company and to acquire, by 1964, five
ditional seats on the board of directors, bringing its total
resentation up to seven. Large constructional works were to
undertaken which would eventually allow the passage of 60,
tead of the present 35, ships a day through the canal. This
reement was to hold good until the expiry of the existing con-
sion in Nov. 1968.

An agreement was announced by the British foreign secretary
May, whereby Egypt was to participate (sharing on the basis
£4,500,000 and £7,500,000 respectively with Uganda) in the
t of a project to raise the level of Lake Victoria, at the head-
ters of the White Nile, thereby providing power for the in-
strialization of Uganda and a greatly increased flow of water
Egypt.

n June Egyptians celebrated the closing, in accordance with
terms of the Montreux convention, of the mixed courts, the
vestige of the Ottoman regime of capitulations which had
g been regarded as a privilege allowing Europeans to evade
ective subjection to Egyptian justice. Similarly the foreign
sular courts closed down on Oct. 14.

On July 25 the government of Ibrahim Abdul Hadi Pasha resigned, chiefly, it was understood, because of a dispute between the Saadist and Liberal parties as to the distribution of seats at the forthcoming election. On the same day King Farouk appointed Hussein Sirry Pasha to form an all-party caretaker coalition government. It was then announced that elections would take place in October and that they would be held under full constitutional guarantees. Circumstances, however, necessitated a change in this plan.

On Nov. 3, unable to obtain agreement of the political parties to the draft scheme for the redistribution of constituencies, Sirry Pasha resigned. Entrusted at once by the king with the formation of a new government, he accomplished this task on the same day. His new cabinet was composed of nonparty men whose tasks were clearly those of routine administration, the delimitation of constituencies and the conduct of elections expected to be held in Jan. 1950. (H. S. D.)

Education.—(1945–46) Schools: primary 425, pupils 82,161; elementary 4,035, pupils 730,039; secondary 141, pupils 62,445; technical 47, pupils 12,464. Universities (1948–49) 5, students 12,540 (excluding Farouk university, Alexandria, and el-Azhar university, Cairo), professors and lecturers 719 (excluding el-Azhar university); other institutions of higher education 8. Illiteracy (1937): 85.2% (excluding nomadic population).

Finance and Banking.—Budget: (1948–49 est.) revenue £E141,500,000, expenditure £E183,400,000; (1949–50 est.) revenue £E147,100,000, expenditure £E188,000,000. National debt (Nov. 1949) £E116,000,000; currency circulation (July, 1949) £E141,000,000. Gold reserve (July 1949) U.S. $53,000,000. Bank deposits (May 1949) £E224,000,000. Monetary unit: Egyptian pound with an exchange rate Nov. 15, 1949, of $2.87 U.S.

Foreign Trade.—Imports: (1948) £E160,300,000; (1949 six months) £E88,100,000. Exports: (1948) £E143,100,000; (1949, six months) £E73,600,000.

Transport and Communications.—Roads (1947): 8,874 mi. Licensed motor vehicles (Dec. 1948): cars 37,890, commercial vehicles 11,800. State railways (1948): 3,109 mi.; passengers carried 51,052,000; goods traffic 8,345,000 tons. Shipping (July 1948): number of merchant vessels of 100 tons and upward 50, total tonnage 83,073. Telephones (1947): subscribers 99,814.

Agriculture.—Main crops (in metric tons, 1948): cotton, ginned, 386,000; maize 1,409,000; wheat 1,080,000; rice 1,308,000; onions 195,000; sugar, raw, 200,000. Livestock: sheep (July 1947) 1,868,000; goats (July 1947) 1,474,000; cattle (July 1947) 1,318,000; buffaloes (July 1947) 1,239,000; asses (July 1947) 1,125,000; camels (Jan. 1945) 162,000; horses (July 1947) 25,000; chickens (July 1947) 16,294,000. Fisheries: approximate annual catch 53,000 metric tons; value £E2,000,000.

Industry.—(1945) Industrial establishments 129,231, persons employed 458,000. Crude oil (in metric tons, 1948): 1,887,000. Raw materials (1948): phosphate rock 377,000 metric tons; manganese ore 60,000 metric tons. Manufactured goods: cotton yarn (1948) 32,970,000 metric tons; cotton piece goods (1948) 154,800,000 sq.m.; cement (1948) 768,000 metric tons.

Einstein, Albert (1879–), German-born physicist, was born March 14 in Ulm, Württemberg. (For his early career *see* the *Encyclopædia Britannica.*) As a Jew, in the early 1930s he came under fire of Hitler's anti-Semitism and was forced to leave Germany. He spent some time in England and then, in 1933, went to the U.S. as professor of mathematics at the Institute for Advanced Study in Princeton, N.J. It was his memorandum to Pres. F. D. Roosevelt, that the Germans were reputedly attempting to utilize in warfare the explosive energy of the atomic nuclei, that set the U.S. on the road to the development of the atomic bomb.

Late in Dec. 1949 the Princeton University Press announced that Einstein had produced a new theory, "the generalized theory of gravitation," which by four mathematical equations sought to unify the basic theories of gravitation and electromagnetism and to show that they are different aspects of the same force. Einstein described this theory as an extension of his theory of relativity, and conceded that it would be difficult to test it experimentally.

Eire: *see* IRELAND, REPUBLIC OF.

Eisenhower, Dwight D. (1890–), U.S. army officer and university president, was born on Oct. 14 in Denison, Tex. He was graduated from the U.S. Military academy at West Point, N.Y., in 1915, and during World War I served as an instructor, camp commander and commander of tank troops. He was graduated later from the Army War college and the Army Industrial college, served in the office of the chief of staff at Washington, D.C., and in 1935 saw duty in the Philippines as chief of staff to Gen. Douglas MacArthur. In June 1942 he was given command of the U.S. headquarters in England. He was commanding general of the Allied armies that conquered North Africa and Sicily (1943), invaded Italy (1943), landed in France (1944) and completed the conquest of Germany from the west in 1945. He was made commander of U.S. occupation forces in Germany in 1945 and chief of staff Nov. 20, 1945, retiring from that post Feb. 7, 1948, to become president of Columbia university.

Repeatedly before the presidential campaigns of 1948 Eisenhower was strongly mentioned by both Republican and Democratic spokesmen as a possible candidate, but he refused to stand for the nomination. In Feb. 1949 he took several months' leave from Columbia to serve as temporary presiding officer, without a vote, of the joint chiefs of staff. On March 3 in a New York city address he urged the strengthening of the authority of the secretary of defense, declaring "an entrenched bureaucracy" was hindering true unification of the armed forces. In an address in St. Louis, Mo., in September, Eisenhower expressed as his political philosophy a course "down the middle of the road between the unfettered power of concentrated wealth . . . and the unbridled power of statism."

Elections. The Republican party fared so poorly in numerous off-year elections in 1949 that prominent Democratic spokesmen, including President Truman and House Speaker Sam Rayburn, expressed mock fear over prospects of the disappearance of the two-party system in the United States. The Nov. 8 debacle in scattered but important contests meant that, with the exception of the recapture of congress in 1946, the G.O.P. had not scored a major sweep since 1928.

The most significant test took place in New York state, where former Governor Herbert H. Lehman opposed John Foster Dulles for the seat held by the latter since the resignation of Robert F. Wagner. Dulles, a Wall street lawyer and former U.S. delegate to the United Nations, had been appointed to the senate post by Gov. Thomas E. Dewey. With President Truman and several cabinet members pleading for Lehman and with Governor Dewey campaigning actively for Dulles, this election brought the 1948 presidential rivals face to face again.

Dulles raised the issue of "statism," which was his description of the "Truman welfare state." It was the first time that a Republican candidate for such high office had taken such a definite stand against the New Deal-Fair Deal system of government. Lehman endorsed the White House program, although he entertained reservations toward President Truman's national health insurance scheme and the two-price Brannan farm formula.

The vote was 2,573,934 for Lehman and 2,377,641 for Dulles, giving the Democrat a plurality of 196,293. The American Liberal party contributed more than 400,000 votes to the Lehman total, and he would have lost without this reinforcement. Moreover, a Democratic candidate for a state-wide judicial office topped the Lehman plurality by more than 200,000. Lehman also benefited from the fact that the American Labor party, Henry A. Wallace's alleged pro-Moscow organization, did not enter a candidate in the senatorial contest. In view of these facts, Republicans comforted themselves with the thought that Dulles had made a good run under difficult circumstances.

Democratic Mayor William O'Dwyer was re-elected mayor of New York city by 308,430. His opponents were Newbold M ris, who had the nomination of the Republican, Liberal a Fusion organizations, and Rep. Vito Marcantonio, who carri the banner of the American Labor party. The G.O.P. plac only 1 man on the new 25-man city council, and he had to ha the help of the American Liberal and Labor parties to g elected. The only other Republican winner in New York ci was a candidate for a place on the Manhattan municipal cou

Across the Hudson river in New Jersey, the Republicans r elected Gov. Alfred E. Driscoll over former State Sen. Elmer Wene by 75,860. A Democratic revolt against "Boss" Fra Hague in Jersey City kept Wene's plurality there down 1,550, whereas this area normally turns out a lead of fro 70,000 to 100,000 for any Hague entry. Thus Driscoll was r elected by disaffected Democrats; he needed their support b cause he lost ten normally Republican counties in south Jerse

The most exciting and politically significant special congre sional election in 1949 was staged in the 20th district of Ne York's upper west side, for it brought another Roosevelt, Fran lin D., Jr., onto the national political stage. When Tamma denied him the regular Democratic nomination, he ran as t candidate of the Liberal and Four Freedoms parties. Fr morning to midnight he toured the district.

He rolled up 41,146 votes as compared with 24,252 for t Tammany candidate, 10,026 for the Republican and 5,348 f the American Labor entry. Young Roosevelt's victory led mention of him as a possible candidate for the New Y governorship or the United States senate in 1950.

The Democrats won another special congressional election the 7th New York district, a heavily Democratic section Brooklyn. On Nov. 8 the Democrats won two more congr sional contests in the 10th New York and 5th California d tricts. The New York outcome had no special significance, the 10th had been a Democratic stronghold for decades.

In the California test a Democrat who also headed the st Federation of Labor won on a program pledging full support the Truman program. Although he replaced a veteran Repu can, Richard Welch, the latter had voted more often with Democrats than with his own party during the 23 years in house prior to his death.

The Republicans' only triumph in off-year congressional str gles in 1949 came in the 26th Pennsylvania district. Th John P. Saylor, the G.O.P. candidate, defeated Ethel M. Cof by 8,460 votes. Mrs. Coffey's son, a World War II flier, carried the district by 12,056 in 1948. He was killed in a pl crash early in 1949.

The congressional results made only a slight change in hou senate alignment. For the session opening on Jan. 3, 1950, senate line-up was 54 Democrats and 42 Republicans. In house it was 261 Democrats, 169 Republicans, 1 Ameri Labor party member, 1 Democratic-Liberal member an vacancies. On Jan. 3, 1949, it had been 262 Democrats, Republicans and 1 American Labor party member.

Old-time bosses did not do so well in 1949. Frank Hague control of Jersey City to the John V. Kenny faction in a sp election of city commissioners, and Hague failed to recou gaining control of the state government in the Driscoll-W struggle. He immediately resigned as vice-chairman of Democratic National committee, and his long career a national political power seemed ended.

In Boston the 74-year-old James Michael Curley, seeki fifth term as mayor, was defeated by City Clerk John B. Hy Hynes, an erstwhile member of the Curley machine, had a as mayor for five months in 1945 when Mayor Curley serving a federal prison sentence.

The Hague-Curley setbacks were attributed largely to olitical influence of women and ex-G.I. voters, who do not em to be unduly susceptible to machine domination. The 'Dwyer re-election was also considered to be an anti-organizaon demonstration, for he had been at odds with Tammany nce he took office.

In Detroit the forces of organized labour suffered a reverse. ity Treasurer Albert E. Cobo defeated George Edwards, presient of the local C.I.O. union, for the mayoralty by 115,110 otes. It was the fourth time in 12 years that the C.I.O. had ied and failed to elect its candidate to the Detroit city hall.

Thomas A. Burke, Democrat, was re-elected mayor of Clevend. His demonstration of popularity and strength was rerded as politically interesting because he had been mentioned a possible opponent of Sen. Robert A. Taft of Ohio in 1950.

Largely because of exposés of Republican officeholders' graft d inefficiency, the Democrats won four municipal offices in hiladelphia which they had never held in recent times. They ected David Lawrence, Democratic National committeeman r the state, as mayor of Pittsburgh. They also won a stateide judicial post by a 35,000 plurality, although in off-years e G.O.P. candidate had usually won by 200,000 to 300,000.

Several states voted on constitutional and legislative questions wide interest. Pennsylvania adopted a proposal for a bonus r World War II veterans to cost an estimated $500,000,000, a 3-to-1 favourable majority. New Jersey defeated a simr $105,000,000 scheme by a narrow margin.

Virginia and Texas defeated constitutional amendments that ould have outlawed the poll tax, as demanded by President ruman in his Civil Rights program before congress. These jections inspired a new drive for national legislation.

California surprised the nation by repealing year-old constitional amendments that had given exceptionally high pensions the aged. The voters raised the qualifying age for assistance om 63 to 65, boosted property restrictions and provided that age-earning relatives of indigents must take care of them, if ossible. It was an unusual sign of resistance to the pension rade in this state. The repeal had been fought bitterly by e Townsendites, the "ham-and-eggers" and the "twenty dolrs every week" clubs.

President Truman, who was making a political speech before emocratic women at Washington, D.C., as the state and unicipal returns rolled in on the night of Nov. 8, made no tempt to conceal his personal exultation. A few days later, told a press conference that the off-year results had inspired ore congratulatory messages to the White House than had his vn triumph over Dewey in 1948.

Democratic strategists considered that the 1949 election ends justified their acknowledged program of building future ccesses on an alliance of industrial workers and farmers, who d gained material advantages from the Roosevelt-Truman gime in the form of higher wages, farm parity payments, penons and welfare benefits.

President Truman indicated clearly that he regarded the Nov. outcome, especially the Lehman-Dulles figures, as general dorsement of his Fair Deal policies, or, as his opponents aracterized his program, his "welfare state." (*See* also Comunism; Democracy; Democratic Party; Republican arty; United States; and under various states and various untries of the world.) (R. Tu.)

ectrical Industries.

Indications that postwar expansion in the U.S. electrical industry was aring or had passed its peak appeared in 1949. Energy proiced for the public supply exceeded the output for 1948 by ly 2.9% as compared with a 10.1% increase the previous ar. Total output was 290,783,000,000 kw.hr., as compared with 282,698,000,000 kw.hr. in 1948. This increase of 8,085,000,000 kw.hr. compares with the previous year's increase of 26,959,000,000 kw.hr. To generate this output in 1949, the average kilowatt of hydro capacity produced at full tilt for more than 63 hr. out of every 100, while steam capacity produced for about 54 hr. out of every 100.

WEST GERMAN VOTERS at the polls in Frankfurt on Main on Aug. 14, 1949, during the first democratic elections in the country after 1933. Conservatives, led by the Christian Democratic Union party, won a majority of the seats in the lower house of the new west German parliament

Of the output increase of 8,085,000,000 kw.hr. in 1949, 6,815,000,000 kw.hr. were furnished by hydro power plants, raising the proportion of hydro power generation from less than 29% in 1948 to almost 31% in 1949, the fuel share in output thus declining from more than 71% to under 70%. This decrease in fuel power output lowered the consumption of coal, gas and oil from 130,000,000 to 123,000,000 tons of coal equivalent. Actual coal consumption in 1949 dropped to 87,300,000 tons, as against 99,590,000 tons in 1948, due in part to an increase in consumption of oil from 42,640,000 bbl. in 1948 to 58,950,000 bbl. in 1949 and an improved water supply for hydro generation.

As between outputs of power company and government-owned plants, the proportion of the total from the latter rose from 19.2% in 1948 to 20% in 1949.

Power Plant Capacity.—Net increase in generating capacity in 1949 up to Nov. 1 was 4,606,000 kw. bringing the total as of that date up to 61,166,000 kw. The actual increase in 1949 was slightly more than this, with some new machines being scheduled to go into operation in November and December. The reported new capacity installed in 1949, not all representing net increase, was 6,750,000 kw. Preliminary figures set the peak load at 54,300,000 kw. and indicated that the margin of safety would be about 12% or double that of 1948.

Ratios of fuel and hydro power, and of power company and government-owned generating capacity in the total remained little changed in 1949 from 1948. In the earlier year, fuel power was 72.2% and water power 27.8% of the total; in 1949 the ratios were 72.5% and 27.5%. In 1948, power companies and government divided ownership of generating capacities in the ratios of 80.8% and 19.2%; in 1949, the ratios were 80% and 20%.

Electricity Sales.—Electric utility customers bought 248,750,000,000 kw.hr. of energy in 1949, an increase of 8,010,000,000 kw.hr. over 1948, but the 1949 increase was considerably less than that of 1948 over 1947—23,000,000,000 kw.hr. Industrial usage was responsible for the slowing up of the increase rate. In 1948, large industrial customers bought 10,500,000,000 kw.hr. more than in 1947, but in 1949, their total usage dropped to 120,750,000,000 kw.hr., or 4,000,000,000 kw.hr. less than their 1948 consumption.

Sales to residential and rural customers, however, continued to grow. In 1949, sales to these customers were 65,925,000,000 kw.hr., about 8,600,000,000 more than in 1948, which, in turn, was about 6,000,000,000 more than in 1947. Average annual residential use of electricity rose from 1,563 kw.hr. in 1948 to 1,685 kw.hr. in 1949, an increase of 122 kw.hr.

Revenues.—Customers paid the electric utilites $4,611,000,000 in 1949, about $298,000,000 more than in 1948, a 6.9% increase. This was associated with a 3.3% increase in sales; it reflected a greater usage of energy at higher steps in rate, largely because of the increase in number of customers served. Average revenue from all customers in 1949 was 1.85 cents per kw.hr. as against 1.79 cents in 1948.

Residential customers, however, had a decrease in the unit price they paid for electricity, 2.96 cents in 1949, as against 3.01 cents in 1948. Because of their greater use of electricity, these customers paid an average annual bill of $49.88, $2.83 more than in 1948. The 1949 increase of 122 kw.hr. in usage cost the average consumer only 2.32 cents per kw.hr.

Users.—The number of customers served in 1949 grew to a total of 42,836,000, an increase of 2,114,000 over 1948. The largest increase was in the residential class, which added 1,928,000 new customers for a total of 37,172,000. It was perhaps significant that industrial and commercial customers showed only modest increases, less than the previous postwar years.

The number of people in homes served by electricity in 1949 was about 137,500,000 or approximately 95% of the total population.

Financial.—The most noteworthy facet of electric utility financing in 1949 was the successful accomplishment of the largest financing program ever undertaken in any one year by the electric companies. New capital entering the business in 1949 was $1,445,000,000 as compared with $1,314,000,000 in 1948 and $576,000,000 in 1947. Refunding operations rose to $34 000,000 in 1949, an increase of $212,000,000 over 1948, but decrease of $661,000,000 over 1947. The total financing in 19 was thus $1,793,000,000 or about $342,000,000 more than 1948.

The share of the revenue dollar available for dividends ar surplus rose in 1949 due to increased revenues and high operating efficiencies. In 1947, the proportion was 18.2 cent in 1948 it dipped to 16.7 cents; in 1949 it increased to 18 cents. The gross operating revenue of power companies ro from $3,903,000,000 in 1948 to $4,150,000,000 in 1949, an i crease of $247,000,000. Money left for net income in 1949 wa $778,000,000, which amount was $108,000,000 greater than th net income reported in 1948.

Electrical Manufacturing.—In 1949, the Federal Reser board index of general industrial production dropped to 203, points below 1948 and 2 points below 1947. The electrical pr duction index dropped to 429, 48 points below 1948 and on 14 points above 1947. Following a distinct slowing-up of pr duction in 1948, electrical goods for industrial installation co tinued to decline in 1949. Appliances for domestic use fell fro the record high of 1,040 in 1948 to 885 in 1949, while apparat for electricity supply systems declined less severely from 399 1948 to 383 in 1949. (*See* also PUBLIC UTILITIES; RURAL ELE TRIFICATION; TENNESSEE VALLEY AUTHORITY.) (F. J. K.)

Canada.—Total central electric station production for t first eight months of 1949 stood at 30,990,729,000 kw.hr., co pared with 29,867,671,000 kw.hr. for the same period of 194 The increased production was obtained from several new hyd electric and steam-generating installations, chiefly in Queb Ontario, Saskatchewan and British Columbia.

Canadian and United States engineers and government o cials studied the possibility of expanding the power-generati facilities of Niagara Falls and of Passamaquoddy tidal curren but no decisions were announced.

Because of the 1948 import restrictions on electrical par Canadian production of both domestic and commercial elect cal refrigerators and parts rose markedly in 1949. To bo sales of British electrical goods in Canada, in competition w similar Canadian-produced goods, the Canadian Standards as ciation set up approvals procedures for British electrical a allied manufacturers. (C. CY.)

Europe.—In Great Britain further study of tidal pow schemes was carried out and the construction of a model of t Severn estuary for experimental research was planned. Inve gations on the possibilities of wind power for electricity gene tion on a large scale made good progress, and preparations w made to install two 100-kw. wind-driven generators (one Orkney, by the North of Scotland Hydro-Electric board, a

GENERATING PLANT built at Croydon, Eng., in 1949, one of 38 new power stations scheduled for completion in Britain before 1954, under a plan to increase the national power supply by 40%

by the British Electricity authority), to gain operating ex- ience. The Hydro-Electric board, and also the ministry of l and power, sponsored research on the burning of peat in turbines for electricity generation.

Cable research was very active, particularly in the direction developing cables to work at alternating-current voltages of to 300 kv., for direct-current voltages of the order of 500 1,000 kv. and for submarine transmission of power over long tances. Arrangements were made to test a British 220-kv. le over a long term connected to the French 220-kv. network.

Generating Plant.—In Great Britain, steam turbogenerators public supply power stations were standardized at 30 or 60 gawatts, and the former was approximately the average size set in use. The installation of larger sets was becoming more nmon and this average appeared likely to rise during the next v years to between 40 and 50 kw. Walsall power station was cially opened on Sept. 30. It had then in operation two -megawatt sets but would have a total capacity of 180 megatts by 1952. In the same British Electricity authority divin two further new stations, one of 210 megawatts and the ier of 120 megawatts, were under construction.

Transmission and Distribution.—As an extension of the grid tem of the B.E.A., a 33-kv. submarine cable was laid across Solent from Gurnard, Isle of Wight, to Lepe, Hants. Of a al length of 2.9 mi. it was approximately 6 in. in diameter l weighed 132 lb. a yard. Another submarine cable (for teleone circuits) 80 mi. long was laid between eastern England l the Netherlands. Its main insulation was of telcothene, a v polythene-base insulating material which could withstand ° C.

Up to June 1949 the total of orders placed with British nsformer manufacturers during the past few years for transmers to operate at 200 kv. and over was 1,187,000 kilovoltperes in 18 installations. These included 120,000 kva. at kv. for the U.S.S.R. in 1942 and other groups at 220 kv. the Netherlands and Finland.

Utilization.—A railway electrification scheme for Brazil inved the manufacture by a British firm of fifteen 3,000-h.p., 00-v., direct-current, mixed-traffic locomotives. These were largest type ever manufactured in Britain and would be d on a 64-km. length of main line which was being electrid. One locomotive could haul a load of 600 tons at 45 m.p.h. the level or at 20 m.p.h. up a 2.5% gradient. At the dairy w at Olympia, London, in October, two makes of dairy sterers which were of the thermal storage type and thus folved the general trend of agricultural electrical equipment vard low electric loading and off-peak operation, were shown. rn hay-drying by cold air blowing and electric soil warming glasshouses was being adopted.

n Great Britain in April the restriction on electric lighting display purposes was removed until October. Fluorescent nting made further strides and was being extended to underound railway trains. An important development was the our-matching fluorescent tube. The specially developed light- equipment for the huge assembly hall, seven and one-half es in floor area, at Bristol in which the huge air transport ne Brabazon I was built, created much interest. At the unting height of 75 ft. above the floor high efficiency lamps ıld be used without risk of glare. A combination of 1,500-w. gsten filament and 400-w. mercury vapour discharge lamps s installed.

ILMS OF 1949.—*Energy in Our Rivers* (Coronet Instructional Films). (E. W. G.)

ectric Transportation.

Urban Transit Equipment.—At the beginning of 1949 ut 75% of all electric passenger transportation vehicles operated in the United States were in the cities of more than 500,000 population. On the other hand, only about one-third of the motorbuses used for urban transit service were operated in these areas, the great majority being in the smaller communities. Of the total volume of riding in the large cities, about 70% was being handled by electric vehicles and 30% by motorbuses. In the smaller communities the situation was almost exactly the reverse, electric transportation handling 28% of the volume and motorbuses 72%.

HIGH-VOLTAGE engineering laboratory of the General Electric Co., opened at Pittsfield, Mass., June 23, 1949. Described as "the world's largest man-made lightning centre," it was designed for basic research into effects of lightning on power transmission lines and other related problems

Additions of equipment during the year emphasized this trend toward concentration of electric transportation in the large cities. No new electric rail cars were ordered for operation in the smaller cities. About 700 new rapid transit cars, which were put in service in New York city, represented an important step in modernization. Several hundred streetcars of the presidents' conference committee type ordered in 1948 were placed in service in various large cities during 1949. This, too, represented an important step in electric transportation modernization. In addition about 200 new cars of the same type were ordered for Detroit, Mich., and St. Louis, Mo.

Electric trolley coach operations were substantially expanded during 1949, the total number of such vehicles in service in the United States increasing to approximately 6,000. About half of the trolley coaches added during the year were for operation in cities of more than 500,000 population, notably Philadelphia, Detroit, Cleveland, Boston, and San Francisco, the remainder of the new trolley coaches were mainly for cities of between 250,000 and 500,000 population.

For the most part the new trolley coach operations inaugurated in 1949 were replacements of streetcar lines. Detroit, however, replaced a motorbus line by an electric trolley coach line.

Traffic Trends.—The total number of passengers carried by electric transportation in 1949 showed a decline estimated at about 10% from the previous year's total of 10,600,000,000. Numerous increases in rates of fare were necessitated by increases in operating costs, especially wages. These probably resulted in some loss of riding but statistics were not available to show the exact effect on the number of passengers carried. Despite the decrease which occurred during the year the total volume of electric transportation riding in the United States remained above the level of 10 years before.

On the street railway lines the decrease in riding was accentuated slightly by the substitution of other types of vehicles in place of electric rail cars on a number of lines in Chicago, Cleveland, San Francisco and elsewhere. Figures issued by the management of the rapid transit lines in New York city indicated an increase in the average fare paid from 5 cents to 8.73 cents, which produced an increase of 55% in gross revenue, accompanied by an 11% decrease in the number of passengers carried. While part of this decrease was the result of general business conditions, the higher fare was undoubtedly a factor.

Trolley coach operation was the only type of electric transportation which registered a gain in patronage during 1949, reaching an all-time peak of about 1,750,000,000 passengers carried. This was largely the result of the great expansion of these operations during 1948 when more than 1,400 new trolley coaches were put in service.

Finances.—Because of the co-ordinated operation of electric and motorbus service by a large number of companies it is impracticable to derive separate figures for the financial results of electric transportation. It may be said in a general way, however, that fare increases in recent years had enabled the electric transportation industry to keep gross operating revenue fairly stable despite some decline in the volume of business. Operating expenses, however, had mounted steadily, so that each of the past several years had witnessed a drop in net revenue. This situation was a cause of considerable concern within the industry.

Heavy Electric Traction.—Modernization of equipment for commuter service was the outstanding development of the year 1949 in the field of heavy electric traction. Orders were placed by the New York Central railroad for 100 new four-motor multiple-unit cars for operation on its 600-v. direct-current electrified line between Harmon and Grand Central terminal. These new cars were to have tight lock couplers and electromagnetic brakes, wide windows, a three-two seat arrangement and were to be air-conditioned. They were designed for speeds up to 75 m.p.h. The Pennsylvania railroad also ordered 100 new four-motor multiple-unit cars. These were to be used on its suburban 11,000-v. alternating-current electrified lines operating out of Philadelphia. The Reading railroad ordered 10 cars for its Philadelphia electrified lines and the Long Island railroad ordered 50 double-deck multiple-unit cars.

Another significant development in heavy electric traction was signalized by the Pennsylvania railroad's order for four 5,000-h.p. straight electric locomotives for operation under an 11,000-v. single-phase A.C. trolley wire. Each locomotive was to consist of two cabs. Various running gear arrangements were to be employed. Two of the locomotives were to be equipped with four simple, swing-bolster, two-axle swivel trucks having 48-in. wheels and a loading of 60,000 lb. per axle. One locomotive was to be equipped with six two-axle swivel trucks having 42-in. wheels and a loading of 45,000 lb. per axle. The fourth locomotive was to be equipped with four three-axle swivel trucks having 42-in. wheels and a loading of 45,000 lb. per axle. In each case, all axles were to be motored.

This design of locomotive was the result of a concerted effort on the part of builders and operators to obtain an electric freig locomotive having all weight on driving axles and using simp truck construction. It was expected that these new designs locomotive would enable the railroads to select the most ec nomical unit for moving heavy freight traffic at speeds on th order of 30 m.p.h. over ruling grades.

All of the heavy electric traction equipment ordered durin 1949 was to be operated on existing electrified lines. On minor extensions of existing electrifications were contemplat for the immediate future. (J. A. Mi.)

Canada.—The most significant development of 1949 w the widespread and persisting pressure for increased streetc fares. Typical increases granted included: Winnipeg, from tw tickets for 15 cents to three for 25 cents; Hamilton, from fo for 25 cents to four for 30 cents; Edmonton, from four for cents to three for 25 cents.

The Toronto Transportation commission, in its 1949 annu report which covered 1948, showed an all-time record for gro revenue of $25,000,000 and for passengers of 311,155,9 (3,000,000 more than 1947), on a basic fare of four tickets f 25 cents. In 1948 the commission spent $19,000,000 of reserves on 200 new streetcars (100 delivered in 1949), 3 buses, 85 trolley buses, plus $2,000,000 on preliminary wo for the Yonge street subway.

The trend to trolley buses continued. By the end of 194 13 major Canadian cities ran a total of 611 trolley buses, co pared with 67 such buses in 1945 (which were concentrated three cities); 122 additional trolley buses were on order f 1950 delivery. Montreal's electric transportation difficulti however, were not being entirely cured by trolley buses. Th in operation in 1945 had been expanded to 46 by 1949, but acute problem still remained on the high-density main rout of the metropolis. Late in the year the traffic research boa recommended a $180,000,000 subway, to be built in $20,000,0 sections.

Electric transportation statistics for Canada for the fi seven months of 1949, compared with the same 1948 period parentheses, were: urban revenues, $57,803,981 ($55,026,457 interurban revenues, $24,980,482 ($20,978,270); urban electr car mileage, 55,208,844 (62,702,202); urban trolley-bus milea 10,624,867 (6,295,834); interurban electric-car mileage, 3,62 885 (3,812,953). (C. Cy.)

Great Britain.—In Sept. 1949, the Central line of the Lo don Transport executive was extended from Loughton to Epp (five mi.). This administration placed orders for 90 surfa line cars of aluminum alloy in order to obtain comparative da of cost and performance and to secure a saving in energy co sumption. A weight reduction of 3.1 tons a car was anticipat

The working party appointed to review proposals for railw improvement put forward by the Railway (London Plan) co mittee published its report on railway construction and devel ment advocated in Greater London. The electrification of remaining steam-operated suburban services radiating fr London, except on the Western region, was proposed as far High Wycombe, Tring, Luton, Hitchin, Bishop's Stortford a Shoeburyness. Such services were to be continued diametrica across London in tubes taking full-sized rolling stock. Ac tional normal-sized tubes (12-ft. diameter) would be construc both on new routes and as extensions to existing routes.

Austria.—Electrification in Austria benefited from Mars aid. Electric working was introduced in May 1949, on Attnang Puchheim-Linz section (34 mi.) bringing the total el trified mileage up to 342 mi. on the main line between Vier and Buchs on the Swiss frontier. Another hydro station under construction at Kaprun to supply power for the exist Innsbruck-Bregenz line.

Belgium.—The conversion of the Brussels Midi-Linkebeek-arleroi (35 mi.) route was completed in October. The second ussels Nord-Schaerbeek-Antwerp line (27 mi.) and the concting loop, Linkebeek-Schaerbeek, was progressing. Plans ovided for through freight working between Antwerp Nord d Monceau, near Charleroi, as soon as work in the Brussels a allowed.

France.—Work on the Paris-Lyons (318 mi.) electrification s proceeding steadily; the annual power consumption beeen Paris and Dijon would be 250,000,000 units, with a furer 150,000,000 units from Dijon to Lyons. The bulk of this wer would be produced in the Génissiat hydroelectric plant. sts of a new C_0-C_0 4,000-h.p. express locomotive were rerkably successful. It was the first French locomotive with al adhesion having two three-axle motor undercarriages. On est run between Paris and Bordeaux (362 mi.) a maximum eed of 105.6 m.p.h. was reached with an average of 81.4 p.h.

Germany.—Preliminary studies were made of the heavily ded railway network in the Ruhr zone and the adjoining ine province with a view to electrification. A start was connplated on the Rhine-Ruhr express route between Cologne, esseldorf, Hagen and Hamm. The conversion of the link tween Stuttgart and Waiblingen was undertaken. This concted the main electrified Stuttgart-Ulm-Munich line with the ittgart-Nuernberg and the Aalen routes.

Hungary.—Electric working was restored on the Budapest-gyeshalom main line (93 mi.). The locomotives on this line erated on the Kando system in which 50-cycle single-phase rrent was taken from the industrial network and converted to ree-phase variable frequency on the locomotive by rotating chinery. New 3,200-h.p. locomotives were delivered by the nz works. These had one three-axle and one two-axle underrriage, on each axle of which an induction motor was mounted. ve economical running speeds with automatic regeneration on wngrades were available. The electrification of the Budapest-atvan-Miskolc main line (115 mi.) was planned as part of a e-year program.

Italy.—Marshall aid funds were used to extend the 3,000 v. C. system to Genoa Brignolo on the Genoa-Rome route. A ort connecting link was to be built between Avellino and lma-San Genaro. This would shorten the distance between aples and Avellino by 9 mi. The old route, Poretta-Pistoia, mi. of single track, on the Milan-Bologna-Rome line, was opened for electric working. As the intermediate substations re not finished power was supplied from Bologna and orence and the resultant voltage drop was compensated for by ecial equipment on the electric locomotives and at certain ints along the line.

Netherlands.—During May 1949 the electrification of the etherlands railways from Eindhoven to Maastricht and Heern was opened. This section comprised 90 route and 230 track les and included the large coal distributing yard at Susteren. e work was estimated to save about 30% in coal amounting more than 300,000 tons a year.

Sweden.—The lines from Landskrona to Billeberga and Warrg to Borås, a total of 80 mi., were converted during the ar. The total length of electrified lines was now 3,500 mi. cluding 430 mi. of the Göteborg-Gäyle railway. These lines rried 85% of the total traffic.

Switzerland.—The power supply for the Swiss federal railys was investigated and a scheme was developed to meet the quirements necessitated by new conversion and increased servs over the next 10 to 15 yr., and to complete electrification. ovision would be made for an estimated annual consumption 970,000,000 units a year. The federal railways owned power stations which provided a total of 782,000,000 and private stations 99,000,000 units annually. Prolonged droughts and dry winters had periodically resulted in a shortage of power.

U.S.S.R.—The electrification of the line between Dolgintsevo and Nikopol (74.5 mi.) in the coal fields of southern Russia was completed in Nov. 1948, and would later be extended from Nikopol to Zaporozhe. Another conversion in this area was that of the line between the Black sea port of Poti and Samtredia (28 mi.) which was the junction between the Batumi line and the coast line from Tiflis to Tuapse.

India.—Additional sets of motorcar and trailer equipment were under construction in Great Britain for the Bombay suburban lines of the Great Indian Peninsular and the Bombay, Baroda and Central Indian railways. There was considerable French activity in seeking building and operating concessions for underground railways in cities abroad.

South Africa.—Work was in progress on the electrification between Bellville-Touws River and Capetown-Woltemade together with the conversion of the Cape suburban lines from 1,500 to 3,000 volts D.C. Multiple-unit stock built in Great Britain was delivered for the Reef suburban electrification, Johannesburg. Electric shunting locomotives were also on order for use there and in Capetown and Durban. (*See* also Railroads.) (J. W. Gr.)

Electrification, Rural: *see* Rural Electrification.

Electronics.

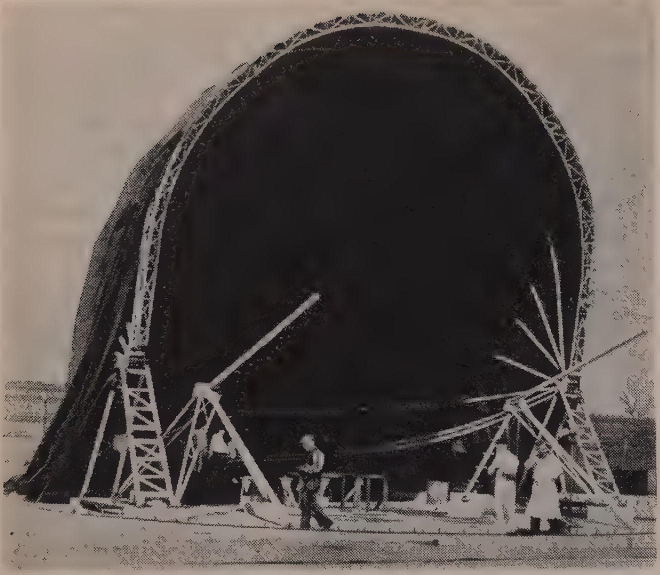
A number of developments in the field of electronics, employing adaptations of techniques devised during World War II, were announced in 1949. One of these was an atomic clock, of which details were published by the national bureau of standards where the new instrument was constructed.

The rotating earth provides the basic time standard, but from the time of Christiaan Huygens, who first applied it to a practical clock about 1670, the pendulum has been the principal secondary standard of timekeeping. In recent years, however, oscillating crystals of quartz had provided an accurate constant frequency of vibration that might be used to control the operation of clocks. The new device utilized vibrations of atoms in the ammonia molecule. It promised to surpass by one or two orders of magnitude the accuracy of the earth itself, which is subject to a gradual slowing down from tidal friction as well as sudden irregular variations due to causes that have not been fully explained.

The atomic clock, which utilized principles developed by Harold Lyons of the bureau's microwave research laboratory, was built with the assistance of B. F. Husten, E. D. Herberling and others. It was said to provide a time constancy of 1 part in 10,000,000 (equivalent to about three seconds per year), while it was theoretically capable of 1 part in 1,000,000,000 or even 10,000,000,000.

The molecule of ammonia is constructed like a pyramid with three atoms of hydrogen forming the triangular base and one atom of nitrogen the top. The pyramid is capable of twisting itself inside out 23,870,000,000 times per second. If very short radio waves, oscillating at this frequency, are passed through ammonia gas they may be absorbed, while vibrations of slightly higher or lower frequency, with which the molecule is not in tune, pass through more easily. Thus, basically, the atomic clock transmits through a spirally coiled absorption cell 30 ft. in length and containing ammonia, a stream of radio microwaves, which changes from slightly above to slightly below the ammonia absorption frequency.

By means of an intricate electronic circuit, a quartz crystal vibrating 100,000 times per second is continually compared with



VIEW OF A HALF-OPEN RADOME, a beamless, airtight structure made of fibre glass and synthetic rubber and designed as a shelter for radar installations. Inflated by a small vacuum cleaner, it was held up by internal air pressure and could withstand a 100-m.p.h. gale and a three-ton load of ice and snow

the unvarying absorption frequency, so that any tendency of the crystal to alter its vibration rate is immediately and automatically corrected by an error signal. The vibrations of the crystal are stepped down to 50 cycles to operate a clock dial of familiar type. Not only was the atomic clock seen as of potential use in scientific work, as in checking variations of the earth's rotation, but it was thought that it might also be able to furnish with greater precision the standards of constant frequency needed to keep accurately in tune many kinds of radar, radio and electronic equipment throughout the world, and thus to utilize most efficiently the crowded radio spectrum.

As part of the program of the Civil Aeronautics authority for safety in aerial navigation and traffic control, a new radar device, developed by engineers of the General Electric company, which would help planes to make all-weather approaches and landings at airports in greater safety and with fewer delays, was revealed in January. It was expected that the first units produced would be installed during 1950.

These sets might be installed up to two miles from the control tower, a remote system permitting the traffic controller in the tower to see the radar picture, displaying the location and flight path of every plane within a 30-mi. radius. Moving target indication was employed, eliminating fixed objects from the picture and presenting only moving aircraft.

Contour maps of the earth's surface might be made more rapidly and less expensively than in the past with the aid of airborne radar, Raymond C. Brown of State College, Pa., reported to the National Electronics conference held at Chicago, Ill., in September. He said that the new system, not yet in actual operation, was capable of mapping at the rate of 1,000 sq.mi. per flying hour. With the flying radar, he proposed, several thousand ground points per second could be observed, and the measurements then converted into measures of position and elevation for each of the points. The map produced would show elevation data in the usual way, as by contour lines or varying shades of colour.

A cloud analyzer, which indicated the thickness, height and density of clouds, was developed for the U.S. navy by the General Electric company. At the heart of the device, which is attached to a weather balloon that climbs into the upper atmosphere at a velocity of about 1,200 ft. per minute, is a piece of string impregnated with a salt. Its electrical conductivity is increased with moisture as it passes through a cloud, controllin a small radio transmitter which relays its reading to the groun station. Other instruments that are carried aloft give addition data, such as temperature and barometric pressure.

A physicist at the Bell Telephone laboratories, A. V. Holler berg, described a new method of amplifying radiofrequency si nals in a vacuum tube. The experimental device which employe this method was called a double-stream amplifier. A cylindric stream of electrons travels down a tube more than a foot lon This stream is enveloped by another slightly larger strea travelling in the same direction but more slowly. The tw streams pass through a wire helix from which the signal to amplified is impressed upon them. As they progress there interaction between them, causing amplification of the sign which is taken out as they pass through another helix at t other end of the tube. Another helical coil, surrounding t tube, guides the two electron streams. The method is partic larly suitable for amplifying signals of high frequency, *i.e.*, short wave length. The more wave lengths there are in t amplifying region, the greater is the gain.

A fundamental difference between this and other amplifyi tubes is that there is no metal structure in the space whe amplification occurs. In other tubes for high-frequency mic wave amplification, the small size of the elements, the sm spacing between them, the small clearance between the electr streams and the elements as well as the electron bombardm of the metal parts raise increasingly difficult problems as t frequency is increased. Design and construction of the doub stream amplifying tube followed theoretical studies by J. Pierce and W. B. Hebenstreit, of the Bell Telephone labo tories. Independent researches in the same field were carri out by L. S. Norgaard, of the RCA laboratories, and A. V. Hae at the Naval Research laboratory.

A new type of memory tube, called the graphecon, whi could store and intensify a fleeting image on the radar scope a had important possible scientific applications as well, was a nounced to the meeting of the Institute of Radio Engineers March by Louis Pensak, of the RCA laboratories. He said th the tube had visual memory, and would retain for more tha minute images that otherwise would have a life of less tha millionth of a second.

At the heart of the graphecon is a metal target, three inch square and coated on one side with a layer of pure quartz fifty-thousandth of an inch thick, which serves both as an sulator and a conductor. The target is sprayed with t electron beams, one of which is connected with the output the radar set and builds up on the target an image made electrical charges. This is similar to the image formed on sensitive screen of a television camera tube, except that in graphecon it is formed by electrons rather than by variations the light image. The second electron beam, again as in camera tube, scans the target and takes off the image. Sign from this beam may then be fed to a television picture tu where the radar pattern is displayed, more permanent and m brilliant than it appeared originally.

An application of the graphecon in scientific research announced in November to the New York section of the In tute of Radio Engineers by two other research workers from RCA laboratories, L. E. Flory and W. S. Pike. Scientists f quently make use of the oscilloscope to study phenomena wh can be converted into electrical variations. A tube like that i television receiver displays them graphically as a wavy bri line. If the effect is very brief, it may be impossible to see a very difficult even to record photographically the transient c play on the tube.

For such situations, the two engineers developed a stor cilloscope, employing the graphecon to hold the image long ough to be observed on a television screen. They said it was is possible to freeze for a full minute a tiny electrical signal, ming, perhaps, from an exploding atom, and lasting for as le as a billionth of a second.

A method analogous to radar, using reflections of high-fre- ency sound waves (above the audible range) rather than radio lses showed promise of helping surgeons to locate gallstones, foreign matter such as bullets, shell fragments and glass or oden splinters in the body, it was announced by George D. dwig of the Naval Research Medical institute in Washington, C. He developed the new technique on an experimental sis in collaboration with the Harrison department of Research rgery at the University of Pennsylvania, Philadelphia.

The ultrasonic waves are transmitted directly into the body om a vibrating quartz crystal placed in contact with the skin d excited by an electronic circuit. Reflections of these waves cur from the bones or from foreign materials and by detecting ese echoes the object may be located. Similar ultrasonic ethods were used to detect flaws in metals.

In recent years there had been great interest in methods of cording sound magnetically on wires, tapes and disks, though eir applications seemed limited because the only method of king duplicates was by playing back one tape or wire, and recording on another. Marvin Camras, physicist of the Armour search foundation of the Illinois Institute of Technology, nounced to the National Electronics conference a duplicating ethod which was analogous to contact printing in photography. worked most satisfactorily, he said, with records on magnetic pe, though satisfactory duplications of wire recordings had en made in his laboratory.

He explained that the master record is made on a tape of h coercive force, that is, one that is not easily harmed by ssage through another magnetic field. The blank copy tape, ced in contact with the master, is passed through a high fre- ency magnetic field where it becomes magnetized itself. This in exact correspondence with the master, which retains its n record. Copying may be done at many times the speed at ich the tape is played and the copy has negligible loss of elity. With a tape on which several records are made side by e in parallel lines of magnetization, all channels may be pied at once.

An electronic computing machine, called BINAC and said to the first small machine of this type for use in laboratories d factories, was announced by John W. Mauchly, president the Eckert-Mauchly Computer corporation, who built for the S. army an earlier electronic computing machine, the ENIAC, name being an abbreviation for "electronic numerical in- rator and computer." BINAC was applied to the new com- ter because it uses a binary number system with only one and o, instead of the decimal system with ten digits. An electrical se represents the number one while the absence of a pulse icates zero. By combinations of these any number may be resented. BINAC was said to be about three times as fast ENIAC and used only 700 tubes, as compared with 18,000 in earlier computer. It also had a mercury memory unit. This s an 18-in. column of mercury through which electrical pulses re sent back and forth. Data could thus be held in storage, n fed to other units of the machine for arithmetical proc- es. With a storage capacity of 15,000 binary units the mer- y column replaced many of the additional electron tubes in earlier machine.

James D. Cobine, of the General Electric Research labora- y, told a conference on gaseous electronics held in Pittsburgh, , of an electronic torch, hot enough to melt tungsten, most ractory of the elements, with a melting point of 3,370° C. By means of a magnetron oscillator, radio waves with a frequency of a billion cycles per second are produced. These are fed to an antenna, consisting of two concentric metal cylinders, at the end of which a high-frequency arc may be formed. As various gases are fed past the arc, a long jet of flame is produced. Some of these are extremely hot, while others are so cool that the finger is not burned if held in the flame.

Hot flames are produced with a gas such as nitrogen, which consists of molecules made of two atoms. The arc breaks them into their constituent atoms, but when they strike a surface they recombine, giving off heat. Helium and argon, however, normally consist only of single atoms. Since they cannot be broken and reunited, they yield a relatively cool flame. The electronic torch was still in the experimental stage, and its commercial possibilities had not been explored.

Working under the technical supervision of Ralph R. Shaw of the library of the department of agriculture and the sponsorship of that department and the Atomic Energy commission, Engineering Research Associates, Inc., developed a new electronic selector. This would automatically sift through a mass of technical data and select those needed for specific research jobs. It operated as a person would in looking through the cards in a library catalogue, but far more rapidly. It would scan up to 120,000 coded subject entries per minute.

In the machine a 2,000-ft. reel of film provides space for text and code for 60,000 abstracts or pages. Six coded entries may be made for each unit; if more are needed the text is repeated. The machine scans 500 ft. of film per minute, so the entire reel goes through in four minutes. Banks of phototubes read the code, and when the desired information comes along, a photograph of that page is taken. It is not necessary to stop the film, since the exposure is made with a stroboscopic light source giving a flash lasting two millionths of a second.

Another stroboscopic device for accurate timing of races was developed for the Bulova Watch company by J. C. Beekman and E. M. Whitley, of San Carlos, Calif. To photograph the finish of a horse race, for example, a slit camera is often employed. This forms the picture on a vertical slit, always open, and aligned exactly with the finish line. The film moves behind the slit at a speed which corresponds to the motion of the horses, so that undistorted images are obtained. The new camera adds to this a time record, which is photographed directly on the film, from a series of counter dials inside the camera and timed by a tuning fork. They are started by an acoustic relay placed near the starter and actuated when his gun is fired. The dials are illuminated every hundredth of a second by a stroboscopic light flash, lasting for ten millionths of a second. Thus, as the racers cross the finish line, their exact times, to the nearest hundredth of a second, are recorded at the top of the film. (*See* also PHYSICS; STANDARDS, NATIONAL BUREAU OF.)

Employment.

United States.—The civilian labour force (persons not in the armed forces and available for employment) numbered 63,637,000 in Aug. 1949, a gain of 451,000 over Aug. 1948. The labour force reached its maximum, for the first eight months of 1949, during July, when 63,815,000 workers were available. The unemployment figure in Aug. 1949 was 3,689,000 as compared with 1,941,000 in Aug. 1948.

Males in the civilian labour force numbered 45,163,000 in Aug. 1949 as against 45,215,000 in the same month of 1948. Females numbered 18,474,000 as compared with 17,971,000 in Aug. 1948.

Employees in nonagricultural establishments numbered 43,027,000 in Aug. 1949, a decrease of 1,467,000 from Aug. 1948. During the year there were decreases in every area of nonagricultural employment except finance and government (Table I).

In these latter areas there was an increase from 7,275,000 workers to 7,595,000 during the period. The largest decrease occurred in manufacturing, where employment in Aug. 1949 fell to the level of 14,088,000 workers as compared with 15,400,000 in Aug. 1948. This was a loss of 1,312,000 workers.

Table. I—*Number of Employees* in Nonagricultural Establishments, by Industry Division, United States (estimated)*
(In thousands)

Industry division	Aug. 1949	July 1949	June 1949	Aug. 1948
Total estimated employment	43,027	42,535	42,792	44,494
Mining	968	494	970	1,006
Contract construction	2,333	2,279	2,205	2,384
Manufacturing	14,088	13,755	13,885	15,400
Transportation and public utilities	4,000	4,014	4,030	4,213
Trade	9,212	9,205	9,327	9,366
Finance	1,780	1,781	1,774	1,742
Service	4,831	4,845	4,829	4,850
Government	5,815	5,707	5,772	5,533

*Estimates include all full- and part-time wage and salaried workers in nonagricultural establishments who worked or received pay during the pay period ending nearest the 15th of the month. Proprietors, self-employed persons, domestic servants and personnel of the armed forces are excluded. These estimates have been carried forward from 1947 bench-mark levels.

*The figures beyond May 1949 were unavailable at the close of the year, because of extensive revisions being undertaken by the bureau of labour statistics.
Source: United States Bureau of Labor Statistics, *Monthly Labor Review.*

Pay roll indexes of production workers showed a decrea from July 1948 to May 1949 in all areas except two. Th increased in both transportation equipment (except auton biles) and in printing, publishing and allied industries. T figures beyond May 1949 were unavailable at the close of 19 because of extensive revisions being undertaken by the bure of labour statistics.

The durable goods index of production worker employme fell from 185.0 in July 1948 to 162.4 in July 1949; the no durable goods index fell from 137.7 to 128.6 in the same peri (1939=100). The number of and indexes of production worl employment and pay rolls in United States manufacturing indu tries are shown in Table II.

Table III gives indexes of employment and pay rolls selected nonmanufacturing industries in April and May 1949 a May 1948.

South Africa, Union of.—The general employment index 937=100) averaged 128.6 for 1948 and 130.7 for the first uarter of 1949. The industrial employment index averaged 6.1 for 1948 (1937=100) and 160.9 for the first quarter of 49.

Australia.—The Australian general employment index 937=100) averaged 137.0 for 1948 and 140.0 for the first uarter of 1949. The industrial employment index averaged 7.9 for 1948 (1937=100) and 160.5 for the first quarter of 49.

South America.—Argentina's index of industrial employ-ent (1937=100) averaged 146.9 for 1947, which was the latest ailable figure at the close of 1949. The Chilean industrial nployment index (1937=100) averaged 134.0 for 1948.

Norway.—The industrial employment index for 1948 (1937=0) averaged 133.3 and averaged 138.1 for the first quarter of 49. The general employment index was 106.9 on the average 1948 and 108.5 for the first quarter of 1949.

Sweden.—The Swedish industrial employment index for 1948 937=100) averaged 125.5 and averaged 126.2 for the first uarter of 1949.

Switzerland.—The industrial employment index for 1948 eraged 135.0 (1937=100).

France.—The French industrial employment index averaged 0.3 in 1948 (1937=100). The general employment index eraged 107.7 (1937=100) in the same year. (*See* also BUSI-ESS REVIEW; CENSUS DATA, U.S.) (P. TA.)

ndocrinology. By far the most notable advance in endocrinology during the year 1949 was the scovery that rheumatoid arthritis and certain other chronic seases of obscure aetiology could be controlled by the admin-tration of one of the steroid hormones of the adrenal cortex, by stimulating the gland to secrete that hormone. This de-lopment represented the confluence of two separate streams of search, one laboratory and the other clinical.

It was known, from previous work with animals, that many pes of stress (*e.g.*, cold and heat, noxious drugs and infections, erwork and anoxia) are followed by adrenal cortical hyper-ophy and evidences of an increased production of adrenal rmones. This reaction is brought about by the stress stimulus ting in an unknown manner to signal the central nervous stem. The signal is then relayed to the anterior pituitary and causing a release of adrenocorticotrophic hormone CTH), which is the specific stimulator of the adrenal cortex. nder the influence of a sudden outpouring of ACTH, morpho-gical and chemical changes occur in the adrenal cortex, leading to an increased production of the adrenal steroid hormones. These steroids enable the organism to combat or adjust itself to the stress and to survive. The adrenalectomized animal, which is unable to carry through the described mechanism, succumbs to environmental or internal stresses which the normal animal can withstand. Hence, this complex system consisting of neurological pathways and hormonal relays seems to constitute a vital self-corrective or homeostatic mechanism for the adaptation of the living organism to threatening environmental or internal influences, which may otherwise have catastrophic consequences.

STUDENTS in Boston, Mass., placing their bids for employment in 1949, as industry appeared to be catching up with the wartime shortage of college-trained workers in certain fields. Competition was very keen in law and journalism, for example, but slight in teaching, medicine and social service

The adrenal cortical steroids which are effective against stress are the group of C_{11} oxysteroids (Compounds A, B, E and F of E. C. Kendall). Because of their important effects on certain aspects of carbohydrate metabolism, they were sometimes called glucocorticoids. But their precise mode of action in facilitating adaptation to stress was not yet known at the end of 1949. However, Hans Selye and others who contributed much of the above knowledge studied the phenomenon of adaptation and reported certain evidence which was suggestive of the role of the various adrenal cortical steroids. It was postulated that some chronic disorders might be expressions of an inadequate or unbalanced reaction of the adrenal cortex to past or continuing stresses and that certain types of hypertension, vascular disorders and arthritis might be considered to be "diseases of adaptation."

At the same time as the complexities of adrenal function were being unravelled by physiologists, clinicians were investigating the characteristics of rheumatoid arthritis, a common chronic and crippling disorder of the joints, etc., of unknown origin. It was observed that a woman afflicted with this disorder might be free of symptoms during the whole course of a pregnancy. It was also known, through the work of P. S. Hench and associates, that an arthritic suffering from certain types of liver disease accompanied by jaundice was often relieved of his arthritis during the course of the liver dysfunction. Hench showed further that bile pigments or bile salts (present in jaundiced blood) have no therapeutic value, that the female sex hormones (increased in pregnancy) do not relieve arthritis. Two years before, Eleanor Venning demonstrated that in pregnancy, in addition to the sex steroids, there was also found a high level of the C_{11} oxysteroids of the adrenal cortex. With all these considerations in mind Kendall, Hench, C. H. Slocumb and H. F. Polley administered one of the glucocorticoids (Compound E or Cortisone) to patients with rheumatoid arthritis. Striking beneficial effects became evident within one or two days, and complete relief was obtained during prolonged therapy. These findings were later amply confirmed by others.

During 1949 it was also shown that ACTH administration was equally efficacious in suppressing the symptoms and signs of rheumatoid arthritis. ACTH or Cortisone, or both, were also tested in many other acute and chronic disorders such as rheumatic fever, psoriasis, lupus, various allergies, etc. While it was too early to judge accurately, it would seem that the C_{11} steroids are able to suppress the overt manifestations of many seemingly unrelated diseases. It also appeared that, with the aid of these steroids, the tissues of the body acquire an increased capacity to "resist" pathological changes. The implications for the theories of disease processes and for the role of the endocrine glands in health and disease were manifold.

Pituitary.—The supply of the protein hormones for experimental and clinical purposes continued to be limited by the fact that they had to be prepared by extraction and purification, from the respective glands removed from the meat-producing animals (beef, sheep, hog, etc.). The precise structure of any protein was still almost completely unknown. Synthesis from constituent animo acids seemed beyond immediate possibility. With the exception of thyroxine, the protein hormones do not seem to possess an "active" nonprotein group. However, C. H. Li and H. M. Evans showed that a reasonably small peptide, which resulted from enzymatic hydrolysis of purified ACTH, has the full physiological activity of the complete protein. This peptide consists most probably of 6–7 amino acids. If the structural pattern could be determined, it would open up the possibility of a partial synthesis of an ACTH-like substance. The significance of such an event would be great, both from its practical aspect and from its bearing on the relation between chemical structure and physiological function of the other protein hormones.

Pancreas.—The intense development of tissue enzyme chemistry had led to the general expectation that hormones which affect the metabolism of foodstuffs would be found to do so by increasing or decreasing rates of particular intermediary reactions. For this reason the location of the action of insulin was looked for in some known enzymatic reaction concerned with glucose phosphorylation or its deposition as glycogen. Despite intensive search in this direction the results were not rewarding in 1949. A somewhat different approach was suggested by the work of R. Levine *et al.* They observed that insulin lowered the level of galactose in the body fluids when this sugar was given to eviscerated animals from whom the kidneys were also removed. Such experimental preparations cannot metabolize galactose, for their tissues do not possess the necessary enzymes. The effect of insulin was, therefore, interpreted to mean that this hormone in some way increased the rate at which galactose entered the cell interior through the cell membrane. It seemed reasonable to assume that the action of insulin on glucose is of the same nature. If this is so, the hormone does not exert an action on any of the enzymes of glucose metabolism but makes glucose more freely available to them. Its action is one of fu
thering "transport," not use. (*See* also DIABETES; ZOOLOGY.)

English Literature.

In English literature during 194
Winston Churchill's concise, forcib
English, his feeling for words and his mastery of narratio
spoke their own eloquent testimony in the second volume
his memoirs of World War II, *Their Finest Hour.* The exper
ence of war sharpened the perception and descriptive gifts
some younger men called from peaceful pursuits to battle in r
mote places. Col. F. Spencer Chapman told of his fight
organize resistance in Japanese-occupied Malaya in *The Jung*
Is Neutral, one of the best of all war books. Eric Williams wa
another who did not lack resource in unfamiliar surrounding
and *The Wooden Horse,* the story of his escape from Stala
Luft III, by means of a tunnel scraped from the earth, caugh
the peacetime imagination. Brig. Fitzroy Maclean publishe
Eastern Approaches, his remarkable record of personal achiev
ment, which included accounts of his diplomatic stay and wa
derings in the prewar Soviet Union as well as of his mission
Yugoslavia.

The first volume of *The Oxford History of English Art,* a su
vey to be issued in 11 vol. under the editorship of T. S.
Boase, president of Magdalen, made a welcome appearanc
This volume (v), which appeared out of chronological sequenc
was written by Joan Evans and was devoted to the years 1307
1461. Sir Kenneth Clark's *Landscape into Art* was concerne
with the development of landscape painting as "the chief artist
creation of the 19th century." Arthur M. Hind issued the se
ond part of his great critical catalogue of *Early Italian Engra*
ing (the earlier part was published in 1938); and with *La*
Saxon and Viking Art, T. D. Kendrick completed his two-vo
ume informative and scholarly survey.

Douglas Jerrold produced a one-volume *Introduction to t*
History of England, which began with prehistoric man and we
to the loss of Normandy in 1204. J. E. Neale devoted h
knowledge of the Elizabethan period to a study of *The Eliz*
bethan House of Commons. Herbert Butterfield, who also pu
lished two other important books—one on the relationship
Christianity and history, the other on the origins of science—
described in *George III, Lord North and the People* how Lo
North's ministry, then struggling with the American colonie
reached a particularly critical phase in 1779; and B. Wilkins
issued the first volume of his new documentary *Constitution*
History of England, 1216–1399, which went to the year 13
G. M. Trevelyan issued *Autobiography, and Other Essays,* a
G. P. Gooch's *Studies in German History* collected 12 pape
Events leading up to World War II were clarified by the pub
cation of several volumes of *Documents on British Forei*
Policy, 1919–39, edited by E. L. Woodward and Rohan Butl
and by Elizabeth Wiskemann's history of the relations betwe
Hitler and Mussolini, *Rome-Berlin Axis.*

Laughter in the Next Room, the fourth volume of Sir Osbe
Sitwell's delightful autobiographical sequence, *Left Hand, Rig*
Hand! opened with a picture of Armistice night in London
1918 and then roved over the afterwar years, again giving d
attention to the diverting oddities of his father's character.

There were two interesting portraits of Ruskin—Derrick Leon's studious *Ruskin: the Great Victorian* (written before the publication in 1948 of Adm. Sir William James's book on the correspondence relating to the marriage with Effie Gray), and Peter Quennell's lucid and objective *John Ruskin.* Rossetti, too, was twice presented. Helen Rossetti Angeli's *Dante Gabriel Rossetti* was written in order to remove some misconceptions concerning Rossetti's life and character and his relations with his friends and fellow artists; Oswald Doughty's *A Victorian Romantic: Dante Gabriel Rossetti* was a painstaking study which made plain the complex personality of the poet and artist.

Sir Charles Tennyson used family letters and papers to illumine some obscurities and personal problems in the life of his illustrious grandfather, *Alfred Tennyson;* Hesketh Pearson, encouraged by Bernard Shaw, turned to the character and career of *Dickens,* examining the books and noting what was biographically revealing; and Roger Fulford's *The Prince Consort* emphasized Prince Albert's personal contribution to the increase in the political powers of the crown during the middle years of the 19th century, as well as his interest in his family affairs.

The marchesa Origo's absorbing account of Byron's love affair with Teresa Guiccioli—*The Last Attachment*—included 149 of Byron's love letters to Teresa, some of her answers, her unpublished account of his life in Italy—*Vie de Lord Byron*—and other relevant documents. Achievement in the political sphere was the central theme of I. Deutscher's documented and balanced biography of *Stalin.* A new volume brought the *Dictionary of National Biography* up to 1940.

R. W. Chapman's *Jane Austen: Facts and Problems* brought together some researches into various aspects of her life and work and method of writing. *Poets and Story-Tellers,* a book of essays, was published by Lord David Cecil. Bernard Blackstone's *Virginia Woolf* was an interpretation of her method as novelist and critic. Edwin Muir's diverse and discriminating critical gifts were displayed to some purpose in *Essays on Literature and Society* and Norman Ault shed some *New Light on Pope.* In *The Common Asphodel* Robert Graves collected his essays on poetry compiled between 1922 and 1949 and allowed the reader a view into the poet's workshop; and the storyteller's and playwright's workshop was partially illumined by Somerset Maugham's *A Writer's Notebook,* culled from 15 stoutish notebooks which he kept over a period of about 50 years.

Fiction.—Aldous Huxley and George Orwell used their considerable talents to depict a scarifying future. Huxley's *Ape and Essence* pessimistically portrayed human society after a third world war had wrecked 20th-century civilization; Orwell's vision of society 34 years hence, *Nineteen Eighty-Four,* was scarcely more reassuring. Joyce Cary was more concerned with character and emotion in his *A Fearful Joy,* a swiftly paced narrative depicting the exuberant and diverting sides of shady characters. H. E. Bates's *The Jacaranda Tree* told of the reactions of a group of characters thrown together by circumstances; in *The River Line,* Charles Morgan seemed overmuch concerned with the sensibilities of his characters; Compton Mackenzie returned to the Highlands, lairds, ladies and local colour with *Hunting the Fairies;* and Eric Linklater went back to Scotland's early days for a good-humoured frolic about giants, a poet and a princess—*A Spell for Old Bones.*

Rex Warner's allegory, *Men of Stones,* was concerned with the conflict between authority and freedom. Tom Hopkinson chose another familiar theme—political escape from a totalitarian country—for his tale *The Long Slide;* Malcolm Muggeridge's *Affairs of the Heart* made a deft and high-spirited affair of one literary man's investigations into the emotional entanglements of another (deceased); William Sansom turned from the short story to an impressive full-length study in jealousy, *The Body;* and Jocelyn Brooke's blend of reminiscence and reflection made *A Mine of Serpents* an agreeable and realistic account of a man's life.

Elizabeth Bowen's *The Heat of the Day* brilliantly recreated the atmosphere of London in 1942; and the setting of Ivy Compton-Burnett's *Two Worlds and Their Ways* was a ramshackle country house, and the main theme the sending to school of two children. Nancy Mitford's *Love in a Cold Climate* was a diverting portrayal of life and behaviour in high society.

Among the short-story writers Rhys Davies, in the titlepiece to a collection called *Boy with a Trumpet,* showed that his gifts were not confined to tales about Wales and Welshmen; and William Plomer's *Four Countries* was a volume worthy of one who confessed the debt that he owed to Guy de Maupassant.

(A. Ck.)

Poetry.—The general impression was that the younger generation, those who began to write during and after World War II, shared in common an outlook and philosophy that turned away from cynicism, the political preoccupation, the class-bitterness of the 1930s. It was significant that a first book by a newcomer, A. J. McGeogh, should be called *Annus Mirabilis.* From the poetic point of view, that truly describes the year which saw the appearance of Edith Sitwell's own selection of her poetry, *Canticle of the Rose,* including the Cassandra-like war poetry that carried her name and fame throughout the English-speaking world. Two other women poets produced notable books: Kathleen Raine, in *The Pythoness,* and Dorothy Una Ratcliffe, in *Until that Dawn,* a collection of Yorkshire songs.

The outstanding collection of new poems was *The Labyrinth,* by Edwin Muir. Here was major poetry, simple, subtle, passionate and direct, like that of Edith Sitwell. Another collection of new work from the poet laureate, John Masefield, *On the Hill,* was the vision of a veteran, looking back over the landscape of his life. Another elder poet, too, was Herbert Palmer, whose *Old Knight,* "a poem sequence for the present time," was a title which spoke for itself. His prophetic strain was still unimpaired. Edmund Blunden's quiet voice was heard again in *After the Bombing;* and Ronald Bottrall published *The Palisades of Fear.*

Among the poets putting out *Collected Poems* were Louis MacNeice and Laurence Whistler. MacNeice had grown in stature with time, as had Cecil Day Lewis. Their work was the direct statement of distinctive personalities, artists who had found the way to a statement in song of the problems of our time, giving universality to their individual reactions. Laurence Whistler was more intimate, more a poet of solitude. Comparable with him was Clifford Dyment, whose work, now collected, showed a lyric poet of a Heine-like keenness of touch. Finally, mention must be made of the translation of Dante Alighieri's *Inferno* by Dorothy L. Sayers. (*See* also AMERICAN LITERATURE; BOOK PUBLISHING; CHILDREN'S BOOKS; LITERARY PRIZES.)

FILMS OF 1949.—*Charles Dickens: Background for His Works; The Lady of the Lake* (Coronet Instructional Films). (R. CHU.)

Entomology.

Insects contaminate as well as consume food products. In recent years, a great deal of attention had been given to the elimination of insects and their body parts, excrement and webbing from all types of food products. Concerned in this endeavour were public-health authorities, entomologists, insecticide manufacturers, food processors and canners. During 1949 the most concerted action ever attempted was under way to insure wholesome, insect-free, fresh, dried, canned and frozen fruits, cereals and vegetables for the consumption of the public. New and more effective insecticides were being investigated and used by entomologists for this single purpose—the control, and, in some cases, the complete eradication of insect pests.

Bee Culture.—In the United States, according to the bureau of entomology and plant quarantine, the honeybee produces more than 200,000,000 lb. of honey and 4,000,000 lb. of beeswax each year; yet by far the greatest service the bee renders to man is the cross-pollination of valuable and necessary agricultural plants. Without this insect many of our most valuable food crops would become barren and soon disappear and many beautiful ornamentals would also cease to exist.

Foul brood disease of bees was effectively controlled in the hives when one-half gram of sulfathiazole added to a gallon of sugar syrup, or combined with pollen, was fed them. It was estimated that this treatment resulted in a saving per year of about 100,000 colonies of bees worth $1,000,000 and honey worth $2,000,000, together with great gains in the pollination of plants.

Cabbage Insects.—According to W. J. Reid, Jr., and F. P. Cuthbert, Jr., of the U.S. bureau of entomology and plant quarantine, caterpillars infesting cabbage and other cole crops in the south were most successfully controlled by 3% DDT applied as a dust every two weeks. A 1% DDT mixed with a 2% combination of di- and trimethylnaphthalenes was also as effective as 3% DDT dusts. Technical benzene hexachloride or lindane proved to be as toxic as DDT in equal dosages of active ingredients and also controlled aphids. Three and five per cent dusts of toxaphene and rothane were also effective against the caterpillars and aphids.

Codling Moth on Apples.—DDT continued to be the favoured insecticide for controlling this insect in apple orchards. According to the available statistics, DDT increased the value of the 1948 apple crop by at least $225,000,000.

Cotton Insects.—Investigations showed that 3% benzene hexachloride (BHC) mixed with 5% DDT gave excellent control of the boll weevil, bollworm and cotton aphid. Plots treated with this mixture produced an average of 496 more pounds of seed cotton per acre than untreated areas. Calcium arsenate alone, and with nicotine, also gave better than normal yields. Chlorinated camphene applied after the plants had set and were maturing gave an average of 563 more pounds of seed cotton per acre than when the same insecticide was applied earlier, and 403 more pounds than no treatment.

Sweet Corn.—Better quality of roasting ears of sweet corn was obtained when the insecticides ryania and rothane were used to control the corn-ear worm and the European cornborer. Ryania was found most effective in killing the larvae of the corn borer and rothane the most promising in destroying the corn-ear worm.

Grasshopper Control.—During the summer of 1949, 140,000 ac. of land in the United States were baited for the control and elimination of grasshoppers. The use of poison baits and chlordane resulted in 90% control. An estimated 6,000 tons of grasshoppers were killed daily, resulting in saving 24,000 tons of forage daily—enough to supply 1,700 cattle.

Mosquito Larvae Control.—In the control of mosquito larvae B. F. Burgess, Jr., found that the surface active agent Ethofat 142/20 is the most suitable spreading agent for DDT-oil larviciding formulations.

European Corn Borer Parasites.—The most important parasites of the European corn borer in the United States were: *Lydella stabulans grisescens* (R. & D.) an introduced exotic species; *Pyraustomyia penitalis* (Coq.) native species; *Eulophus viridulus* (Thoms.) exotic species; *Macrocentrus gifuensis* (Ashm.) native; *Horogenes punctorius* (Roman) introduced; *Aplomya caesar* (Aldrich) native; *Chelonus annulipes* (Wesm.) introduced.

Insect Resistance to Insecticides.—The development and extensive uses of new insecticides had demonstrated beyond a doubt the fact that all insects of a given species vary in their susceptibility to the killing efficacy of any insecticide. It had long been known that certain scale insects such as black scale and red scale of citrus were able to survive rather heavy doses of cyanide fumigation, whereas others of their kin were killed. This survival quality was called resistance. The codling moth of apples, pears and other fruits had shown resistance, in certain localities, to arsenate of lead sprays. DDT, the first so-called all-round killer of many insects, and specially deadly to the common housefly, failed within two or three years to give an adequate control of this insect with two or three times the normal dosage. What had happened in the control of these insects was occurring with other insects and insecticides. Therefore, it appeared from recent experience that there was no such a thing as a perfect and lasting insecticide for any insect pest.

Hessian Fly Control.—The use of the Hessian-fly resistant Pawnee wheat in Kansas, greatly increased the production for the following reasons: (1) fewer larvae developed on this strain; (2) adult Hessian flies were smaller and matured more slowly; (3) plants were rarely killed; (4) tillers suffered less than in other varieties, resulting in from 17% to 42% higher yields.

Wireworm Control.—Experiments conducted over a two-year period in California by W. H. Lange, Jr., University of California, and M. W. Stone, U.S. bureau of entomology and plant quarantine, showed that chlorinated propane-propylene at the rate of 26 to 36 gal. per acre and ethylene bromide (36 lb.) per acre, at the rate of 2 gal., when applied as soil fumigants 7 to 12 in. deep, gave very good control of wireworms.

Forest Insects in Canada.—The spruce budworm in the maritime region of Canada increased slightly in 1949 over 1948. The largest and most severe outbreaks, covering about 280 sq.mi., occurred in Victoria county, and Madawaska county, N.B. The defoliation ranged from 25% to 100%. Other outbreaks occurred in the Portage Brook and also in Newfoundland and Nova Scotia areas.

In addition to the spruce budworm, other insect pests to forests were: black-headed budworm on balsam and spruce in Quebec, Alberta and British Columbia; spruce needleworm on spruce and balsam in Quebec; European spruce sawfly on spruce in Quebec; hemlock looper over the maritime provinces; and yellow-headed spruce sawfly on white spruce in Quebec and Saskatchewan (heavy). Birch sawfly decreased somewhat in Manitoba, but spruce gall adelges caused considerable loss to Douglas fir in British Columbia.

Animal Pests.—For the control of the chicken lice, fowl tick or blue bug, poultry bedbug, poultry mite and chicken flea a 2% oil or chlordane emulsion spray applied to all parts of the houses and nesting boxes was very effective. It was also equally effective against the winter tick of cattle and horses.

Housefly Control.—Experiences in house and stable fly control in barns and barnyards, where DDT alone failed to give adequate control, showed that where DDT, methoxychlor or chlordane were applied regularly and thoroughly and accompanied by sanitation, good or excellent control was possible.

Mass Production of Insects.—Large quantities of insects are reared for experimental purposes by many entomological departments. During 1949 the University of Wisconsin Research Foundation laboratory produced daily approximately 500 pea aphids, 1,000 cockroaches, 8,000 houseflies, 1,000 clothes moths and hundreds of carpet beetles, red spiders and others to make up a list of 20 species in all.

DDT as an Insecticide.—During 1948 and 1949, the extensive use of DDT to control the insects infesting cereal and

MIGRATORY GRASSHOPPERS, part of a horde covering 3,000 sq.mi. which was eating its way into California from Nevada in 1949. A fleet of 50 planes, mobilized in June by the U.S. department of agriculture, spread poisoned bait for the pests at the rate of 500 tons a day

forage crops resulted in the publication of no less than 85 important papers in the United States and other parts of the world (England, Australia, Italy, Canada). In many of these DDT was compared with many of the standard older insecticides such as arsenate of lead, sabadilla, pyrethrum, derris, sulphur, cryolite, rotenone, toxaphene, methoxychlor and also with such other newer insecticides as BHC and lindane, parathion and chlordane. Good control was reported for army worms, bruchids, corn-ear worms, cucumber beetles, cutworms, chinch bugs, corn rootworms, clover root borers, European corn borers, flea beetles, leaf hoppers, lygus bugs on alfalfa and beans, rice bugs, webworms, pests in stored grain, seeds and flour, velvet bean caterpillars, wireworms in soil, white-fringed beetles, sugar-cane borers and thrips, poultry ectoparasites, and weevils (alfalfa, clover leaf, clover root).

DN 289.—This is a nonoil insecticide for control of scale insects and aphid and mite eggs on dormant deciduous fruit trees. It is applied at the rate of two quarts to 100 gal. of water. It should not be followed by oil sprays within two or three weeks. Spray operators should be protected so that the spray does not come in contact with the skin, and clothes should be changed frequently if wetted. (*See* also Agricultural Research Administration.)

Epidemics. No serious disease pandemics occurred in 1949. In the United States, decreases were recorded in the number of cases of pertussis, streptococcal infections, syphilis, bacillary dysentery, salmonellosis, meningococcus meningitis and pneumonia.

The rabies epizootic continued to spread in the United States, reaching from the Appalachian plateau in the states of New York and Pennsylvania to Texas. Intensive dog vaccination programs reduced rabies in dogs and humans, but wildlife, particularly the fox, was taking over the role of the chief mode of transmission.

In the United States, localized epidemics of Q fever extended to northern California, Washington and New York state. Further work was done regarding the role of raw milk and association with cattle as modes of transmission of this disease in southern California. Apparently, pasteurization is effective in rendering milk harmless as a means of spreading the disease to humans.

At the close of 1948 and extending well into 1949 there was an epidemic of jungle yellow fever in Panamá, an area from which no human cases of the disease had been reported since 1907. Heroic measures of *Aedes aegypti* eradication and mass immunization of the population resulted in the effective control of the outbreak. The epidemic recurrence of this disease in Panamá served as a warning that epidemiologists remain alert to the danger of the reintroduction of yellow fever into many areas long free of recognized human infection.

Poliomyelitis appeared again in serious proportions for the second consecutive year in the United States. The northeastern, central, north and south central states and California were especially involved, with the nation's total for the year reaching more than 40,000 cases, a record high and an increase over 1948 of approximately 15,000 cases. The large-scale epidemic of 1947 in Europe did not recur in 1949.

Influenza which appeared in Sardinia in Oct. 1948 spread to Italy, France, Austria, Bulgaria and the Netherlands by Jan. 1949. During the next few months, numerous cases appeared throughout Europe and the United States. This outbreak provided the first test of the World Health organization's Influenza centre, established at London in 1948, and the listening posts scattered in laboratories throughout the world. The centre recommended that throat washings and acute and convalescent phase serum from influenza cases be submitted to approved laboratories for determination of the strain of virus involved. On Jan. 12, the centre announced identification by the Institut Pasteur of a virus belonging to the A group as causing one-half of the cases in France. The centre was informed of the isolation of a similar virus from the southern area of the Netherlands, and later the strain was discovered in the United States. The virus was shown to be related to the A prime or FM1 strain epidemic in Europe and the United States during 1947.

During the 1947 pandemic, it became apparent that the stock vaccines then available, containing influenza viruses A and B, failed to be protective. Subsequently, the FM1 strain was added to all influenza vaccines; however, it was realized that antigenically different strains might appear from time to time, so that ideally it would be best to immunize the threatened population with the current epidemic strains. This was done in at least one area in 1949. In this episode, only ten days were required for the production of vaccine following the receipt by the laboratory of the throat washing containing the epidemic strain. During the pandemic of 1949, the prevalent influenza disease was mild, with a low case fatality. The success in securing speedy notification of the strain involved by the World Health organization was encouraging in the face of the possible later occurrence of a highly fatal pandemic of influenza with the necessity for the rapid preparation and world-wide distribution of specific vaccine. Estonia.

From Feb. 24, 1918, to Aug. 6, 1940, when it was annexed by the U.S.S.R., Estonia was an independent Baltic republic. The British, U.S. and many other governments, however, had not by 1949 granted *de jure* recognition to this annexation. Area: 18,357 sq.mi. Pop.: (Jan. 1939 est.) 1,134,000, (Jan. 1946 est.) 854,000. The reduction is explained by the evacuation of 17,000 Germans in 1939–40, by the soviet deportation in 1940–41 of 62,000 people, by the fact that about 50,000 Estonians fled to Germany and 30,000 took refuge in Sweden when the soviet armies returned, and by a second wave of soviet deportations begun in 1944 (about 121,000 deported up to the end of 1945). Chief towns (1939 est.): Tallinn (cap., pop., 146,400); Tartu (60,100). Chairman of the supreme soviet of the Estonian S.S.R.: Edvard N. Päll; chairman of the council of ministers: Arnold T. Veimer.

History.—During 1949 the country came still further under soviet domination and state administration, the Estonian Communist party being permeated by Russians. The party purge begun in 1948 continued.

The total population of Estonia was estimated by mid-1949 at 1,300,000. This increase, however, meant both an absolute and a relative decrease of the native population. The influx of Russians was particularly important in towns. For instance, in Tallinn a total population of 165,000 included 70,000 Russians. A new mass deportation of about 40,000 people took place in the first half of 1949. (*See* also Latvia; Lithuania.)

At the beginning of 1949 about 88% of the party members were civil servants, 8% workers and 4% peasants, but as the forcible collectivization, which had been inaugurated in Aug. 1947, increased the grip of the party on the countryside, this disproportion was possibly reduced.

Päll proclaimed on July 21, 1949, that industrial production was double what it had been in 1939—no small achievement in a country where by 1944 war destruction had reduced the industrial production capacity to one-seventh. It had also been announced earlier that the volume of oil-shale production in 1948 was double the prewar yield. That would bring the production of oil-shale to 3,400,000 and of oil to 358,000 metric tons: the respective targets for 1950, however, were 8,400,000 and 1,000,000 tons.

According to N. G. Karotamm, 1,800,000 sq.mi., or 48% of the total housing space, had been destroyed during World War II. The construction target for 1950 was 1,100,000 sq.mi., which meant that a population increased by one-seventh was to be housed in a space reduced to four-fifths of that of 1939.

By mid-1949 the number of Lutheran clergymen had been reduced from 170 (in 1939) to 40. The Lutheran bishop August Pähn was deported.

Education.—The total number of pupils in elementary and secondary schools in 1949 was 156,000, including 24,543 members of the All-Union League of Communist Youth (Komsomol). The University of Tartu had in 1949 a staff of 450 professors and lecturers, while the students, more than half of whom were women, numbered 2,700.

Etching.

The medium of etching, like all other branches of graphic art, continued in 1949 to gain in both volume of work and in public support, in the countries where practised to any considerable extent. Under the economic conditions of modern life that require smaller homes with less wall space for pictures and that impose strict limitations upon the average budget, prints of all kinds had grown in popularity and each year had found more and more people collecting them, public art galleries selling them and societies being formed among laymen and artists alike designed to foster and maintain their production and distribution.

This was particularly true in the United States. Of all the graphic media, however, etching followed, in 1949, its normal course of existence as an independent art with the least amount of change. Most exacting in its demands upon the intellectual power and discipline, as well as the technical skill of the artist, the so-called "modern" movement had done comparatively little to alter the traditional character of the etcher's art, even in countries where it had become such an important factor in all forms of creative expression. In the United States the teachings of Stanley W. Hayter, Mauricio Lasansky and Ernest Freed continued greatly to influence those etchers who found the modern idiom particularly sympathetic to their own styles and techniques.

The regular large national annual exhibitions took place, of which the two most comprehensive and representative as cross sections of American etching were that conducted by the Library of Congress and the annual exhibition of the Society of American Etchers, Gravers, Lithographers, and Woodcutters. Smaller exhibitions, along both national and regional lines, were held by such other long established print organizations as the Chicago Society of Etchers, the Print Makers' Society of California, the Prairie Print Makers, the Northwest Printmakers and the Print clubs of Philadelphia and Albany, while print dealers all over the country, as well as museums and libraries maintaining print rooms, held exhibitions covering all phases of etching and its sister arts.

The names of noteworthy practising etchers in the United States during the year were too numerous to mention at length. Best known among them, however, were Niels Y. Andersen, Will Barnet, Isabel Bishop, Cornelis Botke, Federico Castellon, John E. Costigan, Stephen Csoka, Ralph Fabri, Isac Friedlander, Sue Fuller, Arthur W. Hall, Eugene Higgins, Morris Henry Hobbs, Alfred Hutty, Philip Kappel, Gene Kloss, Armin Landeck, Jeannette M. Lewis, Martin Lewis, Helen A. Loggie, Luigi Lucioni, William Meyerowitz, Helen Miller, Roi Partridge, Margaret Philbrick, Carl M. Schultheiss, Reynold H. Weidenaar, R. W. Woiceske and George H. Wright.

The British school of etching, less affected by contemporary trends than any other national group, and maintaining its traditional standards both in approach and technique, presented the work of such long established artists as S. van Abbé, Sir Muirhead Bone, John Copley, Paul Drury, Martin Hardie, Westley Manning, Malcolm Osborne, W. P. Robins, Henry Rushbury, D. I. Smart, Robert Spence and Leonard R. Squirrell, s well as such regular exhibitors as Winifred Austen, W. D. Brokman-Davis, H. Andrew Freeth, Percy Lancaster, Gwen May, Sara Sproule, E. Heber Thompson, Murray M. Tod, Leslie M. Ward and the distinguished Hungarian etcher Julius Komjáti.

France, one of the great strongholds of etching, showed in 949 a group of etchers which had grown steadily stronger and more active since World War II. Contributing to the great Paris exhibitions as well as to smaller ones all over the country, were such veterans as Yves Alix, Maurice Asselin, Adolphe Beaufrère, Camille Berg, Jean Bersier, Jacques Beurdeley, Jacques Boullaire, Richard Brunck de Freundeck, Robert Cami, Gérard Cochet, Eugene Corneau, Pierre Dubreuil, Raoul Dufy, Jean Frelaut, Demetrius Galanis, Marcel Gromaire, Pierre Guastalla, Edmond Kayser, Henri Matisse, Pierre-Louis Moreau, Pablo Ruiz-Picasso, Alexandre Urbain, Henri Vergé-Sarrat, Jacques Villon and Henri de Waroquier. Younger artists of recognized significance were Michel Ciry, René Cottet, André Jacquemin and Pierre-Yves Trémois.

The veteran American etcher Herman H. Webster had long lived and worked in France.

In Canada, the Society of Canadian Painter-Etchers and Engravers held its usual annual exhibition, which was supplemented by numerous others throughout the country. Prominent among the artists working in etching and dry point were David J. L. Anderson, Robert W. Annand, R. F. Darby, I. Mackinnon-Pearson, Wilbur K. Peacock, E. B. Sisley, J. R. Tate, Fred B. Taylor, Harry D. Wallace and W. J. Wood.

Little was done in etching in Italy in 1949, though a few of the younger artists produced some interesting work, chiefly in the modern vein. Similarly, isolated examples appeared in Sweden, Norway, Denmark, the central European countries, Spain, Mexico and some of the South American republics, though in all of these the media of woodcut and lithography appeared more popular and nowhere among them was etching sufficiently widely practised to constitute a real national school.

(J. T. AR.)

Ethiopia.

An independent empire of northeastern Africa, Ethiopia is bounded on the north by Italian Eritrea, on the west by the Anglo-Egyptian Sudan, on the south by Kenya, on the southeast by Italian Somaliland and on the east by British and French Somaliland. Area: *c.* 350,000 sq.mi. Pop. (est. Dec. 1948): 8,000,000, but the ruling race, the Amhara, numbers about 2,000,000. Chief towns: Addis Ababa (cap., pop. *c.* 250,000); Harar (*c.* 45,000); Dessie (*c.* 35,000); Diredawa (*c.* 30,000). Languages: Amharic, the official language; also Tigriña, Tigré, Galla, Somali, etc. Religions: Christian (Alexandrine) 57%; Moslem 17%; pagan, etc., 26%. Ruler: Emperor Haile Selassie I.

History.—Throughout 1949 the political atmosphere was clouded by the continued failure of the United Nations to effect disposal of the former Italian colonies. Ethiopia's claim for the surrender as war criminals of Marshals Pietro Badoglio and Rodolfo Graziani also proved abortive, since Italy rejected its note and no other powers were disposed to press the matter. Ethiopia continued participation in other U.N. activities, and was the first country to ratify the genocide convention.

Internal politics were strengthened in two directions: in January the marriage took place between Princess Aida, granddaughter of the emperor, and Dejazmach Mangasha, son of Ras Siyum, hereditary prince of Tigré, two royal houses being thus united; and in July there was a considerable reshuffle of ministerial posts, most of the ministries being now provided with both a minister and a deputy minister.

Events of economic importance—though potential rather than actual—were the "spudding-in" of the first oil well in Ogaden in May; preparations for extensive cotton-growing in an attempt to reduce imports of cotton goods; and the start of inoculation of stock, on a large scale, against rinderpest and other cattle diseases, this with the assistance of experts from the Food and Agriculture organization of the U.N. In the financial sphere, a settlement of outstanding lend-lease accounts was announced in May. The Ethiopian dollar was not devalued in line with sterling. The exchange rate in Dec. 1949 was Eth. $2.53 = $1.00 U.S.

Communications were furthered by the opening in April of the rebuilt bridge over the Gibbe on the Jimma road; and in June the foundations were laid for a new bridge over the Blue Nile, on the road connecting Addis Ababa with Gojjam. The railway suffered interruption for several weeks in the summer through a strike of workers at Diredawa. Ethiopian Airlines, besides maintaining all their regular services, inaugurated some new ones to provincial towns in the south.

In education progress was normal. Of 26 candidates for London matriculation, 13 passed and were sent abroad for higher studies, most to England, where a society of Ethiopian students published its first magazine. The foundation stone of a University of Addis Ababa was laid in November. Books published in Amharic included first instalments of a revised translation of the Bible; a world history; and *Ethiopia and Western Civilization* by Kabbada Mika'el, director of the national library.

Education.—(Est. 1948) Elementary schools 390, pupils 35,000, teachers 1,350; secondary schools 3, pupils 450, teachers 30; technical schools 2, students 250, teachers 15.

Finance.—The monetary unit is the Ethiopian dollar with an exchange rate of 2.53 Eth. $=$1.00 U.S. (Dec. 1949). Budget (1947, in Ethiopian dollars): revenue 58,000,000; expenditure 58,000,000.

Foreign Trade.—(1947, in Ethiopian dollars, approximate totals): imports 69,035,000; exports 89,430,000.

Transport and Communication.—Roads (asphalted and macadamized) (1947): 15,500 km. Railway mileage: 406 mi. of the Franco-Ethiopian railway run through Ethiopian territory. Motor vehicles in use (Dec. 1947): total 5,520. Telephones in Addis Ababa: approx. 2,000 (1947).

European Movement: *see* EUROPEAN UNION.

European Recovery Program.

The process of enacting legislation providing for the second year of the European Recovery program began on Feb. 7, 1949, when bills were introduced into the house of representatives and senate authorizing a program of $1,150,000,000 for the final quarter of 1948–49 and $4,280,000,000 for 1949–50, or a total, inclusive of certain minor items, of $5,580,000,000. Somewhat earlier, on Jan. 2, the Organization for European Economic Cooperation, after reviewing and consolidating programs submitted by its members, had requested the slightly larger sum of $4,347,000,000 for 1949–50. Estimates presented by Economic Cooperation Administrator Paul Hoffman called for the following tentative allocation of funds (in millions) for 1949–50: United Kingdom $940; France $875; Italy $555; bizone Germany $404; Netherlands and Netherlands Indies $355; Belgium-Luxembourg $200; Austria $197; Greece $170; French Zone of Germany $115; Denmark $109; Norway $105; Ireland $64; Sweden $54; Turkey $30; Trieste $12; Portugal $10; Iceland $7.

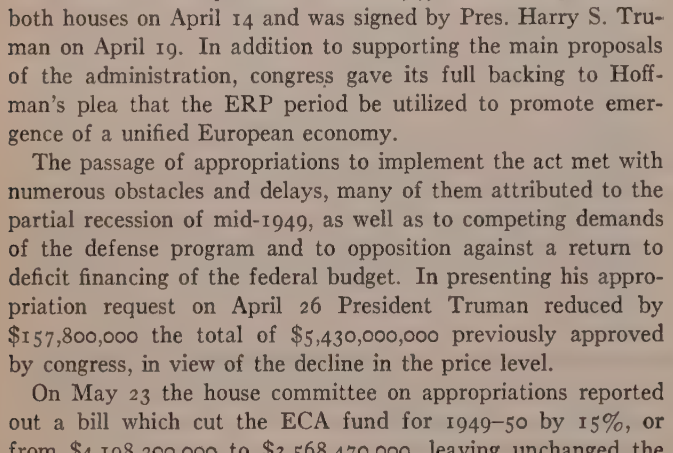
In joint hearings held by the senate committee on foreign relations and the house committee on foreign affairs, administration spokesmen emphasized that the program was designed to carry further physical reconstruction of damage inflicted by World War II, to promote resumption of international trade and adjustment of the European economy to postwar conditions and to foster the "development, rationalization and expansion of the economies" of Europe, for the general purpose of making western Europe economically and politically viable. On March 7 the senate committee, in reporting out its bill, recommended approval of the Economic Cooperation administration's full request of $5,580,000,000. A figure of $5,380,000,000 was proposed by the house committee on March 22.

After intensive debate, during which amendments reducing the total by 15% and 10% were rejected, the senate by 70 to 7 vote, on April 8, approved a bill allocating $5,580,000,000. On April 12 the house adopted a bill (354 to 48) approving a program of $5,380,000,000. The house bill also contained a provision for raising from $28,000,000 to $300,000,000 a guaranty fund for encouraging private U.S. investments in ERP countries. U.S. investments in these countries would be protected against losses through inability to convert dollar capital outlays back into free exchange, in addition to insurance, provided in the act of 1948, against losses through civil disturbance or confiscation and to inability to convert profits into dollars.

On April 13 a conference committee approved a bill fixing the aid program at $5,430,000,000, plus $150,000,000 for the guaranty fund for protection of U.S. investments abroad, thus in effect accepting the larger amount approved by the senate. The Economic Cooperation act of 1949 was then passed by both houses on April 14 and was signed by Pres. Harry S. Truman on April 19. In addition to supporting the main proposals of the administration, congress gave its full backing to Hoffman's plea that the ERP period be utilized to promote emergence of a unified European economy.

The passage of appropriations to implement the act met with numerous obstacles and delays, many of them attributed to the partial recession of mid-1949, as well as to competing demands of the defense program and to opposition against a return to deficit financing of the federal budget. In presenting his appropriation request on April 26 President Truman reduced by $157,800,000 the total of $5,430,000,000 previously approved by congress, in view of the decline in the price level.

On May 23 the house committee on appropriations reported out a bill which cut the ECA fund for 1949–50 by 15%, or from $4,198,200,000 to $3,568,470,000, leaving unchanged the allocation of $1,074,000,000 for the last quarter of 1948–49. Strong objections were raised against this reduction on the grounds that it would cut back seriously the program of reequipping European industry and would therefore jeopardize the chances of making the European economy self-sustaining after 1952. On May 26 the house adopted a compromise allowing the ECA, in the president's discretion, to expend the appropriation of $3,568,470,000 during the first 10½ months, instead of during 12.



THERE'S TALK IN AMERICA OF CUTTING DOWN EUROPEAN AID...
CRAWFORD

"BAD NEWS TRAVELS FAST," cartoon by Crawford of the *Newark News*, published in 1949

During these discussions ECA Administrator Hoffman emphasized the importance of increased U.S. investments abroad and of far larger U.S. importations of foreign goods as means for reducing the dollar deficit of the outside world, lessening the need of Europe for direct dollar grants and enabling Europe to balance its dollar trade in 1952. In putting into effect the investment guarantees for U.S. enterprises abroad, Hoffman pointed out that of the $300,000,000 of guarantee funds made available in 1948, only $4,000,000 had been drawn, and he again urged more intensive development of private investment abroad. In November ECA further liberalized governmental guarantees of convertibility of U.S. investments in ECA countries, to give protection to investments of unique productive techniques and processes; for this type of investment, as well as for actual transfers of dollar capital and equipment, the guarantee, based upon agreements between ECA and the investors, could be as high as 175% of dollar investment. In addition the ECA provided a guarantee of convertibility of profits from such enterprises, amounting to a 20% return on investment for each of the first five years of operation.

Implementing the administration's proposals for increased imports into the United States, ECA organized numerous missions of businessmen and technicians to acquaint European producers with the needs of the U.S. market and with distribution techniques. A joint field mission of ECA and the department of commerce urged that imports into the United States be increased by $2,000,000,000 a year and recommended a number of concrete measures to this end.

Meanwhile, passage of the ECA appropriation had met with continuing obstacles and delays, particularly in the senate. One amendment, pressed with great persistence, involved earmarking $50,000,000 for a loan to Spain. Another proposed amendment would have allocated $1,500,000,000 of ECA funds for the purchase of U.S. farm products which might be declared surplus by the secretary of agriculture, whether or not these commodities were the ones most needed for European recovery. As the debates continued, temporary spending authorizations were enacted repeatedly to permit ECA to operate, and in July the senate restored the appropriation of $1,074,000,000 for the final quarter of 1948–49, which its committee on appropriations had reduced to $1,000,000,000. After rejecting by narrow margins amendments concerning the loan to Spain and the compulsory procurement of surplus farm products the senate, on Aug. 8, passed a bill (63 to 7) allocating $3,628,380,000 for the 1949–50 program.

After strenuous negotiations a conference committee reached a compromise in September, setting the sum of $1,070,000,000 for the final quarter of 1948–49 and $3,630,000,000 for 1949–50, but omitting the house-approved provision which allowed the president to expend the total appropriation in ten and one-half months if, in his opinion, this was necessary in order to achieve the purposes of the program. The compromise bill, which passed both houses and received the president's signature, also provided for Export-Import bank loans up to $150,000,000 to members of the O.E.E.C., and contained provisions for $45,000,000 in military aid to Greece and Turkey, $912,500,000 for occupation and relief expenses in Germany, Austria, Japan and the Ryukyus, and $110,000 for the continuation of a joint congressional committee charged with watching over the operation of ERP.

The reduction in the ECA appropriation required numerous and difficult adjustments in the allocation of assistance among

European recipients, and Hoffman announced on Sept. 1 that responsibility for the division of ECA funds would henceforth rest with him rather than with O.E.E.C. In view of the rapidly worsening dollar situation which confronted Britain and the sterling bloc, the British government in July had presented a strong plea for an increase in its ECA allotment from the $923,000,000 contemplated in January to $1,518,000,000. The allotment, as announced by Hoffman, was distributed (in millions) as follows: United Kingdom $962; France $704; Italy $407; Western Germany (including French, British, U.S. zones) $348.2; Belgium-Luxembourg $312; Netherlands and Indonesia $309; Austria $174; Greece $163.5; Denmark $91; Norway $90; Turkey $61; Sweden $48; Ireland $47; Portugal $33; Trieste $14; Iceland $7. No funds were allocated to Switzerland, a member of O.E.E.C., since it had requested none and had also refused, on July 20, to sign with ECA an agreement similar to those signed by other participants in ERP.

The first step in the process of legislating for the third year of ERP was taken on Jan. 9, 1950, when President Truman proposed an allocation of $3,100,000,000 for 1950–51, compared with, for 1949–50, an original request for $4,200,000,000 and an actual appropriation of $3,630,000,000.

During 1949 the effects of ERP were felt in an accelerated recovery of Europe from the immediate consequences of war. British industrial output reached its highest point in history, averaging about 25% above the immediate prewar years. France reported an industrial production substantially above prewar, while agricultural output, after a series of poor harvests, was returning to the pre-1939 level. Italy reported that national income in 1949 reached 97% of 1938 and set forth plans for raising industrial production 6% and agricultural output 3% during 1950. Similar reports of progress in reconstruction were made by other recipient countries. While the modernization of European equipment was being promoted both by ECA dollar grants and ECA counterpart funds, a far greater investment was being made in each country from local currency resources.

The amount and use of ECA counterpart funds expanded greatly during 1949. Under agreements made with ECA each recipient government was to deposit in a special account amounts of local currency commensurate with the value of ECA goods delivered under dollar grants. These local currency funds could then be utilized within the country for purposes agreed upon between the government and ECA. An estimated $4,500,000,000 in counterpart funds had been deposited by late 1949; of this total $3,300,000,000 had been withdrawn, including $1,200,000,000 applied toward retirement of public debt and $1,700,000,00 toward increasing the productivity of industry and agriculture.

Great Britain had devoted its counterpart funds primarily to reducing the national debt, thus easing somewhat the fiscal burden left by the war. France devoted a large part of its counterpart funds to improving industrial equipment, particularly through constructing modern steelmaking and hydroelectric plants. In Austria and Greece attention had been devoted chiefly to restoring the system of transportation and communication. Smaller allotments had helped to provide inexpensive housing in several countries, to eradicate malaria in parts of Italy and Greece and to facilitate land reform, as in Italy. In many cases ECA had rejected proposals to use the counterpart funds to meet current outlays of administration, and the funds remained unused; in other cases it was difficult to select projects which would contribute to the long-range efficiency of the local economy without increasing immediate inflationary pressures within it.

As ERP moved toward its immediate goals of increasing production, reducing trade barriers and gradually restoring living standards, the more intractable nature of the long-range problems of the European economy stood out more clearly. With the terminal date of ERP set for June 30, 1952, Europe faced the more difficult problems of deciding what degree, and by what means, European integration could be achieved, of finding ways to cover the dollar gap in European trade and of adjusting to the approaching termination of ERP aid in 1952. (*See* also DEMOCRACY; EUROPEAN UNION; INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT; ORGANIZATION FOR EUROPEAN ECONOMIC COOPERATION.) (P. E. M.)

European Union. The union of Europe, based upon common traditions and a heritage of common civilization, had inspired in the 19th and 20th centuries a number of leading European thinkers. What then seemed a distant idea, was brought closer to realization by the economic and strategic necessities of the period following World War II. Yet even then the question remained whether the deep social and cultural differences separating the various European peoples —differences in no way slighter than those separating the United States from Canada or Mexico—could be overcome by the realization of the necessity for a very new and very bold step. In spite of the great progress accomplished in the military and economic integration of Europe in the year 1949, the approach to a more far-reaching unification remained at the end of the year tentative and functional. The great difficulties opposing a fuller integration were realized as soon as the concrete economic and political problems were discussed.

This attitude of good will in principle and hesitation in practice prevailed in spite of the encouragement which United States policy gave more and more to the program of European union. The concern of the U.S. for an economic recovery and a social stabilization of Europe was one of the two mainsprings of all the progress achieved toward European unity. The other one was the aggressive policy of the U.S.S.R. which culminated in the Communist seizure of total power in Prague, Czech., in Feb. 1948. It may be said that without the policy pursued by Marshal Stalin after World War II all progress toward European union might have remained in the realm of hopes and wishes of a few intellectuals. It was the need for the defense of Europe and of European civilization against the totalitarian system spread from Moscow which helped to overcome at least some of the deep-rooted loyalties to national sovereignty in the various European nations and some of the animosities between them, the result of a long past of feuds and conflicts.

When the United States launched in 1947 what became known as the European Recovery program (*q.v.*), it was intended that all European nations, including the U.S.S.R., should participate in it and benefit from it. The U.S.S.R. objected strongly to any joint European program as it would infringe upon the sovereignty of the European states. Of the soviet satellites, Czechoslovakia first accepted the invitation to participate, and Poland inclined toward participation, but both finally rejected participation as did all the other nations within the soviet orbit. Thus, against the original wishes of the U.S., but in accordance with the real situation in Europe as it had developed after World War II, the division of Europe in two opposed sectors was made manifest. The eastern European nations which were within the "orbit" of the Soviet Union were economically and militarily woven into a closely integrated unit under the control and leadership of the Soviet Union. To these nations eastern Germany was added in 1949, while Finland was able to preserve its cultural personality and much of its political and economic independence, and Communist Yugoslavia was excluded from the soviet orbit because it did not wish to accept the "colonial" economic role of a mere granary assigned to it in the soviet plan. Thus all attempts at European union remained confined to the free nations of western and central Europe.

On Jan. 25, 1949, a Council for Mutual Economic Assistance was set up in Moscow. It included, beside the Soviet Union, Bulgaria, Czechoslovakia, Hungary, Poland and Rumania. This step on the part of the Soviet Union seemed a move to counter the European Recovery program of the United States, which got into full swing during 1948, and which was put into operation with the help of the Committee on European Economic Co-operation (C.E.E.C.). While thus the foundations were laid in 1948 for an economic integration of the free nations of Europe, a first step was also taken during that year for their military integration. On March 17, 1948, only three weeks after the Communist coup in Czechoslovakia, Britain, France and the Benelux countries (Belgium, the Netherlands, Luxembourg) signed a treaty of co-operation in the economic, military, and cultural fields for the duration of 50 years. For the first time sovereign nations set up in peace time a permanent organization for the co-ordination and fusion of military defense.

The year 1949 brought forth a definite progress on this road to European union. Many influential circles, above all in Italy, Belgium and France, stressed the need for the growth of a supranational European loyalty among the people themselves as the basis for a political integration of free Europe. On May 5, 1949, a date which may be the beginning of a historical development, ten European nations (Britain, France, Belgium, the Netherlands, Luxembourg, Denmark, Norway, Sweden, Ireland and Italy) signed the statute of the Council of Europe. The statute made it clear that any European country which accepted the rule of law and of enjoyment by all persons within its jurisdiction of human rights and fundamental freedoms could join. Matters of national defense were excluded from the scope of the council. Strasbourg, France, was made the permanent seat of the council, which consisted of two bodies: the Committee of Ministers, which could recommend measures to promote the aims of the council, and the Consultative assembly, in which the parliaments of the various member states were represented.

In its meeting at the beginning of August in Strasbourg the Committee of Ministers decided to invite three other nations, Greece, Turkey and Iceland, to join. Thus the dream of private organizations, like the European movement led by Winston Churchill (*q.v.*), found an official sanction. Duncan Sandys was the chairman of the Executive committee of this unofficial movement, the honorary presidents of which were Churchill, Alcide de Gasperi, Paul-Henri Spaak and Léon Blum, while the chairman of its International council was the veteran French trade union leader Léon Jouhaux. In his address in Strasbourg Churchill declared: "We have met in this ancient and war-scarred city to set up an assembly which we hope will one day become the Parliament of Europe. The first step has been taken, and it is the first step that counts. We are not here as the representatives of our countries or parties, but as Europeans walking forward hand in hand, and if need be, shoulder to shoulder. It is not against any race or nation that we range ourselves. It is against tyranny in all its forms. . . . We have in our long history wiped out the danger of religious wars and dynastic wars. I trust that we have reached the end of nationalistic wars. We hope and work for an age of peace and plenty when the unmeasured riches and genius of Europe will make her again the fountain of world inspiration."

The Consultative assembly had no powers. It could only make recommendations to the Committee of Ministers. Nevertheless the assembly of 101 delegates, representing 12 nations, made a number of sweeping recommendations. It established a 28-member standing committee under the chairmanship of Paul-Henri Spaak, the president of the assembly, to insure continuity of its work between the yearly sessions. It called upon the Committee of Ministers to prepare a program of a European economic union having a free money market and a single preferential trading system, embracing also the colonies of the member states. The creation of permanent machinery for consultation on credit policies, the investigation of European production with a view to reduction of non-European imports, the organization of European conferences of employers, workers and consumers, and finally, the sponsorship of a European convention on control of cartels were also suggested. The French delegate, Paul Reynaud, called for the merger of European economies into a single market and for the election of a European legislature by direct suffrage with authority to carry out such a merger. The General Affairs committee of the assembly was asked to report by April 30, 1950, on concrete steps for the creation of a union of European countries with limited powers over the governments of member nations.

Though the concrete achievements of this first "European parliament" were naturally meagre in view of its limited rights, nevertheless an assembly of leading statesmen and politicians of 12 European nations made its wishes for a further integration so clearly heard that they could no longer be completely overlooked. The assembly devoted much time to cultural questions and to the concern for the common heritage of freedom. A basic program of ten fundamental human rights was accepted as well as a far-reaching proposal, to supplement it by the creation of an international court of human rights to guarantee these basic freedoms in Europe, and an inquiry commission to screen and submit cases of violation to the court. The European governments were asked to undertake a systematic instruction of their peoples, "pointing out to them the undeniable advantage of union for Europe, and at the same time the dangers inherent in national isolation." It was also decided to consider the establishment of a European university at the assembly's next session in 1950. A conference of ministers of education of the 12 nations was asked to draft a plan for cultural co-operation and for pooling resources for scientific research and technical development. The European movement called a cultural conference to Lausanne, Switz., in Dec. 1949, where leading European intellectuals discussed the necessity for the formation of European thinking as a necessary condition for Europe's future political unification.

Events at the end of 1949 showed, however, that the further development of the European union would be slowed down. The Committee of Ministers, which met in Paris at the beginning of November, did not take any definite decision on the recommendations adopted by the Consultative assembly, but referred them to various committees for further studies. Among these assigned proposals were those for the admission of west Germany and of the Saar, for the convocation of the convention on human rights, and for the creation of a European court, and the alternative proposals for a European passport or for the abolition of passports. Germany and the Saar were to be admitted as associate members, that is, with representatives in the Consultative assembly but not in the Committee of Ministers. The committee took no action on a proposal for the admission of Austria as an associate.

On Dec. 19 the General Affairs committee of the Council of Europe met in Strasbourg to discuss various proposals for strengthening the European unity. It was decided at present to reject proposals for outright federation supported by France and Italy, and to consider only proposals for strengthening the existing council, as suggested by Britain and the Scandinavian countries which strongly favoured a "functional approach" by developing European co-operation along multiple lines.

t was interesting to note that in a resolution, proposed by
British delegates, it was decided to make no recommenda-
n that might interfere with Britain's relations with the com-
nwealth, and to explore ways in which the Council of
rope and the British Commonwealth of Nations could co-
erate in political and economic matters. The acting chairman
the committee, Bertil Ohlin of Sweden, pointed out that the
uncil of Europe strove for mutual co-operation among demo-
tic nations all over the world and did not wish to turn the
uncil into a closed entity. This decision clearly pointed the
ed for a broadening of the basis of European union. Such a
oadening is in the nature of things, for Europe is not pri-
rily a geographic concept (the soviet satellites and Franco
ain were excluded from the European union, as conceived by
founders) but a unit based upon a common tradition of
itical liberty. These traditions are common to most European
tions, to the United States and to the British dominions. The
glish revolutions of the 17th century and John Locke, Charles
ntesquieu, the American Revolution, the French Revolution
d the Declaration of the Rights of Man and of the Citizen
m their common inspiration. Neither is the threat presented
Stalinism to the traditional freedom of the west directed
inst western Europe or North America alone, but against
h. The North Atlantic has become in recent times what the
editerranean was in antiquity. Even a European union cannot
ieve military and economic security without the participa-
n of the transatlantic democracies. This became clear beyond
ubt in 1949 when the centre of gravity of military and eco-
mic integration was definitely anchored in the co-operation of
United States, Canada and Europe. In this co-operation
ne European union found strength and inspiration. In the
litary field this co-operation expressed itself in the North
lantic treaty, in the economic field in the European Recovery
ogram and the Organization for European Economic Co-
eration.

Several European nations made attempts at closer economic
egration among themselves. Most advanced in that direction
re the efforts at creating an economic union among Belgium,
etherlands and Luxembourg, the Benelux countries. Some
inite progress was made toward this economic union, though
eat obstacles still remained at the end of 1949. A common
iff policy had been decided upon, though the combination of
Belgian specific protectionist system and the Dutch ad
lorem duties presented considerable difficulties. A joint sec-
ariate was set up in Brussels to deal with the remaining prob-
ns of different types of monetary and economic systems.
her economic unions, such as those between Italy and France,
between these two countries and Benelux, or between Britain
d Scandinavia, did not get beyond preliminary discussions. It
s under these circumstances that the United States, through
ul G. Hoffman, administrator of the Economic Cooperation
ministration (ECA), pressed in a talk on Oct. 31, 1949, for a
eater immediate economic integration of the European na-
ns who were recipients of aid under the Marshall plan. But
the end of the year it became clear that such an integration
uld be achieved only by stages, that British economy and
itain's relations with the commonwealth and the sterling area
esented special problems, and above all, that European eco-
mic problems could not be solved without similar measures
ning toward integration introduced by the United States itself.
wering of tariff barriers and of prices in the European na-
ns would presuppose the leadership of the United States in
h measures. It became evident that a sound economic basis
d to be constructed for the whole of western civilization, and
h a process would necessitate painful adjustments on all
es.

EDOUARD HERRIOT delivering the opening address at the first session of the Council of Europe in Strasbourg, France, Aug. 10, 1949

Greater progress than in the economic field was achieved in the military field. The North Atlantic treaty was signed in Washington, D.C., on April 4, 1949, by the United States, Canada and ten European nations. The pact was supplemented by the Foreign Military Aid bill, decided upon by the U.S. congress at the end of September. The Council established by the North Atlantic treaty held its first session in Washington in Sept. 1949, and made plans for common strategic planning and co-operation in the fields of training, procurement and rearmament. Five regions were established, the Northern European group (Great Britain, Denmark and Norway), the Western European group (the Brussels pact powers), the Southern European-Western Mediterranean group (France, Italy and Britain)—all three working with the active participation of the United States—the North American group (United States and Canada) and the North Atlantic Ocean group (all members except Italy and Luxembourg). The Council was the top-ranking body of the treaty, with its chairman rotating annually alphabetically by countries. Next to the Council was the Defense Committee, which was composed of the chiefs of staff, and under which there was the Military Committee and the Military Production and Supply Board. The key military unit in the whole edifice was the standing group, consisting of officers from the United States, Britain and France. By the end of 1949 these various committees and arrangements were slowly being worked out, thus providing the defense backbone for the integration of the European union. The Council of the North Atlantic Treaty created on Nov. 18 a defense, financial and economic committee to keep the military expenditures in line with the economic goals of the member nations.

The realization of the need of the Atlantic pact for the peace and integration of Europe was best attested by the attitude of

those small European nations who had been for a long time renowned for their faithful adherence to peace and democracy and who had not known in recent times any desire for imperial expansion or aggrandizement. In spite of violent Communist opposition, the Norwegian parliament approved the pact on March 29, 1949, by 130 votes to 13. National elections which were held soon afterward confirmed this decision by an overwhelming popular vote which completely wiped out Communist representation in the Norwegian parliament and strengthened the Norwegian Labor party, which was primarily responsible for Norway's adherence to the pact. In a similar way the lower house of the Danish parliament approved on March 24 the nation's adhesion to the Atlantic treaty by 119 votes to 23. An amendment, proposed by the nine Communist deputies, which would have prevented the government from granting other nations bases on Danish territory, including Greenland, or from admitting any armed forces other than Danish to Danish soil, was voted down by the majority of 129 to 9.

Thus, in the year 1949 the free nations of Europe moved toward integration and union. Progress seemed slow, but, compared with what was regarded as possible only ten years before, it could be termed tremendous. The European nations, and with them the United States and Canada, faced, in their effort to secure the peaceful development of western civilization, a great many problems, not only political and economic, military and monetary, but also moral and spiritual. Many people in th United States believed that only by widening the bases of European union—either to a world federal government of fre nations desirous of assuring peace and human liberties, or to federal union of democratic nations on both sides of the Atlantic—its main purposes could be achieved. To that end resolutions, favouring world federation and favouring Atlantic union were introduced in 1949 in the congress of the United States The resolution for an Atlantic union, which took its startin point in the existing North Atlantic treaty, and the variou attempts to achieve a European union asked the president o the United States "to invite the democracies which sponsore the North Atlantic Treaty to name delegates, representing thei principal parties, to meet . . . with delegates of the Unite States in federal convention to explore how far their peoples and the peoples of such other democracies as the conventio may invite to send delegates, can apply among them, within th framework of the United Nations, the principles of free federa union." (*See* also EUROPEAN RECOVERY PROGRAM; NORTH ATLANTIC TREATY; ORGANIZATION FOR EUROPEAN ECONOMIC COOPERATION.)

Events of the Year: *see* CALENDAR OF EVENTS, 1949, page 1–16.

Exchange Control and Exchange Rates.

Whereas in 1948 the world shortage of dollar exchange ha been progressively reduced by rising production and exports outside the U.S. as well as by more stringent control of imports this trend was sharply reversed in the second quarter of 194 Most countries experienced increasing difficulties in meetin their dollar requirements in spite of the continuance of large-scale U.S. financial aid. The causes of this change were many and ranged from the reappearance for the first time since Worl War II of a buyers' market for many commodities to the abatement of inflation in the U.S. at a time when significant inflationary pressure still persisted in various other parts of th world. The strain on the gold and dollar resources of th sterling area in particular became acute, and on Sept. 18, wit the approval of the International Monetary fund, the poun was devalued by 30.52% from 4.03 U.S. dollars to 2.80.

Changes in the exchange rates of many other currencies followed quickly, and by Nov. 15 the International Monetary fun had approved new par values for 14 of its 48 members. Of th others, Austria, China, Finland, Greece, Italy, Poland, Thailan and Uruguay had not yet established the initial par value o their currencies, while France continued, as in 1948, without par value agreed with the fund. In all of these countries, excep China and Poland, currency adjustments amounting to depreciation against the dollar were undertaken. Similar changes we also made in Argentina, Burma, Ceylon, Ireland, Israel, Ne Zealand, Portugal, Sweden and Western Germany, which we not members of the International Monetary fund. On the oth hand, Switzerland, most of the countries of eastern Europ Central and northern Latin America and several countries the middle and far east, such as Iran, Pakistan and the Republ of the Philippines, did not allow their currencies to deprecia against the U.S. dollar.

Despite these widespread and profound changes, exchang d import restrictions were maintained throughout the year in ost countries with the exception of the U.S., Switzerland and me Central American countries. Furthermore, many nations, pecially in Latin America, continued to operate multiple ex- ange rates to control imports and exports. Nevertheless, some ogress toward freedom of the exchanges was made, especially Belgium where the franc was made freely convertible on Nov. . In France and Italy also the currency depreciations of ptember were accompanied by substantial unification of the change rate structures. Similar steps were taken in Peru and araguay, but in the other Latin American countries which de- lued, *viz.*, Argentina and Uruguay, and which also employed ultiple exchange rate systems, the spread between the highest d the lowest rates was increased.

United States.—The relatively strong position of the U.S. llar—and the growing difficulties of foreign countries in meet- g their dollar requirements—clearly affected the U.S. balance payments. In the spring of 1949 the rising trend of U.S. ports of goods and services was reversed as a result both of duced volume and declining prices. The U.S. surplus on cur- nt account (goods and services), which had fallen to $1,205,- 0,000 in the third quarter of 1948, rose to $1,990,000,000 in e second quarter of 1949. In the third quarter of the year, rgely as a result of more stringent restrictions imposed on im- rts from the U.S. by many countries suffering from a shortage hard currencies, the surplus was reduced to $1,161,000,000. the first nine months of the year, the U.S. current account rplus totalled $4,811,000,000, and despite U.S. government ants and loans of $3,978,000,000 and $563,000,000 respec- vely, foreign countries had to draw upon gold and short-term llar assets to the extent of $591,000,000 to finance imports goods and services from the U.S. This was partly offset, how- ver, by a net inflow of foreign ng-term capital into the U.S. nounting to $122,000,000. oth of these figures include t dollar disbursements by the ternational Monetary fund d the International bank. The mainder of the U.S. surplus as financed by net U.S. private mittances of $412,000,000 and a net outflow of U.S. private ng- and short-term capital, nounting to $278,000,000. The eans of financing thus ex- eded the current account sur- us, leaving unidentified trans- tions of $889,000,000.

The upward trend of the U.S. ld reserves continued, from 24,398,000,000 at the end of 948 to $24,771,000,000 at the d of Aug. 1949. After the cur- ncy devaluations of Septem- r, however, fears of an even- al rise in the price of gold— belled groundless by U.S. offi- al spokesmen—led some coun- ies to prefer gold to dollar lances, and foreign purchases gold, for example by Italy d the Netherlands, brought e U.S. reserves down to $24,- 8,000,000 at the end of ctober.

Canada.—On Sept. 20, two days after the devaluation of sterling, the Canadian dollar, which had been at par with the U.S. dollar since July 1946, was devalued by 9.1%. The unofficial buying rate in New York city improved from an average of 1.082 per U.S. dollar in January to an average of 1.051 in the two weeks preceding the devaluation of sterling. Thereafter the disparity was practically wiped out for a time, but by the end of the year the free rate was again quoted at a small discount.
